EMERGENCY POWERS. The Emergency measure above mentioned received the royal assent on October 29th, having been rushed through Parliament with little debate. It empowered the government to proclaim "a state of emergency" when there was in its judgment danger of interference with the supply and distribution of food, water, fuel, or light, or with the means of transport. Orders in Council might in such case be issued to secure the "essentials of life" to the community—such regulations, however, not to continue without the sanction of both Houses of Parliament. The immediate occasion of its passage was the threat of the railwaymen in October to enforce a "lightning" strike.

CHANGES IN THE MINISTRY. Early in the year the ministry ceased to contain any representatives of Labor. At the end of January, Mr. G. N.

Barnes, minister without portfolio, withdrew and on February 6th, and March 10th respectively the last Labor representatives in the ministry, namely, Mr. George H. Roberts, Food Controller, and Mr. G. J. Wardle, parliamentary secretary to the Ministry of Labor, resigned. On March 1, Sir Robert S. Horne succeeded, as president of the Board of Trade, Sir Auckland Geddes, who was appointed British Ambassador to the United States, and he was succeeded as Minister of Labor by Dr. T. J. Macnamara. Another important appointment early in the year was that of Sir Hamar Greenwood, as chief secretary for Ireland in place of J. I. Macpherson, who became Minister of Pensions in succession to Sir L. Worthington Evans. The last named became minister without portfolio, in succession to Mr. Barnes. Corresponding changes followed among the under-secretaries. The Ministry of Transport, which had been established during the war and abolished in 1920, was restored for a short time but on September 28 was definitely abolished. Though its work and organization had been highly praised by many and the administration of Sir Eric Geddes had been widely approved, it was criticized by others on the ground of unnecessary expense. For members of the cabinet at the close of the year, see above under MINISTRY.

POLITICAL PARTIES. Early in the year an important by-election was held at Spen Valley, the most significant that had been held since the general election, for it was regarded beforehand by the government as a test of the strength of the Liberal following upon which the government could count. There were two Liberal candidates in the field, one representing the Coalition and the other an Independent Liberal. Both were heavily defeated and the Coalition Liberal ran nearly 4000 votes behind the Labor candidate. It was the culmination of a long series of Labor successes indicating a great growth of strength. The weakness of the Labor party was at that time its lack of leaders in Parliament. Prominent men in the Liberal party declared after the Spen Valley election that the Independent Liberals had no hope of success. Some of them favored a progressive policy that would bring the Liberals into line with the Labor party. Others, however, objected to this on the ground that no compromise was possible and advised the free Liberals to unite with the Coalition on the basis of a restoration of cabinet government and the appointment of Liberals to the ministry. In January Mr. Asquith decided to stand as the Liberal candidate for Paisley. In the course of his speeches, he laid down a programme including the taxation of wealth accumulated during the war and the duty of the Liberals to reinforce the power of the League of Nations so that it might secure at once progressive disarmament. He believed in a revision of the territorial arrangements made by the treaties and urged the summoning of an international economic conference of all states affected by the war, including the enemy nations. As to the Irish question, he believed in the immediate granting of self-government in the fullest sense. He also favored the nationalization of the mines, of transport, and of the land; the raising of national revenue by a single tax on income; and the right of the unemployed to full maintenance and old-age pensions of one pound a week up to the age of 65. As the result of the Paisley election, Mr. Asquith was returned to Parliament. He

received 14,736 against 11,902 for the Labor candidate and only 3795 for the Coalition Unionist candidate. He took his seat February 25th, and became at once the recognized leader of the opposition. The government's policy seemed to take firm issue with the Labor party, which was blamed for the public discontent. Government spokesmen refused flatly to nationalize the coal mines. In regard to housing, it was said that the main obstacle came from the demands of Labor itself. Lloyd George in February presented the arguments against the plan for nationalization offered by the Miners' Federation, which he said was not a genuine scheme for nationalization, but for turning the mines over to the control of a single class. In Parliament a vigorous debate was carried on in February in the course of which the government was sharply criticized. The Independent Liberals accused it of failing to recognize that it was impossible for the late enemies of Great Britain to fulfill certain of the peace terms. Meanwhile the government had lost unexpectedly in the by-election at Wrekin in Shropshire, where a well-known London journalist associated with the chauvinist editor, Mr. Bottomley, won the election on an independent platform. The Labor candidate stood second and the government candidate lost by a large majority. On the other hand the government won soon afterwards at the by-election of Horncastle in Lincolnshire where the Labor candidate stood far below either of the other parties on the list. In by-elections at Stockport, Basingstoke, Northampton and Northwest Camberwell, the government candidates also won. On the other hand at Dartford, March 27, the Labor candidate was highly successful, turning the former Coalition majority of more than 9000 into a Labor majority of more than 9000. The Coalition candidate stood third on the list and this defeat marked the ninth seat lost to the government since the election of December, 1918. The attitude of the government party toward the progressive element was shown in the attack by Lloyd George upon the Labor party in March. He denied that the by-elections had developed any new opponents to the government, saying those who were now opposed to the Coalition were the same who had opposed it during the war, and that no party could have formed a strong government at the last election. If the by-elections were to be taken as a sign, they indicated not a Liberal advance, but a Socialist advance, and if there was a new general election, neither Liberals nor Unionists could count upon sufficient support to set up a stable government. The Liberal party was a party of Communism or Bolshevism and the independent Liberals who attacked the Coalition were weakening the common cause against the Socialists. Civilization was in danger in all countries and unless there were coöperation among the law-abiding elements there would be a general disaster. The government intended to proceed on the principle of a fair deal and a fair reward for individual effort. Even in comparatively moderate quarters the speech was described as more Tory in its spirit than any that the prime minister had recently made. After Lloyd George's "Tory" speech, Mr. Asquith made several statements all tending to show that the Liberals were not going to surrender to the hysterical fear of Bolshevism and embark on a class war. In regard to foreign policy, he said in the House that the replacing of the Sultan

in Constantinople was an intolerable solution of the Turkish question. It would have been well enough to leave him there with all his spiritual powers, but his political powers should have been assumed by the other nations. He criticized the government for its lack of clearness in explaining its policy in Mesopotamia. A definite breach between the Liberals and the Coalition government occurred in May, when the National Liberal Federation passed a resolution against the government, and there seemed no chance of a compromise henceforth between the Independent Liberals who supported Mr. Asquith and the members of the party who still remained loyal to the Coalition. At that time, however, the Independent Liberals had met with some reverses at the by-elections and on the same day that the above-mentioned resolution was passed, the government candidate, Sir Hamar Greenwood, who on his appointment as chief secretary for Ireland had to seek a reelection, won by a large majority over his Independent Liberal opponent. Mr. Asquith's attitude toward the Irish question was shown by the offer of an amendment to the Home Rule Bill which proposed to give to any county in Ulster the right to vote for exclusion from an Irish parliament at any time within six years. He explained that his plan looked to the creation in Ireland of a single parliament and a single executive, and he declared that the government proposals would lead to a chaotic condition and were wholly out of relation to the desires and necessities of the Irish people. As the year went on, the breach between the government and the Liberals widened, and the prime minister at the end of the year was apparently entirely divorced from his former party. In the House the government's most severe criticism came from its own side, that is to say, from among the Unionists. This was often brought out in the debates on the two leading problems, namely, the Irish bill and the budget. Nevertheless there was no sign of any weakening in the *bloc* on the government benches. Lloyd George was able to carry through several important ministerial changes in March (see below), and its strength in the country in the autumn was indicated by the victory of the government candidate at Ilford, September 25, by a majority vote over the combined polls of the Liberal and the Labor candidates.

At the annual conference of the Labor party which opened June 22, the usual statements in regard to the conflict between capitalism and the capitalist government on the one hand and labor on the other were made. In regard to Ireland, the government was declared to be responsible for the violence of a purely military rule and it was said that Ireland ought to have the form of government that she desired, even an independent republic if she chose. The demand was made that all British armed forces should be immediately withdrawn from Ireland. At an interview between the prime minister and representatives of Irish labor at this time, the former declared that it was impossible to form a truce with the extremists in Ireland. He said that the government could never expect the setting up of an independent Irish republic and compared his attitude to that of President Lincoln of the United States, when the Southern States demanded secession. He said it was the firm intention of the government to arm and defend the munition workers and if the railway men per-

sisted in their opposition to the government they would be held responsible for paralyzing the whole traffic of Ireland. See preceding section on the IRISH QUESTION, and the GOVERNMENT AND THE COAL INDUSTRY.

TRADE UNION CONGRESS. The 1920 annual meeting was held at Portsmouth, consisting of 955 delegates representing 6,505,482 members. On July 13 it passed by a vote of 2,760,000 to 1,636,000 a resolution recommending a general stoppage of work if troops were not withdrawn from Ireland. A deputation from the Congress was sent to the heads of the government, July 22, and received from Mr. Bonar Law the summary answer: "Stop the murders and we will remove the troops"; while Lloyd George declared that discussion was idle so long as the Sinn Feiners were irreconcilable.

TRADE WITH RUSSIA. On May 31st a meeting took place between Lloyd George and other members of the government with M. Krassin, who was nominally the head of the Russian Coöperatives, and who came to England as the chief of a delegation from the Soviet government. M. Kamenef was the political member of the delegation. It was reported that a Russian trade office was about to be opened in London, but by many it was suspected that the presence of the delegation in London was due rather to the design of promoting Bolshevik propaganda. The Krassin mission provoked the sharpest criticism in the French press, where it was considered an act of disloyalty to the alliance with France. Early in June members of the House of Commons evinced distrust of the Krassin mission and put a number of questions to the government in regard to its alleged political aspect. A debate followed in which the government was warned that the nation was seriously disturbed about the matter. The Labor representative argued that the action of the prime minister was welcome to the masses of the people. Others demanded that guarantees of the Soviet government's sincerity should be required before trade relations were resumed. Lloyd George defended the government's course saying that Russia had a prodigious quantity of material to dispose of. Because the British government disapproved of the Soviet government it did not follow that trade should not be resumed. He asked if Great Britain had never traded with countries guilty of atrocities and cited the case of Turkey. In September, difficulty arose from the alleged attempt of the Bolsheviks to bribe a British radical newspaper, the *Daily Herald*, in which M. Kamenef was accused by the British government of participating. He was also accused of being concerned in the sale of the Russian crown jewels in England. M. Kamenef left for Russia, after writing a letter denying the British government's contentions. Meanwhile in August there had been a long discussion between Lloyd George and the Russian envoy, M. Krassin, on the subject of the renewal of commercial relations. The British policy aimed at the three following results: (1) The exchange of British merchandise for gold and the importation of raw materials into England; (2) the turning of the Bolsheviks away from their projects in Persia, Turkestan and India; (3) the appeasement of the working class in England by a more or less complete recognition of the Bolshevik government. In all quarters hostile to this policy and particularly in that large part

of the press which had favored intervention in Russia and the support of every anti-Bolshevik leader, whether or not an adherent to the old régime, the policy of renewing the attempt of restoration of trade with Russia was attacked and ridiculed. Toward the end of the year, the Liberal and Labor party element in England attacked the government for its delay in coming to an agreement with the Soviets, but made an exception of Lloyd George, who they believed was trying to restore trade relations. It was hinted that a general strike would result if this policy was delayed. Committees had been formed during the summer, when Krassin was negotiating with the British government, and it was proposed that they should take measures to organize a strike. Lloyd George announced the policy of an Anglo-Bolshevik accord in December and there was much rejoicing in Labor quarters. It was believed that although in principle it only renewed trade relations it involved political reconciliation as well. The government had at that time not declared its opinion on the subject of the Russian debts. It was pointed out by financiers that if trade relations were renewed a loan to Russia would logically follow, because the Russians could not export merchandise without purchases and they lacked the money for this purpose. For the present there was perhaps enough Russian gold to begin the purchase of goods abroad, but this supply would soon be exhausted and then the European or American exporters would bring pressure to bear that loans be made to Russia in order to guarantee payment. The security for such loans would be a mortgage on Russian wealth and Russian territory, and the result would be the partition of Russian property among the foreign creditors. The decision to renew relations with Russia, reached after long delays and in the face of violent opposition and many difficulties, was among the most important event in international politics during the year.

LABOR AND BOLSHEVISM. A message was sent from Lenin to the workers of England May 30th, in which he renewed his previous accusation that England in spite of the Russian peace proposals was continuing her intervention in Russia by giving aid to Wrangel in the Crimea and to the White Guards in Poland. He declared that every educated person knew even before the revolution that the Czar had secret treaties with the robber governments of England, France, United States, Italy and Japan, for the distribution of booty at the expense of Constantinople, Galicia, Armenia, Syria, etc. He urged the formation in England of a Communist party to educate the working masses, saying that there was no danger that there would be too many Communists in England for at present they were practically non-existent there. He said that the persons who were really guilty of terrorism were not the Red forces but the Liberals of England and their allies who were conducting the White Terror in Finland, Hungary, India, and Ireland, and who had and were still supporting chiefs like Judenitch, Kolchak, Denikin, Pilsudski and Wrangel. The above message was brought back to England by two members of the Labor delegation on their return from Russia. These delegates declared that there was actual terrorism in Russia and that the Bolshevik leaders had said that force would be used so long as there was the possibility of a counter-revolution,

and so long as the Polish war continued. The general opinion of the delegates was that while the ideals of the Bolsheviks were good they were not practicable. As to liberty, the individual did not have as much industrial freedom in Russia as in England, but they believed that if Russia had peace and if trade relations were resumed, the country would become rich in a short time and that the leaders had shown a capacity for extending production. In August scattered groups of radicals formed a "National Communist Party," believing in the dictatorship of the working class, the Soviet system, and the Third (Moscow) International. Comments of the conservative press were to the fact that the leaders were little known and at that the membership did not exceed 5125. See SOCIALISM.

LORD GREY ON THE AMERICAN ATTITUDE. There was much discussion at the beginning of the year of Lord Grey's expression of views on the subject of the American attitude toward the Treaty. He expressed them not as an ambassador but as a private individual. He said that charges of bad faith or repudiation could not be justly brought against the United States or against the Senate on account of the failure to ratify the Treaty. Nor did he think that the United States could fairly be taxed with an undue regard for self-interest. The tradition of the United States was against all entanglements in European affairs. A possible conflict between the executive and the legislature was involved in the nature of the American constitution. He did not believe that the people wished to withdraw their influence from world affairs. While he thought the difficulties and dangers which Americans predicted as a result of the League of Nations would probably never arise, he at the same time believed their fear of them was sincere. As to the reservations he did not think that they weakened or injured the League in the manner that certain persons apprehended. See UNITED STATES AND WAR OF THE NATIONS.

ENGLAND AND FRANCE. In England the various attacks in the French press led in moderate quarters to an admission that in certain respects France had reason to complain of British foreign policy, but she certainly ought not to blame the British people. It was unfortunate that so many French writers saw fit to attack England and especially her prime minister at the very moment when the British were making great efforts to come to the aid of the people in the devastated regions of France. It certainly seemed impolitic to sow the seeds of enmity at such a time. A rupture between France and England at this moment would be an act of insanity and would surely play into the hands of Germany. There were vast numbers of people in England who would make any sacrifice for the sake of uniting the two nations. A great deal of the British comment confined itself to generalities such as these. In an interview on November 20th, Lloyd George condemned the quarrel-makers in both countries and defended the British position in respect to the reparations. He said that France and England were not at odds in this matter and would certainly stand together, but that there were everywhere people who tried to stir up strife. He did not believe that they would succeed. The question of reparations he admitted was an essential point for France, but it was of equal importance to England, for it was evident that the more France received, the

more England would receive also. The policy to pursue was very simple. It consisted merely in making Germany pay all that she could. The question was how much she was able to pay. England believed that the amount ought to be definitely fixed. To say that in so thinking she was moved by sympathy for Germany was absurd. It was obviously necessary for a debtor to know how much he was in debt and it was certainly not in the debtor's interests alone that he should have this knowledge; but of course the debtor's own statement of his account was not to be the final authority. The Powers must estimate his capacities and fix the amount due. The important thing was just that—the fixing of the amount—and as soon as it was done Great Britain would be firmly united to France in pressing the demand for payment. "I think I have," continued he, "shown by acts and not by words alone my great friendship for the French democracy. We have fought and gained the victory together and we must not renounce in times of peace the accord which for a long time has been dear to my heart. On the other hand, the French must not consider me an enemy simply because I speak like a man of business and a realist. Friends must always speak to each other frankly and support the method which is best for their common interest." See WAR OF THE NATIONS.

ANGLO-EGYPTIAN RELATIONS. In the autumn it was still a question how far the British government would go toward meeting the demands of Egypt for her entire independence. Negotiations between the Egyptian delegates and Lord Milner's mission resulted in an agreement on certain points in a programme bestowing on Egypt a modified independence. Some of the Egyptian delegates who had been conferring in London returned to Egypt apparently to secure the approval of this policy. The main points in it according to the London *Times* were: The recognition by Egypt of the privileged position of Great Britain on the Nile; Egyptian consent in case of war to give the British all facilities of approach in Egyptian territory; maintenance by Great Britain of a garrison in Egypt in the canal zone; bestowal on Egypt of freedom in her foreign relations provided she abstained from the formation of treaties contrary to British policy; suppression of the capitulations, the control of legislation affecting foreigners to devolve on a British high commissioner. The Egyptian view of this matter was thus set forth by the Egyptian Nationalists and their sympathizers in the French press. In the first place there was the important omission of the Sudan from the proposed arrangement. It was recalled that in 1899 Great Britain had imposed on the Khedive a convention, that had never been ratified by Turkey, whereby the Khedive ceded to England part of the rights that he possessed over the Sudan, forming it into a sort of condominium of England and Egypt. But a series of decrees forbade the Khedives to abrogate rights granted to Egypt by the Turkish government or to alienate any part of Egyptian territory. Later Turkey signed the treaty in which she renounced all rights over Egypt, but it was pointed out that this Anglo-Egyptian agreement formed without regard to the legitimate rights of Egypt had no standing from the point of view of either national Egyptian or international law. During the Anglo-French dispute over Fashoda, England had rec-

ognized expressly that the Sudan was a genuine possession of Egypt and by virtue of that interpretation France was obliged to evacuate Fashoda, thus herself recognizing that Sudan was a part of Egypt. From an economic point of view Egypt could not dispense with the Sudan, for whoever was the master of the Upper Nile controlled also the Lower Nile, that is to say, Egypt. The neutrality of the Suez Canal was guaranteed by the convention of Oct. 29, 1888, which entrusted to Egypt the duty of keeping the route open in the interest of international commerce. As to the canal zone the Egyptian delegates had declared that they were ready to recognize the neutrality of the canal under the League of Nations, which solution would be to the interest of all the Powers. As to the right of access to Egypt in case of war, that also might threaten the neutrality and security of the canal as well as the legitimate rights of all the Powers who had a direct interest in the free navigation of the canal. It was pointed out also that the presence of an English army on Egyptian territory might make Egypt the battleground of conflicts in which she had no interest. The limitation of Egypt's right to make treaties was again a serious restriction. The condition imposed, namely, that all treaties must be in accord with British interest, would handicap Egypt in her economic development if it were to her interest to form agreements with England's commercial competitors. It was moreover an attack upon the sovereignty of Egypt in that she would not be independent in regard to her foreign policies but would have to secure English consent in advance to any agreement that she wished to make with a foreign state. The Egyptians were opposed to placing the control over legislation affecting foreigners in the hands of a British high commissioner. Such a control would also impair the sovereignty of Egypt.

The above comments are from French sources and illustrate the spirit of French criticism of British foreign policies throughout the year. In general the French critics sided with the party opposed to the British government's foreign policies wherever dissension showed itself. The general tendency of all French writers was to accuse on every possible occasion the British government of self-seeking and disregard for the rights of others. This was in accordance with a widespread belief that Great Britain was getting the lion's share for herself after the war. For discussion of this and other matters relating to foreign affairs, see **WAR OF THE NATIONS**.

THE ARMISTICE CELEBRATION. An impressive feature of the Armistice celebration was the burial of an unknown soldier in Westminster Abbey. A similar ceremony took place in France (q.v.), where an unknown soldier was buried at the Arc de Triomphe. In the English ceremonies the body was brought on a gun carriage to Whitehall in the presence of the generals, admirals, higher clergy as well as the representatives of the throne, the prime minister and his cabinet.

THE PRINCE'S TOUR. A long and successful voyage was made by the Prince of Wales during the year, in the course of which he visited Australia and New Zealand, and was everywhere received by marks of great enthusiasm. On account of his fatigue he was unable to carry out the plan of paying a visit to India in the winter

of 1920 in honor of the new era to be brought in by the reform measures of the government. Toward the close of the year the Duke of Connaught was appointed to take his place and set out for Madras.

GREAT LAKES. See **DOCKS AND HARBORS**.

GREECE. A kingdom in the southeast of Europe between the Ægean and the Ionian seas, consisting of the lower part of the Balkan peninsula, the island of Crete, and the new territories acquired after the Balkan wars. The mainland is nearly cut in two by the gulfs of Patras and Lepanto on the west and the Gulf of Ægina on the east. In addition to the continental portion there are the archipelago of the Ægean Sea and the Ionian islands. Capital, Athens.

AREA AND POPULATION. Before the Balkan wars the area was given at 25,014 square miles with a population in 1907 of 2,643,109. The area of the new territories, comprising Macedonia, Epirus, the Ægean islands and the island of Crete, etc., was placed at 16,919 square miles, giving a total in 1913 of 41,933. The population of the new territories according to the provisional census of 1913 was 2,101,616. The total population was estimated in 1914 at 4,821,300. With the consent of the Allied Powers, Greece occupied North Epirus, taking formal possession in March, 1916. The population of that region was placed at about 250,000. After the war Greece also occupied with the consent of the Powers a part of western Thrace which had been held by Bulgaria and the larger part of the former Turkish province of Aidin in Asia Minor, having for its principal town Smyrna. Athens, the capital and principal city of Greece proper had a population in 1907 of 167,479. The largest cities of the new territories and of those occupied in 1920 were with their populations in 1915: Saloniki, 157,889; Korytza (in North Epirus), about 40,000; Candia, 25,185; Canea, 24,399; Cavalla, 23,378. The population of Athens and the Piræus was placed in 1919 at about 300,000 and in that year the population of Saloniki was reported to have increased to about 250,000. The majority of the inhabitants are Greek Orthodox. Education is compulsory between the ages of six and 12 years, but the law is not well enforced and illiteracy prevails. The primary schools in 1917-18 numbered 6799 with 476,695 pupils and 8641 teachers. There were besides, 76 high schools and 425 middle schools with 55,408 pupils. At Athens are the two universities, the National University and the Capodistria University.

PRODUCTION AND INDUSTRY. The interests are mainly agricultural. About one-fifth of the land is cultivable. The forests have steadily diminished but recently great efforts have been made to restore them. The land is mainly in the hands of peasant proprietors and farmers under the metayer system, though there are a few large proprietors. The chief cereals are wheat, barley, corn, rye, and mezzlin, but the most important crop is that of currants which covers an extremely large area. The yield of currants in 1919 was 145,000 tons. Next in importance are olives. The olive production in 1918 was 31,702,800 gallons. Tobacco in 1919 yielded 57,198,485 pounds; nuts in 1919, 4,486,185 pounds; wine in 1918, 10,566,800 gallons. The other important industries are the fig industry, oranges, mandarines, and lemons. The minerals worked include: Magnesite, iron, lead, emery, nickel, zinc, copper,

manganese, aluminum, antimony, tin, cobalt, lignite, salt, etc. See AGRICULTURE.

COMMERCE. The following table supplied by the United States Bureau of Foreign and Domestic Commerce in 1920, shows, by countries, the value of imports into and exports from Greece during 1914, 1917, and 1918 (1918 is the latest period for which statistics are available):

Greece and Turkey. It was composed in 1920 of representatives of Great Britain, France, Italy, and Russia. The revenues from the sale of salt, kerosene, matches, playing cards, cigarette paper, tobacco, stamped paper, emery from Naxos, the customs receipts at certain ports, and certain surtaxes on tobacco were placed under the control of this commission, which supervised the pay-

Exports to the United States in 1919 were valued at 30,191,304 drachmas as against 18,479,763 in 1918. Of these the chief item continued to be tobacco leaf—22,681,873 drachmas in 1919 and 17,295,451 in 1918. The figures for the period under consideration exceeded those of any year since the establishment of commercial relations between the two countries. The principal items showing gains were currants, figs, furs, gum mastic, aromatic herbs, marble, olive oil, opium, skins, sponges, tartrate of lime, and wool. Olive-oil shipments to the United States began again with the removal of the prohibition against exportation existing in 1918.

FINANCE. The following information in regard to the finances, shipping, etc., was supplied by the United States Bureau of Foreign and Domestic Commerce: During the war three elements, among others, gave the Greek drachma a strong position on the changes of the world—the presence of large Allied armies, with the consequent expenditures of large sums for local and immediate needs, the earnings of the Greek merchant marine (in great part under requisition to Allied governments), and the sums sent into Greece by Greeks residing in the United States. Against these favorable elements in the exchange situation must be noted the inability in 1919 to realize credits held in certain countries, the depletion in some measure through the rush to buy articles of luxury in America and Europe, of which the country had been long deprived, the restrictions on exchange transactions imposed by the government, which latter induced many holders of foreign exchange to retain their capital abroad for trading purposes, etc. The general result of these unfavorable elements was gradually to impair the strong position held by the drachma, which toward the end of 1919 began to show evidences of weakness in comparison to the dollar, with which it had been successfully maintained theretofore. The full effect of this, however, was not seen until the early spring of 1920. The drachma as valued in United States currency stood at 5.19% cents in June, 1919, and at 8.0612 in June, 1920.

The International Financial Commission was established in 1898, following the war between

Greece and Turkey. The receipts for 1919 exceeded those of any previous year in the life of the commission and are almost double those of 1914. The receipts of 1914, 1918, and 1919 were as follows: 1914, 82,209,932 drachmas; 1918, 90,138,297 drachmas; 1919, 158,039,887 drachmas. The gains registered for the 12-month period were marked in the receipts from the various customhouses of the kingdom; this was naturally reflected in sales of stamped paper entering into commercial and other transactions. Matches, salt, and kerosene, as articles of prime necessity, the sale of which was particularly hampered during the war as a result of difficulties of transportation and communication, showed satisfactory gains over 1918. The moratorium continued in effect during 1919 with a tendency toward a modification of some of its features, notably in the matter of rents.

COMMUNICATIONS. On Jan. 1, 1920, the Greek mercantile fleet was composed of 228 steamers of 430,237 tons. At the same time 754 sailing vessels, of a combined tonnage of 108,218 tons, flew the Greek flag. To these figures should be added 214 small craft on the Danube, some 94 smaller boats at Galatz, and about 29 tugboats at Constantinople. The Greek mercantile fleet of steamers was largely divided among seven companies. A number of vessels were owned by individuals or unincorporated groups.

During the year 1918 all rail and water lines were under the control of the government; this control continued over the railway lines and was expected to lead to the ultimate taking over of all independent companies by the federal authorities. Those navigation companies which lost ships during the war and other ship-owners who gained handsome profits as a result of operations of the past few years were active buyers of ships in 1919-20.

During 1919 American vessels arriving at Piraeus numbered 37, of a combined carrying capacity of 123,305 tons. Cargoes consisted of salt, coffee, coal, flour, sugar, and frozen meat from Canada. There were also a number of general cargoes. But three ships with a tonnage of 6283 flying the American flag arrived in 1918.

DEFENSE. The approximate strength of the

army at the beginning of 1920 was 200,000 men. Demobilization had not yet been completed on account of the large number of troops engaged in the operations in Asia Minor. The army constituted 12 divisions, the average strength of each being 12,000. The number of vessels in the navy were two warships of 13,000 tons each, one of 10,118, three of 5000 each, and one of 2600 tons, and there were also 13 destroyers, and a number of torpedo boats, two submarines, and miscellaneous craft.

GOVERNMENT. The executive power is in the hands of the King, who acts through a responsible ministry. Legislative power is in the Boule, and in the Council of State. The former comprises 316 deputies, including those from the new territories. The ministry at the beginning of 1920 was as follows: Premier, E. K. Venizelos; Vice-President of the Ministerial Council and Minister of Marine, E. Repoulis; Minister of War, M. Grivas; Minister of Foreign Affairs, N. Politis; Minister of the Interior, M. Raktivand; Minister of Finance, M. Negropontis; Minister of Justice, J. Tsirimocos; Minister of Food Supplies, P. Bourloulmis; Minister of Education, D. Dingas; Minister of Agriculture, G. Kafastaris; Minister for Refugees, S. Simos; Minister of Communications, A. Papanastasiou; Minister of National Economy, K. Spyridis; and Ministers without portfolio, A. Michalacopoulos and M. Sterghiadis.

HISTORY

OPPOSITION TO VENIZELOS. To what extent the power of Venizelos rested upon the consent of the people was not definitely known, but it had been hoped by the Allied Powers that it was firmly based. He had acted steadily in concert with the Allies during the war and afterwards. As to his own country he had secured through the peace great advantages in respect to territory. On the other hand he was successful in carrying out the requests of the Allies in Asia Minor. He established Greek authority firmly in Smyrna and the surrounding territory, driving out the Turkish Nationalists and preparing the way for the signature of the Treaty of Sèvres, and he acquired for his country the sovereignty over the Turkish portion of Thrace. The policy of Venizelos down to the spring of 1915 seemed to have the full approval of the people. At that time they were beginning to question the attitude of the King who in spite of his record in the Balkan wars of 1912-13 was losing some of his popularity. He seemed to repudiate the principles on which those wars had been waged. When the late war began his policy consisted in benevolent neutrality toward Serbia, and therefore toward the Allies, and the government declared that if Bulgaria attacked Serbia, Greece would take part in the war against Bulgaria. Another feature of his policy was a careful watch lest any Balkan nation should secure territory at the expense of Greece, and finally after Turkey entered the war, an attempt to obtain possession of Thrace, the Aegean islands, and the coast of Asia Minor. In this policy Constantine and his Prime Minister, Venizelos, had been in accord, but Constantine believed that the Germans would win the war, while Venizelos had a profound faith in the ultimate success of the Allies. The course subsequently followed by Venizelos led to a great loss of life and treasure and the question arose after the war whether Greece would not have been better off if she had followed the policy

of neutrality favored by Constantine throughout.

Under Venizelos there had been a strict repression of all elements favorable to Constantine, even though they had been loyal to the government throughout the war. Many officers and soldiers had been driven into exile. The censorship of the press concealed these incidents, but when in the summer of 1920 the censorship was lifted, knowledge of them was spread abroad. Venizelos was generally condemned by his opponents for ambition and for subserviency to England and France. The government was accused of lavish expenditures in its foreign policy. It was found that the crops could not be gathered because of the absence of able-bodied men who had been called to the front and who according to the critics were fighting the battles of England and France. An active propaganda was carried on to spread these views and from its headquarters at Lucerne, Switzerland, the campaign was ably conducted.

Meanwhile the government of Venizelos was being carried on by an assembly which had been elected on May 31, 1915. This assembly had been dissolved by Constantine six months afterwards, but was called by King Alexander after his father's expulsion. This was naturally an embarrassment. The critics did not refer to the unconstitutionality of recalling this assembly but they dwelt on various unconstitutional acts of Venizelos. They characterized as unconstitutional his invitation to the Allies to occupy Greek territory at Saloniki. They called his setting up a provincial government in Crete an act of treason, and they condemned him for assuming power after the expulsion of Constantine. At the time of the expulsion, the French High Commissioner wrote to King Constantine's Prime Minister, M. Zaimis, a letter calling upon the King to abdicate. In this he said that the King had openly violated the constitution and had lost the confidence of the protecting Powers and that he had therefore been authorized to demand the King's abdication. To this the Prime Minister replied that the King had decided to leave the country and had appointed as his successor, Prince Alexander. According to the papers issued from Lucerne afterwards, the King had been dethroned against the will of 90 per cent of the people who would have fought for him had he called upon them to do so. It was further said that the Greeks had suffered needlessly and to a terrible extent. The King's supporters appealed to the principle of President Wilson that every country should determine its own destiny as giving the Greeks the right to say whether or not they wanted King Constantine. In short, the situation was represented by the partisans of Constantine as one artificially forced upon Greece by the policy of the Allies during the war.

There were many discontented persons who joined the opposition on account of alleged maladministration during the frequent absences of Venizelos at Paris and London. While Venizelos blamed his ministers for the wholesale arrests and other arbitrary acts he himself was held to account for them. Along with the supporters of Constantine, there was a large number of pro-Germans and Socialists. Many were less desirous of the return of Constantine than of the overthrow of Venizelos. These included all who were opposed to the republican system, for the establishment of republican gov-

RULERS AND STATESMEN PROMINENT IN GREECE DURING 1920

201

ernment was the ultimate aim of Venizelos, although he did not believe that the country was at that moment ready for it.

THE ELECTIONS. In the November elections the main issue was the policy pursued by Venizelos during and since the war, especially the expulsion of King Constantine. The former Prime Minister, Gounaris, had accepted the challenge of the Liberal followers of Venizelos and agreed that the election would serve as a popular referendum on this issue. The results as announced on November 15th were entirely favorable to the opposition including the personal defeat of Prime Minister Venizelos in his own constituency. No serious disorders were reported during the election contests.

CABINET CRISIS. On November 16th, the Venizelos cabinet resigned on account of the victory of the opposition in the elections. All but two of the ministers had been beaten in the elections and the returns published at that time gave 250 Royalists to 118 supporters of Venizelos. This was followed by reports of an impending revolution and by lamentations in France and England over the probable return of ex-King Constantine. A new cabinet was now formed under the former Premier, M. George Rhallis. The new Prime Minister took his oath of office in the presence of Admiral Coundouriotis who was acting as regent. In addition to the Prime Minister who also held the portfolio of Foreign Affairs and Justice, the Ministry comprised the following: M. Boldris, Minister of the Interior; M. Nicolas Kalogeropoulos, Minister of Finance and Provisions; M. Demetrios Gounaris, Minister of War; M. John Rhallis, Minister of Marine; M. Theodore Zaimis, Minister of Education and Pensions; M. Petro Mauromeghali, Minister of Economy and Agriculture. Thereupon the regent resigned and it was arranged that the other members of the cabinet were to take their oath before the Queen Mother, Olga. Out of the 369 Deputies elected 287 were reported to be loyal to the King. In spite of the opposition to a continuance of the forward policy of Venizelos it was reported on November 21st, that the cabinet had decided to go on with it and it was expected that Greek troops in Asia Minor would shortly begin a new offensive.

RECALL OF KING CONSTANTINE. It was learned on November 17th, that ex-King Constantine refused to go to Athens as the head of any one political party, but insisted on a plebiscite before he would return himself or permit any one of his sons to do so. The plebiscite was held, December 5. According to the preliminary returns, it gave a large majority in favor of the return of the former king. The voting did not occasion any disorder, but it appeared not to be taken seriously since it seemed a foregone conclusion that the decision would be in favor of the recall. According to the press reports only royalists voted in certain parts of the country. The meeting of Parliament was postponed for a month. It was reported that new elections would shortly be held in order to secure the King a larger majority in the Chamber, where at present there were 120 votes against him.

King Constantine reached Athens, December 19, and was received by vast crowds with great enthusiasm. Meanwhile France had withdrawn her representative and it was reported that England had instructed hers to have no official relations with Constantine.

ALLIED GOVERNMENTS AND THE KING. The Supreme Council of the Allies at London on December 3d announced to the public that all financial support would be withdrawn from Greece if Constantine were returned to the throne and that the Allied Powers would consider the question of the territorial reprisals. The conference also decided to protest internationally against the issue by the Greek government of 200,000,000 drachmae in currency in spite of the objection of the Allies. At this time the treaty of Sevres had not been ratified and the Allies therefore had the power to revise it, so far as Greece was concerned. They could if they chose change completely the status of Smyrna. According to the view of certain French groups, Smyrna would be safer in the hands of the Turks than the hands of Constantine. On the other hand certain British authorities believed that Constantine who had promised that he would pursue the policy of Venizelos in regard to the acquisitions of Greece would carry on an effective campaign, being himself a successful commander. The question was complicated further by the fact that the Greeks in the recent elections had given evidence that they had tired of the policy of foreign expansion and were unwilling to fight for their claims in Asia Minor.

Meanwhile, Venizelos left Athens for Nice on board a Greek yacht, escorted by a British cruiser and two British destroyers. The news of the Greek situation caused much anxiety in official circles in France and according to the newspaper correspondents, the French were beginning to plan a change in their Near Eastern policy. Instead of holding off from any arrangement with the Turks it was now proposed that overtures should be made to the Turkish Nationalists. There had been much talk in Paris of the failure of the Greek expedition into Asia Minor which had never been highly approved, being regarded as an Anglo-Greek arrangement. It had no success in checking the National Turkish movement and rumors were circulating that there was serious demoralization in the Greek forces on account of the conflicts between the supporters of Venizelos and the supporters of the ex-King Constantine. There had also been rumors of mutinies arising from the desire of the men to return home. There was talk in France about reducing the area occupied by the Greeks. An article in the *Temps* declared that the best thing to do was to negotiate with the Nationalists. This would necessarily involve the rejection of the Turkish treaty. Such a policy was said to be the best for French interests and justified in the circumstances. The French view of the situation in Greece was that the former Allies of Greece in general and the protecting Powers in particular had uncontested rights in the matter and that if the Greek people were free to recall a ruler that pleased them, England and France were equally free to refuse diplomatic recognition to one whom they did not think worthy of their confidence. At first it had even been argued by French writers that the return of King Constantine ought to be forbidden.

THRACE. In the autumn, Eastern Thrace was still under Greek military control, the officers having their headquarters at Adrianople. Western Thrace with its capital at Gumoldjina was under a governor-general, and was still engaged in organizing the civil government. Efforts were being made by the military in the eastern divi-

sion to win over the 25,000 Bulgars to the support of the Greek government, and to come to an arrangement in respect to religious administration that was satisfactory to the 57,000 Turks of the region. See *ARCHÆOLOGY*.

GREELEY, EDWIN SENECA. Banker and Civil War veteran, died January 10. He was born at Nashua, N. H., May 20, 1832, and worked at the trade of locomotive building in his youth. Entering the Civil War he served with distinction and was made brigadier-general of volunteers, March 13, 1865. After the war he worked for 20 years in an electric and railway supply company which became E. S. Greeley and Company, and lasted until 1897. After that he was engaged in banking in New Haven, Conn. He was a member of many important social and educational institutions.

GREEN, JAMES MONROE. Educator, died, November 1. He was born in New Jersey, Aug. 29, 1851; and was educated at the New Jersey Normal School and at Dickinson College. He was principal of New Jersey normal schools and president of the State Teachers' Association. In 1889 he proposed the method of approving high schools, which was adopted by the State. In 1910-11 he was president of the Association of Colleges and Preparatory Schools of the Middle States. From 1899 to 1917 he was principal of New Jersey State Normal and Model Schools.

GREENAWALT, ELMER ELLSWORTH. Immigration Commissioner, died March 8. He was born at Lancaster County, Pa., June 1, 1862. After working as a cigar-maker until 1886 he devoted himself to the organization of trades unions and became the editor of the *Labor Leader* at Lancaster, Pa., continuing in that work for 23 years. He represented the organizations of Labor at the State capital, and also before Congress, during 15 years, and was president of the Pennsylvania Federation of Labor, 1902-12. On May 1, 1914, he was made Commissioner of Immigration at the port of Philadelphia.

GREENLAND. Next to the island continent Australia, the largest island in the world, with an area variously estimated at from 826,000 square miles to 849,429 square miles. It is for the most part uninhabited and the settled portion constitutes a colony belonging to Denmark the area of which is given variously at from 34,015 square miles to 46,740 square miles. Population in 1911, 13,449. The largest settlement is the city of Sydproven with a population in 1911 of 789, and the smallest Skansen with a population of only 46. The trade with the colony is a monopoly of the Danish government and is largely in seals, seal skins, fish, oil, and blue fox skins. The head of the administration is a director who resides at Copenhagen.

GREGORY, STEPHEN STRONG. Former president of the American Bar Association, died in Chicago, Ill., October 24. He was born at Unadilla, N. Y., Nov. 16, 1849; removed to Madison, Wis., 1858, and graduated at the University of Wisconsin, 1870. He then practiced law at Madison and subsequently at Chicago where he was counsel in many important cases. Along with John P. Wilson, he successfully defended the law which created the sanitary district of Chicago. He was also a lawyer for the defense in the celebrated murder case of Prendergast and in the Debs conspiracy trial. He was for a short time special counsel for the Federal Trade Commission and in 1917 was appointed war commis-

sioner of the Chicago Bar Association. In 1911 he was elected president of the American Bar Association. In politics he was a Democrat.

GRENADA. One of the Windward Islands in the West Indies belonging to Great Britain. Area, 133 square miles. The colony includes one-half of the Grenadine Islands, the other half being under the administration of St. Vincent. Population, estimated Dec. 31, 1918, at 73,881. The capital and chief town is St. George's, with a population of 4916, mainly negroes. In 1918 there were 59 government or government-aided elementary schools with an enrollment of 9845 pupils. The chief products are spices and cocoa, which are also the chief exports. Other imports in order of their importance in 1919 were cotton, manufactures, flour, dried and salted fish, and various foodstuffs. Revenue in 1918-19 was £110,116 and expenditures £107,981. The public debt in 1919 was £192,180. The total shipping entered in 1918 was 260,268 tons. Governor and commander-in-chief, resident at St. George's, Sir G. D. Haddon-Smith.

GRENADINES. See *GRENADA* and *ST. VINCENT*.

GRIFFES, CHARLES TOMLINSON. American composer, died in New York, April 8. He was born in Elmira, N. Y., Sept. 17, 1884. Having received his first instruction in his native town, he spent four years in Berlin, studying under Jedliczka, Klatte, Rüfer, and Humperdinck. After his return to America he was in charge of the department of music at the Hackley School in Tarrytown, N. Y. His name did not become widely known until shortly before his death, when the performance of his symphonic poem, *The Pleasure-Dome of Kubla Khan*, by the Boston Symphony Orchestra attracted general attention. His premature death deprived America of a composer who held out unusual promise. His other works are *The Kairn of Koridwen*, a dance-drama in two scenes; *Schojo*, a Japanese mime-play; two pieces for string-quartet; three poems of Fiona MacLeod for soprano and orchestra; a sonata in F for piano; minor pieces for piano, and songs.

GRIFFITH, Sir SAMUEL WALKER. Australian official, died August 9. He was born, June 21, 1845, and educated at the University of Sydney. In 1874-78 he was attorney-general of Queensland, and he was Prime Minister in 1883-88, 1890-93. From 1893 to 1903 he was Chief Justice of Queensland and Lieutenant-Governor from 1889 to 1903. He translated Dante's *Divine Comedy* and published *The Queensland Criminal Code*.

GROVES, CHARLES EDWARD. British chemist, died, February 1. He had been vice-president of the London Chemical Society from 1899 to 1902 and before that was for many years the editor of the Society's *Journal*. He was born in 1841. He left a bequest to the Royal Institute for the promotion of scientific research.

GRUBICY, VITTORE. See *PAINTING AND SCULPTURE*.

GUADELOUPE. A French colony in the Lesser Antilles, consisting of two islands separated by a narrow channel, with a combined area of 722 square miles, and having five dependencies of smaller islands, whose area is 688 square miles. Population as estimated unofficially in 1919 was 213,229. Capital, Basse Terre, with a population of 8656. The chief city is Pointe-à-Pitre (population, 22,664), with an excellent

harbor. The chief products are coffee, sugar, vanilla, cacao, and rum. Two steam navigation companies maintain direct communication with France and there is a wireless station at Destrelan. It is locally administered under a governor and an elected council. It sends to the French Legislature one Senator and two Deputies.

GUAM. An island belonging to the United States, situated in the Pacific Ocean between 13° 13' and 13° 39' north latitude and 144° 37' and 144° 58' east longitude. Area, estimated at 225 square miles; population in 1920, 14,724, of whom 548 were foreign residents and 478 were at the Naval station. The pupils of school age in 1920 numbered 1894 of whom 1769 were in daily attendance. The imports in 1920 amounted to \$408,264 and the exports to \$34,133. The leading imports were foodstuffs, cotton tissues, cigars and tobacco, refined sugar, and refined petroleum. The revenue amounted to \$155,836 and the expenditures to \$137,206 for the fiscal year ending June 30, 1920. The estimate of revenue for the fiscal year 1921 was \$175,725. Governor in 1920, Capt. William W. Gilmer.

GUATEMALA. A Central American republic in the western part of Central America, extending from the Caribbean Sea to the Pacific Ocean. Capital, Guatemala City. Area, estimated at from 43,641 square miles to 48,290 square miles, the estimates diverging on account of boundary disputes; population, estimated unofficially, Dec. 31, 1917, at 2,123,091, of whom about 61.5 per cent were Indians, the larger portion of the remainder being mestizos. Guatemala City had a population variously estimated at from 90,000 to over 100,000. It was in large part destroyed by one of the most violent earthquakes ever known in Central American history, which began in November, 1917, and lasted into the early months of 1918, but the city was being rebuilt in 1920. Other towns are: Coban (30,770); Quezaltenango (28,940); Totonicapan (28,310). The movement of population during the year ending March 1, 1920, was as follows: Births, 69,758; deaths, 63,790; marriages, 3799.

EDUCATION. Primary instruction is free and compulsory between the ages of six and fourteen. No later statistics were available than those given in the preceding YEAR BOOK, which showed 1942 government schools with an attendance of 54,745. The institutions of higher learning include the University of Guatemala, opened in 1918; the Normal Central Institute; a school of handicraft for women; a conservatory of music; a school of art; and schools of commerce, law, medicine, pharmacy and dentistry. Measures for the extension of public instruction were taken in the course of the year, including the establishment of a night school for workmen, a school for native Indians, and the opening of new elementary schools.

PRODUCTION. The soil is very fertile, yielding tropical and sub-tropical products. Along the seacoast and further inland large banana plantations cover thousands of acres, and the country raises for its own and other foreign consumption about 10,000,000 bunches of bananas a year. The valley of the Motagua River is considered one of the most densely vegetated regions in the world. The chief crop of the country, however, is coffee, which is raised for the most part on the slopes of the mountains, 1500 to 5000 feet above sea level. In 1919 the coffee crop was estimated approximately at 1,100,420 quintals (a quin-

tal=101.4 lbs.). The other crops in the order of their importance are platanos and bananas, maize, beans, rice, and potatoes. The forest area was placed at 1,316,482 acres and contains rich supplies of mahogany and dyewoods, most of which are exported to the United States. The production of ferro-chromium is important. During the fiscal year ending March 1, 1920, the mines of this mineral in the departments of Jalapa and Estrada Cabrera produced over 2,250,000 kilos, most of it coming from the former department.

COMMERCE. No later figures for commerce were available than those in the preceding YEAR BOOK, which showed that in 1919 foreign trade was distributed among the foreign countries in order of value as follows: United States, United Kingdom and Belize, France, Mexico, and Central America. The total imports for 1918 were \$8,991,573; exports \$11,319,000.

COMMUNICATIONS. The principal lines form a part of the international railway of Central America, and extend from Puerto Barrios to the city of Guatemala, 194½ miles, and thence to José on the Pacific Ocean, a distance of 74 miles. Various extensions were in process of construction or under consideration, including a survey for the new Eastern railway, to run from Santa Maria to El Patimar. The tonnage in 1919 of vessels entering the ports was 696,885 tons, of which 422,929 tons were American.

FINANCE. Revenue during the fiscal year ending March 1, 1920, was 127,249,489 pesos, an increase of 15,312,164 pesos; expenditure, 101,028,476 pesos. The following figures in detail in regard to receipts and expenditures were issued by the Secretary of the Treasury in 1920: Receipts: Customs revenues, 80,104,225 pesos; liquor taxes and government monopolies, 30,511,955; sundry revenues, 6,825,907; telegraph and telephone, 5,269,727; and postal receipts, 4,447,675. Expenditures: Department of home government and justice, 12,729,091; foreign relations, 619,062; treasury, 6,938,237; public credit, 452,491; fomento (promotion), 4,030,151; war, 22,848,920; public instruction, 6,530,222; exchange, 37,635,869; telegraph and telephones, 6,523,465; postal department, 8,489,115; other expenditures, 757,318.

GOVERNMENT. The executive power is vested in a president elected for six years and the legislative power in a national assembly and a council of state, the former consisting of representatives elected for four years by universal suffrage and the latter of thirteen members, a part of whom are elected by the national assembly, and a part appointed by the president. President in 1920, Don Carlos Herrera.

HISTORY. A revolt broke out on April 7 against the president, Estrada Cabrera, who was accused of ruling tyrannically, and of torturing, imprisoning and executing those who opposed him. He was overthrown on April 17th. the immediate issue being that of the Central American Union, to which he was opposed. Dr. Carlos Herrera was appointed provisional president in his place and the new government was recognized by the United States. On September 15, the new president took the oath of office before the National Assembly. The programme set forth among the aims of the administration the establishment of close and friendly relations with the United States and Mexico. A plan was under consideration for an international bridge over the

Suchiati River, to be built at the expense of the Guatemalan and Mexican railways. On November 1st., representatives from the municipalities of Costa Rica, Guatemala, Honduras, Nicaragua and Salvador met in Antigua and issued a proclamation advising the union of all five states under a single government for Central America. The unionists of Guatemala agreed in a meeting with those of Salvador upon resolutions favoring a single government to be presented at a new meeting of the representatives from the five states. Among the measures to be considered were wireless telegraph systems, customs tariffs, coinage, weights and measures, and coastwise trade. In October ex-president Estrada Cabrera was still in prison as a result of the revolution. On November 22nd he requested the intervention of the President of the United States on behalf of his release.

GUILLAUME, CHARLES EDOUARD. French physicist to whom was awarded the Nobel prize for physics in 1920. Many important discoveries especially in connection with alloys have been due to him. He was born about 1860, the son of a watchmaker, and he made his first important discovery in 1896 when he found an alloy that was of a more stable nature than platinum and which he called "invar" from its invariable quality. This transformed methods of measurement of geodesic bases and reduced the cost to 2 per cent of what it had been 20 years before. As a result of the employment of the new material it was possible to measure the Simplon in five days. This steel-nickel compound when the steel component amounted to 45 per cent equaled in expansive power the combination of platinum and glass. It was possible to employ it during the war in place of platinum for the soldering of the filaments of electric lights and to continue the manufacture of the bulbs after the stock of platinum had begun almost to disappear. He was a member of the Academy of Sciences at Stockholm, and of the French Institute, and an officer of the Legion of Honor.

GUINEY, LOUISE IMOGEN. American poetess and essayist, died at London, England, November 2. She was born at Boston, Mass., in 1861, and began to publish volumes of verse in 1884. In 1899 she published the *Martyr's Idyl and Shorter Poems*. She also wrote a number of volumes in prose, including a volume of essays in 1897, and a biography of Hurrell Froude (1904), and edited the works of Matthew Arnold and others.

GUISASOLA, VICTORIANO (MENENDEZ). See ROMAN CATHOLICS.

GULLAND, JOHN WILLIAM. British Liberal politician, died at Manchester, England, January 28. For some time past he was the chief Liberal whip in the Asquith ministry. He was born in Edinburgh in 1864, educated at the University of Edinburgh, and entered Parliament in 1906, serving for 12 years. From 1909 to 1915 he was the Junior Lord of the Treasury and Scottish whip and later became the chief government whip. In 1915-17 he was Joint Parliamentary Secretary to the Treasury. He went out with the rest of the Asquith cabinet. He was a radical in politics and a keen and uncompromising politician, but personally popular with members of all shades of opinion.

GUNTHER, CHARLES FREDERICK. Manufacturer, died, February 10. He was born in Germany March 6, 1837; came to the United

States in 1842 and after receiving a public school education became a cashier in a bank. He was the manufacturer of a celebrated confectionery, 1868-1915. He interested himself in the collection of relics, manuscripts, etc., and his collections of Washington and Lincoln relics were well known.

GUTHRIE, CHARLES JOHN, Lord. Scottish jurist, died, April 28. He was born at Edinburgh in 1849, educated at the University there, and admitted to the bar in 1875, acquiring a large practice. He was legal adviser of the Free Church of Scotland, 1881-1900, and of the United Free Church, 1900-02; president of the Royal Scottish Geographic Society, 1917. He wrote *John Knox and His House* (1898), and edited Knox's History of the Reformation in Scotland.

GYMNASTICS. The national Amateur Athletic Union championships and Olympic try-outs were held at New York City, July 22. The winners in the individual events were: horizontal bar, Curt Rottman, N. Y. Turn Verein; parallel bars, Joseph Oszy, N. Y. A. C.; side horse, Charles M. Cremer, N. Y. A. C.; flying rings, J. D. Gleason, Los Angeles A. C.; rope climb, Louis Weissman, 92d Street Y. M. H. A.; Indian club swinging, Ray Dutcher, N. Y. A. C.; tumbling, Arthur W. Nugent, Newark Turn Verein; all-around, Joseph Oszy, N. Y. A. C.

The United States Naval Academy won the intercollegiate championship, scoring 25½ points. The University of Pennsylvania was second with 13½ and Yale third with 11. Other scores were Princeton 6; Haverford 4; Massachusetts Tech. 3. Perry Potter of Yale won the all-around championship, J. S. Long of Haverford finishing second.

GYPSUM. About 2,430,000 short tons of crude gypsum were mined in the United States in 1919, an increase of 373,000 tons over the output of 1918, according to estimates of the United States Geological Survey. This increase was in striking contrast to a decrease in 1918 from 1917 amounting to 24 per cent. The following table shows the distribution by States:

CRUDE GYPSUM MINED IN THE UNITED STATES, 1918-19, IN SHORT TONS

State	1918	1919 (estimated)	Increase or decrease in quantity mined (per cent)
Iowa	827,927	482,000	+ 32
Kansas	54,958	78,060	+ 42
Michigan	286,768	339,000	+ 18
New York	531,038	573,000	+ 08
Ohio	199,456	254,000	+ 28
Oklahoma	126,208	120,000	- 05
Texas	157,888	176,000	+ 12
Wyoming	41,877	52,000	+ 24
Other states *	831,395	406,000	+ 23
	2,057,015	2,430,000	+ 18

* Includes Arizona, California, Colorado, Montana, New Mexico, Oregon, South Dakota, Utah, and Virginia.

HAITI. A West Indian republic occupying the western part of the Island of Haiti or Santo Domingo, but the other portion of the island constituting the Dominican Republic. Capital, Port au Prince. The area is estimated at 11,072 square miles; estimated population on the basis of the church registers in 1909 was 2,029,700; and the estimated population in 1912 was 2,500,000. The density was greater than that of any other Latin-American republic with the exception of Salvador. About 90 per cent of the population are negroes and the language spoken is

a dialect of French. Estimates of population of cities vary widely. The largest city is Port au Prince, the capital, with an estimated population in 1919 of 101,272 (other estimates 120,000). Other cities are Cap Haitien with an estimated population in 1919 of 18,952 but according to other estimates, 30,000; Gonaïves 30,000 (other estimates 8,000) and Cayes, 12,000 to 15,000; Port du Paix 5000 to 10,000.

PRODUCTION, COMMERCE, etc. Agriculture is the chief occupation and coffee is the most important product. Cocoa, cotton, tobacco, sugar and rum are produced in considerable quantities. The forests yield logwood and other valuable woods which are exported. The exports in 1916-17 amounted to \$7,220,289 and the imports to \$8,606,055. The chief exports were: Coffee, logwood, etc., cocoa, cotton, honey, hides, gum, etc. From Oct. 1, 1919, to June 30, 1920, the foreign trade of the republic amounted to 4,809,072 gourdes (par of gourde \$0.25, exchange rate approximately \$0.20) and \$4,430,340. The imports were valued at 4,809,072 gourdes and \$2,164,082; the exports, at \$2,055,850.

FINANCE. There is an inconvertible paper currency, the monetary unit being the gourde or dollar with a fluctuating value in the market. At the end of 1920 its market value in United States money was \$.25. The revenue is derived mainly from customs. The budget for 1918-19 balanced at \$3,999,646 currency gourdes. The report from the commission of public credits showed that the total national debt to date amounted to 180,182,187 gourdes, divided as follows: Consolidated debts, 96,466,191 gourdes; floating debt, 50,645,751 gourdes; and time loan, 33,070,245.

GOVERNMENT. The executive power is vested in a president, elected for four years by the legislature and the legislative power in a national assembly consisting of two chambers, namely, the Chamber of Communes and the Senate, members of the former being elected for three years by popular vote and of the latter for six years by popular vote. By the Haitian Treaty ratified by the National Assembly in November, 1915, and by the United States Senate in February 1916, the United States established a virtual protectorate over the republic. See preceding YEAR BOOKS. President in 1920, M. Sudre Dartiguenave. See the article UNITED STATES, paragraph on *Relations with Haiti*.

HAITOVITCH, ABRAHAM. SEE MUSIC, Artists, Instrumentalists.

HALE, SARAH J. British educator, died, April 20. She was well known in the course of a long career in the training of teachers and was principal of the training college for teachers at Edge Hill after 1890. Her earlier work was in the new training college of St. Katharine's where she began to teach in 1878. In 1885 she went to Newnham College, Cambridge. She was one of the committee appointed to inquire into the conditions of pupil teachers and their training, in 1903. She wrote on the teaching of infants and instruction in needlework.

HALL, ERNEST. Lawyer, died, February 9. He was born in London, England, Oct. 24, 1844; came to the United States and enlisted in the New York Volunteers in the Civil War; studied law at New York University and was a justice of the City Court, 1881-08. In 1902 he was made justice of the Supreme Court of New York. In politics he was a Republican.

HALL, HENRY. Newspaper correspondent, died, February 6. He was born in England; came to America in his childhood; and was educated in the common schools. He entered newspaper work in 1881 and was on the editorial staff of the *Pittsburgh Commercial Gazette*, 1884-5. In 1891 he became legislative correspondent for the *Pittsburgh Dispatch* and from 1893 to 1906 was Washington correspondent for the *Pittsburgh Times*. After 1907 he was correspondent for the *Pittsburgh Chronicle-Telegraph*. In 1887, 1889, 1901, he was a member of the Pennsylvania House of Representatives. In politics he was a Republican.

HAMILTON COLLEGE. A non-sectarian institution of the higher learning at Clinton, N. Y., founded in 1812. There were 318 students enrolled for the fall session of 1920. There were 28 members on the teaching staff, including one addition. The productive funds amounted to \$2,136,750. The income amounted to \$100,493. There were about 86,000 volumes in the library. President, Frederick C. Ferry, Ph.D., LL.D.

HAMPTON NORMAL AND AGRICULTURAL INSTITUTE. An institution for the education of negroes and American Indians, at Hampton, Va., founded in 1868. The enrollment for the summer school of 1920 was 447 and for the regular fall session, 891. The faculty numbered 117. The productive funds of the institution amounted to \$3,632,960 and the income from endowment fund amounted to \$222,950. The total income from all sources, including special gifts was \$422,875. There were 42,937 volumes in the library. President, Rev. James Edgar Gregg, D.D.

HAMSUN, KNUT. The Nobel Prize (q.v.) for literature which had been withheld since 1916, was awarded to Knut Hamsun, the date for the formal presentation being fixed at December 10. Hamsun was born in 1860 and in his youth turned his hand to many trades. A lecture tour that he undertook in this country having failed he worked for a time as a conductor on the street cars in Chicago. His writings which have been translated into many languages include: *Pan* (1894); *At the Gates of the Kingdom* (1895); *The Game of Life*; *Sunset Glow* (the three last named constituting a trilogy, all three dealing with the same central figure); *Vendt the Monk* (1903); *Children of the Time* (1913); *The Growth of the Soil* (1918); *The Shallow Soil*, and *Hunger*, one of his earlier books, published in the United States in 1920. After his unfortunate experience in America, he published a book called *The Spiritual Life in America*, commenting unfavorably on American characteristics.

HANLEY, J. FRANK. Former governor of Indiana and Prohibition candidate for the presidency, died, August 1. He was born at St. Joseph, Ill., April 4, 1863; educated in the public schools; admitted to the bar in 1889 and began the practice of law at Williamsport in the same year. He was member of Congress, 1895-97, and Governor of Indiana, 1905-09. In 1916 he was the nominee for the presidency of the United States on the Prohibition ticket. He afterwards returned to the practice of law at Indianapolis and also gave lecture tours. Among his other interests was journalism and he was editor-in-chief of the *National Enquirer*.

HARBORS. See DOCKS AND HARBORS.

HARDING, WARREN G. Republican candi-

date for President in 1920. He was born in Corsica, Morrow County, Ohio, Nov. 2, 1865, educated at the Ohio Central University, and began his career as a printer on a local paper in Marion, Ohio. He passed successfully through the stages of reporter, circulation manager, business manager, editor and publisher of the leading Marion newspaper called the *Marion Star*, which became the most influential daily in that portion of the State. He was a member of the State Senate in 1900-1904, lieutenant-governor, 1904-6, and ran for governor in 1910 but was defeated; in 1914 he was elected a Republican member of the United States Senate for the term of 1915-21. At the Republican National Convention in 1912 he nominated Mr. Taft for the presidency and he was chairman of the Republican convention in 1916, making the key-note speech. His political position was that of a regular supporter of the dominant group in the Republican party that bitterly opposed the Roosevelt element. His nomination was a surprise to the country at large for although he had won a certain reputation in Congress as an orator he was not generally known as a prominent figure in politics. In the debates over the treaty he supported the Lodge reservations in the Senate. See UNITED STATES, *Presidential Campaign*.

HARDY, E. J. British clergyman and author, died near Dublin in October. He was especially celebrated as the author of *How to be Happy though Married* (1884), which was translated into many foreign languages. He was born in Armagh, Ireland, May 7, 1849, and graduated at Trinity College, Dublin, taking honors. Ordained as priest in 1875, he was army chaplain, 1878-1908, serving at many points, including the Far East and Canada. In 1898-99 he was lecturer at Trinity College, Dublin. His first book, above mentioned, was followed by many others including, *The Business of Life* (1892); *Mr. Thomas Atkins* (1900); *Concerning Marriage* (1901); *Love, Courtship and Marriage* (1902); *How to be Happy though Single* (1909); *The British Soldier* (1915).

HARRIS, ELIJAH PADDOCK. Chemist and college professor, died at Warsaw, N. Y., December 9. He was born at Le Roy, N. Y., April 3, 1832; graduated at Amherst in 1855; and took his doctor's degree at the university of Göttingen in 1859. After serving as professor of chemistry, Victoria College, Canada, and at Beloit College, Wisconsin, he was professor of chemistry and at Amherst from 1868 to 1907, when he retired on the Carnegie foundation and became professor emeritus. He wrote a standard text on *Qualitative Chemistry* in 1875 which passed through 10 editions.

HARRIS, HENRY TUDOR BROWNELL. Rear-admiral, United States Navy, died in 1920. He was born at Hartford, Conn., March 10, 1845, and was in the Volunteer Navy during the Civil War. He served in the paymaster's department, rising to the rank of pay director, June 13, 1902, and paymaster general in 1905, when he retired with the rank of senior rear-admiral. He took part in the North China campaign and the Philippine revolt.

HARRISON, CONSTANCE CARY. (Mrs. BURTON HARRISON), American novelist, died at Washington, D. C., November 21. She was born in Fairfax County, Va., in 1843 and lived in Richmond, Va., during the Civil War. After

studying abroad she married Mr. Burton Harrison, a lawyer, and lived for many years in New York City, but spent much time in travel abroad. The best known of her novels had to do with conditions in fashionable life, the earliest of them to attract wide attention being: *The Anglomaniacs* and *Sweet Bells Jangled out of Tune*. She began writing in the 1870's, and published a number of short stories and serials in the magazines. Other novels that may be mentioned are, *The Bachelor Maid*, *Errant Wooing*, and *Good Americans*. Besides novels and stories she wrote books on fairy tales and several plays.

HARTZLER, HENRY BURNS. Bishop in the United Evangelical Church, died September 3. He was born in York County, Pa., March 23, 1840, and educated in the common schools. He was at first licensed to preach in the Methodist Church and later was ordained to preach in the Evangelical Association and administered to parishes in Pennsylvania. After 1892 he was a member of the United Evangelical Church, in which he was bishop in 1902-10.

HARVARD UNIVERSITY. A non-sectarian institution of the higher learning at Cambridge, Mass., founded in 1636. In the summer schools of 1920, there were 2077 students. There were 5597 students enrolled for the fall session. The teaching staff numbered about 800. There were several notable additions to the faculty, namely: William MacDougall of Corpus Christi College, Oxford, Professor of Psychology; Wilbur C. Abbott, formerly of Yale, Professor of History; Allyn A. Young, formerly of Cornell, Professor of Economics; Dr. Richard C. Cabot, well-known physician, author, and social worker of Boston, Professor of Social Ethics; Morton C. Campbell, formerly of the University of Missouri, Assistant-Professor of Law; Chester A. McLain, Assistant-Professor of Law; Calvert Magruder, Assistant-Professor of Law; John C. Callan and Durward E. Burchell, both formerly of the University of Wisconsin, Professor of Industrial Management and Professor of Industrial Accounting, respectively; Daniel Starch, formerly of University of Wisconsin, Assistant-Professor of Business Psychology; Frank A. Vanderlip, New York banker, Lecturer at the Business School; and A. Kingsley Porter, formerly of Yale, Professor of Fine Arts. The productive funds of the institution amounted to about \$44,000,000, while the income from endowment amounted to about \$2,800,000. The gross over-turn was \$5,000,000. The library contained about 2,000,000 books and pamphlets. There were various changes in instruction, etc. The Graduate School of Education founded partly through the assistance of the General Education Board and largely through the results of the Harvard Endowment Fund Campaign, for both men and women opened in September. It is a school for the professional training of school superintendents, principals, and teachers, and for research in educational problems. A new plan of work was adopted at the Harvard Engineering School, whereby the students will spend part of their time in classroom work and part in work in industrial plants and engineering concerns near Cambridge, thus combining theoretical instruction with practical experience. The Harvard Graduate School of Business Administration and the Engineering School joined in laying out a five-year programme of study in 'business en-

gineering." Starting with the Class of 1922, all seniors except those specializing in the natural sciences will be obliged to pass general examinations in the field in which they are concentrating. This programme includes the engineering training given in the regular four-year course at the Harvard Engineering School and also the fundamentals of business as taught in the Harvard Graduate School of Business Administration. Beginning with the Class of 1922, all seniors in Harvard College except those specializing in the natural sciences, will be obliged to pass before graduating *general examinations* in the field in which they are concentrating, this examination not only to cover the courses which the individual student may have taken in that subject, but to call for outside reading. This new plan is an extension of the system of general examinations which was adopted several years ago for men concentrating in History, Government, and Economics, and which has proved highly successful in that field. The Harvard Endowment Fund campaign was carried on from the autumn of 1919 through the autumn of 1920 under the direction of an Endowment Fund Committee appointed by the Harvard Alumni Association, and resulted in a fund of over \$13,000,000. President, Abbott Lawrence Lowell, LL.D., Ph.D.

HAVERFORD COLLEGE. An institution of the higher learning under the control of the Society of Friends at Haverford, Pa., founded in 1833. There were 214 students enrolled for the fall session. The members of the faculty numbered 24. Two new instructors were added: John Alexander Kelly, Ph.D., instructor in German, and John Saegu Bradway, A.M., LL.B., Lecturer on Contracts. The productive funds amounted to \$2,885,374, and the income for the year amounted to \$367,976. The library contained 82,000 volumes. An endowment fund of \$500,000 was established. President, William Wistar Comfort, Ph.D., LL.D.

HAWAII. A Territory of the United States, consisting of an archipelago of nine inhabited islands, Hawaii, Maui, Oahu, Kauai, Molokai, Lanai, Niihau, Kahoolawe, and Midway, besides a number of small uninhabited islands. The island of Hawaii is the largest and was formerly the most important, and has thus given its name to the group. The following information concerning population, production, commerce, etc., was supplied by the Governor's report for the fiscal year ending June 30, 1920: The population of Hawaii on Jan. 1, 1920, as shown by the Fourteenth Census of the United States, was 255,912. Compared with a population of 191,909 in 1910, this represents an increase during the 10 years of 64,063, or 33.4 per cent. The first census of the Hawaiian Islands was taken in 1832 and was followed by a census in 1836, 1850, 1853, and 1860. These were very simple and rudimentary in character. There was no provision for taking a census at regular periods until 1865, when the legislative assembly made it the duty of the board of education to make a complete census of the Kingdom every sixth year, counting from the year 1860. These were taken until 1896, and in 1900 the first Federal census was taken.

Immigrants in the year ending June 30, 1920 numbered 616, of whom 361 were Japanese and 184 Filipinos; emigrants, 2172, of whom 1807 were Japanese, and 138 Filipinos.

POPULATION OF HAWAII, 1832 TO 1920

Year	Population	Year	Population
1920	255,912	1872	56,897
1910	191,909	1866	62,959
1900	154,001	1860	69,800
1896	109,020	1853	73,138
1890	89,990	1850	84,165
1884	80,578	1836	108,579
1878	57,985	1832	130,313

POPULATION OF HAWAII, BY ISLANDS, 1920

Island	Population	Island	Population
Hawaii	64,895	Midway	81
Kahoolawe	8	Molokai	1,784
Kauai	29,247	Niihau	191
Lanai	185	Oahu	123,496
Maui	86,080		

Hawaii is divided into five counties, one of which (Hawaii) is coextensive with the island of the same name, and Honolulu, the largest county, comprises the two islands of Oahu and Midway. The city proper, of Honolulu, the capital, has a population of 83,237, according to the Federal census; Hilo, island of Hawaii, has a population of 10,431. See below under *Racial Conditions*.

AGRICULTURE AND FORESTRY. Conditions throughout the Territory were exceedingly prosperous largely as a result of the high price of sugar, which is the main crop of the islands. Sugar and pineapples continue to be the main crops of the islands. The yield of sugar for the year 1920 is estimated at 568,671 tons; that of pineapples 6,000,000 cases. On Feb. 1, 1920, several thousand plantation laborers on the island of Oahu went on strike, claiming dissatisfaction with the wage system existing. The strike lasted until June 30, 1920, when the laborers decided to return to work on the same wage conditions as when they had left. The difficulty arose over the application of the bonus system. When the price of sugar began to rise, the plantations decided they would share the profit with the laborer and voluntarily agreed to give a bonus. One of the provisions was that the laborer should stay on any one plantation for a year and work at least 20 days out of each month. A certain amount of the bonus was paid each month and a portion kept back until the end of the year to guarantee the laborer remaining for that length of time. Among the reasons advanced for the strike were the following: That the laborer should be entitled to the bonus if he worked but 15 days in a month; that instead of being paid as a bonus the pay should be as wages; that a larger percentage of the bonus should be paid each month and less held back until the end of the year, or that all of the bonus should be paid each month. This bonus system has had a very disastrous effect in many lines of activity throughout the Territory. While the sugar plantations could afford to pay the bonus, as their product was selling at an extremely high price, people not in the sugar business found it absolutely impossible to pay corresponding salaries or wages, with the result that many of their men who were formerly satisfied quit their work.

The total area included in the 47 forest reserves throughout the Territory amounted in 1920 to 817,114 acres, or about 20 per cent of the total land area of the eight main islands in the group. Of the area in forest reserves 557,344 acres, or 68 per cent, was land belonging to the Territory. Eleven forest and grass fires, none of them very

extensive, were reported during the fiscal year, a surprisingly low number in view of the very dry condition which prevailed. SEE AGRICULTURAL EXTENSION WORK

COMMERCE. Imports for the year ending March 31, 1920, amounted to \$63,283,647; exports amounted to \$104,779,804. Of the imports, those received from the mainland amounted to \$53,669,174, and those from foreign countries to \$9,614,473. Of the exports, the shipments to the mainland totaled \$101,194,733, and to foreign countries \$3,585,071. The foreign trade by countries is shown in the following table:

IMPORTS AND EXPORTS BY COUNTRIES*				
Countries	Imports		Exports	
	1919	1920	1919	1920
Australia	\$188,289	\$472,683	\$36,141	\$12,827
Other British Oceania	67,914	70,472	106,720	94,286
British India	1,372,469	1,534,924	703
Canada	431,760	141,730	3,975,849	340,104
Chile	871,328	1,358,012
France	1,822	8,263
Germany	1,535
Hongkong	465,209	769,901	7,485	15,011
Japan	4,558,499	4,774,228	548,758	328,847
United Kingdom	47,095	80,655	1,114	923,372

* For fiscal years ending March 31. * Mostly pineapples.

EDUCATION. The public schools in 1920 numbered 173 and the private schools, 59. At the end of the fiscal year the number of pupils enrolled in the public schools of the Territory was 38,295, an increase of 6.07 per cent over the previous year's enrollment. There were 7406 in the private schools, or 237 more than the year before. There were 1161 teachers in the public schools, of whom 1018 were female; and 384 in the private schools, of whom 301 were female. There are two industrial schools, one for boys and the other for girls with an attendance of 159 and 138, respectively. Concerning the foreign language schools the Governor's report contained the following recommendations and statistics:

in the other work of the public school; that enrollment be by written or oral request of the parent; and that the parent may, if it seem desirable, be required to pay as a monthly fee the pro rata cost of providing teachers for such classes.

CLASSIFICATION OF PUPILS IN THE PUBLIC SCHOOLS, BY RACES			
Hawaiian	3,293	Porto Rican	1,088
Part Hawaiian	4,100	Chinese	3,721
Anglo-Saxon	1,033	Japanese	17,541
Scandinavian	34	Korean	506
Spanish	879	Filipino	941
Portuguese	5,304	Others	373
Total	38,295		

The College of Hawaii in 1920 had 242 registered students. By an act of the 1919 Legislature, effective July 1, 1920, a University of Hawaii was established. The new institution grew out of the College of Hawaii and was to have that institution as its basis. Consequently the year 1919-20 was the last year of the college as heretofore organized.

TRANSPORTATION. In 1920 the public steam railways had a mileage of 349; and the private (plantation) lines of 628. The gross tonnage of vessels entering the ports during the year ending June 30th, was 5,430,976, an increase of 1,970,771 over the preceding year.

FINANCE. Valuation of all real and personal property in the Territory as rendered by the tax assessors was \$287,006,792, which was \$36,482,446 more than the assessed valuation the year before. The treasury cash balances, all accounts, amounted, July 1, 1920, to \$3,370,648, as compared with \$2,365,979 the year before. The total revenue collected during the fiscal year was \$8,719,898; total disbursements were \$10,949,897. The chief revenue of the Territory is through its income-tax law, which has been in successful operation since 1901. One of the sections of the act allows a "deduction for all government taxes." At the time the law was passed, there was no thought that Congress would some time pass an act which would cause the taxpayers of Hawaii to pay in a single year to the Federal government income taxes amounting to nearly \$12,000,000, as was the case during the fiscal year ending June 30th. As the Territorial tax was 4 per cent, this meant a loss to the Territory of about \$480,000 a year.

TERRITORIAL OFFICIALS. The leading officials of the Territory in 1920 were as follows: C. J. McCarthy, Governor; C. P. Iaukea, Secretary; Harry Irwin, Attorney-General; Delbert E. Metzger, Treasurer; C. T. Bailey, Commissioner of Public Lands; Lyman H. Bigelow, Superintendent of Public Works; Vaughan MacCaughey, superintendent of Public Instruction; J. L. Coke, Chief Justice Supreme Court; J. K. Kalaniana'ole, Delegate to Congress.

RACIAL CONDITIONS. For years Hawaii has served as a sort of racial experiment station, for the prejudice of race or even the prejudice of color seemed hardly to exist there, and to offer no obstacle to the mingling of the diverse elements. Comparatively early in the European settlement it was evident that little discrimination was made in the matter of marriage between the Europeans and natives. The color line seemed to be less regarded there than anywhere else. The natives though not relatively of a high civilization were singular in respect to their adaptability to the civilization of more advanced races, and remarkable for their lack of the usual vices of peoples at their stage of culture, as well as for the positive qualities of honesty, generosity, and general kindness. Much foreign labor was imported as the islands began to develop in industry. At first many immigrants came from the South Sea islands, but later this source ceased to supply them and this element in population almost disappeared. Then labor was secured from among the Chinese, Portuguese, Japanese, Spaniards, Filipinos, etc. The laws of the islands gave the right of American citizenship to immigrants, irrespective of race, as soon as they possessed the necessary qualifications, and all children born in Hawaii of immigrants are legally

Americans by birth. Owing to various conditions a tendency to the blending of races developed and there was no serious obstacle in the way. The alternative, that is to say, the policy of separating each race and encouraging its development along its own line would have resulted ultimately in a contest for control among the various elements and in all probability the right of the whites to remain the ruling class would have been disputed. The races are, however, to a certain extent gathered into their own communities. On the large plantations, for example, there are camps exclusively made up of Japanese, Chinese, Portuguese, etc., respectively, and they each speak their native languages and even publish newspapers in them. Language schools also exist, especially for the Japanese. These things have retarded Americanization, but in the public schools English is used and the national language schools are often attended after public schools hours. They are thought to be dying out and as the new generations grow up who have been educated in the English-speaking schools, there is less and less desire to keep up the separate institutions. Even among leaders and statesmen, especially among the Japanese, there has been a tendency to favor Americanization and exclusive attendance at English-speaking schools.

Japanese	110,000
Portuguese	25,000
Chinese	22,000
Hawaiians	22,800
Filipinos	22,600
Part Hawaiians ..	16,660
Porto Ricans	5,400
Spaniards	2,400
Other Caucasians ..	31,000
All others	5,800

The conditions in Hawaii have been of especial interest in connection with the Japanese question for as seen in the table above the leading racial element is the Japanese, who outnumber many times each of the other groups and were estimated in 1920 at about half the total population. It has been reported that in Hawaii, the Japanese adapt themselves with remarkable facility to American ideals and standards; that they learn the language at an uncommonly early age and employ it by preference; that the younger generation regards the American civilization as superior to their own, because in that community it brings them greater advantages. The superior ability of the Japanese in the schools has been so marked as to occasion embarrassment by necessitating the conferring of prizes on children of that race alone. In the spring of 1920, the question of the language schools as an unfavorable influence on Americanization was considered in a Federal survey and in the report that followed it was declared that they had no such tendency. It was, however, recommended that they should be dispensed with for other reasons and it was generally believed that they would disappear themselves, before long. Buddhist priests who were conducting most of the language schools admitted generally that Americanized education in the islands was the more useful. Japanese officials said the same thing. Indeed many of them went so far as to say that the Japanese there ought to be Americanized and to declare that if after being Americanized, they were not in case of war, loyal citizens, and if even

they would not fight against Japan, in the event of war between the United States and Japan, they would not be respected even by the Japanese themselves.

On the other hand those who feared the growth of a permanent and separate Japanese element in the United States and its possessions argued that, however superior the Japanese might be in many intellectual and moral respects and however adaptable to American civilization the fact remained that as a result of their distinctive physical type they would always be a race apart whether the strain was pure or mixed. In Hawaii with their growing population they would soon be in the majority and they would then elect the majority of the Territorial Legislature and finally would become masters of the islands. Once in the majority and in control they will naturally regard other races as inferior. Despite the considerations presented in preceding paragraphs it was declared that there was evidence of strong racial organizations among the Japanese of Hawaii, and that this was promoted by Japanese officials and aided by the priests of the Shinto and Buddhist temples. See ANTHROPOLOGY.

HAWKINS, RUSH CHRISTOPHER. American soldier and author, died in New York City, October 25. His death was the result of injuries received the night before when he was struck by an automobile on Fifth Avenue. He was born at Pomfret, Conn., Sept. 14, 1831; educated in the common schools; organized during the Civil War the Ninth New York infantry known as the Hawkins Zouaves and became its colonel, May 4, 1861; served with distinction in the Civil War and received the brevet of brigadier-general of volunteers March 13, 1865, for meritorious and valuable service; was honorably mustered out, May 20, 1865. He devoted himself to the collection of books especially those relating to the early history of printing and wood engraving. He was art commissioner to the Paris Exposition in 1889, and was an officer in the Legion of Honor. He established at Providence, R. I., the Annmary Brown Memorial containing paintings and various valuable books and manuscripts. He was the author of *Titles of First Books from the Earliest Presses; Better Than Men; Assassination of North Carolinians for Serving in the Union Army; Our Political Degradation* (1904); and a large number of pamphlets and magazine articles. He was a member of the New York House of Representatives in 1872.

HAY. The hay production of the United States in 1920 as estimated by the Department of Agriculture was 108,233,000 tons, of which 91,193,000 tons was tame hay and 17,040,000 wild hay. The season of 1920 was in general quite favorable for hay production. The area devoted to hay in 1920 was 73,181,000 acres, of which wild hay occupied 15,266,000 acres and the average yield per acre was 1.48 tons, slightly under the average yield of the preceding year. The average yield of tame hay was 1.57 tons and that of wild hay 1.12 tons per acre, as against 1.62 tons and 1.10 tons per acre respectively for the preceding year.

Early in 1920 hay prices were extremely high but during the fall, largely as the result of a favorable season and good pasturage, prices declined to a considerable extent. The average price of hay on the farm Dec. 1, 1920, was \$16.72 per ton and the total value of the year's crop

on this basis was \$1,809,162,000 while the corresponding price in 1919 was \$19.56 per ton and the total value of the 1919 crop \$2,134,581,000. The average farm price on December 1st for the five years 1914-18 was \$13.18 per ton. During the first quarter of the year hay prices in some of the principal European countries ranged from about \$12 per ton in Germany to \$55 in Switzerland, and prices from \$45 to \$50 per ton were maintained also in Great Britain and Denmark.

The high point of hay consumption in the United States was reached in 1919. Formerly nearly all hay was sold within 30 miles of the place of production, but now it is shipped to large city hay markets and even exported. This market movement of hay demands proper grading and baling. See also ALFALFA.

HAY FEVER AND ASTHMA. It is often convenient to consider these affections together because many cases of asthma are due to sensitization to certain nitrogenous substances. Drs. Vander Veer and Cooke have recently analyzed the records of 2000 of these cases, from the special viewpoint of treatment. The authors use saline extracts of pure pollens with special reference to the percentage of nitrogen contained. They no longer seek to prevent the hay fever by attempts at immunization during the cold weather. Instead they treat during the period of the fever giving a course of injections in increased amounts during the entire season. Personal observation and the results of a questionnaire sent out to patients show that about 25 per cent receive little or no relief while the remainder are satisfied with the treatment. About 25 per cent become quite free and 50 per cent comfortable under the treatment but results show some variation from year to year, certain years producing a more severe type of disease. They hope to continue to improve their percentages by controlling some of the factors as yet not fully understood.

Within the past few years our knowledge of asthma has greatly increased. Not many cases are due to food sensitization but in many instances we may accuse some kind of albuminous substance, presumably animal, in the dust, which contains such substances as chicken feathers, wool from mattresses, human epithelium, etc. But vegetable substances in the dust may exert the same influence. Extracts of special dusts may be used like mixed pollens, both for diagnosis and treatment. Multiple sensitization occurs in which it may be difficult to trace all of the exciting causes. Subjects with chronic bronchitis also present the latter as a complicating factor, which of course requires separate treatment. In a certain class of elderly patient the only results were obtained by autotherapy, using extracts of the patient's sputum. Until recently there had been no service for poor asthmatics and hay fever victims but clinics for this purpose will soon be installed.

HECKERT, CHARLES GIBVEN. College president, died at Springfield, Ohio, December 7. Until the summer of 1920, he was president of Wittenberg College. He was born at Northumberland, Pa., March 22, 1863; graduated at Wittenberg College in 1886 and at Wittenberg Theological Seminary, 1889, when he was ordained to the Lutheran ministry. He became professor of English and logic at Wittenberg College in 1893 and was president after 1903. He was one of the editors of the *Lutheran World*.

HEINEMANN, WILLIAM. British publisher, died, October 5. He was born at Surbiton, May 18, 1863 and founded the house which bears his name in 1890. As a book publisher he was known for his quick recognition of new writers and for the wide variety of his interests. His publications were widely distributed in the United States as well as in Europe. He was president of the Publishers' Association of Great Britain and Ireland, 1909-11, and president of the National Booksellers' Provident Society, 1913-20. His publications include many of the most celebrated books of their time for example Whistler's *Gentle Art of Making Enemies* (1890), and the works of such foreign writers as Tolstoi, Björnson, Couperus and Sienkiewicz. Other important and successful enterprises included short histories of *The Literature of the World*, which began in 1897 with Professor Gilbert Murray's *Ancient Greek Literature*. Many of the writings of Maeterlinck, Ibsen, D'Annunzio, Tourgeniev, were also among his publications. He was especially interested in the drama and published *The First Step* in 1895; *War* in 1901; etc. He left half of his estate to the Royal Society of Literature for a fund out of which money prizes were to be given to others who had produced work of genuine value. It was understood that by the wishes of the testator the prizes were to be so distributed as to reward especially authors of books in fields that were not financially remunerative.

HELICOPTER. See AERONAUTICS.

HELIGOLAND. An island, formerly fortified, in the North Sea, ceded by England to Germany in 1890. It was dismantled by Germany in 1919 under the terms of the Treaty.

HEMPHILL, ALEXANDER JULIAN, Financier, died in New York City, December 29. At the time of his death he was chairman of the board of directors of the Guaranty Trust Company. He was born at Philadelphia, Pa., Aug. 23, 1856, and in 1875 became a clerk in the Pennsylvania Railroad Company. He attracted the attention of his superiors by his tact and ability, and in 1883 was appointed secretary to the Norfolk and Western Railway, being the youngest holder of that position in the United States at the time. He remained with the Norfolk and Western until 1905, when he became vice-president of the Guaranty Trust Company, of which he was appointed president, Dec. 8, 1909. He retired from the presidency in 1915. The list of corporations on which he was director or other officer, is too long to give in full, but includes the following: The American Surety Company, Fidelity and Casualty Company, Hudson & Manhattan Railroad Company, Missouri Pacific Railroad, Southern Cotton Oil Company, United Gas and Electric Company, Texas and Pacific Railway Company. He began early in the late war to take an active part in war relief and was prominent in many relief associations. The French government recognized his services by making him a chevalier of the Legion of Honor. He was president of the Automobile Club of America and a member of many other clubs and associations.

HENNESSY, JOHN JOSEPH. See ROMAN CATHOLICS.

HEREDITY, See Zoölogy.

HERKLES, REV. SIR JOHN. British prelate and educator, died, June 11. He was vice-chancellor and principal of the University of St.

Andrews. He was born at Glasgow, Scotland, Aug. 9, 1855; educated at Glasgow University and in Germany, and having been ordained, was engaged in pastoral work till 1894, when he was appointed Professor of Church History in St. Andrews University. He held that chair till 1915, when, in 1911, he was made provost. He wrote a number of works on Scottish church history, Bible commentaries, and several volumes on the Archbishops of St. Andrews.

HERTZBERG, HANS RUDOLPH REINHART. American journalist, died, May 18. He was born at San Antonio, Texas, July 1, 1871, and was educated in St. Louis, Mo., in France, and in Texas. In 1892-94 he was engaged in the practice of law and in the editing of a small newspaper in Texas. He was later engaged in weekly journalism in San Antonio, Texas, and New Orleans. In 1903 he joined the staff of the *Times-Democrat* in New Orleans and was afterwards proprietor and editor of *Hertzberg's Weekly* (1908-10). From 1910 to 1914 he was on the staff of the *Chicago Inter-Ocean*.

HESSE. One of the states of the former German empire, having down to November, 1918, the status of a grand duchy; situated in the western part of Germany. Capital, Darmstadt; area, 2968 square miles; pop. (Dec. 1, 1919) 1,282,051. In 1918, there were 974 public elementary schools with 4166 teachers and 212,264 pupils. Its chief crops are rye, barley, potatoes and wine, and its chief manufactures, leather, clothing, paper, chemicals, vehicles, machinery, furniture, musical instruments, etc. The budget according to a British authority balanced in 1919-20 at £4,865,793. In common with the other states of Germany, it overthrew the government in the autumn of 1918. In November of that year a republic was proclaimed and a new constitution was drafted in 1919. The new Diet was elected Jan. 26, 1919, and a new ministry was appointed in February, 1919, under the premiership of Herr Ulrich, (Socialist).

HEURE ESPAGNOLE, L' See MUSIC, Opera.

HEWITT, JOHN HASKELL. College professor, died at Williamstown, Mass., October 6. He was born at Preston, Conn., Aug. 8, 1835, and graduated at Yale College, 1859, and at the Yale Theological Seminary two years later. After teaching Latin and Greek at the Olivet College, Mich., and Lake Forest College, Ill., he was appointed Professor of Ancient Languages at Williams College in 1882. In 1901 and 1902 he was acting-president and in 1903 was appointed Professor of Greek.

HIDES. See LEATHER.

HIGH SCHOOLS. See EDUCATION.

HILL, BENJAMIN. Mexican general, died at Mexico City, December 15. For a short time before his death he had been Secretary of War in the cabinet of the newly elected President, Obregon. He was reputed to be of American descent. Under the administration of Huerta, he was a Constitutionalist leader and he afterwards served under Carranza against Villa and Zapata. When Obregon left the Mexican capital in April, General Hill joined his party and he was one of the firmest supporters against Carranza. He had charge of the forces in the valley of Mexico after the surrender of the city, and he was appointed Secretary of War December 1.

HILLIER, FREDERICK J. British journalist, died June 11. He was born in 1870 and in his

youth was associated with the Paris edition of the *New York Herald*. He was later on the staff of London papers and finally became editor of the *Daily News*. He was a prominent figure in the British newspaper community.

HIRSCH, FRANZ. See GERMAN LITERATURE. **HISTORICAL ASSOCIATION.** AMERICAN.

This organization was founded for the promotion of historical studies in the United States. The 36th annual meeting was held at Washington, D. C., Dec. 27-30, 1920. Several other organizations held conferences there at the same time. The association publishes *The American Historical Review*, and *The Historical Outlook*. It awards the Justin Winsor Prize, and the Herbert Baxter Adams Prize annually, besides the Military History Prize. Much work is done through its committees which are composed of authorities on history from all parts of the country. The officers in 1920 were: President, Edward Channing; first vice-president, Jean Jules Jusserand; second vice-president, Charles H. Haasins; secretary, John S. Bassett; treasurer, Charles Moore; and chief editor, Allen R. Boyd. Headquarters of the association are in the Woodward Building, Washington, D. C.

HISTORY. See LITERATURE, ENGLISH AND AMERICAN.

HOCKEY. Ottawa, Canada, captured the Stanley Cup emblematic of the world's professional hockey championship, defeating Seattle in a five-game series by 3 matches to 2. Canada also won the world's amateur hockey honors through the victory of the Winnipeg Falcons at the Olympic Games (q.v.).

Several colleges in the United States had teams during 1920 but the Intercollegiate League again failed to conduct a series. The results of the games played indicated that Harvard had the strongest aggregation of players in the college world. Boston, Pittsburgh, Philadelphia, and Cleveland maintained hockey teams but New York City which in the past had been represented by brilliant sevens once more found itself unable to take up the game chiefly because of the lack of suitable rinks.

HOLCOMB, SILAS ALEXANDER. Former governor, died, April 25. He was born in Gibson County, Ind., Aug. 25, 1858, and studied law in Nebraska, where he was admitted to the bar in 1882. After holding the office of judge in that State he was made Governor, 1894-98, being elected as a Populist on the fusion of the Populist and Democratic parties. From 1900 to 1906 he was Justice of the Supreme Court of Nebraska and, July 1, 1913, was appointed a member of the Board of Commissioners of State Institutions.

HOLLAND. See NETHERLANDS.

HOLLYER, SAMUEL. Line engraver. See PAINTING AND SCULPTURE.

HOLMES CHRISTIAN R. Dean of the College of Medicine, University of Cincinnati, died in 1920. He was born in Denmark, Oct. 18, 1857, and educated in Denmark, Germany, and the United States. After 1908 he was the consulting ophthalmologist of the Cincinnati Hospital and after 1904 Professor of Otology of the College of Medicine in the University, subsequently

becoming dean. He held the office of president and other offices in important learned societies and during the war he was in charge of the Ear, Nose, and Throat Department, Base Hospital, at Camp Sherman, Ohio. The equipment and organization of the General Hospital in Cincinnati was largely due to his efforts.

HOME DEMONSTRATION. See AGRICULTURAL EDUCATION.

HOLY CROSS, COLLEGE OF THE. A Roman Catholic institution of the higher learning conducted under the Society of Jesus, at Worcester, Mass., founded in 1843. In the fall of 1920 there were 723 students enrolled. There were 44 members in the faculty. The library had about 60,000 volumes. A campaign for \$1,000,000 was successful. President, Rev. James J. Carlin, S.J.

HONDURAS. A Central American republic. Capital, Tegucigalpa.

AREA, POPULATION, ETC. The area is estimated at about 44,275 square miles and the population according to the census of 1916, was 613,458, which, however, was only an approximate estimate. Tegucigalpa, the capital, was also the largest city, with 28,950 inhabitants in 1914. Primary education is free and nominally compulsory from seven to fifteen years of age. The following statistics of education were supplied by the president in his message to the Congress in 1920: At the beginning of the school year, 1919, there were 970 primary schools, of which 926 were public, 12 private, 30 night schools, and 2 kindergartens. The total attendance was 45,442 pupils and 980 teachers. There were also 5 normal schools open, 1 for boys and 1 for girls in Tegucigalpa, 1 in Esperanza, 1 in Santa Barbara, 1 in Santa Rosa, and 1 in Juticalpa, which had, all told, 565 pupils registered. In Tegucigalpa the School of Commerce for men had 138 pupils and the commerce section of the college "La Instrucción" for young ladies had 19 pupils; in Santa Barbara the business course of the college of "La Independencia" had 22 pupils. Secondary education was conducted by the following 5 institutions: National Institute of Tegucigalpa, College "León Alvalado" in Comayagua, College "La Independencia" in Santa Barbara, the school of secondary education in Santa Rosa, and "La Fraternidad" in Juticalpa. The total enrollment of these institutions for the year was 265 pupils. The University of the Republic only gave courses in law, medicine, and surgery, there being 49 students in the law school and 40 in the medical school.

PRODUCTION. The chief crop is bananas which are grown chiefly on the Caribbean seacoast. Cocoanuts are also raised in that region. Corn is the staple food crop. Other products are rubber, coffee, tobacco, cereals, vegetables, sugar cane, yucca, and indigo. Sugar production has showed marked advance in recent years and become one of the chief exports. There is a considerable production of live stock and the mineral resources are rich and varied.

COMMERCE. The total foreign trade for the fiscal year 1919-20 (August-July) amounted to \$19,805,487 as compared with \$12,929,117 for the previous year, an increase of 53 per cent. In 10 years preceding the imports had always exceeded the exports owing to the large importation of machinery and other supplies. The following table gives the trade of the country for the fiscal

years from 1910-11 to 1919-20; the values are in American gold calculated at the rate of 2.6 pesos for \$1 in 1910-11, at 2 pesos for \$1 in 1918-19 and 1919-20, and at 2.5 pesos for the other years:

Years	Imports	Exports	Total Trade	Excess of Imports
1910-11.	\$3,560,939	\$2,908,391	\$6,469,330	\$652,548
1911-12.	4,317,314	3,080,178	7,397,492	1,237,136
1912-13.	5,132,679	3,180,968	8,313,647	1,951,711
1913-14.	6,624,930	3,421,381	10,046,261	3,208,599
1914-15.	5,874,797	3,457,847	9,332,644	2,416,950
1915-16.	4,452,109	4,190,565	8,642,674	261,544
1916-17.	6,293,162	5,353,452	11,646,614	939,710
1917-18.	4,784,449	4,586,931	9,371,380	197,518
1918-19.	6,981,876	5,997,741	12,929,117	933,685
1919-20.	12,860,762	6,944,725	19,805,487	5,916,037

The foregoing statistics, taken from Government sources, are fairly accurate as to imports, but not as to exports, owing to a large clandestine exportation which failed to appear in the records of the custom houses and prices below the actual market were often given in compiling the statistics. The balance of trade was probably considerably less unfavorable than indicated.

The preponderance of the United States as a source of imports appears from the following table of imports by countries, from 1913-14 to 1917-18:

Years	United States	England	France	Germany	Total
1913-14.	\$5,262,043	\$459,763	\$141,598	\$521,837	\$6,624,930
1914-15.	5,177,105	303,000	54,834	95,937	5,874,797
1915-16.	4,085,088	131,796	55,257	365	4,452,109
1916-17.	5,794,765	819,473	61,286	4,660	6,293,162
1917-18.	4,358,472	276,202	25,855	4,784,449

The United States took 86.9 per cent of the exports in 1913-14 and 95.9 in 1919-20.

FINANCE. With the desire to place its finances on a more stable basis, the government, in July, 1920, secured the services of an American economist to draw up a financial programme for the country. Large reductions in government expenditures were secured through his efforts, and during the 1921 session of Congress several laws radically changing the existing financial policy were to be presented. The following are some of the important reforms contemplated: It was proposed to establish a national bank with an authorized capital of \$5,000,000, to be formed if possible by a fusion of the two existing banks; the new bank to be the depository of all government revenues. It was proposed to have a fixed policy with regard to the budget, the authorized expenditures not to exceed \$2,100,000 per year, excluding interest on and amortization of existing and future debts, payments of which are provided for by setting aside each year the sum of \$500,000. The executive was to be authorized to contract a loan not exceeding \$5,000,000 to be used in consolidating and paying existing debts. A commission of public credit was to be created to examine claims against the government and to determine the indebtedness of the country and to have power to make final arrangements with all creditors. No payments of principal or interest on any debts were to be made without the order of this commission. It was proposed to establish a monetary system with a unit of the peso of 100 centavos to contain 0.75233 gram of pure gold. Provision was made for the coinage of silver coins of 1 peso, 50 centavos, and 20 centavos, and minor coins of 10 centavos, 2 centavos, and 1 centavo. The notes of the National Bank

were to be legal tender, redeemed in the legal currency and kept at a par of exchange of 200 per cent with United States gold. The importation of silver coins of Nicaragua, Guatemala, etc., was to be prohibited and their legal-tender quality annulled. A reserve fund of at least 30 per cent of the coins in circulation of the new currency, to be known as the "Gold Standard Reserve," was to be established from the seignorage profits on coinage of the subsidiary currency. Other proposed reforms were revision of the customs tariff, improvement and systematizing of the administration of the customs and internal revenue, a new educational system, and preparation of plans for the development of natural resources, construction of roads, and public utilities.

RAILWAYS. According to the latest available figures in 1920, the railways had a mileage of about 360, the chief line being the National railway running from Puerto Cortez to Potrerillas. By the terms of a contract approved April 7, the National railway of 95 kilometers (1 kilometer = 0.621 mile), was delivered by the government to the Compañía Agrícola de Sula, which granted the government a credit of \$1,000,000 to be used in the complete reconstruction and equipping of the road. The company was

to have charge of the administration until the repayment of the loan. The other four railroads of Honduras were owned and operated by the various fruit companies on the north coast. The Truxillo railroad, eventually to reach Juticalpa in the interior, had about 119 kilometers completed, 28 kilometers having been constructed during 1920. The Tela railroad had about 250 kilometers, 14 of which were laid in 1919-20. The Cuyamel Fruit Company railroad in the department of Cortes had an extension of 80 kilometers, and the Vaccaro Brothers railroad some 204 kilometers.

GOVERNMENT. The executive power is in a president, elected by the popular vote for four years, who acts through a council of five ministers; and the legislative power is in a congress of deputies elected by popular vote. President in 1920, Rafael Lopez Gutierrez, elected in the October, 1919, election for the term 1920-24.

HISTORY. In consequence of reports of an intended revolution in the northern part of the country at the beginning of October, United States warships were stationed near the coast to protect American property. Disturbances were reported at La Ceiba, Oct. 2, and about the same time martial law was declared by President Gutierrez. See GUATEMALA.

HONGKONG. A British crown colony at the mouth of the Canton River off the southeast coast of China at a distance of about 90 miles south of Canton. It consists of an island with an area of about 32 square miles and a strip of land on the mainland with an ear of from 356 to 376 square miles; also of about 4 square miles of the opposite peninsula of Kowloon. The civil population estimated in the middle of 1918 was 561,500, of whom the Chinese numbered 548,000,

Of the white residents, about one-half were British and one-third Portuguese. Its commerce is chiefly with Great Britain, which has about one-half of the trade and whose vessels constitute 32.4 per cent of the ocean-going ships. The imports in 1918 and 1919 by countries, were estimated as follows:

Countries	1918	1919
United Kingdom	\$21,086,390	\$22,571,050
Australia	5,891,884	10,284,177
New Zealand	89,933	26,198
Canada	532,904	1,847,780
India and Ceylon	17,129,735	34,623,292
Burma	587,273	1,705,836
Africa	107,189	27,806
Straits Settlements and Federated Malay States ..	12,904,303	14,604,502
British North Borneo ..	1,428,787	1,160,557
Malta	414
Mauritius	32,727
Aden	708
Egypt	83,282
Mesopotamia	28,292
China	44,468,687	55,855,872
Japan, Chosen, and Taiwan	46,641,716	42,494,219
Netherlands, East Indies..	6,274,508	13,042,256
French Indo-China	72,624,885	59,651,992
Siam	17,090,257	21,052,992
Philippine Islands	2,586,295	2,725,378
Vladivostok	8,498	37,938,064
United States	89,658,408	78,139,648
Central America	4,475
South America	12,179	36,582
France	148,978	667,137
Italy	29,782	76,820
Spain	84,181
Portugal	15,783
Norway	282,586
Sweden	67,280
Denmark	18,662
Netherlands	96,756
Belgium	15,140
Switzerland	165,576
Europe (other)	198,180
Total	\$289,435,186	\$398,867,515

The exports in 1918-19 by countries were as follows:

Countries	1918	1919
United Kingdom	\$5,288,880	\$11,874,777
Australia	1,722,288	2,030,556
New Zealand	194,482	193,849
Canada	8,141,852	2,120,738
India and Ceylon	10,811,940	14,106,233
Burma	1,595,465	1,617,805
Africa	1,915,772	516,028
Straits Settlements and Federated Malay States ..	14,745,484	41,971,618
British North Borneo ..	475,895	772,087
West Indies	1,256,978	7,585,450
Gibraltar	467,161
Mauritius	815,207
Egypt	1,650,273
Mesopotamia	851,569
China	175,804,805	232,874,472
Japan, Chosen, and Taiwan	21,348,876	43,284,578
Dutch East Indies	7,562,989	12,030,812
French Indo-China	27,808,348	38,490,518
Siam	5,852,487	10,234,145
Philippine Islands	7,144,217	6,882,830

Madagascar	16,850
France	1,556,956	2,422,814
Italy	444,717
Spain	29,753
Denmark	181,736
Netherlands	908,156
Belgium	410,529
Switzerland	136
Germany	8,686
Total	\$318,524,287	\$457,348,909

In 1919, 649,168 vessels with a tonnage of 35,615,169 entered and cleared the port, which

was an increase over the 1918 figures. The estimated revenue figures for 1919 were \$17,056,410; expenditures \$15,078,600; for 1920, revenue was \$15,314,800; expenditure, \$14,886,473. The executive is vested in a governor assisted by an executive council and legislative power in a council over which the governor presides. The governor in 1920 was Sir R. E. Stubbs.

HOOVER, WARREN BREWSTER. Judge, died, March 5. He was born at Perrysburg, N. Y., Nov. 24, 1856, and admitted to the bar in 1879. After practicing at Tacoma, Wash., he practiced at Fredonia, N. Y., 1894-98. Meanwhile, he served as member of Congress, 1891-98. In November, 1899, he was elected Justice of the Supreme Court of New York for the term 1900-13, and in 1902 he was made Judge of the Appellate Division, holding that office till 1908.

HOOVER, HERBERT CLARK. Former Food Controller of the United States, considered during the early part of the year among the candidates for the presidency. He was born near West Branch, Iowa, in August, 1874, and was brought up by relatives in Iowa, India Territory, and Oregon. In the last-named State he became interested in mining through the influence of an old friend in the family. At the age of 14 he ran away from home and entered a real estate office in Portland where he studied in his spare time until he was able to enter the Leland Stanford University in 1891 despite a lack of sufficient training. He pursued his college course under great difficulties being obliged to earn his way and at the same time make up his deficiencies. But he made an excellent record in his studies and at the same time showed capacity in the organization of various student activities. During his college course he became interested in the writings of Georg Bauer, more commonly known as Georg Agricola, the German scholar and metallurgist of the sixteenth century, known as the father of scientific metallurgy, and he made a careful study of Agricola's great work *De Metallica* which dates from about 1556. Later he translated this book with his wife's assistance and it was published in 1912. Meanwhile he graduated in 1895 and for the sake of experience became a common miner in Nevada County, Cal. In the following year he was made assistant-manager of the Carlisle mines in New Mexico, and of the Morning Star mines in California. Then came a call to the position of manager of a mining company in New South Wales. After this work in Australia he became chief engineer of the Chinese Imperial Bureau of Mines (1899) and carried on extensive explorations in the interior of China. During the Boxer Rebellion he was one of the chief organizers of the defense against the siege of Tientsin where he and his wife were staying at the time. After that he acquired an interest in a great coal-mining property near Tientsin and went to London for the purpose of promoting it. In London he became interested in the development of mining and petroleum enterprises and joined as a partner a great firm of London mine operators. This firm met with reverses and finally failed but Mr. Hoover having given assurance that everybody would be paid the last shilling devoted himself to straightening out affairs and after several years of work completely succeeded. This gave him a high reputation in the engineering and mining world and he was called upon to organize and direct a large number of important com-

panies scattered throughout foreign countries. At the outbreak of the war he was in London and when an appeal was made to him to help in aiding the American refugees who were stranded in England and unable to obtain passage home, he threw himself into the work of rescue, advancing from his personal funds half a million dollars, it is said. When the Belgians began to pour into England and the terrible straits of their country were forced upon his attention, he devoted himself to relief of these refugees. The question of feeding Belgium having become acute, associations for relief were organized and Mr. Hoover was appointed chairman of the American Relief Committee in London (1914). The chief difficulty that he encountered was in securing sufficient vessels at a time when the ship market was at the mercy of the competing war governments. After finding cargoes for the first squadron of relief he encountered the flat refusal of the British government to issue clearance papers. Though he explained that the supplies had been bought and were on board the ships it was of no avail and he was even informed that he was fortunate in not being thrown into prison for what he had done. Nevertheless he succeeded in securing papers. This is simply one of the many instances of his energy and skill in surmounting obstacles. Another instance was his success in insuring stable exchange rates between London and Brussels which had been declared beforehand to be impossible. Still another was his success in securing respect for the flag of the Relief Commission on the part of the German forces, one food-ship having been sunk by a submarine and the safety of the whole provision fleet threatened. His dealings with profiteers and obstructionists generally were remarkably vigorous and successful. In 1915 he became chairman of the Commission for Relief in Belgium, where his work drew the attention of the entire civilized world. It had reached a point of complete organization when Mr. Hoover was appointed chairman of the Food Commission of the Council of National Defense in the United States. This office he held from April to August, 1917, and he was then appointed United States Food Administrator Aug. 10, 1917. The main principle of his organization was to give everybody something that he could do. The Food Administration of the United States during the war was in the circumstances remarkably successful and many accounts have been published illustrating the efficiency and resourcefulness of his direction. On the other hand, his policy was criticized on the ground that he laid too much stress on production and too little on the control of prices and the cost of living. There was an extended controversy on this point but it brought out nothing to the discredit of his abilities and fidelity. After the Armistice an entirely different set of problems had to be faced. He sailed at once for Europe and organized in Paris the American Relief Commission drafting experts from the army and other sources in order to meet the needs of the diverse populations. The restoration of means of transport, bridges, etc., was rapidly carried forward, and relief and reconstruction went on in an enormous area. He visited Austria, Poland, Hungary, Bohemia, and other afflicted regions in order to inspect personally the working out of relief measures. The organization of the feeding of children in Belgium and other devastated countries was one

of the principal tasks. In Hungary he carried on relief measures with especial energy with a view to counteracting the revolutionary spirit which in his opinion arose from the chaotic economic conditions. He is said to have been one of the chief instruments in overthrowing the Bolshevik dictatorship of Bela Kun. As to politics, he had been throughout his early career a Republican and he remained a member, while abroad, of a Republican organization in New York. He was reported to have voted for McKinley in 1896 and to have contributed more or less irregularly after that to the Republican campaign funds. In 1918 he appealed in a letter for a united support of President Wilson and when he was sounded with a view to presidential possibilities, he reported that he would support any party committed to a League of Nations against any party that opposed it. At the beginning of 1920 he was a member of the industrial commission which aimed at a settlement of the social, economic, and industrial conditions arising between employers and employees. Besides the translation of Agricola's work above mentioned he wrote *Economics of Mining* (1906); and *Principles of Mining* (1909).

HOPS. Nearly all the principal hop growing countries of the world reported an increased acreage and a larger production in 1920 as compared with area and yield in 1919. In many of the European countries a recovery from the depression suffered by the industry from the war was evident. In England and Wales the production for the year was estimated at about 35,000,000 pounds, or over 10,000,000 pounds above the yield of 1919, less than 1,000,000 pounds below the average production for the 10-year period 1910-19. The importation of hops into Great Britain was retained for the year under governmental control to expedite the recovery of the industry.

The hop area of Germany in 1920 was about 30,000 acres, an increase of 50 per cent over the area of 1919. In Czecho Slovakia on the former Bohemian hop fields the production for 1920 was estimated at 19,841,400 pounds as compared with an average production of 19,420,500 pounds or 431 pounds per acre for the 10 years 1901-10.

According to estimates published by the Department of Agriculture the crop in the United States amounted to 38,918,000 pounds, produced on 29,200 acres or at the rate of 1332.8 pounds per acre. In 1919 the area was 25,000 acres and the total yield 29,346,000 pounds. The farm value of hops on Dec. 1, 1920, was only 36.5 cents per pound, while on the corresponding date the year before it was 77.2 cents. On this basis the total value of the 1920 crop was \$14,194,000 and of the 1919 production \$22,656,000. The production by States in 1920 was estimated as follows: New York, 2,290,000 pounds; Washington, 5,730,000 pounds; Oregon, 9,000,000 pounds; and California, 21,875,000 pounds. The yield in all these States except Oregon was exceptionally heavy, being considerably above the 10-year average. The yield per acre in Washington was estimated at 1910 pounds while in Oregon it was placed at only 900 pounds. The hop consumption by brewers in the United States in 1920 was reported at 6,440,890 pounds, and the exportation at 30,779,500 pounds, the average figures for the ten years 1910-20 being approximately 26,649,500 pounds and 13,805,000 pounds, respectively.

HORSES. See **LIVE STOCK** and **VETERINARY MEDICINE**.

HORTICULTURE. The total production of fruits and vegetables in North America during 1920 was large. It exceeded that of 1919 in all cases except peaches, prunes, and beans. Weather conditions were less favorable in Europe and, combined with other disturbing factors, were responsible for a continued low total production. In Great Britain and Ireland there was a serious shortage of all tree fruits. The Serbian prune crop was fairly large, but was being cured with difficulty on account of the great damage to drying ovens during the war. A large crop of olives was reported from the Mediterranean region. Other crops showed reduced yields, the Smyrna fig crop being very short. Australia produced large crops of fruit during the season of 1919-20.

During the second half of 1920 prices of fresh fruits and vegetables in the United States gradually declined as shipments increased. The canned and dried fruit and vegetable packs were lower than in 1919. This is attributed to many factors, such as an export market overstocked with the 1919 pack, the early high contract prices demanded by growers, and restriction in credit, thereby eliminating speculation by wholesalers and jobbers. Unfavorable weather materially reduced the prune crop in the Northwest. Most of the canned pack and much of the dried pack was put up and contracted for under the high prices prevailing earlier in the year, and was being marketed with difficulty as the year closed. A notable exception is the raisin market, which continued active in spite of high prices, largely, it is generally believed, because of the demand for wine material.

Of the commercial vegetable crops in the United States, 430,458,000 bushels of white potatoes were produced in 1920, as compared with 357,542,000 bushels in 1919; sweet potatoes, 112,368,000 bushels as compared with 105,405,000 bushels; dry beans, 9,075,000 bushels as compared with 11,935,000 bushels; onions, 19,119,500 bushels as compared with 11,397,600 bushels; cabbage, 820,000 tons as compared with 357,025 tons; and canned peas 12,317,000 cases as compared with 8,885,000 cases. The total apple crop was 240,646,000 bushels as compared with 152,238,000 bushels in 1919. The commercial apple crop amounted to 36,272,000 barrels as compared with 26,223,000 barrels; peaches, 43,697,000 bushels as compared with 49,578,000 bushels; pears, 17,279,000 bushels as compared with 15,472,000 bushels, and oranges 27,200,000 boxes as compared with 22,075,000 boxes. California shipped over 35,000 cars of fresh deciduous fruits in 1920, of which 24,000 cars were grapes. The California dried fruit output was estimated at 328,500 tons as compared with 417,250 tons in 1919. Georgia shipped over 7000 cars of peaches in 1920. Hawaii packed 5,071,976 cases of pineapples in 1919, with an estimated pack of 6,000,000 cases for 1920.

EXPORT TRADE. For the fiscal year ended June 30, 1920, the United States exported fruits worth \$115,064,381; vegetables, \$36,517,381; nuts, \$3,261,638 or a total of \$154,843,400 as compared with \$124,435,825 in 1919. The imports for the same period were fruits, \$50,338,696; vegetables, \$46,569,851; nuts, \$74,434,501, a total of \$171,343,048 as compared with \$101,921,962 in 1919. Exports of nursery stock amounted to \$384,809 as compared with \$333,356 in 1919, and imports of nursery stock, \$3,841,161 as compared with

\$2,363,553 in 1919. As in 1919, the export trade, with few exceptions, was marked by increased shipments at higher prices. Exports of dry beans and peas dropped from \$29,383,190 in 1919 to \$10,870,375 in 1920. Exports of dried fruits increased from \$24,745,730 in 1919 to \$45,121,005 in 1920. Of the increased imports, shipments of fruits and table nuts from the Mediterranean region rose from \$14,203,195 in 1919 to \$39,964,152 in 1920. Of the oil-nuts, imports of peanuts increased from \$1,208,224 in 1919 to \$12,381,531 in 1920. China and Japan are now exporting large quantities of peanuts to the United States.

Certain new regulations under the United States Plant Quarantine Act went into effect on August 1st. The new regulations provide that a report shall be made to the Secretary of Agriculture by the captain or other person in charge of a vessel arriving at a United States port and containing on board plants or plant products the entry of which is prohibited or restricted. This report must state the nature and quantity of such plant or plant products, the country or locality of origin, the date of arrival, the date of sailing from the United States port, together with a statement indicating the steps taken to prevent the escape of insects or plant diseases which they may carry. It is further provided that the person in charge of such vessels must allow inspection of his craft and must take such measures as are prescribed by the inspector representing the Department of Agriculture, to prevent the landing of any such plant or plant products or the escape of insects or plant diseases which they may carry. The Collector of Customs, in co-operation with the inspector of the Department of Agriculture, may require such person to destroy the objectionable plants and plant products or to remove them forthwith from the port and the territorial waters of the United States. If necessary, the inspector of the Department may require the disinfection of the vessel in accordance with methods prescribed by the Department of Agriculture. A quarantine prohibiting the importation to the United States of fruit stocks, cuttings, scions, and buds from Asia, Japan, the Philippine Islands, and Oceania became effective June 1, 1920. The Japanese government has established a quarantine against fruits, vegetables, and walnuts from practically all exporting countries. It is said that the discovery of the codling moth in a shipment of apples caused the establishment of this measure. Arizona established a quarantine against citrus fruit from the Gulf Coast States. The quarantine permits the entrance of California citrus fruit subject to inspection for citrus pests.

EXPERIMENTAL WORK. The California Experiment Station recently reported improved methods of storing such perishable fruits as apricots, cherries, and berries. Under present commercial methods these fruits can not be cold stored for any great length of time without losing color and flavor. The station found, however, that if these fruits are held in water or syrup at 8°-12° F. they retain their flavor and color very well for at least a year. They may be stored either as whole or as crushed fruits with equally good results, except that if they are to be used for jelly making the fruit should be stored without being sweetened. Grape juice stored at 8°-12° F. was very much superior to the juice preserved by pasteurization.

Work with fruit juices by the United States Department of Agriculture has shown that fresh grape and apple juices may be satisfactorily clarified with infusorial earth before pasteurization. The resulting products remain perfectly transparent after pasteurization, and retain the characteristic flavor of the untreated juices. This work indicates that the "cooked taste" commonly observed in pasteurized fruit juices is due not so much to loss of flavoring constituents during pasteurization as to caramelization and other changes produced in the suspended colloidal material by heat. The removal of this colloidal material with infusorial earth prior to pasteurization not only does away with the "cooked taste" but also eliminates the long storage period usually required to settle and clarify the fruit juices.

Work with Bartlett pears in the Pacific Coast region has shown that hard-ripe pears can be stored for two months or more at a temperature ranging from 28° to 30° F., and that the fruit will be in good condition at the end of this period. In storage work with grapefruit, at temperatures of 32°, 36°, 40°, and 60° F. it has been found that the acid content and apparently the bitter principle decreases during storage, while the sugar content apparently remains the same at all storage temperatures used. The Satsuma orange, commonly grown in the Gulf Coast region, reaches its highest quality for consumption several weeks before it attains a yellow color, and deteriorates in quality if allowed to remain on the trees. Experiments recently carried out on a fairly large scale in Alabama have shown that by exposing the fruit to an atmosphere of gases formed by the imperfect combustion of kerosene and certain other petroleum products, it will develop a desirable color in four or five days, thereby obviating the need of storage.

Curing and storage investigations with sweet potatoes conducted for several years coöperatively by the United States Department of Agriculture and the South Carolina Experimental Station have given sufficient promising results to warrant the statement that where the potatoes are carefully handled during the harvest and cured in storage house of the design recommended for a period of 10 days to two weeks at a temperature of about 90° with plenty of ventilation, followed by storage in an approved storage house at a temperature of 52° to 56° F. with occasional ventilation, practically all varieties can be kept through the winter with a loss from decay on an average of not to exceed 1 per cent.

Pruning experiments conducted at the New York State College of Agriculture have shown that all types of pruning have a dwarfing effect and tend to reduce fruit production on young trees, primarily because of the reduction in the size of the trees. With species bearing fruit from spurs, the reduction in yield is greater than for species bearing fruit on laterals or one year twigs. Thus far, pruning has not affected the yield through any marked stimulating effect on fruit bud formation or twig growth.

PROMISING FRUITS AND PLANTS. Investigations now being conducted by the United States Department of Agriculture in cooperation with the Alabama Experiment Station indicate that the citrangequat (a citrange-kumquat hybrid) is apparently fully as immune to citrus canker as the kumquat and makes a good stock for the Satsuma and other citrus varieties. Severinia,

a small woody plant distantly related to the orange, has proved to be entirely immune to canker and offers considerable promise as a citrus stock and as a hedge plant to replace the susceptible trifoliolate orange. The canker resistance also of certain forms of the Siamese pummelo seems quite well established. Two of these pummelos are of excellent quality and good appearance while being normally seedless. Authentic bud wood of the best Siamese varieties has been secured to permit further testing under American conditions.

Among the numerous citrus hybrids developed by the Department is the Eustis limequat. It originated from a cross between the common lime and the kumquat and gives promise of achieving considerable economic importance as a hardy lime for the Gulf Coast region. The fig insect, *Blastophaga*, necessary to the pollination of Smyrna figs has now been successfully colonized in southern Georgia for three years, and a small distribution of caprifigs containing these insects from Brunswick, Ga., led to the maturing of Smyrna figs at five different places in five of the Southeastern States. The Smyrna trees thus made productive were old seedling trees that had never previously matured a crop.

MISCELLANEOUS. The English Chamber of Horticulture, London, has successfully organized a strong influential Parliamentary Committee to guard and watch over all horticultural interests in general, and to keep before the authorities just claims of those engaged in various branches of horticulture. The California Nurseryman's Bud Selection Association has been organized with the view of determining and ultimately propagating from selected buds of various fruits and plants.

France employed a large force of skilled gardeners under the direction of Europe's foremost landscape artists beautifying the Argonne Cemetery, where 23,000 American war heroes lie. It is the desire of the French government to make this spot one of the most beautiful in France. The death was announced of Reginald Farrar, the well-known plant collector and writer, October 16, age 40 years.

HOSKINS, FRANKLIN EVANS. Missionary,

died in Syria, November 12. During the war he had worked among Allied prisoners and suffered a break-down in health. He was born at Rochdale, Pa., Sept. 20, 1858; graduated from Princeton in 1883; and was ordained to the Presbyterian ministry in 1888. He had been several years engaged in foreign missions before his ordination. From 1888 to 1900 he was on missionary and exploration journeys in the Near East and after 1900 he was editor of the *American Mission Press*. He was prominent in many missionary and other religious associations and wrote a number of books of travel, besides contributing largely to magazines on religious, geographical, and other subjects. Among his books may be mentioned, *From the Nile to the Nebo* (1912), and in collaboration with Prof. William Libbey, *The Jordan Valley and Petra*.

HOUGHTON, LOUISE SKYMOUR. Author, died, August 22. She was born in Piermont, N. Y., Nov. 22, 1838, and educated at the Utica Female Seminary. After several years abroad she became a volunteer in McAll's mission in France and editor of its periodical in 1889. She was one of the founders of the King's Daughters' Settlement in New York City. In 1882-1902 she edited *Evangelist* and was associate editor of *Christian Work*, 1902-04; wrote a number of popular books in relation to the Bible and translated many works from the French. She also published selections from the Bible with commentaries. Among her latest books may be mentioned: *The Silent Highway* (1901); *Telling Bible Stories* (1905); *Hebrew Life and Thought* (1906); *Our Debt to the Red Man* (1918); *The Idealism of the French People* (1918).

HOURS OF LABOR. See LABOR LEGISLATION.

HOUSING. Although the housing situation was very acute at the beginning of 1920, during the summer and fall some improvement of conditions was obtained and at the close of the year the crisis was believed to be past. Profiteering on rents aroused much public dissatisfaction during the year, and led to State legislation, especially in the Eastern States, in respect to the limits of a landlord's rights in dispossession proceedings. The landlords objected strenuously, saying if the law allowed tenants to stay irrespective of the landlord's wishes in the matter the law was unconstitutional as being an interference with their "inalienable rights as citizens of the United States." In New York City for instance, a landlord and owner of property might recover his property unless his sole purpose in requiring the repossession of that property was to enable him to get it so as to take advantage of the housing shortage by imposing unfair terms through duress upon his tenants. If he wanted to live there, he could recover it; if his tenant was objectionable, he could recover it; if he wanted to tear it down and demolish it to build again, he could recover it. The above is the general spirit with which laws have been formed for the relief of the housing situation. According to the old law, a landlord could dispossess after five days, leaving the tenants to argue about it afterwards. Statistics gathered in 1920 showed that 13 to 14 per cent gross was the minimum economic return from any rented property.

During 1920 the housing situation took on two general tendencies. One was legislation, mainly on the part of municipalities, preventing profit-

teering on the part of landlords, and the dispossessing of tenants already paying a fair rent. Although this legislation did not work out as well as was intended, because the law was unable to say exactly what constituted a fair rent, it alleviated extreme causes of overcharging. The legislation took the form of forbidding more than a certain percentage of increase during a certain period.

The second trend was the formation of housing corporations in cities and in some States. Included in this work is the investigation of conditions, the procuring of building materials for sale at moderate prices, and the loaning of money on mortgage to persons wishing to own their own home. This procuring of funds was difficult, and in some cities it was found necessary to use municipal funds. Money was loaned to a 50 per cent value of the improved property, usually with a maximum of \$5000 and a minimum of \$2000. Statistics showed that not more than 10 per cent of the required number of homes needed were being built, normal requirements being about 450,000 in the United States each year. There were built in 1919 but 70,000 and there were over 1,000,000 marriages. Statistics from the National Banks showed that loans on real estate fell far short of the limit allowed by law, and that a large part of the loans made were for agricultural purposes and not for buildings and dwellings. Most of the loans made were in the Middle West and the Southwest.

Efforts were made during the year to arouse public sentiment in favor of garden cities and garden suburbs, built on plans similar to those used in England. The plan is as follows: 6000 acres of land, 1000 of which shall be used for building homes, and the remainder to be used in roadways, gardens, parks, etc.; a belt line railroad shall surround the city and factories shall be built close to it; beyond the factories shall be an agricultural district which shall supply the city with the food that it needs. This plan has been used in England with great success. Effort would be made to keep the city from becoming too regular in its architecture, or too severe in its lines, but rather to impart some of the "home" atmosphere of the ordinary small town.

In 1918 it cost but \$3000 to build a workingman's house, while in 1920 it cost between \$6000 and \$8000. For the most part workingmen's dwellings at \$6000 were beyond the purchasing power of the workingman; for, he would have to pay a rent of \$60 a month, or the equivalent of it, for such a house. Thirty dollars was about what he expected and was able to pay. The only solution seemed to lie in the standardization of houses, so that parts and fittings could be turned out on a large scale. It is interesting to note that in Cleveland there was a 50 per cent increase in the number of illegitimate births during the first six months of 1920, and that the Health Commissioner credited this to the lack of housing facilities and the consequent promiscuity of living.

The United States Housing Corporation is an organization to provide houses for workmen engaged in war work, and had an appropriation of \$100,000,000. On Dec. 16, 1919, the report of a committee investigating this corporation was presented in Congress, and the corporation was severely criticized for its lack of speed in attaining results after it was once organized.

LEGISLATION. An important step looking toward the solution of the housing problem presented by the acute, nation-wide shortage was taken by the Senate on April 17th when it passed a resolution introduced by Senator Calder of New York providing for the appointment of a Senate Committee to investigate the situation and report upon it by December.

Approximately 120 rent bills were introduced into the Legislature of the State of New York during one session, of which 12 became law. These laws did nothing to relieve the housing problem, but bore on landlords, profiteering, and how soon and for what reasons a tenant may be turned out by the landlord. As these laws were passed an enormous number of cases were carried into court, and the tenants scored an overwhelming majority. The law says that a landlord may not increase his rent more than 25 per cent of the rent charged the year before.

The rent profiteering situation and housing shortage resulted in various movements for State housing, but progress in this field seemed destined to be slow not only because of lack of precedent, but because of constitutional difficulties. In only one State was State housing undertaken, namely, Massachusetts, but only after a Constitutional amendment made it possible. Proposals for State housing were made during the spring legislative sessions in New York, New Jersey, and Minnesota.

The Eighth National Conference of the National Housing Association was held at Bridgeport on Dec. 9-11, 1920, where the subject was discussed in many phases. Many noted specialists on the different features of the housing problem were present and spoke to the conference. The Association publishes the quarterly magazine, *Housing Betterment*, which gives news of the developments of the problem in all parts of the world. Further information may be obtained from the Association, whose headquarters are at 105 E. 22d Street, New York City, and whose secretary is Lawrence Veiller.

FOREIGN. A meeting of the Inter-Allied Housing and Town Planning Congress was held in London on June 3-11, 1920. The delegates heard many discussions of the problem, and were shown some of the results of the efforts in England to alleviate the situation.

GREAT BRITAIN. The Housing Bill of July 31, 1919, makes it incumbent upon the local authorities to prepare and carry out housing schemes. Because of the war 350,000 working houses were not built during that five years, and 20,000 now standing are not fit for use. Under the Act mentioned above, the central government is to pay deficits where they occur to the municipal building. A new Rent Act was passed on July 1, 1920, providing that a landlord may increase his rent 8 per cent for improvements or structural alterations, besides 5 per cent the first year, 10 per cent the second year, and where the landlord is responsible for repairs another 25 per cent may be added. Further provisions deal with dispossession of a tenant.

England in 1920 was proposing to build 500,000 houses for her people, at an estimated cost to the taxpayers of Great Britain of over \$100,000,000 loss every year for a period of 60 years. The capital needed was placed at over £517,000,000, and was to be raised by a bond issue at 6 per cent by the local authorities.

NORWAY. Much progress was reported in this

country during the year. Several of the municipalities went in very heavily for the buying of land, and rather heavily for house building. For instance in Christiania, a city of 260,000 inhabitants, 2500 houses were built during the three years ending 1919 at a cost of \$12,500,000 or \$5 per inhabitant, and the building of at least 1000 more new houses annually was planned for years to come.

BELGIUM. This country lost 150,000 dwellings during the war, and in 1920 only 4000 had been erected in the devastated regions. In order to promote house building Belgium allocated 100,000,000 francs for use in 1920 in grants at the rate of 2 per cent; no loan to exceed half the cost of the building, to a maximum of 6000 francs, and no building so built to be rented at a rent above 4 per cent of the total cost.

ITALY. Housing conditions in Italy were reported as being very acute. It was estimated that one-third of the population of Rome was without permanent homes. The government appropriated 92,000,000 lire to be loaned directly to the various semi-official organizations actually engaged in construction. Provisions were made for erection of two new garden suburbs outside the present limits of the city.

CZECHO-SLOVAKIA. Shortage of dwellings in Prague and other large cities of this republic forced the government to take steps toward relieving the situation by enacting a law providing for the compulsory letting of all rooms not absolutely required for the owners of the houses in which they are found. Two rooms for each family head and one additional room for each adult member of the family are allowed, and all other rooms must be rented.

GERMANY. The rent laws in Berlin have been found ineffective. Means were found of side-stepping the law, and in a great many cases it is simply not enforced. On March 11, 1920, the Department of Labor came out with a series of regulations forbidding under penalty of fines up to 10,000 marks the offering of any premiums for the locating of vacant rooms, the offering of rooms under vague addresses, the asking of bids for rooms, and the offering of rooms in connection with the purchase of furniture.

CANADA. Much progress was reported from the Dominion, although there, too, as in the United States, the question of financing has been a difficult one. There was \$27,000,000 made available by the government to be borrowed by the local authorities for building purposes. Ninety-nine municipalities passed by-laws under the act and appointed commissions, of which number 68 constructed houses. Money is lent at 50 per cent of the value for 20 years at 5 per cent.

AUSTRALIA. This country, too, has introduced a housing scheme for its workmen and returned soldiers similar to that in Canada. For additional information, see BUILDING; CITY PLANNING; ARCHITECTURE; and WELFARE WORK.

HOWARD, THOMAS BENTON. Rear Admiral in the United States Navy (retired), died at Annapolis, Md., November 9. He was born at Galena, Ill., Aug. 10, 1854; graduated at the Naval Academy in 1873; served as navigator on the *Concord* in Manila Bay, May 1-Aug. 19, 1898 and on the *Charleston* and *Monadnock*, 1899-1900; commanded in succession several battle-ships; took part in the cruise around the world, 1908-9; commanded the Fourth Division of the Atlantic Fleet, 1910-1912; and was president of

the National Examining and Retiring Board, 1912-13 and again in 1915-16, when he was retired. He was called again into active service as superintendent of the United States Naval Observatory in April, 1917. From November, 1914 to September, 1915, he was Commander-in-Chief of the Pacific Fleet.

HOWELLS, WILLIAM DEAN. Leading American novelist, died in New York City, April 11, 1920. For many years preceding his death he was in the first rank of American writers and after the death of Henry James was generally considered the chief American novelist and frequently termed the "Dean of American Letters." He was born at Martin's Ferry, Ohio, March 1, 1837, of Welsh Quaker ancestry. His father was a country newspaper-man, working first as compositor on the local journals of the State and afterwards as correspondent and editor. Young Howells had no college education but grew up among books and in the atmosphere of journalism. He showed literary talent at an early age, and some of his youthful poems were published in the *Atlantic Monthly*. In 1860 he published along with John J. Piatt a book of poems called *The Two Friends* and in the same year wrote a *Life of Lincoln*. As a reward for the latter he was appointed consul to Venice where he remained from 1861 to 1865. From 1866 to 1881 he was engaged on the *Atlantic Monthly*, of which he was editor after 1872. Meanwhile he had published his *Italian Journeys* (1867), reminiscent of his experiences at Venice; *Their Wedding Journey* (1871), his first novel; *A Chance Acquaintance* (1872); *A Foregone Conclusion* (1875); *A Counterfeit Presentment* (1877); *The Lady of the Aroostook* (1879); *The Undiscovered Country* (1880); *A Fearful Responsibility* (1881); and *Dr. Breen's Practice* (1881). These works and many of his later ones show the effects of his life in Boston and New England. In 1886 he joined the staff of *Harpers Magazine* where he carried on the department known as the "Editor's Study." He left the House of Harper subsequently but returned in 1901 and conducted the department known as the "Editor's Easy-chair," from that time until his death. The list of his novels and other writings is too long to give here in full but the following may be mentioned: *A Modern Instance* (1882); *A Woman's Reason* (1883); *Three Villages* (1884); *The Rise of Silas Lapham* (1885); *The Minister's Charge* (1886); *Indian Summer* (1886); *April Hopes* (1888); *Annie Kilburn* (1889); *A Hazard of New Fortunes* (1890); *The Coast of Bohemia* (1893); *Their Silver Wedding Journey* (1899); *The Kentons* (1902); *Son of Royal Langbrith* (1904); *Miss Bellard's Inspiration* (1905); *A Fantasy* (1914). Besides the above novels he wrote a number of witty and entertaining farces including *The Sleeping Car*, *The Elevator*, *The Mouse-Trap*, and *Out of the Question*; many essays and criticisms, impressions of writers, reminiscences, and books of travel, including *Modern Italian Poets* (1887); *Criticism and Fiction* (1891); *Impressions and Experiences* (1896); *Literary Friends and Acquaintances* (1900); *My Mark Twain: Reminiscences* (1910); *Tuscan Cities* (1885); *A Boy's Town* (1890); *London Films* (1905); *Familiar Spanish Travels* (1913).

In *A Traveler from Altruria* (1894) he showed his growing tendency toward socialistic ideas and cast in the form of fiction a criticism of

modern society. His work as a literary and social critic though of a high class and admirable as regards the manner of presentation had not the same value as his novels, which for nearly two generations held the foremost place among American works of fiction. He was the leading realist in American letters, having from the first imbibed the spirit of the best French realists and the great Russians. An admirer of Balzac and the masters of French fiction since that day, he had little sympathy with the romantic writers and was profoundly hostile to the conventional romance of his own time, whose unreality and pretentiousness he delighted in satirizing. He was long an intimate of Henry James with whom he carried on an extensive correspondence containing letters of great interest some of which appeared in the volumes of James's *Letters* published in 1920. More than any other writer of his time he gave a minute and varied picture of American life, and like James, he served as an interpreter of American social conditions to Europe, and of the European point of view to America. Unlike James, however, he never felt the lack of sufficient literary incentive in his own country, despite James's frequent complaint that he was wasting his time in the portrayal of crude and elementary conditions when the whole rich and complex field of European life was open to him. Of all his novels the most popular seems to have been *The Rise of Silas Lapham*, but his admirers prefer a number of his more subtle and complex works in the later period, of which *A Hazard of New Fortunes* is a good example; *The Kentons* is also an admirable example of his mature work. No man in American letters was more beloved by fellow members of the craft. A singularly kindly spirit pervaded all he did and said and he was remarkable for his power of discerning promise in new writers. Indeed, he was blamed somewhat for going too far in his praises and encouraging young writers who had no other merit than an earnest desire to cultivate the same realistic field of fiction that Howells had taken for his own. When the National Institute of Arts and Letters was founded he was chosen one of the first seven members of the American Academy and became its president, which office he held to the time of his death.

HUGHES, MATTHEW SIMPSON. Bishop, died, April 4. He was born in Doddridge, Co., Va., Feb. 2, 1863; studied at the University of West Virginia and was ordained to the Methodist ministry in 1887. He held pastorates in Maine, Minnesota, Missouri, and California. He was professor of practical theology in the University of Southern California, 1908-1911, and he was elected bishop of the Methodist Episcopal Church in 1916. He wrote the *Higher Ritualism* (1906) and *The Logic of Prohibition* (1915).

HUNGARY. A republic in eastern Europe, formerly a kingdom which along with Austria, made up the Dual Monarchy of Austria-Hungary. Capital, Budapest. The area of the old kingdom was 125,609 square miles and its population, Dec. 31, 1910, was 20,886,487. In 1920 the area and population were not definitely known because the boundaries of the new state had not been determined. Under the terms of the Treaty (see below under *History* and also *WAR OF THE NATIONS*), the new state would be about one-half the size of the old kingdom. Out of the former parts of Hungary, Croatia and Slavonia were absorbed in the new state of Jugo-Slavia, Slo-

WILLIAM DEAN HOWELLS

1837-1920

20

vakia in Czecho-Slovakia and Transylvania in Rumania.

The republic was proclaimed Nov. 16, 1918 under the title of the Hungarian People's Republic and Count Michael Karolyi was appointed provisional president. His government fell from power March 12, 1919 and was succeeded by a Soviet government which declared the dictatorship of the proletariat. Opposition to it arose and soon succeeded only with the assistance of the Rumanian army in overthrowing it. On Aug. 7, 1919, a new government was organized, representing the parties of the Right, and elections were held in January and February, 1920. The new parliament chose a regent styled "Protector" of the Magyar Republic." Regent in 1920, elected March 1, Admiral Nicholas von Horthy; Prime Minister (appointed March 14) Dr. Alex. Simonyi-Semadam. The official style of the ministry was "Royal Hungarian Ministry," the cabinet having voted, March 23, that Hungary should be described as a monarchy.

ELECTIONS. The elections of January 25th gave a large majority to the parties of the Right. The distribution of seats according to the party groups was as follows: Small Land Owners, 71; and Christian National Union, 68, both these groups belonging to the Right; National Democrats, 6; Christian Socialists, 5; Christian Social Economic party, 4; United Christian National Small Land Owners, 3; Christian Small Land Owners, 4; miscellaneous, 3. The assembly began its session February 16 and elected M. Rakovsky as its presiding officer. At the beginning of March the election of Admiral Nicholas Horthy as vice-regent by the National Assembly was announced. This was followed by the resignation of the Huszar Ministry, March 10. A new ministry was appointed under a Christian Nationalist, M. Simonyi-Semadam, a friend of the former prime minister. The programme as announced by the new ministry included among its features various measures of agrarian, economic, and financial reform.

THE REACTION. Reactionary movements were reported from time to time during the year especially those due to the activity of the so-called "Society of Awakening Hungarians" and of army officers. The land question offered much difficulty on account of the opposition of the aristocratic landed proprietors. Demonstrations against the Jews occurred at intervals through the year. Discontent showed itself in Parliament and on June 10th led to the overthrow in turn of the ministry that had been established in February.

The government of Hungary was repeatedly referred to in the Liberal press as the most reactionary in Europe. It met with sharp attacks from the Socialists on all sides and at one time this element in Hungary itself and in Austria attempted a boycott of the existing régime. The government was believed to be hostile to the neighboring states. The fear of this hostility was attributed to the so-called Little Entente concluded by Rumania, Jugo-Slavia and Czecho-Slovakia, which states were thought to apprehend an attempt on the part of the Hungarian government to recover territory ceded to them under the treaties. Charges were repeatedly made against the so-called "White" government in Hungary under Admiral Horthy. It was alleged in the autumn that a former officer of the Austro-Hungarian army had as a spy succeeded in pene-

trating the army and had acquired a mass of evidence against the "White" leaders, proving that there had been a plot against the former prime minister, Friedrich, and that a robbery upon an enormous scale had been committed by the reactionaries. At this time there was an outbreak of the anti-semitic society known as the Society of Awakening Hungarians at their convention at Budapest, September 15, urging the immediate necessity of expelling all the Jews from state, military, academic and journalistic positions. Some demanded the expulsion of all Jews from Hungary. The society agitated for the overthrow of the government but its plans were discovered and measures taken for its dissolution. There were many anti-semitic outbreaks at Budapest and hundreds of casualties were reported. The police force threatened to strike unless the government took measures against the terrorists.

SENTENCE OF THE COMMUNISTS. The trial of the ten people's commissaries under Bela Kun concluded on December 28, after sitting nearly six months, with a judgment finding all guilty of sedition and murder and the sentence of four to death and the rest to imprisonment for life. Protests against the severity of the sentence were offered by leading liberals and moderates in many countries. The Soviet government informed the Hungarian government that it would treat a number of prominent Hungarian officials in Russia, including Counts Karolyi and Szechenyi, in exactly the same manner as the Communist commissaries were treated by the Hungarians.

MURDERERS OF COUNT TISZA. The murderers of Count Tisza had been on trial before a military court which rendered its decision in October. It condemned to death two of the accused and sentenced a third to fifteen years imprisonment. It was announced that proceedings would be taken against those who had instigated the crime.

FINANCIAL DIFFICULTIES. In October the finance minister submitted the budget for 1920-21 to the National Assembly which was as follows: ordinary revenue, 8,809,000,000 kronen; extraordinary revenue, 1,744,000,000 kronen; ordinary expenditures, 8,434,000,000 kronen; extraordinary, 10,773,000,000 kronen. In addition to this was an item of expense under the title of "investments," amounting to 1,300,000,000 kronen. Thus a deficit existed of 10,000,000,000. The condition was regarded as one of virtual bankruptcy.

THE HUNGARIAN TREATY. The ratification of the treaty at Budapest occurred on November 23. At a preliminary conference the session for the signature was termed the "session for the burial of old Hungary" and it was resolved that a protest against a dictated peace should be sent to all the Powers. Meanwhile the government had received a note from the Council of Ambassadors, saying that certain measures had been taken to insure in neighboring countries the protection of Magyar minorities and promising that the allied commission would begin the work of delimiting the Hungarian frontiers as soon as peace was ratified. See WAR OF THE NATIONS.

WEST HUNGARY. This division of Hungary was ceded by the treaty with Austria to Austria, but the Hungarians did not accept the decision. A strong feeling of nationality prevailed in the region and toward the close of the year a movement gathered force for holding the region. Troops were concentrated in the vicinity, accord-

ing to reports at the close of the year, and the territory was said to have been provided with a system of trenches and thoroughly organized for defense. The Hungarian nationalist troops were commanded by Colonel Lehar, brother of the composer and were said to be well supplied with munitions. This action had been hastened by the recent decision of the Council of Ambassadors, that West Hungary should be turned over to the Allies, who would set up an international commission to provide for its transfer to Austria.

MONARCHIST MOVEMENT. At the close of the year there was a strong element that desired and expected the return of the monarchy, and it was believed in certain quarters that Admiral Horthy was soon to retire in favor of a royal candidate. There were many signs in Hungary of fidelity to the monarchy and the Constituent Assembly had even declared that Hungary was still a kingdom but that the king was temporarily absent. The question of candidates was much discussed. The people were manifestly glad to be delivered from Austrian rule and did not look with favor on any aspirant to the throne who implied the possible revival of the Austrian control. There was opposition to King Charles on this account and especially because he was accused as Emperor of Austria-Hungary of having made separate overtures of peace without the knowledge of Germany in 1917 and because his queen, Zita, was supposed to be too sympathetic with the Allies. They accused him also of having abandoned Hungary after the armistice without making any effort on her behalf and finally of sacrificing too readily the principle of legitimacy. Some favored his son, believing that Charles could be induced to abdicate on his behalf, but the objection to this was that it would involve a long regency. The most popular candidate among the monarchists at the close of the year seemed to be the Archduke Joseph, familiarly known as *Father Joseph*, who, though a Hapsburg, was particularly sympathetic to the Hungarians. His father had been the representative of the king at Budapest and Joseph was born in Hungary and had passed all his life there, rarely going to Vienna. He was about fifty years old and during the war had served with distinguished bravery. Against him it was urged by the legitimists that he had betrayed the royal cause in taking his oath to the new republic after the armistice. To this he replied that King Charles himself had authorized him to do so. Under the Communist régime of Bela Kun, he had remained in Hungary and had been obliged to work along with his family like common peasants on his own estates. It was said that the Bela Kun government had resolved upon the execution of himself and his family and that they were only saved from death by the fall of the Communist government.

HUNTINGTON, ALFRED KIRBY. British metallurgist, died, April 16. At the time of his death he was professor of metallurgy at King's College, University of London, having been appointed to the chair in 1879. After the discoveries of the Wright brothers in America, he interested himself in aeronautics and made experiments in flying in machines of his own devising. During the war he gave valuable service in connection with the high explosives.

HUSON, THOMAS. British chemist and engraver, died, February 6. He was born at Liver-

pool, England, January, 1844, and practiced there as an analytical chemist and at the same time applied himself to painting and engraving. He wrote a number of works on art subjects, including *Six Landscape Mezzotints* (1880); *Round About Helvellyn* (1885); *Photoaquatint and Photogravure* (1897). He executed many etchings and engravings.

HUTCHINS, CHARLES THOMAS. Rear-admiral of the United States Navy, died, August 9. He was born at Kingston, Pa., Feb. 5, 1844; graduated at the Naval Academy, 1866; and was made a lieutenant-commander in 1887 and commander in 1896. He was on the *Wyoming* as navigator in the expedition to Santiago (Cuba), to retake the *Virginius*. He was navigator on board the *Lancaster* at the bombardment to Alexandria, Egypt. On this occasion he was in command of the landing party from the fleet and subsequently received the thanks of the King of Sweden. From 1893 to 1900 he was in command of several vessels and he was afterwards engaged as commanding officer of the *Buffalo* in carrying recruits to China. In 1902-04 he was the Naval Secretary of the Lighthouse Board and in 1904-05 was in command of the new battleship *Maine*. Meanwhile he had been raised to the rank of captain, 1904; on June 30, 1905, he was raised to the rank of rear-admiral and retired.

HYATT, JOHN WESLEY. Inventor, died, May 10. He was born at Starkey, N. Y., 1837, and while still a boy made several inventions. His first important one (1865) was a billiard ball made out of composite material as a substitute for ivory. In 1870 he discovered the means of dissolving pyroxalyn under pressure and later invented a "celluloid." His discoveries in this field led to the foundation of the great celluloid industry. More important than this was the discovery of the means of purifying large bodies of water (1881). His method was soon followed extensively and finally became in general use both in the United States and abroad. In 1900 he made important inventions in connection with the sewing-machine, and later he invented a machine for sugar extraction and a new method of solidifying hard woods, used for the making of bowling balls, heads of mallets, etc.

HYSLOP, JAMES HERVEY. Psychologist, died, June 17. In the latter part of his life he was prominently before the public in discussions of Spiritualism in which he defended the authenticity of communications with persons after death. He was born at Xenia, Ohio, Aug. 8, 1854; graduated at the University of Wooster, Ohio, 1887; studied at the University of Leipsic, 1882-4, and became a professor in American colleges. After teaching at Lake Forest University, Smith College, and Bucknell University, he became professor of philosophy, ethics, and psychology in Columbia University in 1899 and held the chair of logic and ethics, 1895-1902. He was an organizer of the American Institute for Psychical Research and was its secretary after 1903, editing its journal and proceedings. Among his writings may be mentioned: *Elements of Logic* (1892); *Elements of Ethics* (1895); *Logic and Organization* (1899); *Problems of Philosophy* (1905); *Science and a Future Life* (1905); *Enigmas of Psychical Research* (1906); *Psychical Research and the Resurrection* (1908); *Psychical Research and Survival* (1913); *Life After Death* (1918); and *Contact with the Other World* (1919).

ICELAND. A Danish crown colony with an area of 40,456 square miles of which 16,245 are inhabited, and with a population estimated in 1919 at 92,700. In 1916-17 the number of pupils in the elementary schools was 6920. There is a university in Reykjavik with faculties of theology, jurisprudence, medicine, and philosophy. The national church, which is endowed by the state, is the Evangelical Lutheran. In 1918 the total hay crop was about 2,300,000 cwt.; the crop of potatoes 52,000 cwt.; and of turnips 20,000 cwt. The total value of the fisheries in 1917 was placed at 18,300,000 kronur. The budgets for 1920 gave a total revenue of 5,420,300 kronur and the expenditure at 5,182,537 kronur. The executive power is in a ministry representing the king and the legislative power is in a parliament of two houses. The president of the council appointed February 25, 1920 was Jon Magnusson.

IDAHO. POPULATION. According to the preliminary report of the census of 1920, there were 431,866 residents in the State, January 1, 1920, as compared with 325,594 in 1910.

AGRICULTURE. According to the census of 1920, the number of farms was 42,100, an increase of 36.7 per cent since 1910. The following table is compiled from the estimates of the United States Department of Agriculture, covering the years 1919 and 1920:

Crop	Year	Acreage	Produc. Bu.	Value
Corn	1920	45,000	1,800,000	\$1,800,000
	1919	35,000	1,225,000	2,021,000
Oats	1920	200,000	8,000,000	5,440,000
	1919	210,000	7,350,000	7,203,000
Barley	1920	112,000	4,256,000	3,192,000
	1919	110,000	3,300,000	4,620,000
Wheat	1920	1,050,000	23,600,000	29,500,000
	1919	1,050,000	19,075,000	39,104,000
Clover Seed	1920	16,000	88,000	990,000
	1919	13,000	78,000	1,981,000
Rye	1920	18,000	252,000	252,000
	1919	13,000	182,000	318,000
Hay	1920	875,000	2,400,000	29,745,000
	1919	820,000	1,870,000	40,960,000
Potatoes	1920	41,000	7,880,000	5,018,000
	1919	39,000	6,045,000	9,128,000

^c Tons.

MINERAL PRODUCTION. The value of the gold, silver, copper, lead, and zinc mined in Idaho in 1920, according to the estimates of the United States Geological Survey, was about \$32,144,000, an increase of \$13,770,000 from that in 1919. The shipments of ore and concentrate showed a marked increase over those in 1919, when the Cœur d'Alene district suffered on account of a labor strike. Though the output of gold and copper decreased, the output of silver, lead, and zinc increased greatly. Production was not normal, but the large mines were active, and the prices for lead and zinc were somewhat higher. The mine output of gold in Idaho in 1920, was valued at about \$469,000, a large decrease from that in 1919, which was valued at \$713,238. The mine output of silver increased from 5,579,056 ounces in 1919 to about 7,545,000 ounces in 1920, or more than 35 per cent, and the value increased from \$6,248,543 to about \$8,227,000. The mine output of copper decreased from 3,122,763 pounds in 1919 to about 2,203,000 pounds in 1920. The value of the output decreased from \$580,834 to about \$377,000. The mine output of lead, which is the most abundant metal in Idaho, increased from 182,341,898 pounds in 1919 to about 254,662,000 pounds in 1920. The average price of lead was higher, and the value

of the output increased from \$9,664,121 to about \$20,777,000. Though the total production showed a great improvement over that of 1919, the mines had not generally returned to a normal output.

The mine output of recoverable zinc in Idaho increased from 15,094,229 pounds in 1919 to about 28,309,000 pounds in 1920. The price of zinc was higher.

FINANCE. The budget according to the figures published in 1920 was \$4,737,739 and the net debt \$3,880,750.

ELECTIONS. The vote in the presidential election of 1920 was: Harding (Republican) 88,975; Cox (Democrat) 46,579; Debs (Socialist) 38; Prohibitionist 32; as compared with the following vote for president in 1916: Wilson (Democrat) 70,054; Hughes (Republican) 55,368; Benson, (Socialist) 8066. The vote for United States Senator, in 1920 was: Frank R. Gooding (Republican) 75,985; John F. Nugent (Democrat) 64,513. The vote for governor was: D. W. Davis, (Republican) 75,748; T. A. Walters (Democrat) 338,509; S. D. Fairchild (Independent) 28,752. There were popular majorities on the special question whether a bond issue of \$2,000,000 should be authorized for the making of State highways and on the following constitutional amendments: Increasing the membership of the supreme court from three to five justices; giving the supreme court jurisdiction of appeals from orders of the Public Utilities Commission; and providing as an exception to the rule that State credit should not be bestowed upon private individuals or corporations that the State itself might control and promote the development of the unused water power within its borders.

CHARITIES AND CORRECTIONS. The following is a list of institutions under State control: Penitentiary, Boise; Soldiers' Home, Boise; Insane Asylum, Blackfoot; Northern Idaho Sanitarium, Orfino; Idaho State Sanitarium, Nampa; State School for the Deaf and Blind, Gooding.

OFFICERS. Governor, D. W. Davis; Lieutenant-Governor, C. C. Moore; Secretary of State, Robert O. Jones; Auditor, Edward G. Gallet; Treasurer, D. F. Banks; Attorney-General, Roy L. Black; Superintendent of Public Instruction, Ethel E. Redfield; Inspector of Mines, Stewart Campbell.

JUDICIARY. Supreme Court: Chief Justice, John C. Rice; Associate Justices: Alfred Budge, Charles C. McCarthy, Robert N. Dunn, and William A. Lee.

IDAHO, UNIVERSITY OF. A State institution of the higher education at Moscow, Idaho, founded in 1889. There were 141 students enrolled in the summer school and for the regular session there were 1099. The faculty numbered 101, six new members having been added during the year. The income for the year, arising mainly from State appropriations, was \$472,528. There were 50,000 volumes in the library. The establishment of the School of Education was the most important change in the university during the year. The south wing of the administration building, with the exception of the library portion was completed. President, Alfred Horatio Upham, Ph.D., having been elected to succeed Chancellor E. H. Lindley, who was president until August 15.

IDDINGS, JOSEPH PAXON. Geologist, died Sept. 8. He was born at Baltimore, Md., Jan. 21, 1857; graduated at the Sheffield Scientific School, and after graduate studies in this country and in Germany, became assistant geol-

ogist in 1880 in the United States Geological Survey. He was geologist in the Survey from 1888 to 1892 and again after 1895. From 1892 to 1908 he was associate professor and professor, successively, of petrology in the University of Chicago. He was Silliman lecturer at Yale University for 1914 and he was an honorary associate in petrology in the United States National Museum after 1917. He was the author of *Rock Minerals* (1906); *Igneous Rocks* (1904; vol. 2, 1913); and *The Problem of Volcanism* (1914); and collaborated in various other treatises, besides writing many geological reports and papers. His work was highly esteemed by his colleagues and his death was made the occasion of several memorials.

ILLINOIS. POPULATION. According to the preliminary report of the census of 1920, there were 6,485,280 residents in the State, Jan. 1, 1920, as compared with 5,638,591 in 1910.

AGRICULTURE. According to the census of 1920, the number of farms was 237,153, a falling off of 5.8 per cent since 1910. The following table is compiled from the estimates of the United States Department of Agriculture, covering the years 1919 and 1920:

Crop	Year	Acreage	Produc. Bu.	Value
Corn	1920	8,652,000	294,168,000	\$173,559,000
	1919	8,400,000	294,000,000	382,200,000

EDUCATION. According to the Illinois *Blue Book* of 1919-20 the pupils in the public schools numbered 968,947; in the high schools 112,557; and the teachers numbered 34,597, of whom 5600 were men. The average annual salary of men teachers was \$981 and of women teachers, \$770. Pupils in the private schools numbered 54,312 with 2032 teachers. There were 32 universities and colleges with a combined faculty numbering 2541. Professional schools included 15 theological, 11 law, 8 machine, 3 pharmacy, and 2 veterinary medicine.

FINANCE. The amount of all funds in the State treasury, Oct. 1, 1918, was \$20,995,540; receipts of all sources from Oct. 1, 1918 to June 30, 1920, \$60,883,287; total, \$81,878,827. The disbursements from Oct. 1, 1918 to June 30, 1920 were \$54,341,561. The balance of all funds in the State treasury, July 1, 1920 was \$27,537,266. The principal of the bonded debt of the State outstanding July 1, 1920 was \$17,500. All bonds had been called in by the governor's proclamation and ceased to draw interest but had not yet been surrendered.

CHARITIES AND CORRECTIONS. The State institutions were housing on July 31, 26,525 and employed 3726 men and women. The following table gives the names and populations of the respective institutions for July 31, 1920:

Mental Group	Patients
Elgin State Hospital.....	2,083
Kankakee State Hospital.....	3,252
Jacksonville State Hospital.....	2,176
Anna State Hospital.....	1,726
Watertown State Hospital.....	1,828

ELECTIONS. The vote in the presidential election of 1920 was: Harding (Republican), 1,420,480; Cox (Democrat), 534,395; Debs (Socialist), 74,747; Watkins (Prohibitionist), 11,216; Christensen (Farmer-Labor), 49,630; Cox (Socialist Labor) 3471; Macauley (Single Tax), 775; as compared with the following vote in the presidential election of 1916: Hughes (Republican), 1,152,549; Wilson (Democrat), 950,229; Benson (Socialist), 61,394; Hanly (Prohibitionist), 26,047; Reimer (Socialist Labor), 2488. The women's vote for Harding was in a larger proportion than that of the men, 73.9 per cent being the proportion for women and 71.5 per cent for men, whereas the proportion of men was greater in the vote for Cox, the percentages being 28.5 for men and 26.1 for women. For Debs the vote was divided between men and women as follows: Men, 555,771; women, 18,976., and same was true of the votes for the Farmer-Labor, Social Labor, and Single Tax candidates, while the vote for the Prohibitionist candidate showed a larger proportion of women. The total women's vote was 799,314. It was the second time in Illinois that women voted for president.

The vote for governor was: Small (Republican), 1,243,148; Lewis (Democrat), 731,551; Laflin (Socialist), 58,998; Walker (Farmer-Labor), 56,490; Woertendyke (Prohibitionist), 9876; Francis (Socialist Labor), 3020; Harlin (Republican), 5985; Parker (Coöperative), 1254; Spaulding (Single Tax), 930; Longworth (Liberal), 357. The vote for United States Senator was: McKinley (Republican), 1,381,384; Walker (Democrat), 554,362; Fraenckel (Socialist), 66,463; Venum (Prohibitionist), 10,186; Fitzpatrick (Farmer-Labor), 50,749; Carrington (Single Tax), 784. The proposal to abolish pri-

vate banks was referred to popular vote and carried by 811,873 to 299,803.

During the summer, a constitutional convention was in session, consisting of two delegates from each of the fifty-one senatorial districts. It was completely under the control of the Republicans. A referendum brought from the voters a decision in favor of making the initiative and referendum and state and principal ownership of public utilities a part of the new constitution.

ILLINOIS, UNIVERSITY OF. A co-educational State institution of the higher learning at Urbana, Ill., founded in 1867. At Chicago are the departments of Medicine, Dentistry, and Pharmacy. Enrollment for the summer session including both men and women, numbered 1402. The total for the university in the fall of 1920 was 8250, of whom 6372 were men and 1878 were women. The total number of university officers was 904, of whom 575 were of the teaching staff. The income funds of the institution for the year was classified as follows: From the United States government, \$313,527.19; State, \$2,871,500; sales, gifts, etc., \$377,538; and from student fees, \$353,684. There were 466,044 volumes in the library. The changes of interest were: Completion of the Smith Memorial Hall, the funds for which were dedicated by Captain Thomas J. Smith and his wife Tina Weedon Smith, to whom the building is dedicated as a memorial (occupied by the School of Music); extension of the work offered by the Senior Unit of the R. O. T. C. (making the Unit the most complete in the country); and establishment of a four-year curriculum in economic entomology. President, David Kinley, Ph.D., LL.D.

ILLINOIS STATE WATERWAY. See CANALS.

IMMIGRATION AND EMIGRATION. During the fiscal year ending June 30, 1920, the total number of immigrants entering the United States was 430,001 as compared with 141,132 in 1919, and an annual average in the five years 1910-14 of 1,034,940. The following table shows the immigration and emigration for the fiscal years 1910 to 1920 inclusive:

gest number being rejected as likely to become a public charge and the next largest number being rejected under the illiteracy test.

DEPORTATIONS. The deportations of the year numbered 2262 as compared with 3086 in the preceding fiscal year, not including deportations under the Chinese exclusion laws, which amounted to 15. Though the number of deportations was smaller than in the preceding year there was an increase in certain important classes; for example, of the criminal class, 229 were deported as compared with 175 in 1919; 314 of the anarchist and kindred classes as compared with 37 in the previous year; 388 of the insane and mentally defective as compared with 158. The above figures apply to deportations after arrest on departmental warrants. The diminution in 1920 was in part the result of war conditions which had caused in 1919 the deportation of 532 Mexicans who had entered under departmental orders providing for their temporary admission during the war and were subsequently deported under the illiteracy provisions.

COUNTRIES OF ORIGIN AND DESTINATION. The chief source of immigration continued to be Europe which during nearly a century prior to the beginning of the war supplied about 90 per cent of the total immigration. During the war the percentage fell to about 60 in 1915, 50 in 1916, 45 in 1917, 28 in 1918, and 17 in 1919. In 1920 it rose again to 57 per cent of the total. The following table shows the distribution by continents during the fiscal year 1920:

Countries	Immigrant aliens admitted	Emigrant aliens departed	Excess of immigrant aliens
Europe	246,295	256,443	*10,138
Asia	17,505	9,441	8,064
British North America ..	90,025	7,668	82,357
Mexico	52,361	6,606	45,755
Other	23,815	8,167	15,648
Total	430,001	288,315	141,086
* Decrease.			

The excess in 1920 was due to the large return movement to Eastern Europe. As will be seen from the following table all northwestern Euro-

TOTAL ALIEN IMMIGRATION AND EMIGRATION, FISCAL YEARS 1910 TO 1920

Year	Immigrant	Arrivals		Total	Departures		Total	Excess of immigration
		Non-immigrant	Immigrant		Non-immigrant	Immigrant		
1910	1,041,570	156,467	1,198,037	202,436	177,982	380,418	817,619	
1911	878,587	151,713	1,030,300	295,666	222,549	518,215	512,085	
1912	838,172	178,983	1,017,155	338,262	282,030	615,292	401,863	
1913	1,197,892	229,335	1,427,227	308,190	303,734	611,924	815,303	
1914	1,218,480	184,601	1,403,081	303,338	330,467	633,805	769,276	
1915	326,700	107,544	434,244	204,074	180,100	384,174	50,070	
1916	298,826	67,922	366,748	129,765	111,042	240,807	125,941	
1917	295,403	67,474	362,877	66,277	80,102	146,379	216,498	
1918	110,618	101,235	211,853	94,585	98,683	193,268	18,585	
1919	141,132	95,889	237,021	123,522	92,709	216,231	20,790	
1920	430,001	191,575	621,576	288,315	139,747	428,062	193,514	

From this it appears that the emigration in 1920 was proportionately much higher than during the pre-war period. In the two years following the war, the emigration nearly offset the immigration and the emigration was still relatively larger during the first six months of 1920, but during the last half of the year the excess of immigrants greatly increased. While in the month of June the excess was only 9887, in each of the months of October and November, the excess was a little over 100,000. Besides the 430,001 immigrants above mentioned, 191,575 non-immigrant aliens were admitted. During the year, 11,795 aliens were excluded, the lar-

gean countries with the exception of Germany showed an excess of immigration over emigration:

Countries	Immigrant aliens,		Average annual im- migration, 1910-1914
	1920	Emigrant aliens, 1920	
Belgium	6,574	1,846	5,690
Denmark	3,137	1,477	6,694
France	8,945	4,477	8,601
Germany	1,001	3,069	32,239
Netherlands	5,187	1,017	7,147
Norway	4,445	3,022	11,416
Sweden	5,862	3,109	17,843
Switzerland	3,785	1,103	3,762
England	27,871	8,099	43,753

IMMIGRATION AND EMIGRATION 336 IMMIGRATION AND EMIGRATION

Ireland	9,591	3,735	27,482
Scotland	9,347	1,488	15,678
Wales	1,258	141	2,274

(May 15, 1917); 5,083 were excluded and 704 expelled after entering down to June 30, 1920.

THE EFFECT ON ALIEN POPULATION. The following table shows to what extent the various foreign elements in the population were increased or decreased by immigration and emigration during the fiscal year:

ORIENTAL IMMIGRATION. The number of Chinese immigrants for permanent residence rose from 3340 in 1919 to 4690 in 1920. The number of those to whom transit privilege was granted rose from 3340 in 1919 to 10,917 in 1920. Of the applicants for entry, 151 were debarred in 1920. Immigration from Japan to Continental

ILLITERACY. During the fiscal year 15,094 illiterate aliens above the age of 16 were admitted under the exemptions of the law of exclusion, constituting 44 per cent of the total number admitted for permanent residence. The effect of the illiteracy test may be judged from the fact that in the years before the war between 200,000 and 300,000 illiterate aliens were admitted. In 1914, for example, they numbered 260,152, of whom a large proportion would have been rejected after the application of the illiteracy test

United States increased by 13 per cent over the preceding year, but Japanese immigration to Hawaii decreased by 6 per cent. The table below shows the numbers admitted, debarred, etc.

The chief feature of the situation in 1920 was the effect on future immigration of the state of affairs in central and eastern Europe. It seemed probable that immigration from eastern Europe would resume its pre-war volume at an early date. During the fiscal year there was little change in the situation and immigration

JAPANESE ALIENS APPLIED FOR ADMISSION, ADMITTED, DEBARRED, DEPARTED, AND DEPARTED, FISCAL YEARS ENDED JUNE 30, 1919 AND 1920

	1919		1920	
	Continental U. S.	Hawaii	Continental U. S.	Hawaii
Applications for admission	11,466	3,609	13,013	3,355
Admitted	11,404	3,500	12,868	3,306
Debarred from entry	62	109	145	49
Departed after entry	184	4	46	4
Departures	8,328	2,905	11,662	3,991

48 Koreans were admitted in Hawaii, and 25 departed therefrom.

38 Koreans were admitted in continental United States, and 11 departed and 1 was debarred therefrom.

from that quarter continued to be negligible according to the data available to the Bureau of Immigration. In Great Britain, immigration seemed to be returning to normal conditions. French immigration which had averaged in 1910-14, 8601 annually amounted in 1920 to 8945. During the fiscal year 1920, there were signs that the immigration from Belgium, Denmark, the Netherlands, Scandinavia, and Switzerland would before long return to its pre-war volume. An important feature of the immigration in 1920 was the great increase in the immigration from Spain, which down to that time had contributed only a few thousand. In 1920 it reached the number of 18,821. Immigration from Portugal also reached the highest point in its record. Italian immigration recommenced shortly after the war and in 1920 reached a total of 95,145, which was about half of the annual average during the 15 years preceding the war. The same was approximately true of Greece, which supplied 11,981 in 1920.

An important question for the future was the extent to which the immigration from Russia would again become a serious factor. Before the war the main immigration from within the limits of the Russian Empire came from the regions not included under the present Soviet government consisting of Hebrews, Finns, Poles, and Lithuanians. The Russians themselves, however, had risen in 1914 to a considerable figure, namely 40,241 and they came from the territory that is now under Soviet control. It was a question whether the volume of immigrants from Soviet Russia would resume its pre-war dimensions. In 1920 Russia was still for the most part shut off from the rest of the world. The Asiatic situation had not materially changed since 1919 with the exception that the immigrants from Asiatic Turkey who had numbered only 19, rose in 1920 to 5033, chiefly owing to the fact that the Syrians and Armenians were again beginning to enter the country.

At the close of the year, the Inter-Racial Council figures indicated an enormous volume of immigration. From various sources it was learned that large numbers of persons in European countries were waiting for the first chance to emigrate to the United States. There was much complaint in the United States that the laws in respect to qualifications of immigrants were not enforced. It was admitted that it was very difficult to enforce the laws, since the disabilities to which they referred were not easily determinable. According to the laws, these disabilities included mental, moral, physical, political, educational, and economic disqualifications. The most serious aspect of the subject according to many, especially among those influenced by recent campaigns pertaining to 100 per cent Americanism, was the danger of radicalism among the classes likely to immigrate. At the close of the year a vigorous debate was going on between the various associations interested in free immigration, and those who favored restriction. The bill restricting immigration was pending in Congress at the close of the year, having passed the House. Many protests and requests for changes in it were received. See UNITED STATES.

OCCUPATIONS. The following table shows the distribution of immigrant aliens by occupations during the fiscal year:

Occupations	Number, 1920	Per cent of total 1910-1914	
		1920	1914
Professional	12,442	2.9	1.2
Skilled	69,967	16.3	14.5
Farm laborers	15,257	3.5	24.3
Farmers	12,192	2.8	1.1
Laborers	81,732	19.0	18.4
Servants	87,197	8.7	11.7
Other occupations	28,081	6.4	2.7
No occupation (including women and children)	173,133	40.3	26.2
Total	430,001	100.0	100.0

IMPORTS. See articles on COUNTRIES.

INCENDIARISM. See FIRE PROTECTION.

INCOME TAX. See TAXATION.

INDEPENDENT METHODIST CHURCH.

See METHODISTS, WESLEYAN.

INDIA, BRITISH. The territory administered by the British sovereign as emperor of India, through the Viceroy or Governor-General in Council. In addition to regions directly governed by British officials it includes the Native States that are under the suzerainty of the British government. Capital, Delhi.

AREA AND POPULATION. Area including Native States, 1,802,629 square miles; pop. (1911) 315,156,396. No later figures were available than those given in the 1917 YEAR BOOK, which present the details.

EDUCATION. The number of persons with a knowledge of English was placed in 1919 at slightly under 18,000,000. Educational institutions are classed as public or private, according as they are or are not under the department of public instruction. The following table taken from the *Statesman's Year Book* of 1920 gives the number of institutions and scholars in British India, including Ajmer-Merwara, British Baluchistan, and the station of Bangalore, in the year 1918:

	Institutions for		Scholars	
	Males	Females	Males	Females
Colleges	185	16	61,827	1,109
General Education				
Secondary	7,147	707	1,094,604	103,982
Primary	128,480	19,395	4,855,571	1,077,170
Special Schools ..	8,301	279	107,421	10,058
Private Institutions	35,407	2,002	564,456	71,870
Total	174,520	22,399	6,683,879	1,264,189
Grand total	196,919		7,948,068	

There are non-teaching universities at Calcutta, Bombay, Madras, Punjab, Allahabad, and new universities have of late years been established at Mysore, Benares, Patna and Dacca, and projected for Rangoon and Nagpur. At the last census the number of natives able to read and write was placed at 106 males and 11 females per thousand. Indian students in the United Kingdom averaging 1500 to 1600 a year are aided by a student department in England under an educational adviser. In the year 1917-18, £7,880,609 were expended for public institutions and of this over 50 per cent came from fees, provincial resources, local rates, municipal funds, and endowments. There are state scholarships enabling native graduates to pursue studies at a British university.

PRODUCTION, ETC. The chief occupation is agriculture, over 226,000,000 being engaged in it directly or indirectly, and the chief source of revenue next to the income from railways is the land tax. The following (from the *Statesman's*

Year Book for 1920) are the provisional figures for crop production in the year 1918-19:

Name of Crops	1918-19 Provisional	
	Area Sown Acres	Yield Tons
Rice	75,864,000	23,672,000
Wheat ¹	23,764,000	7,502,000
Cotton	20,497,000	3,671,000
Linseed, pure	1,652,000	170,000
Linseed, mixed	321,000	59,000
Rape & Mustard, pure	2,999,000	476,300
Rape & Mustard, mixed	1,848,000	283,000
Sesamum, pure	2,576,000	220,000
Sesamum, mixed	925,000	38,000
Groundnut	1,312,000	490,000
Jute ²	2,500,400	6,955,600
Indigo	300,700	In Cwts. of Dye 44,100
Sugar-cane	2,820,000	Tons 2,337,000
Tea	678,500 ³	Lbs. 380,459,000 ³

¹ Including Native States.

² Excluding Nepal, for which no estimate of area or yield is available. The figures of imports from Nepal are, however, 92,000 bales in 1915, 70,000 in 1916, and 41,000 in 1917 and 13,000 in 1918.

³ Figures are subject to revision.

There are two systems of land tenure. The one consisting of large holdings in the hands of so-called *zamindari* and village communities, which prevails in Bengal, the Punjab and the United Provinces and is found to some extent in the Central Provinces, Madras and Assam. The other or *ryot* system consists of small holdings under private proprietors and prevails in Bombay, Madras, Sind, Burma, Assam, and is also found to some extent in the Central Prov-

figures there were 266 cotton mills with 101,017 looms and 6,263,569 spindles. Other industries include woolen and paper manufactures, breweries, etc.; but the value of the output is small. Forestry has lately received much attention and is important owing to the large area of forest land—estimated in 1918 at 86,924,932 acres. The leading mineral products are coal, gold, petroleum and manganese ore. In 1918 the quantity of coal produced was 19,847,000 tons. The figures for 1919 according to the chief inspector of mines showed an increase. The total production was 21,759,727 tons, the output in tons of the various provinces being as follows: Assam, 291,134; Baluchistan, 29,124; Bengal, 5,777,632; Bihar and Orissa, 15,117,903; Central Provinces, 497,021; North West Frontier Province, 20; and Punjab, 46,893. See AGRICULTURE.

COMMERCE. The year opened with a very favorable trade position, but as the months passed this was completely reversed. A new exchange rate for the rupee was fixed at two shillings gold, in consequence. Demand for Indian produce declined in western markets and at the close of the year the rupee had fallen 50 per cent below its exchange rate in the spring. The following information in regard to the foreign trade for the fiscal year 1920 was supplied by the United State Bureau of Foreign and Domestic Commerce: Preliminary figures of India's seaborne foreign trade for the year ended March 31, 1920, place the value of the imports at \$674,819,900, of the exports at \$1,003,308,700, and of the re-exports at \$57,677,800, making the total merchandise trade \$1,735,806,400 and giving a balance in India's favor of \$386,166,600. The corresponding figures for the two preceding years were:

Year ended Mar. 31	Imports		EXPORTS		Total merchandise trade	Balance in India's favor
	Indian	Foreign	Indian	Foreign		
1918	\$488,029,200	\$757,340,700	\$29,589,100	\$786,929,800	\$1,274,959,000	\$298,900,600
1919	548,403,000	776,450,300	47,225,500	823,675,800	1,372,078,800	275,272,800
1920	674,819,900	1,003,308,700	57,677,800	1,060,986,500	1,735,806,400	386,166,600

inces. The cultivation of opium, which is a government monopoly, has diminished as the result of the agreement with China to restrict the output. It is grown in Baroda and in some of the Native States and manufactured for the foreign market in factories at Ghazipur and Patna. The cotton industry is of considerable importance and is largely in the hands of native Indians. Most of the mills are in the Bombay Presidency. According to the latest available

In connection with the foregoing table it should be noted that conversion from rupees have been made at the normal rate of \$0.3244½ for all years. Exchange, however, fluctuated during this period, being above par most of the time. Classified under the four great groups into which Indian official statistics are divided, India's seaborne foreign commerce during three years had the following values:

Classification	Year ended March 31—		
	1918	1919	1920
Imports			
Food, drink, and tobacco	\$87,719,800	\$98,922,700	\$133,436,600
Raw materials and produce and articles mainly unmanufactured	31,809,900	32,245,600	56,253,200
Articles wholly or mainly manufactured	356,629,800	399,863,200	471,756,600
Miscellaneous and unclassified	11,875,700	17,371,500	13,373,500
Total imports	\$488,029,200	\$548,403,000	\$674,819,900
Exports of Indian Merchandise			
Food, drink, and tobacco	\$245,854,600	\$205,249,200	\$137,002,800
Raw materials and produce and articles mainly unmanufactured	269,145,700	280,644,100	519,310,800
Articles wholly or mainly manufactured	235,946,100	283,872,500	384,961,800
Miscellaneous and unclassified	6,394,300	6,684,500	12,032,800
Total exports of Indian merchandise	\$757,340,700	\$776,450,300	\$1,003,308,700
Exports of Foreign Merchandise			
Food, drink, and tobacco	\$9,094,500	\$9,459,300	\$16,801,500
Raw materials and produce and articles mainly unmanufactured	4,411,800	6,580,200	7,090,400
Articles wholly or mainly manufactured	15,238,600	29,296,800	31,736,800
Miscellaneous	844,200	1,889,200	2,049,100
Total exports of foreign merchandise	\$29,589,100	\$47,225,500	\$57,677,800

SHIPPING. The net register tonnage of vessels including native craft that entered and cleared with cargoes and in ballast during the year 1918-19 was 10,480,000 tons as against 10,868,000 tons in 1917-18, and 16,216,000 tons, the pre-war quinquennial average. This illustrates the effect of the war on shipping so far as India is concerned. Of the total tonnage entered and cleared during 1918-19, steamers constituted 96 per cent (10,028,000 tons), and sailing vessels (Indian and foreign) only 4 per cent (452,000 tons). The average tonnage per steamer in that year was 1036 against 1868 in 1917-18 and 2582, the pre-war average. Here again is another instance of the effect of war on shipping. The following statement shows the clearances of vessels, with cargoes and in ballast, engaged in overseas trade:

Nationality Entered	1917-18		1918-19	
	Number	Tons	Number	Tons
British	2,054	3,404,118	2,041	3,582,541
British Indian...	360	101,733	258	56,768

RAILWAYS. The railways open for traffic March 31, 1919 had a mileage of 36,616 of which 7308 consisted of state lines worked by the state and 19,107 of state lines worked by companies. During the year the government of India approved a project to build an India-Afghanistan railway, by extending the government railway from Jamrud, where it terminated, up the Khyber Pass to the Afghan frontier. The line was to be the Indian standard broad gauge of 5 ft. 6 in. The project also contemplated the hope that the Afghan government would build a line from Kabul, the capital, to connect with this line at the frontier, in order to develop commerce and trade, and at the same further the cause of civilization, since the projected line would transverse a country inhabited by warlike tribesmen.

GOVERNMENT. The source of both executive and legislative power is the Governor-General in Council. The Council consists of 8 ordinary members appointed by the Crown for five years, two being natives of India. Under the Indian Council's Act of 1909 the Governor's Council is expanded into an Imperial Council of 68 members of whom 36 are nominated and 32 elected by various representative bodies of natives and of commercial interests. Governor-General in 1920, Lord Chelmsford; Secretary of State for India, E. S. Montague; High Commissioner for India in London, Sir William Meyer.

FINANCE. The budget for 1919-20 was as follows:

Revenue	1918-20 £
Principal heads of revenue:	
Land revenue.....	22,090,800
Opium	2,990,800
Salt	3,754,000
Stamps	7,223,100
Excise	12,752,300
Provincial rates.....	36,100
Customs	14,919,500
Interest	4,380,100
Posts and telegraphs.....	5,996,800
Mint	1,669,700
Receipts by civil departments:	
Law and justice.....	902,900
Police	170,600
Ports and pilotage.....	136,700
Education	325,800
Medical	114,100
Other departments	507,800
Total	£ 2,157,400
Miscellaneous	1,862,800
Railways (net receipts).....	21,377,300
Subsidized Cos.....	230,000
Total	£ 21,607,800
Irrigation:	
Major works, portion receipts.....	8,546,700
Major works, port of land revenues due to irrigation.....	2,000,700
Minor works	296,200
Total	£ 5,843,600
Other public works.....	363,500
Military services	7,141,600
Total Revenue.....	£ 135,570,000
Expenditure	
1918-20	
£	
Direct demands on the revenues:	
Refunds and drawbacks.....	1,379,200
Assignments and compensation.....	1,326,400
Collection charges, viz.:	
Land revenue.....	4,269,300
Opium	899,100
Salt	563,600

DISORDERS. There were serious strikes in the early part of the year. In January a cotton mill strike at Bombay involved 200,000 workers. In June the railway employees threatened to stop

work unless wages and conditions of employment were improved. Despatches at the beginning of February indicated that the disorders on the northwest frontier which had been giving difficulty for some weeks were being put down. In February the judicial committee of the Privy Council dismissed the appeal of the 21 Indian natives, accused of violence during the riots at Amritsar which had been a leading subject of discussion in the previous year and which led to many charges against the military administration. The counsel for the prisoners declared that they had not been taken in arms, but were arrested after the rioting had ceased and were therefore not amenable to the military authorities.

THE BOLSHEVIST PERIL. As in the previous year there was constant fear of the advance of the Bolsheviks toward India and the spread of Bolshevik views in India itself. At the beginning of the year alarm was expressed in the British newspapers, over the occupation by the Bolsheviks of Trans-Caspia. There was reported to be a large Bolshevik element at Baku in Trans-Caucasia and the Turks were penetrating into that region from the south. The Bolsheviks were at this time reported to be recruiting their forces from Turkestan. Many rumors were afloat during the year as to Bolshevik advances through Persia toward the Indian frontier and Bolshevik designs on China. In the arrangement proposed at the close of the year for resumption of trade between Great Britain and Russia, Lloyd George had stipulated that Bolshevik propaganda in India should cease (See GREAT BRITAIN, *History*).

NEW ADMINISTRATIVE SYSTEM. In August, the new system of administration under the Montagu act of 1919 was announced and five new governors for the Indian provinces were appointed, namely: Sir Harcourt Butler, The United Provinces; Sir Edward Maclagan, Punjab; Sir Frank Sly, Central Provinces; Lord Sinha of Raipur, Bihar and Orissa; and Sir William Morris, Assam. All these officers had had experience in the administrative service. Lord Sinha had been Under-Secretary of State for India since 1919, being the first Indian to hold a cabinet position. This change was made pursuant to the plans proposed in the Montagu-Chelmsford reports. There was great enthusiasm over the appointment of Lord Sinha, but at the same time the agitation of the Nationalists continued and the prominent agitator Mr. Gandhi toured the country with a view to stirring up opposition to the government. Among the masses there was strong anti-British feeling owing largely to the circularization of rumors in regard to British oppressions and atrocities; and the continuance of the "Rowlat regulations" which practically amounted to the maintenance of martial law gave much offence. The dates for the coming into effect of the new administration system were fixed on December 16 as follows: Madras, December 17; Bihar and Orissa, December 29; Bengal, Bombay, Punjab, Assam, and the United Provinces, Jan. 31, 1921.

THE "HOME RULE" MOVEMENT. The movement for home rule in India of which Mrs. Annie Besant was a conspicuous advocate continued. On September 8, the National Indian congress for the purpose of furthering Indian independence was won over to Mr. Gandhi's programme of "non-coöperation" which included the boycotting of the courts by lawyers, of the legislative councils by public men, of foreign imports by consumers

and of educational institutions by students, with a view to enforcing the independence of India. These measures were opposed by Mrs. Besant as going too far; but they were voted by the congress which also voted in favor of the giving up of all honors and positions bestowed on Indians by the government. There was anxiety among the supporters of the government lest this campaign should be carried out. Meanwhile in England, a vigorous opposition had developed in the House of Commons against Mr. Montagu, the Secretary for India. Parliament passed a vote of censure on General Dyer on account of the killing of Indians at Amritsar in 1919 (see preceding YEAR BOOK) and that officer was retired. There was strong feeling on the part of many against the government on account of the lightness of the punishment, while the Unionists on the other hand were opposed to the vote of censure.

THE GENERAL SITUATION. The changes made under the Montagu programme for the purpose of giving the natives a greater degree of direct responsibility in the government did not satisfy the extreme element among them; and discontent was manifested throughout the entire year. The opposition on the part of the Unionists in the home Parliament to the vote of censure and the retirement of General Dyer had an unfavorable effect upon native feeling, and discontent was also heightened by the proposals which tended to give the army in India over to the control of the war forces, placing the latter in command of troops maintained at the cost of India. These recommendations had been made in the Esher army report. In general, there was little popular support for the government programme, but in respect to the educational institutions, there seemed to be a popular demand for their maintenance and no sympathy with the demand of Mr. Gandhi that they should be opposed because they were supported by the State. Moreover, the moderates obtained a majority in the newly elected councils, the effort to boycott the election having failed.

ARMY REORGANIZATION PLAN. Measures of army reorganization aiming at military unity were under consideration, comprising the following main features: Diminution of the detailed control exercised by the India Office. Membership of the India Council by an officer of high military rank to be abolished. The military department secretary at the India Office to be a deputy chief of the Imperial General Staff, the Chief, either directly or through him, being the sole responsible military adviser of the Secretary of State. The Commander-in-Chief in India to be the sole military adviser of the government of India, and to be the administrative as well as the executive head of the army, the army department and the headquarters staff being consolidated under him.

The Defence Committee set up in India during the war to be continued; a Military Council to be established; and decentralization to be promoted by the formation of four commands, each under an army commander graded as a general officer commanding-in-chief. Liberal and sympathetic treatment of all ranks in the army in India and the removal of such grievances as are shown to exist. Existing services to be recognized, and new services to be developed and equipped.

INDIANA. POPULATION. According to the preliminary report of the census of 1920, there

were 2,930,390 residents in the State, Jan. 1, 1920, as compared with 2,700,876 in 1910.

AGRICULTURE. According to the census of 1920, the number of farms was 205,124, a falling off of 4.8 per cent since 1910. The following table is compiled from the estimates of the United States Department of Agriculture, covering the years 1919 and 1920:

Crop	Year	Acreage	Produc. Bu.	Value
Corn	1920	4,545,000	184,072,000	\$108,602,000
	1919	4,500,000	168,500,000	208,125,000
Buckwheat.	1920	10,000	200,000	240,000
	1919	10,000	165,000	248,000
Oats	1920	1,875,000	76,875,000	35,862,000
	1919	1,750,000	56,000,000	38,640,000
Barley	1920	75,000	2,025,000	1,762,000
	1919	70,000	1,750,000	2,065,000
Wheat	1920	1,960,000	23,540,000	39,312,000
	1919	2,835,000	42,332,000	88,897,000
Clover Seed	1920	95,000	142,000	1,548,000
	1919	75,000	75,000	2,048,000
Rye	1920	310,000	4,340,000	5,642,000
	1919	360,000	5,040,000	7,056,000
Tobacco ...	1920	20,000	18,000,000	2,520,000
	1919	20,000	16,000,000	5,632,000
Hay	1920	2,230,000	2,874,000	55,279,000
	1919	2,125,000	2,592,000	55,765,000
Potatoes ..	1920	80,000	7,680,000	10,214,000
	1919	85,000	3,740,000	7,293,000
Sorg'm Si'p	1920	15,000	1,230,000	1,722,000
	1919	14,000	1,148,000	1,688,000
Cowpeas ..	1920	7,000	112,000	336,000
	1919	6,000	90,000	306,000

* Pounds. * Tons. * Gallons.

FINANCE. The latest available figures were those for the fiscal year ending September 30, 1920. The balance on hand at that time was \$4,568,397.37; that of a year earlier, \$3,974,851.34. The receipts during this period amounted to \$17,343,244.77, while the disbursements were \$16,749,698.74.

TRANSPORTATION. The total railroad mileage of the State in 1919 was as follows: Main track 7195.71; second main track, 1356.54; third track, 62.61; fourth track, 26.74; and side track, 4486.95. The total mileage in 1920 was as follows: Main track, 7161.22; second main track, 1369.27; third track, 62.74; fourth track, 26.74; and side track, 4547.44.

CHARITIES AND CORRECTIONS. The names of the institutions, the situation, date of founding and number of inmates present on Sept. 30, 1920, were as follows:

Reformatory, Jeffersonville, (1821) 710.
 School for the Deaf, Indianapolis, (1844) 276.
 Central Hospital for the Insane, Indianapolis, (1845) 1401.
 School for the Blind, Indianapolis, (1847) 115.
 Prison, Michigan City, (1859) 881.
 Boys' School, Plainfield, (1867) 527.
 Soldiers' and Sailors' Orphans' Home, Knightstown, (1867) 282.
 Woman's Prison, Indianapolis, (1869) 73.
 School for Feeble-Minded Youth, Ft. Wayne, (1879) 1414.
 Northern Hospital for the Insane, Logansport, (1883) 898.
 Eastern Hospital for the Insane, Richmond, (1883) 1006.
 Southern Hospital for the Insane, Evansville, (1883) 782.
 Soldiers' Home, Lafayette, (1896) 641.
 Girls' School, Clermont, (1903) 867.
 Southeastern Hospital for the Insane, North Madison, (1905) 1217.
 Village for Epileptics, Newcastle, (1905) 371.
 Sanatorium, Rockville, (1907) 105.
 Robert W. Long Hospital, Indianapolis, (1911) 1226.
 State Farm, Putnamville, (1913) 817.
 Farm Colony for the Feeble-Minded, Butlerville, (1919).

On September 30, 1920 the total population of the several State institutions was 11,505; of the county poor asylums, 3087; of the county jails, 563; and of institutions for dependent chil-

dren, 1560, making a total of 16,715. Expenses for these purposes in 1919-1920 were as follows: State institutions, \$4,357,359.10; county poor asylums, \$1,086,748.63; dependent children, \$386,195.59; county jails, \$175,273.23; and outdoor poor relief, \$387,834.62.

EDUCATION. The school revenue in 1919-1920 was \$20,889,797.30. In 1919-20 there were 784,430 children enumerated in the State (between 6 and 21 years). The enrollment in the schools was 566,089. There were 15,680 elementary and 4754 high school teachers.

LEGISLATION. Two special sessions of the legislature were held during the year 1920. At the first session, the Federal woman suffrage amendment of the constitution was ratified. The only important laws enacted at the second special session were the following: Changes in the election laws to enable women to vote; blue sky law; creating a special coal commission to regulate the price of coal, to require operators to supply a determined amount of coal to the public and to prescribe the priority in which coal shall be supplied to consumers; authorizing cities and counties to establish aviation fields, and providing for the erection of a State world war memorial as the headquarters of the American Legion.

ELECTIONS. The vote in the presidential election of 1920 was: Harding (Republican), 696,370; Cox (Democrat), 511,364; Debs (Socialist), 24,703; Watkins (Prohibitionist), 13,462; Christensen (Farmer-Labor), 16,499; Macauley (Single Tax), 566; as compared with the following vote in the presidential election of 1916: Hughes (Republican), 341,005; Wilson (Democrat), 334,063; Benson (Socialist), 21,855; Hanly (Prohibitionist), 16,368; Reimer (Socialist Labor), 1659; Progressive, 3898. The election for governor in 1920 was: McCray (Republican), 683,253; McCullough (Democrat), 575,253; Hart (Socialist), 23,228; Kroft (Prohibitionist), 12,235; Zion (Farmer-Labor), 16,626. The vote for United States Senator, was: Watson (Republican), 681,654; Taggart (Democrat), 519,191; Wampler (Socialist), 23,395; Vayhinger (Prohibitionist), 13,323; Dillon (Farmer-Labor), 16,804.

OFFICERS. Governor, Warren T. McCray; Lieutenant-Governor, Emmett F. Branch; Secretary of State, Ed. Jackson; Treasurer of State, Ora Daviess; Auditor of State, William G. Oliver; Attorney-General, U. S. Lesh; Clerk of the Supreme Court, Patrick J. Lynch.

JUDICIARY. SUPREME COURT: David A. Myers, Howard L. Townsend, B. M. Willoughby, Julius C. Travis, Louis B. Ewbank.

INDIANA, UNIVERSITY OF. A co-educational State institution, at Bloomington, Ind., founded in 1820. In the summer session of 1920, there were 634 men and 845 women enrolled, and in the fall session, there were 1416 men and 1163 women. The faculty numbered 206. The productive funds amounted to \$750,000. Income for the year amounted to \$927,206. There were 135,367 volumes in the library. A school of Commerce and Finance was established. President, William Lowe Bryan, Ph.D.

INDIANS. There was reference in the commissioner's report of June 30, 1920, to the so-called policy of turning the Indians loose. A movement to this end had been organized in recent years which aimed at abolishing the Bureau of Indian Affairs and releasing Indians

from government supervision. The argument against such a plan was to the effect that while the release of Indians having a larger proportion of white than of Indian blood was expedient, great care should be taken in removing restrictions from persons having one-half or more Indian blood, lest they should fall into the hands of unscrupulous exploiters. It was estimated that 73 per cent of the Indians, exclusive of those in the Five Civilized Tribes were over half-blood, and that about 50 per cent within the Five Civilized Tribes were in that class; also that only 55 per cent of the Indians under Federal supervision, exclusive of the Five Civilized Tribes, were able to speak the English language and that only 37 per cent were able to read and write English. No later figures for school attendance were available than those contained in the 1919 report which showed that out of 84,922 Indian children eligible for school, 60,889, or 72 per cent were in attendance. Outside the Five Civilized Tribes only 41,333, or 64 per cent, were in attendance. Reports indicated that there were hundreds of Indian children who never came in contact with any school. The need of schools in the southwest was especially urgent. In Arizona, for example, over 55 per cent of the children eligible for school were not in attendance and in New Mexico over 49 per cent. In the Navajo country the condition was the worst, 72 per cent of the eligible children being out of school. Out of 1449 Papago children, 796 were out of school. School attendance in the Five Civilized Tribes in Oklahoma was reported as unsatisfactory, only 80 per cent of the eligible children being enrolled. The report for 1920 called attention to the bad health conditions among the Civilized Tribes of Oklahoma and especially to the ravages of tuberculosis and trachoma which had continued to spread through the Indian communities in eastern Oklahoma. The inadequacy of the means of dealing with the situation and the urgent need of men and money repeatedly indicated during several years past were again called to the attention of the authorities. See ANTHROPOLOGY.

INDIA RUBBER. See RUBBER.

INDO-CHINA, also known as **FARTHER INDIA**. The southeastern peninsula of Asia, including the following divisions: Burma, politically attached to British India; Siam, a self-governing kingdom; French Indo-China, including Annam, Cambodia and Cochin China, Laos, and Tongking; the Federated Malay States; the Straits Settlements proper, and the Malay states of Johore, Kedah, Perlis, Kelantan, and Trengganu. See the articles **BURMA**, **FRENCH INDO-CHINA**, **SIAM**, and the other principal states mentioned above.

INDO-IRANIAN. See PHILOLOGY.

INDUSTRIAL WORKERS OF THE WORLD. Public interest in the I.W.W. has centred around two court actions against members of the "One Big Union,"—one at Montesano, Washington, where the eleven men accused of shooting into an Armistice Day parade at Centralia, Washington, on Nov. 11, 1919 (see preceding **YEAR BOOK**) were on trial, and the other in Chicago, where the United States Circuit Court of Appeals passed on the verdict charging some 40 members of the I.W.W. with conspiracy. The trial of the Centralia members of the I.W.W. took place at Montesano, in Gray's Harbor county,

after a change of venue had been asked from Lewis County on account of the strong local feeling against the defendants. A second change of venue was asked, but refused. Two weeks were required to obtain the twelve jurymen and two alternates requested by the judge, and 127 men were examined, from a panel of 378. The eleven defendants, Britt Smith, Elmer Smith, McInerney, Faulkner, Sheehan, Bert Bland, O. C. Bland, Loren Roberts, and John Lamb, together with Wesley Everest, who was taken from the Centralia jail on the night of November 11th and lynched by the mob, and Ole Hanson and Davis, two other I.W.W. who were not apprehended, were charged with the murder of Warren O. Grimm, an ex-service man of Centralia and a member of the American Legion. Evidence was introduced by the State to show that the death of Grimm resulted from the spontaneous firing of the I.W.W. members upon the paraders, and by the defense to show that it resulted from shots or a shot fired in self-defense after the paraders had attempted a raid and had themselves fired upon the I.W.W. hall.

Mr. Vanderveer, the attorney for the defense, voiced an opinion which was widely current in labor and liberal circles, when he stated that the issue was not the murder of one man by another man or group of men, but capitalism against the new philosophy of labor which demands that the industrial system be conducted for service rather than for profit, and which is represented by the I.W.W. He introduced evidence to show that two years previously, following a Red Cross parade, the I.W.W. hall had been raided and property destroyed; that appeals to the legal authorities for protection had been fruitless; that a second raid was known to be contemplated by the Merchants and Manufacturers' Association. He claimed that this group of employers, after learning from the chief of police that there was no legal way in which they could run the I.W.W. out of town, had planned a raid, for which the American Legion was made a catspaw. The I.W.W., knowing of these plans, had armed themselves and stationed their members at various points prepared to fight, but had fired only after they had first been fired upon by the paraders, according to his contention.

The evidence as to whether the paraders or the I.W.W. fired the first shots was hopelessly conflicting,—a fact sufficiently natural under the circumstances, with a large number of by-standers, no one of whom had his attention centred on the I.W.W. hall until attracted by the confusion of shots. The evidence introduced by Attorney Vanderveer to show that there had been a conspiracy against the I.W.W. and that the knowledge of this conspiracy justified them in arming themselves in self-defense, was ruled out by the court on the ground that only evidence tending to show an overt act on the part of Grimm could be introduced for that purpose. The court also ruled that the right of men to defend themselves did not include the right to station men outside a dwelling or other place for such purpose.

The jury, after an all day deliberation, brought in a first verdict, which was not received because it found Barnett and John Lamb, who were shown to have fired the shot that killed Grimm, guilty of murder in the 3rd degree, or manslaughter. The judge instructed them that the verdict must be murder in the 1st or 2nd degree, or not guilty.

After two hours more deliberation, a final verdict of murder in the 2nd degree was brought in for seven of the defendants. Elmer Smith, an attorney, had previously been released on instruction by the court, and Faulkner, one of the men whom the evidence showed to have been unarmed, had also been discharged. Sheehan was found not guilty, and Loren Roberts was found insane. The verdict was unsatisfactory to both sides, the State claiming that it was a travesty of justice, and the defense that the men should have been declared not guilty. Mr. Vanderveer announced his intention of appealing the case on the grounds of prejudice of both judge and jury. All the defendants were immediately re-arrested for the murder of McElfresh, another of the ex-service men killed.

Some indication of the forces behind the events with which the trial was concerned may be gained by noting some of the unusual circumstances in connection with it. Chief among these was the presence of a "Labor Jury," six men chosen as delegates from various labor bodies of the Northwest to sit through the trial, consider the testimony offered, and report their verdict. Their report, made on the basis of the evidence which the court rejected as well as that which it allowed, was:

That the I.W.W. was not guilty of a conspiracy to murder Grimm and the other men who were killed;

That there was a conspiracy of the business interests of Centralia to wreck the I.W.W. hall;

That the hall was raided before the shooting started and that the I.W.W. had a right to defend it;

That Warren O. Grimm was a party to the conspiracy to raid the hall;

That the defendants did not get a fair trial on account of the exclusion of vital evidence.

A large part of the audience at the trial was made up of ex-service men who appeared in uniform and who were suspected of being paid for their time for the sake of the influence they might have upon the jury. After the trial was begun, a detachment of troops from Camp Lewis was sent to Montesano, and took up their headquarters immediately opposite the courthouse. The defense protested against this step on the ground that the troops produced an unfavorable mental attitude on the part of the jury. It was found that the prosecution had asked the governor to send troops without consulting either the court or the sheriff, both of whom denied the need for troops. The court, however, refused to ask for their removal, and they remained.

That the Centralia episode resulted adversely to the I.W.W. was fairly clear from the evidence of public opinion and of the courts. The I.W.W. claimed that their self-defense was expedient, and that they were less frequently molested after they had shown that they could fight. But, according to the statement of a careful observer, whereas previously all cases of "criminal syndicalism" in the North West had resulted in acquittal, after the Centralia shooting nearly all resulted in convictions with sentences of from one to fifteen years for membership in the I.W.W.

In October, 1920, the United States Circuit Court of Appeals upheld the decision of Judge K. M. Landis of August, 1918, in finding some 40 members of the I.W.W., including William D. Haywood, guilty of conspiracy to overthrow the government. The verdict carried with it long

prison sentences for all the men. The superior court passed upon the question of the sufficiency of the evidence introduced at the trial, and declared that it was enough on which to base a verdict.

Accurate figures regarding the membership and increase or decrease of I.W.W. memberships are lacking.

INFLUENZA. This affection re-appeared in the United States, chiefly in the Middle West, about the middle of January, 1920. Up to that period the mortality both from influenza and pneumonia had been unusually low. In Chicago and Kansas City there was a sharp increase in these mortalities on January 17, indicating that influenza had reappeared. In 32 of 36 large cities the disease was soon apparent. A high point was reached in two to three weeks after which the disease slowly declined. Aside from the Middle West the influenza appeared in California, Connecticut, and New Jersey. While on the whole the epidemic ranked as mild with low mortality in several cities of the Middle West it was higher than at any time since the Fall of 1918. During the Fall of 1920 there has been no notable outbreak of the disease, which may reappear early in 1921 according to precedent. The disease in these winter epidemics has little or nothing in common with the pandemic of 1918 for we have had these annual winter visitations since the pandemic of 1890 and in certain localities like Minnesota for a much longer period. In New York City there were practised many immunizing vaccinations against acute pulmonary diseases during the period Sept. 30, 1919, and April 3, 1920. In the brief flare up of influenza in the metropolis in January the vaccinated presented but a slight advantage over the unvaccinated in the case of influenza victims, but the disease was as a rule very mild. While Pfeiffer's bacillus, one of the germs able to cause influenza of the ordinary annual winter type and the supposed cause of the pandemic of 1890, was excupated in connection with the pandemic of 1918 it has recently been shown that it can cause a very deadly form of purulent meningitis in children. This affection fortunately does not prevail in epidemic form. Of 158 cases reported by the Health Department but 12 recovered. The affection has been termed influenzal meningitis, a term somewhat misleading because other organisms which cause influenza also are known to cause meningitis. See MENINGITIS.

INSANITY. In the *New York Sunday World* for November 19 appeared a symposium on insanity by three New York alienists, Drs. Kirby, Brill, and Timme, on various problems in the care and cure of the insane. The former would do away with the term insanity for that of "civil disability due to mental illness." There are many who are technically insane, yet not disabled civilly. The insane who are under restraint, some of whom are mistakenly interned, have had their civil status changed by law, legal process being required for committal. There is a large element of relativity involved for according to Dr. Kirby, Joan of Arc might be legally interned to-day although 600 years ago visions, hallucinations and systematized delusions were not thought incompatible with sanity. One of the most interesting problems of the day is the influence of statutory prohibition on the number of insane commitments. At present these are diminishing, but the decrease began as far

back as 1909. It has been claimed that the chronic alcoholic addict is diseased to begin with and that alcoholic insanity is apt to appear in some other form. Although Kirby does not mention any equivalent we have recently read of a considerable increase of suicide, and believe that will prove to be one outlet for the mental illness which conduces to alcohol addiction. The most common form of insanity at present is precocious dementia, for it constitutes a fourth of all admissions. The causes are unknown and the outlook very bad. The beginnings are often apparent in the peculiar personality of the child. The symptoms show infinite variation, but all point to a failure in mental power without any of the compensation seen in merely unbalanced people. The beginnings are most difficult to detect amid the erratic behavior of the adolescent individual. The best way to hold the disease in check is occupation treatment. The next most important type of insanity is the manic-depressive, which is essentially recurrent, which is not attended by dementia and which includes the most violent mania and the opposite state of melancholia, but not necessarily in the same patient. In the intervals between attacks the subjects are quite normal and attend to their affairs and many have but one or a few attacks in a lifetime. Their insight into their condition may be so sane that they voluntarily seek restraint. It is not easy to determine whether the study of the occult can unseat the reason of a normal subject as many who take up these studies are already unbalanced.

Dr. A. A. Brill takes up the cure of a certain class of subjects on the border line of insanity by psychoanalysis. He admits that this resource is of no benefit to the actually insane. This being conceded, further discussion of the subject is unnecessary in this connection. Brill, however, discusses certain aspects of insanity. He believes that Prohibition will lessen the commitments, but will leave at large many subjects whose mental ill health originally led them to drink and who must now seek some other outlet. He does not mention suicide in this connection. To return to psychoanalysis Brill is of the mind that it is of value in the prevention of insanity in special cases. But few psychiatrists make use of the method because of its exacting character and the time required to analyze a patient.

Dr. Timme discusses chiefly the possibilities of internal secretions in the cure of insanity or rather arrested mental development. The latter furnished the original indication for this kind of treatment because due at times to anatomical defect of a kind which could be made good in this manner. But it has further possibilities, for a few undoubted cases of precocious dementia have responded to treatment. This is as far as we have advanced in the treatment of genuine insanity. As in the case of psychoanalysis there are borderline cases which are favorably influenced, including especially those dependent on some anatomical or functional defect which can be made good in this manner.

INSTITUTE OF INTERNATIONAL EDUCATION. See INTERNATIONAL PEACE AND ARBITRATION.

INSURANCE. Among the chief features of the year 1920 was the extraordinary growth of

the insurance business. In almost every class with the exception of marine insurance, the premium income increased as never before. There was an increase in the new business of legal reserve life insurance companies of over 20 per cent, as compared with 1919 which itself was an exceptionally heavy year. The new business amounted to nearly \$10,000,000,000. There was in consequence a great increase in the liabilities during the year and the gains for increased income were largely neutralized. There were heavy losses in many classes of insurance, especially in fire insurance, burglary insurance, and automobile insurance. In general, conditions were abnormal although in certain classes of insurance which yield a relatively small amount of premiums they were not far from normal. A feature which created much interest in 1919, namely insurance against risks of riot and civil disorders, lost its appeal to some extent in 1920 and although a considerable proportion of old business was renewed, the new business was less than had been expected. Aviation insurance was reported as developing but had not yet become an important factor. It was reported in insurance circles that the presidential campaign created less interest than such campaigns usually do and interfered less with business. In general the practice of carrying insurance seemed to have increased during the year. See the article FIRE PROTECTION.

LIFE INSURANCE. The 62nd annual report of the superintendent of insurance of the State of New York showed that there were 37 life insurance companies doing business in that State, Dec. 30, 1918, including 14 New York State companies and 23 companies of other States. The total assets were \$6,096,788,789; liabilities, \$5,825,223,147; total premium income, \$1,011,956,808; amount of insurance in force, \$29,712,083,607.

FIRE AND MARINE INSURANCE. There were 282 fire insurance companies and 25 marine insurance companies doing business in New York State at the close of the year 1918. The assets of the fire insurance companies were \$1,213,409,109; liabilities \$885,531,849; total premium income \$722,743,654; insurance in force \$102,171,442,951. The assets of the marine companies were \$54,448,472; liabilities \$37,160,033; total premium income \$28,690,075; insurance in force \$1,604,969,674. Of the fire insurance companies 55 were of the State of New York, 162 of other States; and 65 of other countries. Of the marine companies 6 were of the State of New York; 2 of other States; and 17 of other companies. See FIRE PROTECTION.

CASUALTY, FIDELITY, SURETY, and CREDIT INSURANCE. Of this group of companies the premiums written in 1919 were \$302,625,221, an increase over the previous year of \$46,474,156. The premiums on workmen's compensation during 1919 were \$33,991,868 as compared with \$31,730,842. In casualty companies, the assets were \$435,655,717; liabilities, \$376,880,262; total premium income, \$328,822,895; insurance in force, \$3,147,053,000.

FRATERNAL. Hundreds of fraternal societies are scattered throughout the country, but are of a distinctly local nature and statistics were not available. The New York Superintendent of Insurance issued a report covering 12 societies operating in that State. Down to the close of the year 1919, they showed combined assets of

\$220,533,402; liabilities \$90,274,089; total premium income \$100,336,046; insurance in force, \$6,805,830,870.

TITLE INSURANCE. In the year ending Dec. 31, 1919 there were 11 title insurance companies with assets of \$128,828,064; liabilities \$96,626,326; total premium income, \$2,840,-825.

INTERCHURCH WORLD MOVEMENT.

The process of closing up the affairs of this organization was carried on during 1920, and it was expected that this would be complete early in 1921. The headquarters of the Movement are at 45 West 18th St., New York City.

INTERNAL COMBUSTION ENGINES.

The most interesting developments in this field during 1920 probably were in the application of the Diesel engine to marine engineering, though the actual number of stationary Diesel engines ordered in the United States far exceeded those designed for ships. There were 144 stationary Diesel engines sold during the year for use in oil pipe lines, small central stations, and mines, as well as in irrigation at chemical works and ice plants. The range of these units was from above 1000 horsepower, a capacity several American manufacturers were able to provide, down to 75 horsepower. Considerable economy was shown in the smaller types especially when used in ice and lighting plants.

In Diesel marine engines, however, American manufacturers produced units of greater capacities in both two- and four-stroke-cycle types. One novelty of the year was a 2700 horsepower two-stroke-cycle Diesel engine of purely American design. A 2400 indicated horsepower four-stroke-cycle marine Diesel engine, the largest of this type to be built in America, was also constructed during the year. It was announced at the end of 1920 that there would be a material increase in the number of ships under the American flag on which Diesel motors were installed. Two large freighters were being constructed for the American-Hawaiian Steamship Company, while for the Alaska Steamship Company a motor tanker was under construction at the Tacoma plant of the Todd Company. The Shipping Board was equipping the *William Penn*, a large freighter, with a Diesel plant purchased by former Chairman Edward N. Hurley in Denmark, and had sold a number of the Diesel engines which were built in the United States and designed for the 5350 submarine-evading cargo boats, although the hulls for which were never laid down. The Bethlehem Shipbuilding Corporation had evolved a Diesel engine which won the commendation of Charles M. Schwab.

The oil engine undoubtedly had certain advantages over the older reciprocating engine and the steam turbine, but a number of reasons accounted for its limited use on American ships. Those of the Shipping Board were said to be unsuited for Diesel propulsion, while for those in service the cost of replacement would be large for ships in service.

During the year American marine engineers were endeavoring to develop a new type—a combination of the Diesel with the electric drive, in the hope that this kind of propulsion would be more economical than the full Diesel engine. In this system a Diesel engine would furnish the power to drive the generator, which would supply current to motors turning the propellers. It was stated at the end of 1920 that some of the

best minds in American marine engineering were working on this combination.

Internal combustion engines were attracting attention from marine engineers the world over and practically all the great shipbuilding concerns had begun the construction of internal combustion motors. An addition to the list was the Wallsend Slipway & Engineering Company, Ltd., which in 1920 acquired a Sulzer licence, being the fourth marine engineering firm in Great Britain to adopt this type of motor, the other three companies being Sir W. G. Armstrong, Whitworth & Co., Ltd., and Alexander Stephen & Sons, Ltd. During 1920 there were about 170 vessels representing some 495,000 tons under construction while 24 ocean going motor ships were put into commission during the year. See SHIPBUILDING.

Among the types of oil engine under construction in the United States in 1920 was the solid- or pressure-injection oil engine, a type having advantages of simplicity and low manufacturing cost. In size it ranged between the Diesel type, whose economy it approached, and the surface ignition or semi-Diesel type. Units of this design as large as 1000 horsepower were being anticipated. The surface ignition engine in 1920 both as regards numbers and total horsepower was the most utilized in America of any of the types of oil engine. It was simple in construction and operation, and could be used with special advantage where the demand for power was small or seasonal, as in the case of irrigation plants and oil field pumping stations. Units of this type were increasing in size, being built in 1920 by several works up to 300 horsepower. Water injection was eliminated, compression pressures were increased, reaching in some cases 250 pounds per square inch or similar to that of solid injection engines.

Where there was available coke-oven or blast-furnace gas the gas engine naturally found application, though on account of the decline in the natural gas supply there were fewer gas engines installed for industrial purposes. However, for existing power plants a number of producers were built so that the engines could operate on producer gas. Developments in this field were anticipated especially where anthracite or lignite producers could be installed. Gas engines also were installed during the year in casing head gas plants and elsewhere in the oil fields.

An interesting development of the year was the use of an internal combustion engine as a prime mover in a locomotive of large size in England. This machine was under construction as was also one in Switzerland and detailed descriptions of their design, construction and performance were awaited with interest by engineers. See AUTOMOBILES.

INTERNAL SECRECTIONS. This subject is also touched on under DIETETICS and DISEASE. A recently issued number of the *Journal de médecine et de chirurgie pratiques* is devoted solely to Opothrapy or the medicinal use of internal secretions. Since it is at times very difficult to prescribe the latter to the best advantage, special diagnostic measures are becoming more and more utilized. According to the reaction of the subject to a test dose of a secretion or to one of the active alkaloidal drugs, it is often possible to select the particular secretion and dose demanded and also to avoid giving a drug or dose

which is not demanded. In health the organs of internal secretion as the thyroid, suprarenal glands, etc., in response to the needs of the economy pour out certain quantities of their secretion. If the gland sustains a severe pathological alteration and becomes unequal to its tasks other glands may substitute for it; but in general the idea that treatment with these glands consists in mere substitution of something lacking in the economy is only one aspect of the case. Without any anatomical change these organs may pour out too much or too little of their proper secretions, not because of any intrinsic fault, but because of the action of the nervous system, or some other extrinsic factor. The subject instead of being, as formerly thought, relatively simple is really extremely complex. Moreover it is unusual to find one gland acting badly while the others are normal. To a large extent the entire system of these organs behaves as a unit. Not only may several of them be affected simultaneously from a common cause, but a derangement of one may react on several of the others. The exact number of these secretions is unknown, but is very large, although some are of far more importance than others. Several of them appear to form a special system within a system, known as the chromaffins. The part played by them in growth and after growth has been attained in the personality or individuality is enormous. There is at present no material way in which we can explain why one man should possess enormous psycho-physical energy while another with the same inherited equipment and nourished with the same food should be sluggish mentally and physically, save through the habitual behavior of the internal secretions. In like manner the differences between the most masculine of men and most feminine of women lies entirely in the differences in internal secretions. By grafting experiments it has been possible to change an effeminate to a masculine type of man and so slight a factor as a tumor of the suprarenal gland has been sufficient almost to change the sex of a woman, about 30 of these cases being now on record. The subject of grafting the interstitial sex glands of the male into elderly men in the hope of rejuvenation has been active for the past eight years and has given promising results, but at present it seems that a slight operation without grafts performed on the subject himself may bring about the same result and at the time of writing attempts are being made to commercialize this operation on a large scale.

An analogous subject may some time play a great rôle, but at present it is not even thinkable. Removal of the male sex glands as is well known makes of the subject a very defective biological unit who derives not a single advantage from this mutilation. Our knowledge of the corresponding operation on young girls is very slight and almost limited to the practice as carried out in India. In the brief account of the future of these women it appears that although unsexed they are great gainers in all other respects. They have all of the strength and endurance of the best men and are free from minor ailments, enjoying the best of health. Centuries hence there may be reasons to justify this operation which are at present unthinkable.

INTERNATIONAL COÖPERATIVE ALLIANCE. The Coöperative Movement showed during the year 1920 a definite return to the

international spirit which characterized it before the war, and which was replaced during the period 1914-1919 by a rapid growth of national consumers' societies. That this spirit was not lacking even during the war, is shown by the fact that during the greater part of the time, the official bulletin of the International Coöperative Alliance continued to be published in the three official languages, English, French and German, and that yearly conferences were held, with delegates from the consumers' societies of the Allied nations, to discuss the problems of international distribution, food supply and exchange. (See YEAR BOOK for 1918 and 1919.) In 1920, however, for the first time since 1914, there were official meetings of the Central Committee of the International Coöperative Alliance, one at Geneva in April, and the second at The Hague, in October, to which Great Britain, Belgium, France, Denmark, Finland, Germany, Holland, Hungary, Russia, Switzerland, Czecho-Slovakia, Ukraine, Georgia, Prague, and Lithuania, sent delegates. The committee decided in accordance with the arrangements of the Glasgow Congress of 1913, to resume the International Congress of the Alliance in 1921, and to hold it at Basel. A programme was outlined for this Congress covering policies of international coöperation, international peace, the League of Nations, and the International Labour Bureau, as well as topics more directly concerned with the organization and development of the I. C. A. At the same time, meetings were held of representatives of Coöperative Wholesale Societies to discuss the formation of an International Coöperative Wholesale Society. Coöperative production, although it exists on a large scale in Great Britain and on the Continent as an outgrowth of coöperative distribution, and is increasing every year, has not yet developed to the point of organizing an international society apart from the I. C. A.

The most striking advance of the year outside the official coöperative organizations, was the establishment of a Coöperative Section of the International Labour Bureau, under the League of Nations. This section has recommended to the governments of all nations in the League, the representation of the consumers' interests, through the Coöperative organizations of consumers, at the next International Labor conference.

GREAT BRITAIN. The coöperative societies of Great Britain now have a membership of four million families, or over one third of the total population. The membership increase has during the last forty years maintained a ratio of five to one as compared with the increase of population in the Kingdom. The sales for the half year ending June 1st, 1920 showed an increase of 24 per cent over the corresponding period for 1919 according to the report of the Coöperative Wholesale Society, which now distributes over a billion dollars worth of commodities to its members each year. The extent to which this society of consumers has itself become a producer is indicated in the value of the supplies from its productive works, which amounted to nearly one hundred million dollars for the half year and showed an increase of 35½ per cent over the corresponding period for 1919. The C. W. S. owns and operates the largest flour mills and the largest shoe factories in Great Britain, and produces a total amount of commodities five times greater than that of the pri-

vate manufacturers in the Manufacturers' Association. The trade department showed a loss during the first half of 1920 of nearly half a million dollars, after expenses of production and distribution, interest on share and loan capital, and depreciation of property, had been met. This loss was paid from the reserve fund, which itself was increased by the refund of three and a half million dollars of excess profits tax. The Corporation Profits Tax, a 1920 revenue measure, exempts only such part of the profits of coöperative societies as it actually returned to members in the form of dividends or savings-returns. This tax was bitterly protested by the C. W. S. which maintained "that the result of their mutual trading, the distribution of goods which they collectively buy and sell for convenience at current prices, cannot result in anything in the nature of a commercial profit." The banking department reported an increased turnover of 26½ per cent over the corresponding period of 1919.

In 1918, British coöperators formed the Co-operative Party, to secure direct representation of coöperative interests in Parliament. Thus far, only one member, Mr. A. E. Waterson, had been returned by the Party, but its candidates showed considerable strength at two important by-elections during 1920. Reports show about 180 definitely organized local coöperative parties, and subscriptions, which in 1919 were received from 532 societies, were received in addition from 50 new societies up to September 30th, 1920.

RUSSIA. The year 1920 in Russia completed the taking over of the coöperative organizations by the state. Although coöperation was slow in starting in Russia as compared with other European nations, on account of the opposition of the imperial government, the war brought an immense increase in the number and extent of these societies, until in 1918 they included one hundred and fifty million people, united in the production and distribution of almost all the necessities of life. The Moscow Narodny Bank (People's Co-operative Bank), a joint federation of local credit unions and consumers' and peasants' agricultural societies, had in November 1918 a capital of one hundred million roubles, and deposits amounting to six hundred million roubles. In September 1918, a Coöperative University was opened at Moscow, to train workers for the Co-operative movement.

The Soviet government, immediately upon its accession to power, took steps to control the co-operative societies. In April, 1918, membership in a co-operative organization, which according to the principles of the movement had been entirely voluntary, was made compulsory. A year later, all coöperative societies, stores and productive agencies were consolidated by governmental decree into a nation-wide Consumers' Commune, the control of which is vested, not in the consumers, but in those persons entitled to vote in the Soviet elections. Finally, in 1920, the property of the societies, including the agricultural societies and the Moscow Narodny Bank, was made the property of the government, which through the votes of its own members on the board of directors, made the action appear a voluntary one on the part of the organization. The few remaining original directors on the board protested bitterly against this action, and denied the right of the majority of the board to represent Russia in the councils of the I. C. S. The Soviet members of the board, on the other

hand, maintained that their action was the inevitable result of the socialization of the state, when products become the property of the whole community, and buying and selling, as they are understood under capitalism, disappear.

BELGIUM. The membership in coöperative societies in Belgium in 1920 was 350,000, and has shown a steady increase, even during the worst years of the war. The money turnover has also increased. The coöperative movement in Belgium is the only one of the national movements which is definitely adherent to a political party,—the Belgian Labor Party. Of the 70 Labor members of the Belgian parliament, 64 were members, administrators or directors of coöperative societies. Four government portfolios were held by coöperators.

AUSTRIA Since the revolution and the consequent withdrawal of the non-German societies, the Austrian coöperative societies have fallen into three groups: The Union of Distributive Societies, the Union of Productive and Economic Societies, and a group of miscellaneous smaller societies that have not joined either of the unions. The Austrian societies have not only helped meet the financial depression by advancing credit to their constituent societies, but have also aided the government in meeting the food shortage by issuing supplies to other than its own members.

FINLAND. Finland, where coöperation is very strong, shows for the year 1920 a total turnover in its coöperative societies of nearly \$250,000,000. There are 65 coöperators among the 200 members of the Finnish Diet. A permanent Coöperative Business Training School was opened in October, 1920, with a two-year programme for the education of coöperative managers.

FRANCE. In May, 1920, two large coöperative federations in Paris were consolidated, making a society with a subscribed capital of more than five million, five hundred thousand francs, and a yearly turnover conservatively estimated at ninety million francs. Government subsidies to coöperative societies, which have been a practice in France for a number of years, have been continued, especially to societies in the devastated areas. The figures for 1920 were not available, but those for 1919 showed that already the societies in these areas are making efforts to repay the loans.

GERMANY. Germany in 1920 had 3,000,000 members of consumers' societies doing a trade of one billion marks. Another three million were members of banking, agricultural, producers' and dwelling associations. On January 1st, 1920, there were 40,635 registered industrial and provident societies as compared with 38,023 in 1919.

ITALY. In Italy the Coöperative movement has thrown in its fortunes politically with the Socialist party, which is taking an active part in the work of economic reconstruction. Coöperative trade-unions of builders, contractors and day laborers are more developed in Italy than elsewhere. The coöperative banks assisted the workers who seized the factories and attempted to operate them on a co-partnership basis. The total turnover of Italian coöperative industry for 1920, estimated on the basis of the figures for the first part of the year, was \$400,000,000.

NORWAY, SWEDEN AND DENMARK. Norway had, at the beginning of 1920, 295 societies with 70,984 members in the Norwegian Coöperative Wholesale Society. The turnover showed an increase

of some five million dollars over that of the preceding year. Sweden had nearly three times as large a society, in members and turnover, as Norway. Denmark has developed coöperation to a greater extent than almost any other country. Figures for 1920 were not available, but those for 1919 showed that the Danish Coöperative Wholesale Society doubled its turnover, in that year, and that the Coöperative Bank, with outstanding loans amounting to \$2,000,000,000, was probably the strongest single factor in putting agriculture back on a normal basis.

OTHER EUROPEAN COUNTRIES. The splitting up of the Austro-Hungarian monarchy resulted in the establishment of separate coöperative organizations in Hungary and Czecho-Slovakia. The General Distributive Society at Budapest had a membership in 1919 of two hundred thousand and did a trade of two hundred million crowns, and in 1920 these figures were doubled. The Czecho-Slovakian societies united with a wholesale at Prague, which had in 1919 a trade of one billion, three hundred million crowns.

Holland and Switzerland are active in the Co-operative movement, and in Spain and Portugal, the coöperative societies, though small, are active and growing.

UNITED STATES. American coöperation has been hindered by the lack of a central society through which to compare methods, to check up unsuccessful and spurious forms of coöperation, and to educate members and workers in the movement. This need has been met this year through the Coöperative League of America, formerly a temporary organization, but now established as the national central educational organization, by the action of the Second American Coöperative Convention. This convention, which met at Cincinnati, November 11-14, 1920, had 62 delegates from 19 states, representing 279 coöperative societies with a membership of 84,000. In addition, there were 44 fraternal delegates from Trade Unions representing two million members, other fraternal delegates from educational and religious organizations, and many visitors, students and individuals without credentials. This convention, as a step toward better organization, recognized only voting delegates from coöperative societies, and through these delegates, adopted a constitution creating "an organization of the consumers coöperative societies of the United States for education, standardization and national unity." Two whole sessions of the conference were given over to a discussion of the methods of the National (Wholesale) Coöperative Association of Chicago, and the Pacific League, which were represented, contrary to the policy of co-operative societies, by delegates who were also paid employees. After listening to three member delegates from societies organized by the National Coöperative Association, the conference voted to return the credentials of its delegates, and endorsed a resolution advising coöperative societies not to affiliate with the Pacific Co-operative League so long as it continued its present management and methods. The conference elected a board of fifteen directors of the Coöperative League of America, with an Executive Board to carry on the intensive work of the League. Its headquarters are at 2 West Thirtieth Street, New York City. It has been impossible to measure the extent of the coöperative movement in the United States, on account of the large number of small independent societies

through which it worked. It is estimated, however, that there are 3000 true coöperative distributive societies, and 12,000 agricultural producers societies. At least 300 new societies are being organized each year. The movement is now conservatively estimated to have 500,000 members.

INTERNATIONAL LANGUAGE. Throughout the year the controversy on the subject continued. The advocates of *English*, however, were confidently letting things take their natural course. The advocates of *French* did not miss many occasions to point out to the world the traditional rights of their tongue; and particularly they saw in the present prestige of France in world's politics an occasion to reinstate French as the only diplomatic language (the English and the French being both recognized as "official texts" for the Treaty of Versailles; see Article 440 of said Treaty). M. Branting, a Danish scholar, and a member of the Stockholm Delegation to the Peace Conference, points out the discrepancies of the two texts. Cf. also A. Gérard, *Revue Bleue* 13 mars 1920, "*L'importance de la langue française dans les relations diplomatiques*." The French have, moreover, scored a success in the field of scientific researches; French having been adopted as the international language by the Union Internationale des Académies—which embraces all the great Academies of the allied, associated, and neutral countries. (*L'Opinion*, Dec. 4, 1920.)

Nothing striking was published during the year by the adepts of the *Projet Chappelier*.

As to the advocates of the auxiliary and artificial languages they are steadily keeping up their efforts hoping for ultimate success. At the Assembly of the Delegates of the International Union for Peace, which met in Basel, May 22-24, the following resolution was adopted: "*Auxiliary languages*—without taking sides, the committee invites the Pacifists who are partisans of an international language to enter the societies which are concerned with that question and to work in favor of peace."

Esperanto has been officially adopted by the Soviet government of Russia—which may do the cause of *Esperanto* infinite good or infinite harm according to what the future political world holds in store for us and *Esperanto* has been rendered obligatory in all schools. Barbusse, the author of *Le Feu* and now an adherent of Sovietism, proposed *Esperanto* as the International Language at the international congress of the Anciens Combattants, in Geneva, Switzerland, early in 1920. Pressure has been brought to bear on the League of Nations, but the admission of the Soviets and of the communists of Barbusse's stamp may prevent success there for a long time to come. The *Ido* Society was working with enthusiasm. Offices in America: 1059 Mohler Street, Pittsburgh, Pa. They have on the market a series of books; the most condensed exposition of the language costs four cents; a grammar, 12 cents; the exhaustive textbook, \$1.40; and they have three magazines. The *Esperantists*, or *Antidists* seem not to have gained footing on American soil yet; at least no organization has been formed. A handy little textbook has been issued in 1920, *La Langue internationale Espérantide, en quatre semaines*, by Chenevard, Neuchâtel (61 pages). Their review, *Internacia Lingvo Esperantida* is flourishing.

At the last meeting (Dec. 18) of the first Congress of the League of Nations in Geneva (1920) some one proposed to discuss *Esperanto* as the International Language. Then M. Hanotaux, of the French Academy rose, said that there were other questions more pressing, warned against haste, and for the present claimed the rights of the French language. There was practically unanimous applause.

INTERNATIONAL PEACE AND ARBITRATION. AMERICAN PEACE SOCIETY. In his annual report the Secretary (Arthur Deering Call, Colorado Building, Washington) said that the work of the Society, continuing through the World War, not only survives, but is beginning again to thrive. Inquiries from centres of former activities indicate a reawakening of interest. The New Hampshire Peace Society is increasing its effort in behalf of a greater international community of interests, especially among the young people of the Americas, and also between students of this country and those of Europe, including Germany. The National Council of Women has a section studying again the problems of peace and war. Other groups of women are taking up again the strands where they were left when we entered the war. Notwithstanding the marked increase in the cost of paper and other complications in the printing trade, the *Advocate of Peace*, with the assistance of George Perry Morris, has been published regularly and its size increased from 24 to 32 pages. There has been an increasing number of articles from across seas indicating a return to the hopes of the American Peace Society. There have been

a number of requests from abroad, especially from Austrians, for financial help. The renewed interests of the New York Peace Society, the increased activities of the American Union against militarism, the publications of the World Peace Foundation, especially of the Carnegie Endowment for International Peace, are also indications of the change of public sentiment toward this long established movement for an international peace. Press and periodicals are opening their columns more and more to those things for which the American Peace Society stands. The war psychology of the nations Mr. Call declares is giving way once more to the psychology of peace.

The Bureau Internationale de la Paix, with headquarters at Berne, is taking up again its tasks. Documents received tell of its work with the peace societies constituting the international union; of its Assembly of Delegates meeting in Baskem May 22, 23, 24, 1920. There is also an active movement in Germany headed by such persons as Dr. Hans Webberg, Professor Dr. Alfred Manes, Maximilian Müller-Jabusch, a group of scholars which is issuing books and pamphlets, not only for the purpose of rectifying certain provisions of the Treaty of Versailles, but also for the purpose of promoting the organization of some sort of a League of Nations. L'Association de la Paix par le Droit continues its efforts in behalf of progressive substitution of arbitration for war in international relations. Its monthly is *Le Paix par le Droit*, edited by Th. Ruyssen, J. L. Puech, Charles Richet, J. Prudhommeaux, Jacques Dumas, and others, published regularly. The *Arbitrator*, monthly organ of the International Arbitration League, founded by William Randall Cramer in 1870 under the secretaryship of F. Madison, London; the *Herald of Peace*, organ of the Peace Society founded 1816, Sir John Pease Fry, president, and Rev. Herbert Dimmick, secretary; new documents from the National Peace Council of England, M. H. Huntsman, assistant secretary; *La Vita Internazionale*, under the direction of D. Rosetti and S. E. A. Agnelli at Rome, the magazine founded by E. T. Moneta; the *Japan Peace Movement*, monthly organ of the Japan Peace Society and the American Peace Society of Japan; the publications of the Swiss-Dutch Bureau Pax; the publications of the various League of Nations Unions; the many other publications typified by the periodical review, *Pax per Fœderationem*, published at Sofia by the Peace by Federation Society, *Le Drapeau Bleu*, a review of international studies published in Paris; these are some of the indications abroad of a re-development of hope, interest and consecration to the cause of international peace.

A constant subject of study is the extension of the work of the Society. Its Secretary is of the opinion that two lines of extension are now open to the Society, one the development of the *Advocate of Peace* into an international monthly of a much wider influence; second, an increasing publicity, especially among newspapers and magazines.

In the midst of the controversy over the League of Nations, the Secretary of the Society, who is also the editor of the *Advocate of Peace*, was obliged to formulate and to express as best he could the views of the American Peace Society. In the absence of any means of ascertaining the average of the views of the entire membership, he was forced to ascertain and to express those

views after conference with a comparatively few only. In his report he said: "It may be added, however, that this has been done only after the most painstaking study possible to him of the history and purpose of the Society. Those views thus ascertained have appeared from month to month in the *Advocate of Peace*. . . . He has believed, and he now believes, that the views as he has tried to express them in editorials, in other writings, and in public speech, are the views consonant with the spirit of the men who have gone before in the service of this aged society. Out of the year just passed, its confusion of ideas, its unhappy struggle between the legislative and executive branches of the American government, he thinks he sees clearer than ever before the vitality, strength, and abiding veracity of the principles pleaded for and consistently upheld since those epic days of William Ladd. . . . The principles of the society have not been assailed, much less successfully contradicted. They are the expression of a constructive foreign policy, be it for America or other state. They represent the epitome of all that America has achieved in its political history. They are the enduring substructures of any adequately governed world."

Those are the principles upon which men, when once they know, can agree. They are the things upon which men do agree increasingly. The Republican Party of the State of New York has adopted those principles as its plank for a foreign policy. The men who made that platform are to have an influential voice in the platform of the National Republican party. Prominent candidates for the presidency, Governor Lowden, Senator Johnson, Nicholas Murray Butler, have spoken favorably of all or a part of those principles. Democrats favor them. The American Institute of International Law adopted them. The American Peace Society has adopted them. Avoiding the difficulties, real or imaginary, feared by the opposition in the Senate to the Covenant of the League of Nations, particularly the dangers inherent in any international organization with power to coerce by force of arms its will upon unwilling states, also in the nest of threatening controversies arising out of the proposal to perpetuate the inequality of states, these principles advertised and argued for by this Society constitute the very essence of your Secretary's labors during the year just ended. Therefore, they include the sum and substance of his Annual Report.

At the annual meeting held May 29, 1920, at Washington, the following officers were elected:

President: Hon. Andrew J. Montague, Member of Congress from Virginia, Washington, D. C. Secretary: Arthur Deering Call, Treasurer: George W. White, President of National Metropolitan Bank, Washington, D. C. Vice-Presidents: Hon. James L. Slayden, Member Council Interparliamentary Union, San Antonio, Texas. Hon. Jackson H. Ralston, Lawyer, Washington, D. C.; Hon. Theodore E. Burton, former President American Peace Society and Senator from Ohio, Cleveland, Ohio; Hon. William Jennings Bryan, Lincoln, Nebraska.

AMERICAN SCHOOL CITIZENSHIP LEAGUE. The name of the American School Peace League was changed in January, 1920, to American School Citizenship League. This has not changed the objects of the League, but the new name, with the object "to develop an American citizenship

which will promote a responsible world democracy and a real cooperation among the nations," was considered to describe more accurately our line of work. During 1920, it issued "An Eleven-Year Survey of the Activities of the American School Peace League" and "A Reconstruction Programme," the latter stating our chief lines of activity. The Annual Prize Essay Contest was conducted as usual. It was open to seniors in high and normal schools in Great Britain as well as in the United States. The subjects of the essays were: Normal School Set—"Education for Citizenship in the League of Nations"; Secondary School Set—"The Most Effective Methods of Securing Cooperation as against Competition between Nations." The prizes were as usual, \$75, \$50, and \$25 for the three best essays in each set. Successful contestants in Seabury Prize Essay Contest, 1920. Normal School Set: First Prize—Miss Ruth Dunham, State Normal School, Danbury, Conn.; Second Prize—Leo R. McKinnon, State Normal School, Salem, Mass.; Third Prize—Miss Edna R. Doane, State Normal School, Hyannis, Mass.; First Honorable Mention—W. R. Anderson, State Normal University, Normal, Ill.; Second Honorable Mention—Miss Rebecca Lumiansky, State Normal School, Hyannis, Mass. Secondary School Set: First Prize—J. H. Brown, Cheltenham College, Pilton Lodge, Weymouth, England; Second Prize—Miss Grace M. Tull, State Normal School, Preparatory Dept., Townson, Md.; Third Prize—Oliver E. Schafer, Masten Park High School, Buffalo, N. Y.; First Honorable Mention—David W. Palmer, Wendell Phillips High School, Chicago, Ill.; Second Honorable Mention—Miss Cornelia A. Wilson, State Normal School, Preparatory Dept., Townson, Md.; Third Honorable Mention—Miss Iva E. Turner, Oak Grove Seminary, Vassalboro, Me.

The annual convention was held as usual with the National Education Association in Salt Lake City.

The Secretary of the League, Mrs. Fannie Fern Andrews, attended the Convention of the Department of Superintendence of the National Education Association in Cleveland the last of February, where she gave several addresses and held conferences with leading educators in regard to the League's work, especially its Course of Study in history, which is being published for the League by Charles Scribner's Sons. This course, with Type Studies, will be published in five volumes. This is for the elementary grades, and it is one of the most important pieces of work, if not the most important, which the League has accomplished since its organization. The League's "Course in Citizenship and Patriotism," for elementary grades, published by Houghton Mifflin Company, continues to win favor among the educators of the country. A large number of school systems throughout the country have adopted this course.

CORDA FRATRES. The work of the year 1920 of Corda Fratres Cosmopolitan Clubs was started by the convention held in the last days of December, 1919, at Syracuse, N. Y. About 40 delegates were present from the various chapters. The Syracuse Chapter had made great effort to have the best available speaking material for the convention. The convention was notable for a number of new undertakings which promise to make the Association an effective force when they are worked out. One of these was the plan to raise a five-year budget sufficient to pay the expenses

of a full time field secretary, together with the expenses for a number of new enterprises by which it was hoped to increase the effectiveness of the movement both within the clubs and outside of them. As yet, however, the committee in charge of organizing the budget campaign has not succeeded in its work, so that the final impetus remains for this convention. Also the man around whom the plan was built, Dr. George Nasmyth, died during the summer in Europe while on a mission of organizing the Cosmopolitan movement there. His death was a great loss to the movement, to which he was devoted and looked forward to making it his life work if it could be organized so as to make such a plan possible.

During the year a Summer Institute was held in Michigan, in a very small way corresponding to the Y. M. C. A. conference at Geneva. It is hoped by its supporters that this will be a start for other conferences with a greater attendance. The Chicago Women's Chapter had charge of raising money for Dr. Nasmyth's work in Europe, an arduous task well performed. The Women's Chapter at Syracuse had charge of editing and publishing the Association magazine, *The Cosmopolitan Student*. Several new clubs have been added as chapters, at the universities of Virginia, Florida, Kansas, Cincinnati, and the Georgia Tech., and Dennison University. The 1920 convention was at Ann Arbor on December 27th-28th-29th.

LIST OF COSMOPOLITAN CLUBS, NOV. 1, 1920

- Cosmopolitan Club of the University of California, c/o Miss Ruth Van Pelt, Cor. Sec'y, 2017 Lincoln Street, Berkeley, Cal.
- Cosmopolitan Club of Carnegie Institute of Technology, c/o Mr. Paul J. Svabek, Cor. Sec'y, 317 Millin Avenue, Wilkesburg, Penn.
- Cosmopolitan Club of the University of Chicago, c/o Prof. Ernest W. Burgess, Harpers Hall, University of Chicago, Chicago, Ill.
- International Club of the University of Chicago (Women's Chapter), c/o Prof. Ernest W. Burgess, Harpers Hall, University of Chicago, Chicago, Ill.
- Cosmopolitan Club of Coe College, c/o Marguerite Austin, Vorhees Hall, Cedar Rapids, Iowa.
- Cosmopolitan Club of Cornell College, Mt. Vernon, Iowa (no correspondence for a year).
- Cosmopolitan Club of Cornell University, c/o L. K. Elmirst, Pres., The Cosmopolitan Club, Ithaca, N. Y.
- Cosmopolitan Club of Drake University, c/o Miss Margaret Garrett, Sec'y, 1124 27th Street, Des Moines, Iowa (last year's address).
- Cosmopolitan Club of Harvard University, c/o Phillips Brooks House, Cambridge, Mass. (no longer affiliated).
- Cosmopolitan Club of the University of Illinois, c/o Mr. C. M. Rosenquist, Pres., 907 South 6th Street, Champaign, Ill.
- Cosmopolitan Club of the University of Illinois (Women's Chapter), c/o Mrs. A. R. Seymour, 909 West Nevada Street, Urbana, Ill. (old address).
- Cosmopolitan Club of the University of Indiana, c/o Mr. Jose J. Piatos, Pres., 508 East 6th Street, Bloomington, Ind.
- Cosmopolitan Club of the University of Iowa, Iowa City, Iowa (not heard from this last year).
- Cosmopolitan Club of Iowa State College, c/o Carl W. Schmolke, Alumni Hall, Ames, Iowa.
- Cosmopolitan Club of William Jewell College, c/o Prof. W. O. Lewis, Liberty, Mo.
- Cosmopolitan Club of Kansas State Agricultural College, Manhattan, Kan. (no correspondence for over a year).
- Cosmopolitan Club of Massachusetts Institute of Technology, Boston, Mass. (no correspondence for a year).
- Cosmopolitan Club of the University of Michigan, c/o Prof. J. A. C. Hildner, 1125 Fair Oaks, Ann Arbor, Mich.
- Cosmopolitan Club of the University of Michigan (Women's Chapter), c/o Prof. J. A. C. Hildner, 1125 Fair Oaks, Ann Arbor, Mich.
- Cosmopolitan Club of the University of Minnesota, c/o Miss Sophie Holzheld, Cor. Sec'y, 201 State Street, Minneapolis, Minn.

- Cosmopolitan Club of the University of Missouri, c/o Mr. Eliseo Quirino, res., Knights of Columbus, Columbia, Mo.
- Cosmopolitan Club of Oberlin College, Oberlin, Ohio.
- Cosmopolitan Club of Ohio State University, c/o Miss V. Dollinger, English Dept., Physics Building, Ohio State University, Columbus, Ohio.
- Cosmopolitan Club of Ohio Wesleyan University, c/o Mr. Charles Laughlin, Delaware, Ohio.
- Cosmopolitan Club of Ontario Agricultural College, c/o the Secretary of the College, Guelph, Ont.
- Cosmopolitan Club of Oregon Agricultural College, Corvallis, Ore. (not heard from since last December).
- Cosmopolitan Club of Pennsylvania State College, State College, Penn. (not heard from for a year).
- Cosmopolitan Club of Purdue University, c/o L. J. Gracia, Sec'y, 218 Waldron Street, West La Fayette, Ind.
- Cosmopolitan Club of Radcliffe College, Chelsea, Mass. (no correspondence for two years).
- Cosmopolitan Club of Leland Stanford University, c/o Mr. Ray Ground, Pres., Leland Stanford University, Cal.
- Cosmopolitan Club of the University of Syracuse (Men's Chapter), c/o Otis B. Hurry, Sec'y, Syracuse University Cosmopolitan Club, Syracuse, N. Y.
- Cosmopolitan Club of the University of Syracuse (Women's Chapter), c/o Miss Jean Flick, Sec'y, 516 Ostrom Avenue, Syracuse, N. Y.
- Cosmopolitan Club of Union College, Schenectady, N. Y. (no correspondence for a year).
- The Serpentine Club of the University of Virginia, c/o Mr. Randall T. Elliott, Pres., Charlottesville, Va.
- Cosmopolitan Club of Washington State University, Seattle, Wash. (no correspondence for a year).
- The International Club of the University of Wisconsin, c/o Prof. C. D. Coal, 1607 Adams Street, Madison, Wis.
- Cosmopolitan Club of Worcester Polytechnic Institute, c/o Prof. Z. W. Coomba, Worcester, Mass.
- Cosmopolitan Club of Yale University, c/o Mr. Henry R. Goldberg, Sec'y, New Haven, Conn.

LEAGUE TO ENFORCE PEACE (Wm. H. Short, Secretary, 22 W. 19th Street, New York). The year 1920 was not one of great activity. The fact that this was the year of the presidential election made any other course practically impossible, as its constitution forbids the League taking any active partisan part in politics. Three issues of the *Bulletin* were published and one pamphlet, entitled *The League is Alive*, a reprint of Raymond B. Fosdick's article. At what was considered the crucial time, statements were given to the press, reaffirming its belief in a League of Nations and its conviction that the United States should enter the existing League when it should contain such modifications as would make it acceptable to the American people. With the growing activity of the League of Nations, it was felt that probably the most effective piece of work which could be done would be the giving to the country of as much information as possible as to the functioning of the League. To accomplish this, it established a League of Nations News Bureau. At a meeting of the Committee on Management, held after the election, it was felt that it would be unwise for this organization to do anything active until the attitude of President-elect Harding was known. The closest cooperation exists between this organization, the League of Nations Union in England, the French Association for a League of Nations, and various other European organizations.

THE AMERICAN ASSOCIATION FOR INTERNATIONAL CONCILIATION (Sub-Station 84, New York), prints and circulates documents giving information as to the progress of the international movement. These publications are non-partisan. Their sole aim is to educate. In addition to this the Association has organized throughout the country in the various universities and colleges International Relations Clubs under the supervision of its director of the Institute for International Education.

The International Notes Section in the *Journal of International Relations* is edited by the Association.

The publications issued during the latter part of 1919 and during 1920 were:

Reply of the Allied and Associated Powers to the Observations of the German Delegation on the Conditions of Peace. November, 1919.

Agreements between the United States and France, and between England and France, June 28, 1919; Anglo-Persian Agreement, Aug. 9, 1919. December, 1919. International Labor Conventions and Recommendations, January, 1920.

Some Bolshevik Portraits. February, 1920.

Certain Aspects of the Bolshevik Movement in Russia.

Part 1, March, 1920.

Certain Aspects of the Bolshevik Movement in Russia.

Part 2, April, 1920.

German Secret War Documents. May, 1920.

Present Day Conditions in Europe, by Henry P. Davison; Message of President Wilson to the Congress on the United States and the Armenian Mandate; Report of the American Military Mission to Armenia. June, 1920.

Documents concerning the Accession of Switzerland to the League of Nations; The United States and the League of Nations: Reservations of the United States Senate of November, 1919, and March, 1920. July, 1920.

The Treaty of Peace with Germany in the United States Senate, by George A. Finch. August, 1920.

The National Research Council, by Vernon Kellogg; The International Organization of Scientific Research, by George Ellery Hale; The International Union of Academies and the American Council of Learned Societies, by Waldo G. Leland. September, 1920.

SPECIAL BULLETINS:

Jugoslavia, by M. L. Pupin; Declaration of Independence of the Mid-European Union, Oct. 26, 1918; Declaration of Independence of the Czecho-Slovak Nation, Oct. 18, 1918; Declaration of Corfu, July 20, 1917. January, 1919.

The League of Nations: Proposed Constitution of the League of Nations; speeches delivered before the Peace Conference by members of the Commission on the League of Nations; Addresses delivered by President Wilson in Boston, Feb. 24, 1919, and in New York, March 4, 1919. March, 1919.

Criticisms of the Draft Plan for the League of Nations: William Howard Taft, Charles E. Hughes, Elihu Root, April, 1919.

THE INTERPARLIAMENTARY UNION. The Hon. James L. Slayden having retired from Congress, he was because of his services as president of the American Group of the Union made a member of its Council. His successor as president is Congressman William B. McKinley, Senator-elect from Illinois. The president of the Interparliamentary Union and chairman of the Council is Lord Werdale of Great Britain.

The first attempt at a general meeting of the Union since 1914 resulted in a meeting of the Council of that body in Geneva, Oct. 7 and 8, 1919. There was another meeting of the Council at The Hague, June 5, 1920. The following self-explanatory resolutions furnished by the Secretary-General, Christian L. Lange, of Christiania, indicate the situation relative to the Union:

The Interparliamentary Council, meeting at The Hague on June 5, wishes to put on record as its firm conviction that the Interparliamentary Union has now a greater importance than ever. It should especially support and develop the action of the League of Nations, for which it can claim the honor of having done pioneer work. In order that the Union may play in future the same beneficial part as in the past, it is absolutely necessary that it should maintain its essentially international character, which is the very principle of its organization. It is therefore with the sincerest regret that the Council has learned of the recent decision of the Belgian and the French groups provisionally not to take part in interparliamentary meetings.

Without wishing to offer any comment on this attitude, which finds its explanation in the terrible sufferings of the populations of these two countries during the war, the Council wishes to express the hope that their Belgian and French colleagues will revise their attitude, and soon resume their places within the Union, in whose work so many of them have taken a useful and honorable part.

It invites at the same time the parliamentarians of all countries to form groups affiliated to the Union, if they have not already done so, and to take active part in its work.

It instructs its Bureau to transmit this resolution to all parliaments of the world.

II

Whereas the XIX Conference had been convened at Stockholm for the month of August, 1914, and whereas its meeting, carefully prepared, was unavoidably prevented at the last moment by the outbreak of the war;

Whereas it has not been possible, having regard to the essentially international constitution of the Union, to hold a plenary Conference during the war, or later, during the armistice;

Whereas there exist, still at the present moment, difficulties both of a political order and with regard to traveling, which may prevent the holding of a really international Conference;

Whereas the coming elections in the United States will prevent the American parliamentarians from taking part in a Conference in 1920.

The Interparliamentary Council, meeting at The Hague on June 5, 1920, extends its cordial thanks to their Swedish colleagues for their resumed invitation, resolves to adjourn the XIX Conference to next year, and accepts the invitation of the Swedish Group to hold this Conference at Stockholm.

INSTITUTE OF INTERNATIONAL EDUCATION was established Feb. 1, 1919, by the Carnegie Endowment for International Peace, with the general aim to develop international good will by means of educational agencies and to act as a clearing house of information and advice for Americans concerning things educational in foreign countries and for foreigners concerning things educational in the United States. An administrative board determines the policy of the Institute, consisting of representatives of the endowed and State universities, of the men's and the women's colleges, and of international scholarship, law, finance, commerce, medicine, and journalism. The Institute coöperates with the American University Union and the American Council on Education. A plan of coöperation between the three has been adopted.

In 1920 the Institute sent out 15 professors on sabbatical leave to universities in various countries. These professors lectured at the universities of Oxford, London, Paris, Prague, Shanghai, Madrid, Strassburg, Athens, and San Marcus. The Carnegie Endowment furnishes funds with which to pay the cost of transportation. The Institute feels that a wisely selected professor, who because of his personality and scholarship can adequately represent America abroad, may do substantial service in the development of international good will. The Institute has invited professors from other countries to come to the United States and has circulated them among various colleges and universities to lecture before the general student body and to meet in conference with graduate students and professors.

The Institute has been interested in the problem of the exchange of students between this and other countries. It is endeavoring to compile information with reference to all existing scholarships and fellowships open to foreign students for study in the United States and for American students to study in other countries. To facilitate coöperation in matters educational between this country and others, the Institute has already appointed some one to represent it in a number of European countries and hopes to have a representative in all countries of the world.

As a means of stimulating an interest in international affairs the Institute has aided in the foundation of International Relations Clubs in some 60 colleges and universities, providing, free

of charge, syllabi, bibliographies, books, magazines, and literature generally for the study of the problems. The clubs are visited by distinguished foreigners or American professors, who are authorities in the field of international relations. An annual conference of representatives of the clubs is held in the interests of increasing the efficiency of the work.

It has published and distributed a booklet on *Opportunities for Higher Education in France*; one on *Graduate Study in the British Isles*; the first annual report of the Director; and a special bulletin for Administrative Authorities of the Universities and Colleges dealing with Visiting Professors and Commissions; *Recently-Founded Traveling and Research Fellowships*; *Foreign Professors Available for Teaching Engagements*; and *Research Opportunities Abroad for American Students*.

CHURCH PEACE UNION. During 1920 this organization found many opportunities for service and was able to accept responsibility for a large number of tasks. The World Alliance for International Friendship supported by the Union has held two conferences since the Armistice was signed, one at The Hague in September, 1919, and the second at St. Beatenberg in August, 1920. In the interim, Dr. George Nasmyth, the international organizer, visited practically all the countries of Europe and through the efforts of himself and other officers of the World Alliance, councils were established in 22 nations. These are made up of strong representatives of the churches in each one of the nations. Full reports of the St. Beatenberg Conference, together with the activities of Dr. Nasmyth, will be found in the magazine *World Friendship*.

The Archbishop of Canterbury has accepted the presidency of the Alliance and both because of the strength of its personnel and the efficient programme that it is developing, this movement offers at present an effective channel for the co-operation of the Union in doing its work. Through the Baron de Monténach and the members of the faculty of the University at Freiburg, Switzerland, a committee has been formed to represent the Roman Catholic Church in the World Alliance. Baron de Monténach took up with the Pope the matter of co-operation and in a letter from the Pope official sanction was given to the movement. Plans are under way whereby members of the Jewish faith will also be represented in the International Committee. Dr. Nasmyth died very suddenly in Geneva just following the St. Beatenberg meeting. His devotion to the cause, his energy and enthusiasm, as well as his broad culture and wide experience with men and things made him especially valuable in the work.

The Church Peace Union had much to do with arranging the World Conference at St. Beatenberg, and the conference held in Geneva to discuss the possibility of holding of an Ecumenical Conference, and assisted Mr. Robert H. Gardiner in arranging for the Conference on Faith and Order also held in Geneva. The Union also paid the bills at St. Beatenberg and thus made the conference possible. There never can be peace among the nations declared the Union's secretary without first having an understanding. This understanding can be brought about only as representatives of the various nations meet together and exchange their common views.

The Union was able to form important contacts

with many of the European nations. Through its office it is in constant communication with the representatives of Great Britain, France, Italy, Roumania, Hungary, Jugo-Slavia, Holland, Belgium, Greece, Switzerland, Austria, Germany, and the Scandinavian countries. Eight of these nations publish monthly bulletins, magazines, or newsletters. Its publication, *World Friendship*, affords a basis of interchange of news so as to bring the churches of all into closer accord.

The Union coöperating with the Federal Council sent a strong delegation to Europe in the summer to visit the various countries. As a result of this visitation it has been brought into a closer relationship not only with the needs of the countries visited, but it has learned the methods that will be most successful in helping to meet these needs. England, France, Belgium, Holland, Italy, Switzerland, Germany, Austria-Hungary, Roumania, Jugo-Slavia, Poland, Czecho-Slovakia, were visited.

Through a committee appointed for the purpose of bringing about regular interchange between the churches of these countries, the following men from England have visited America: President Alfred E. Garvis, Canon E. A. Burroughs, Rev. Alexander Ramsey, D.D., Rev. T. Rhonda Williams, Rev. R. C. Gillie, D.D., Mr. E. Harold Spender; and the following men from France: Gen. Robert Georges Nivelles, Col. Paul Azan, Rev. André Monod. These latter visitors came to America as the guests of the Mayflower Council which was organized for the purpose of properly celebrating the Tercentenary of the Landing of the Pilgrims. The Council is representative of all the religious faiths of America.

The increased bitterness of the agitation against the Japanese on the Pacific Coast has brought about a situation that is full of menace. In a special report Dr. Sidney L. Gulick dealt very fully with this problem. During the year the treasurer, Mr. George A. Plimpton, made an extended trip through China and met many of the leaders of both countries. Dr. Gilbert Bowles, who is one of the best known among the Christian workers in Japan, was recently in America, and also attended the conference at St. Beatenberg.

Secretary Atkinson visited California in the spring and spoke in leading universities and schools, addressed mass meetings in the principal centres, and met groups of people, with the purpose of stimulating the church people to express themselves upon this important question. The large vote in favor of restrictions upon the rights of the Japanese, which was taken in the last election adds to the tenseness of the situation. In the opinion of the Union there is no more important question calling for action than this question of our relations to the Oriental. Failure to do justice to these people will certainly lead to disastrous results. A just settlement of the vexed problem is demanded in the name of humanity and our common faith. America's missionary enterprises in the Orient will all be nullified if America works an injustice upon the Oriental within her borders.

Early in the year a committee was appointed to study the Mexican situation. This committee was authorized to visit Mexico on a mission of good will and friendship. The committee met several times and coöperated with a similar committee of the League of Free Nations Association and also with one of the Federal Council. The

political situation in relation to Mexico has been so complicated and so many changes have taken place that the committee has not thought it well to exert itself to do more than has been done; and it has not seemed best to attempt a visit to Mexico. The committee still exists and if it seems wise to the trustees will continue its quiet study of the situation and keep watch upon the changes that may take place and be ready to suggest appropriate action from time to time.

Constantly throughout the year the Union advocated the ratification of the League of Nations. Up to the time that this question became the central and disputed point of party politics a large part of its energies was devoted to the propaganda in behalf of the League of Nations. With the division of opinion that came with the political campaign it became obvious that the Union could not take sides and enter into a partisan fight.

From the experience of the year and the voluminous correspondence carried on through the office of the Union the secretary declared his opinion to be that the religious people of America were overwhelmingly in favor of a League of Nations and that there was keen disappointment that our nation was not represented in the sessions of the assembly now being held at Geneva.

The policy of the Union has been to move slowly. There is so much confusion at present and every question is involved with so many minor considerations which must be understood that it has seemed wise to make less speed. The secretary believes that the situation is improving and is quite certain that the time is coming when he can afford to set before the Union certain goals and then expend every energy in the effort to reach them. In his report he presented a programme which had been drawn up and agreed upon by a number of the trustees, in an informal conference, as the basis for discussion in this meeting. There are three things that should be considered in the discussion of the programme: 1. Has the time come for us to consider a programme? 2. Is this programme adequate? 3. Shall the programme be published and primary emphasis be put upon it?

A large portion of the assistant secretary's work was in connection with the American Mayflower Council, which organized to plan for the celebration of the Mayflower Tercentenary in co-operation with other organizations in this and other countries. The most important features in the celebrations of the Tercentenary was the speaking campaign across the country, meetings being held in 63 cities. Most of the work in organizing these meetings fell to the associate secretary. In June he visited Richmond, Atlanta, St. Louis, Dallas, Denver, Minneapolis, Chicago, Cleveland, and Albany for the purpose of establishing regional committees to undertake the responsibility of making the arrangements for the mass meetings. The American speakers were: Dr. Samuel A. Eliot; Dr. John H. Finley; Dr. J. Percival Huguet; Dr. Charles E. Jefferson; Bishop William F. McDowell; Dr. Richard Roberts; Dr. Herbert L. Willett; Dr. Talcott Williams; Rabbi Stephen S. Wise; Dr. L. P. Powell; Dr. Gais G. Atkins; and Dr. W. O. Thompson. The British delegation was made up of Rev. R. C. Gillie; Canon E. A. Burroughs; Rev. Alexander Ramsay; Mr. E. Harold Spender; and Mr. P. Whitwell Wilson.

Early in the year a visit was paid to this coun-

try by Dr. Drummond of England, who came to report concerning the results of his investigations of the Religious Minorities in Transylvania. His visit was followed by a visit of Mr. Pelanyi of Hungary who also set forth the conditions of the sorely-tried minorities in that country. In different parts of Europe religious minorities have come into conflict with new and bitter conditions. Following these reports a large gathering of men was brought together to consider the questions. A representative committee was established. Dr. Arthur J. Brown was elected chairman and the associate secretary Rev. Linley V. Gordon of the Union, executive secretary. During the summer two of the members visited European countries where religious minorities are receiving the greatest ill-treatment, and since their return have reported their findings to the general committee. Facts have been secured and collated concerning the oppression manifested toward the Jews in Poland, Ukraine, Lithuania, Galicia, and Budapest. Especially in Poland have they been the victims of assault, murder, and discrimination at the hands of Polish soldiery and civilians. In Transylvania the Reformed Church, the Unitarians, Roman Catholic, and Lutheran religious minorities are being jeopardized; in Czecho-Slovakia the Presbyterians are sorely-tried; in Lithuania, the Reformed Church; in Serbia, the Baptists are being persecuted by local and municipal authorities and public gatherings are barred. It is alleged that in Alsace-Lorraine German Roman Catholics are being driven out, and that in Belgium the Walloons are receiving ill treatment at the hands of the Belgians.

The committee has not engaged in any public propaganda. It has been making surveys of conditions so that it might be sure it had the facts well in hand before taking the next step.

THE WORLD PEACE FOUNDATION during 1920 steadily supported ratification of the Treaty of Versailles including the Covenant of the League of Nations with whatever reservations would pass the Senate. Its work to this end was personal rather than institutional. The Foundation as a legal charity has not felt itself competent to engage actively in the political controversies which necessarily characterized a presidential election year. Its officials from the outset took the attitude that the issue could not be made an effective vote-making issue in a presidential campaign. This conclusion was reached because it was realized that any issue in foreign affairs would affect the majority of voters to a far less degree than those more obviously and more closely touching the daily life of the voter and also because it was clear that the American election could not positively determine issues whose conditions are largely within the free competence of a world unaffected by any national election. The Trustees of the Foundation voiced their official position in the following note adopted September 30th:

The problem of the organization of the world for peace is greater than any man or any body of men. Although the ratification of the treaty of Versailles, with or without reservations, was prevented by the failure of the President and the Senate to agree, nevertheless, whatever political party may come into power, it will find that the interest, the conscience and the sense of duty of the American people will require the nation to take its part in the essential work of establishing and preserving the peace of the world.

The World Peace Foundation was created to promote

the organization of the world for the prevention of war. The Trustees of this Foundation believe that the only practical way of achieving that result is by joining the existing League of Nations, with such modifications, if any, as the wisdom of our statesmen may think proper for the welfare of the United States. We have assurance that foreign governments will welcome the United States with any such modifications as it may think necessary.

This declaration was unanimously voted at a special meeting of the Board of Trustees, including both Democrats and Republicans, and was signed by William H. P. Faunce, president; George W. Anderson, Sarah Louise Arnold, George H. Blakeslee, Stephen Pierce Duggan, A. Lawrence Lowell, Samuel W. McCall, Bliss Perry, Albert E. Pillsbury, George A. Plimpton, and Joseph Swain; and Edward Cummings, general secretary.

The Foundation felt early in the year that it was important for the American people to have accurate knowledge of what the organization was doing. In accordance with this conviction, a brochure covering in detail the work of the first three months of the League's activities was issued and extensively distributed. In an effort to redirect attention, to the real meaning of the Covenant in an authentic way, the official Swiss Commentary on it was translated and published. Another literary effort with cognizance of the political conditions but without participation in them was the compilation and publication of the texts of all resolutions and reservations which came to a vote in the Senate together with the vote thereon. The Foundation received an early copy of the draft scheme for the Permanent Court of International Justice prepared by the Committee of International Jurists at The Hague and brought it out promptly in a large edition for the information of the American public in mid-September. It did the same thing for the report of the International Financial Conference in October and closed its year's publications with a complete summary account of the meeting of the Assembly together with a summary of the intervening activities of the Council.

The Foundation was greatly interested in the project to establish a League of Nations News Bureau, which began activities on October 1st with headquarters in New York with Raymond B. Fosdick, former Under Secretary-General of the League of Nations, and Denys P. Myers, respectively, as director and assistant director. This organization which originally began operations under the auspices of the League to Enforce Peace became independent on November 18th and maintains separate offices for the purpose of issuing to the American press accurate information on the activities of the League of Nations. It is enabled to do this by the constant receipt by Mr. Fosdick, in his personal capacity, of the documents prepared in the secretariat. The address of the Foundation is 40 Mount Vernon Street, Boston, Mass.

WOMEN'S INTERNATIONAL LEAGUE FOR PEACE AND FREEDOM. In May, 1919, the Zurich International Congress of Women assembled under the presidency of Jane Addams. It was called by the International Committee of Women for Permanent Peace which was the outcome of the International Congress of Women held at The Hague in 1915. (See **YEAR BOOK** for that year.) The Zurich Congress, at which 147 delegates from 15 countries were present, altered the name of the organization to Women's International League for Peace and Freedom and transferred

the international office to "the seat of the League of Nations." The object of the League is to organize support for the resolutions passed at the Women's International Congress at The Hague in 1915 and in Zurich in 1919, and to support movements to further Peace, Internationalism, and the Freedom of Women.

The Executive Committee is made up as follows: Jane Addams, United States (president); Emily Balch, United States (secretary-treasurer); Gabrielle Duchêne, France; Marguerite Gobat, Switzerland; Yella Hertzka, Austria; Lida Gustava Heymann, Germany (vice-president); Marta Larsen, Norway; Chrystal Macmillan, Scotland; C. Ramondt-Hirschmann, Holland (assistant-secretary); H. M. Swanick, England (vice-president).

The League has organized sections and official correspondents in the following countries: Argentina, Australia, Austria, Bulgaria, Canada, Denmark, Finland, France, Germany, Great Britain, Hungary, India, Ireland, Italy, Netherlands, New Zealand, Norway, Poland, Sweden, Switzerland, United States.

The report of the Zurich Congress gives a full account of the purposes and character of the League and furnishes an extremely interesting picture of the state of mind of pacifist women. The Congress not only sent the following telegrams to Paris but sent an international delegation, which was received by representatives of all the chief Allied governments to make representations in the same sense.

Telegram re. FAMINE and BLOCKADE: This International Congress of Women regards the famine, pestilence and unemployment extending throughout great tracts of Central and Eastern Europe and into Asia as a disgrace to civilization.

It therefore urges the Governments of all the Powers assembled at the Peace Conference immediately to develop the interallied organizations formed for purposes of war into an international organization for purposes of Peace, so that the resources of the world,—food, raw materials, finances, transport—shall be made available for the relief of the peoples of all countries from famine and pestilence.

To this end it urges that immediate action be taken (1) to raise the blockade, and (2) if there is insufficiency of food or transport, (a) to prohibit the use of transport from one country to another for the conveyance of luxuries until the necessities of life are supplied to all people; (b) to ration the people of every country so that the starving may be fed. The Congress believes that only immediate international action on these lines can save humanity and bring about the permanent reconciliation and union of the peoples.

Telegram re. TREATY OF PEACE: This International Congress of women expresses its deep regret that the terms of peace proposed at Versailles should so seriously violate the principles upon which alone a just and lasting peace can be secured, and which the democracies of the world had come to accept.

By guaranteeing the fruits of the secret treaties to the conquerors, the terms of Peace tacitly sanction secret diplomacy, deny the principles of self-determination, recognize the right of the victors to the spoils of war, and create all over Europe discords and animosities, which can only lead to future wars.

By the demand for the disarmament of one set of belligerents only, the principle of justice is violated and the rule of force is continued.

By the financial and economic proposals a hundred million people of this generation in the heart of Europe are condemned to poverty, disease and despair, which must result in the spread of hatred and anarchy within each nation.

With a deep sense of responsibility this Congress strongly urges the Allied and Associated Governments to accept such amendments of the Terms, as shall bring the Peace into harmony with those principles first enumerated by President Wilson upon the faithful carrying out of which the honor of the Allied peoples depends.

The Zurich Congress regarded the question of education as fundamental to its programme and created a committee on the subject under the

chairmanship of Dr. Emily Ernesen (Zoölogical Museum, Christiania, Norway). In September the Geneva Office organized an informal international conference where modern tendencies in education and especially the relation of education to internationalism were discussed.

Members of the League have been prominent in the organization of relief of the European famine. Miss Addams with other American and English members made observations of conditions. The British section was concerned in the organization of the "Fight the Famine Council" and the Geneva office supplied a report on certain aspects of the milk famine in Central Europe to the Economic Conference in London in November, 1919. Members of the League have been active also in endeavoring to secure the repatriation of the prisoners in Siberia. The British section was also actively interested in the London conference of September 3d and 4th on the Representation of Women in the League of Nations.

The German section, which is large and active, is led by women who displayed a consistent opposition to war when to do so was most costly, and who protested against the war atrocities so far as known to them and suffered for their principles. The section is trying to get a Minister of Peace appointed in the cabinet and has petitioned for a governmental investigation of the conduct of the war atrocities, as well as of responsibility for its outbreak and continuance. They are actively interested in eliminating militarism and chauvinism from German education.

With 1920 the League began the publication of an organ appearing 10 times a year under the name of *Pax et Libertas*. There will be a regular number every other month, and four special supplements during the year. The first supplement was devoted to the economic situation, famine, blockade, relief, etc.

[The first organ of the League, *The International*, consisted of Vol I, 1916 (six numbers), Vol. II, 1917 (three numbers), Vol. III, 1918 (four numbers), Vol. IV, 1919 (one number). Between the Zurich Congress and the end of 1919 the Geneva Bureau issued five *News-Sheets*.]

WOMEN'S INTERNATIONAL LEAGUE FOR PEACE AND FREEDOM. *Section for the United States.* Its object as stated in the constitution is: To promote methods for the attainment of that peace between nations which is based on justice and good will and to coöperate with women from other countries who are working for the same ends. A programme of immediate action was adopted at the annual meeting at Chicago, April 23 and 24, 1920. It includes: 1. Fight the World Famine (a) by philanthropic contributions and government loans for food; (b) by spreading information concerning the lamentable conditions in starving Europe. 2. Urge through all official channels the repatriation of all prisoners of war, especially the many thousands languishing in Siberia. 3. Stand for our constitutional rights of free speech, free press, free assembly, and minority representation in legislature. 4. Support bills for universal physical education without military training; oppose military training in our schools and compulsory military service. 5. Work toward universal disarmament (land, sea, and air). 6. Protest against the spirit and methods of "raids" and seizure for deportation and exile, and do all in our power to allay the hysteria and panic which make these possible. 7. Appeal for the immediate release

of all political prisoners. 8. Permeate the Americanization movement with the spirit of appreciation of the gifts of many races to our national life. 9. If the League of Nations Covenant is signed by the United States, work for its amendment along lines of equality of rights among nations and true union of peoples to abolish war. If it is not signed, work for the revision of the Treaty and of the League of Nations by a body of delegates democratically chosen from all nations. 10. Support morally and financially the International headquarters at Geneva and circulate the publications and promote the aims of the W. I. L.

AMERICAN SOCIETY FOR THE JUDICIAL SETTLEMENT of International Disputes has had no meeting since the world-war began. It will be disbanded, as its object, the creation of a world court, has now been realized.

AMERICAN SOCIETY OF INTERNATIONAL LAW confined its activities during 1920 to the publication of its quarterly review, *The American Journal of International Law*. A meeting of the Executive Council, held in Washington on November 13th decided to resume the annual meetings of the Society in April, 1921.

THE NOBEL PEACE PRIZE for 1920 was awarded to President Wilson for having taken the initiative for the establishment of the League of Nations. The 1918 prize was awarded to Léon Bourgeois, the president of the League of Nations Council, for his eminent work in connection with the bringing about of the materialization of the League of Nations idea. See NOBEL PRIZE.

INTERNATIONAL CHAMBER OF COMMERCE organized in June is an important development in bringing about better international understandings. The United States, Great Britain, France, Belgium, and Italy have appointed commissioners. America's representative is Frederick P. Keppel, who defines the purposes of the International Chamber to be: To remove international friction; to facilitate the commercial intercourse of nations; to safeguard international trade; to standardize international documents and laws affecting commerce; to secure harmony of action on all international questions affecting commerce, finance, and industry; to increase the total production of the world and make the products available to the peoples of the world; to cultivate personal acquaintanceship among business men and bankers of the different nations and thus lessen international prejudices and misunderstanding; to promote peace, progress, and cordial relations among the countries and their citizens by the coöperation of business men and their organizations; to act as an instrument of coördination which will suggest trade regulations and legislative measures to facilitate and encourage the development of economic resources; to centralize data concerning economic subjects and social conditions and gather facts relating to the respective needs, production, and future possibilities of each country; to inform public opinion through publication of facts regarding business conditions and through the dissemination of the views of technical experts and business men.

THE MID-EUROPEAN UNION (McLachlen Building, Washington) has been striving towards the stabilization of social and economic conditions. Material service in this direction has so far been rendered through its agencies. Strikes and gen-

eral unrest have been and are being combatted, and radicalism in its various forms is being fought. This has been done through organized activity among the various racial groups and their leaders, working through extensive organizations, both civic and church, affiliated with this Union. Expenses connected with these endeavors, with slight exceptions, have been borne by these racial groups through voluntary contributions.

AMERICAN CIVIL LIBERTIES UNION (138 West 13th Street, New York) has built up a nationwide organization capable of dealing with all the aspects of the fight for civil liberty,—individual cases, free speech demonstrations, attacks on labor unions in the exercise of their rights, and litigation in the courts. This organized service is made up of 400 lawyers, 800 local and state correspondents, 50 special investigators, 100 speakers, 100 writers, and 8 local cooperating organizations and committees,—with special organizations for civil liberty in Chicago, Boston, and San Francisco. A nation-wide clipping service gives the facts. The mailing lists reach regularly the leading libraries, organizations, and men and women in public life. The publicity service is the chief means of reaching the public,—with a weekly news letter of the essential facts to 400 farmer, labor, liberal, and radical papers,—and with special stories oftener. The pamphlet publications carry the facts of more permanent value. Monthly law bulletins give cooperating attorneys important information in civil liberty cases. Posters advertise the striking facts, displayed on organization bulletin boards.

The essential feature of its activities is the free speech demonstrations in areas of conflict by which it helps local groups to get their rights against arbitrary officials or local laws opposed to the constitution. Such demonstrations are usually on behalf of labor unions or radical political parties in industrial centres,—as for instance, the campaigns in the steel district of western Pennsylvania, the wool-town of Passaic, N. J., the coal regions of West Virginia, and the Connecticut manufacturing towns.

Efforts to defeat laws restricting civil liberty absorb much of its energy. The last Congress kept it busy and the new one promises as well. But especially it is preparing a nation-wide campaign for action against sedition and criminal syndicalism laws in the 35 States which now have them,—most of whose Legislatures meet next year. The Union is involved in a host of details of prosecutions under these State laws, similar city ordinances, and hold-over cases from the war. Legal advice, bail, appeals, publicity,—all make up its service. Efforts to secure the release of conscientious objectors and political prisoners constitute a considerable activity in themselves. The Union recently created a National Bail Fund to write bail in civil liberty cases all over the United States.

THE AMERICAN UNION AGAINST MILITARISM continued its efforts in opposition to a permanent system of compulsory military training in America and bulletins about congressional action on military training have been issued and a press bureau maintained. These activities have been: Combating through the press and the usual legitimate methods of propaganda all tendencies toward militarism in this country. The Union has fought universal military service at every turn, opposed the nomination of Major-General Wood for presidency, the tendency of militarism to in-

vade our schools. It is at present engaged in furthering the campaign for disarmament. The headquarters are 203 Westory Building, Washington, D. C. Its chairman was Oswald Garrison Villard, and its executive secretary Charles T. Halloran.

LEAGUE FOR DEMOCRATIC CONTROL (No. 2 Park Square, Boston) continued its work during 1920 to create a tolerant and enlightened public opinion on the most vital international and economic problems of the day: to uphold American constitutional rights of free speech, free press, and free assemblage; to endeavor to discover and publish the truth on questions of public import. Its methods of work include supper-conferences and meetings at which speakers of note are heard and subjects of even the most controversial nature are frankly discussed; free distribution of leaflets on current emergencies; a lending library of recent books on political and economic subjects, as well as earlier standard works.

THE FELLOWSHIP OF RECONCILIATION (118 East 28th Street, New York City). The real work of the Fellowship has been done by individuals and small groups in different parts of the country. As far as the central office is concerned, in the Spring it sent out about 200,000 letters to ministers of various denominations, pointing out how in its judgment the country had failed in achieving the things for which the war was supposed to have been carried on, and raising the question as to whether it was not because the way of war could never be expected to gain those things, and inviting them to consider the way of reconciliation as the only better way. In the autumn the secretary, Paul Jones, sent a letter to bishops of the Episcopal Church in this country, calling their attention to the striking phrases in the encyclical letter of the Lambeth Conference, which pointed towards the way of reconciliation as being God's way, and raising the question as to whether they should not follow the logic of that encyclical letter and declare themselves clearly against any war between God's children.

In November he sent out to all the members of the Fellowship and to some 600 ministers, editors, and others communications asking them to mark Armistice Day by a call for disarmament, in which our country should lead, rather than using it merely to glorify military victory.

THE PEOPLE'S FREEDOM UNION (138 West 13th Street, New York) was organized to coordinate for effective national action all American groups striving to help America in the rebuilding of a world order which shall substitute for militarism, governmental coercion, and imperialism, civil liberty, economic justice, and international good will. It was formed in the latter part of October, 1919, as an amalgamation of The People's Council of America and the New York Bureau of Legal Advice. Its accomplishments were: A mass meeting in Madison Square Garden addressed by James H. Maurer, Wilfred Humphries, Dr. Norman Thomas, and Rose Schneidermann, and presided over by Dudley Field Malone, at which resolutions demanding the lifting of the Russian blockade and the recall of American troops from Siberia were passed; a mass meeting in Carnegie Hall on December 19th, against intervention in Mexico; a Christmas Day demonstration against the detention in jail of the country's 1500 political prisoners. This took the form of a "walk" up Fifth Avenue, in which about 200 persons participated.

In February, 1920, as some of the officers accepted work in other cities, and two of the leaders were ill for some time, it was decided to disband.

IOWA. POPULATION. According to the preliminary report of the census of 1920, there were 2,404,021 residents in the State, January 1, 1920, as compared with 2,224,771 in 1910.

AGRICULTURE. According to the census of 1920, the number of farms was 213,312, a falling off of 1.7 per cent since 1910. The following table is compiled from the estimates of the United States Department of Agriculture, covering the years 1919 and 1920:

Crop	Year	Acreage	Produc. Bu.	Value
Corn	1920	10,300,000	473,800,000	\$222,683,000
	1919	10,000,000	416,000,000	499,200,000
Buckwheat	1920	8,000	136,000	182,000
	1919	7,000	98,000	166,000
Oats	1920	5,894,000	239,866,000	82,752,000
	1919	5,670,000	196,182,000	125,556,000
Barley ...	1920	284,000	7,810,000	4,920,000
	1919	315,000	8,032,000	8,996,000
Wheat ...	1920	831,000	18,011,000	18,074,000
	1919	1,580,000	22,515,000	45,080,000
Flaxseed ..	1920	12,000	120,000	216,000
	1919	13,000	124,000	521,000
Clover Seed	1920	134,000	268,000	3,283,000
	1919	110,000	154,000	4,112,000
Rye	1920	68,000	1,071,000	1,253,000
	1919	70,000	1,113,000	1,469,000
Hay	1920	3,531,000	* 4,998,000	79,457,000
	1919	3,647,000	* 5,840,000	100,957,000
Potatoes ..	1920	104,000	11,440,000	18,957,000

	1919	5,000	* 450,000	689,000
c Tons. * Gallons.				

CHARITIES AND CORRECTIONS. The following list gives the names and situation of the State institutions under the Board of Control with their population at the latest date for which figures were available:

Iowa	
Soldiers' Orphans' Home, Davenport.....	334
Soldiers' Home, Marshalltown.....	724
School for the Deaf, Council Bluffs.....
Training School for Boys, Eldora.....
Training School for Girls, Mitchellville.....	645
Inst. for Feeble-Minded Children, Glenwood.....	1,497
Sanatorium for Treatment of Tuberculosis, Oakdale	219
Mt. Pleasant State Hospital, Mt. Pleasant.....	1,108
Hospital for Inebriates, Mt. Pleasant.....	7
Independence State Hospital, Independence.....	1,125
Hospital for Inebriates, Independence.....
Clarinda State Hospital, Clarinda.....	1,198
Cherokee State Hospital, Cherokee.....	1,121
Hospital for Inebriates, Cherokee.....
State Hospital for Inebriates, Knoxville.....	36
Penitentiary, Fort Madison.....	515
Reformatory, Anamosa.....	580
Women's Reformatory, Rockwell City.....	22
Hospital and Colony for Epileptics.....	104

ELECTIONS. The vote in the presidential election of 1920 was: Harding (Republican), 634,674; Cox (Democrat), 227,921; as compared with the following vote in the presidential election of 1916: Hughes (Republican), 280,439; Wilson (Democrat), 221,699; Benson (Socialist), 10,976; Prohibitionist, 3371; Socialist Labor, 460.

OFFICERS. Governor, N. E. Kendall; Lieutenant-Governor, John Hammill; Secretary of State, Walter C. Ramsay; Treasurer, W. J. Burbank; Auditor, Glenn C. Haynes; Attorney-General, Ben. J. Gibson.

JUDICIARY. Supreme Court: William G. Evans, Truman S. Stevens, Byron W. Preston, Thomas Arthur, Silas M. Weaver, Lawrence DeGraff, and E. F. Faville.

IOWA. UNIVERSITY. A co-educational State institution, at Iowa City, Iowa, founded in 1847. In the summer session of 1920 there were 608 men and 780 women enrolled, and for the fall session 2753 men and 1705 women (allowing for duplications). There were 402 members on the teaching staff, 156 new members having been added. The library contained 166,000 volumes. The total income for 1919-20 was \$2,500,887. The State appropriated for 1920-21 \$1,138,000 for support, child welfare, and special purposes. New buildings were under construction, namely: A large armory estimated to cost \$125,000; a nurses' home, \$150,000; and a psychopathic hospital, \$175,000. An appropriation of \$50,000 was received for the building of Old Capitol. President, Walter Albert Jessup, Ph.D.

IRELAND. See GREAT BRITAIN.

IRON AND STEEL. In the great industrial readjustment taking place throughout the world after the world war iron and steel naturally were important considerations. The destruction of French and Belgian plants and the loss of Alsace-Lorraine with its valuable mines by Germany of course were destined to affect the world's industrial conditions. The two years since the Armistice were a test of the ability of the Continental nations to regain their former positions in iron and steel, but statistics seemed to indicate that by the end of 1920 these countries were not figuring to any large extent or to a degree that seriously would threaten the position of the United States and Great Britain as the chief producers. This was indicated clearly in statistics of pig iron and steel production during 1920 by the leading nations compiled by the *Iron Age* (New York), which are given herewith. For the United States and Great Britain the data given below were complete to December, while those for France and Belgium were based on 10 months returns. In Germany no iron and steel statistics had been published since November, 1919, consequently the figures given were the average for the first 10 months of that year. They were repeated for 1920. It was clearly evident that the German industry was handicapped throughout 1920 and it was a question if the output of 1919 would be equalled. The figures represent monthly average production, gross tons (2240 pounds) being used for the United States and Great Britain and metric tons (1000 kilos. = 2204.6 pounds) for the other three countries. Comparison is made with 1919 and with 1913:

ESTIMATED MONTHLY OUTPUT OF PIG IRON AND STEEL IN FIVE COUNTRIES IN 1920, 1919 AND 1913

Pig Iron	1920	1919	1913
United States	3,000,000	2,584,600	2,581,000
Great Britain	645,000	617,000	855,000
Germany	519,000	519,000	1,508,000
France	246,000	289,000	428,000
Belgium	80,800	204,000
Total	4,490,800	4,009,600	5,576,000
Steel ingots and casting			
United States	8,420,000	2,889,270	2,608,000
Great Britain	738,000	658,000	689,000
Germany	652,000	682,000	1,638,000
France	242,600	190,000	885,000
Belgium	97,260	202,800
Total	5,129,860	4,369,270	5,467,800

Analyzing the above figures it will appear that in 1913 the United States contributed 46.3 per cent of the pig iron output of the five countries;

but by 1919 its production had increased to 64.4 per cent and in 1920 had advanced to 66.8 per cent. In Europe pig iron output had declined since 1913, even Great Britain showing a net loss of about 200,000 tons per month in 1920, not all accounted for by the coal strike. As the *Iron Age* states the falling off in the pig iron output of the four European countries by about 1,100,000 tons per month in 1920 and by 1,500,000 tons per month less in 1919 than in 1913 was an outstanding feature.

In steel the relations were somewhat different, but the United States here took the lead even more strongly. Its percentage of the total in 1913 was 47.6, rising to 66.1 per cent in 1919, and to 66.6 per cent in 1920. In 1920 the United States produced more steel than in any year previous to the war. Great Britain also greatly increased its steel production despite the coal strike. It will also appear from the table that France was returning as a producer but Belgium was hardly started though making good progress in reestablishment.

IRON ORE PRODUCTION IN THE UNITED STATES. The following figures for iron ore production were supplied by the United States Geological Survey: The iron ore mined in the United States in 1920, exclusive of that which contained more than 5.5 per cent of manganese, is estimated at 67,773,000 gross tons, an increase of 12 per cent as compared with the output in 1919. The shipments of ore from the mines in 1920 are estimated at 69,558,000 gross tons, valued at \$290,607,000, an increase in quantity of nearly 24 per cent and in value of nearly 43 per cent as compared with shipments in 1919. The average selling value of the ore per gross ton at the mines for the whole United States in 1920 was \$4.18; in 1919 it was \$3.61. The stocks of iron ore at the mines, mainly in Michigan and Minnesota, apparently decreased from 12,986,000 gross tons in 1919 to 11,145,000 tons in 1920, or 14 per cent. The production of iron ore in 1920 was less than 2,000,000 tons below that of 1918 and is exceeded only by that of the war years 1916, 1917, and 1918. In 1920 shipments exceeded production by approximately 1,785,000 gross tons, but in 1919 production exceeding shipments by about 4,147,000 tons. The record of the iron-mining industry in 1920 is the more remarkable when it is considered that shipments were hindered by a strike of ore handlers at the shipping docks early in the season, then by railroad tie-ups, due to a strike of switchmen, and by shortage of coal, cars, and vessels, and later by the closing down of blast furnaces, which was brought about by the cessation of the demand for pig iron and steel.

About 86 per cent of the iron ore mined and shipped in 1920 came from the Lake Superior district, in which 58,173,000 gross tons was mined and 60,656,000 tons was shipped, increases of about 12 and 24 per cent, respectively, as compared with the quantities mined and shipped in 1919. The ore shipped in 1920 was valued at \$257,543,000, an increase of about 43 per cent. These totals include the ore mined and shipped from the Mayville and Baraboo mines in Wisconsin, and ore shipped by rail as well as water from all mines, but exclude manganiferous ores that contained more than 5.5 per cent manganese. The ore is chiefly hematite. The stocks of iron ore in this district apparently increased from about 11,887,000 gross tons in 1919 to about 10,000,000 tons in 1920, or 16 per cent. The ship-

ments of iron ore by water from the Lake Superior district in 1920 (including manganiferous iron ore), according to figures compiled by the Lake Superior Iron Ore Association, amounted to 58,527,226 gross tons, an increase of 24 per cent as compared with these shipments in 1919. A total of about 1,529,000 tons is thus indicated to have been shipped by rail. The average selling value of the ore at the mines in the Lake Superior district in 1920 was \$4.29 a ton; in 1919 it was \$3.70. The mines in Minnesota furnished 67 per cent of the total iron ore shipped from the Lake Superior district in 1920 and 58 per cent of the total of the United States. The mines in Michigan furnished 31 per cent of the Lake shipments and 27 per cent of the grand total.

According to the *Iron Age* ore shipments by water from the Lake Superior district during the 1920 season amounted to 58,527,226 gross tons. Adding the all rail movement the total movement for the season was stated at 60,227,226 tons. This total can be compared with lake and all rail shipments during the previous four years as follows: 1919, 48,812,522 tons; 1918, 62,836,172 tons; 1917, 64,437,003 tons, and 1916, 66,658,466 tons. At the close of navigation in 1920 there was more ore on docks than ever before on that date. The balance on Lake Erie docks December 1st was 10,955,868 gross tons. This compared with 10,454,843 tons in 1919, 10,376,509 tons in 1918, 10,023,743 tons in 1917, and 9,958,306 tons in 1916. Notable among the smaller producers was Alabama with an output of 6,398,000 tons of iron ore of which 4,750,000 tons were Red Mountain self-fluxing red ore groups. New York produced over 1,000,000 tons of iron ore, while New Jersey, Pennsylvania, Virginia, North Carolina, and other States made up the nation's total.

AMERICAN IRON AND STEEL PRODUCTION. In the United States the output of iron and steel in 1920 was nearly 20 per cent greater than in 1919 but fell below the average for the last two years of the war, 1917 and 1918. Pig iron production was 36,414,114 tons and steel ingot and castings production was in excess of 40,000,000 tons. Comparison with the four preceding years is given below:

	Pig iron Gross tons	Steel ingots and castings Gross tons
1916	39,434,797	42,773,680
1917	38,621,216	45,060,607
1918	39,054,644	44,462,432
1919	31,015,864	34,671,332
1920	36,414,114	41,000,000

* Estimated.

The pig iron production in 1920 was made notwithstanding embarrassments due to railroad and coal strikes, car shortages, and other difficulties and compares quite favorably with that of the extraordinary war years 1916, 1917, and 1918. The production in the United States in 1920 was placed at 36,414,114 tons against 30,582,878 in 1919, but an average of over 2,000,000 below the figures for 1918, 1917, and 1916. The daily rate for December, 1920, 87,222 tons, was 10,600 tons under that for November, divided almost equally between steel and merchant plants.

Those interested will find much of the story told in the following comparison of pig iron production in the United States for the three years 1918, 1919, and 1920:

	1918	1919	1920
January	2,411,768	3,802,260	8,015,181
February	2,819,299	2,940,168	2,978,879
March	8,213,091	3,090,248	8,375,907
April	8,288,211	2,478,218	2,739,797
May	8,446,412	2,108,056	2,985,682
June	8,823,791	2,114,868	8,043,540
July	8,420,988	2,428,541	8,067,048
August	8,889,585	2,748,388	8,147,402
September	8,418,270	2,487,965	8,129,823
October	8,486,941	1,868,558	8,292,597
November	8,854,074	2,392,850	2,984,908
December	8,438,617	2,683,268	2,703,855
Total	38,506,047	80,582,873	36,414,114

The daily average rate is given in the table below:

	1918	1919	1920
January	77,799	106,525	97,264
February	82,885	105,006	102,720
March	103,648	99,685	108,900
April	109,607	82,607	91,827
May	111,175	68,002	96,312
June	110,798	70,495	101,451
July	110,854	78,340	98,981
August	109,841	88,496	101,529
September	113,942	82,982	104,810
October	112,482	60,115	106,212
November	111,802	79,745	97,830
December	110,762	84,944	87,222

The ferromanganese output of the United States in 1920 was 62 per cent higher than in 1919. Following are comparisons of production of both ferromanganese and spiegeleisen:

	1918	1919	1920
January	30,695	82,787	23,957
February	26,114	28,105	18,038
March	39,122	26,644	35,275
April	35,511	17,808	27,628
May	54,633	14,604	33,407
June	44,844	14,254	34,751
July	51,762	14,805	36,789
August	54,009	17,419	36,985
September	66,275	20,681	39,546
October	70,379	20,288	34,786
November	59,688	19,964	26,944
December	49,435	15,718	28,028

The number of pig iron furnaces in blast at the end of 1920 were 201 with a capacity of 76,540 tons, as compared with 252 and 90,040 on December 1st. Total stacks on December 31st were 416, indicating that operations dropped below 50 per cent. Salient facts regarding pig iron production in 1920 may be summarized by beginning with the statement that in the first half of the year the demand was sufficient to keep blast furnaces and steel works going at capacity, but output was reduced by an inadequate supply of fuel. In April the railroad strike curtailed operations in all lines, while later railroad congestion interfered seriously with production. In the last quarter of the year orders fell off sharply, and naturally output declined.

The variations in the pig iron production appear in the following statement of the number of furnaces in blast at the beginning of each month from which it will appear that the decreased production did not begin until October:

Jan. 1	262	July 1	302
Feb. 1	290	Aug. 1	293
March 1	304	Sept. 1	311
April 1	312	Oct. 1	319
May 1	281	Nov. 1	285
June 1	295	Dec. 1	252

NEW BLAST FURNACES. The increase in pig iron making capacity in the United States in 1920 was larger than in 1919. In 1919 only two blast

furnaces were completed and put into operation, but in 1920 six furnaces were built, most of which were in operation by the end of the year, whereas in 1918 eight furnaces were completed and in 1917 there were 14. The 1920 record may be compared with that of 1916, when four furnaces were put in blast. The six furnaces completed in 1920 represented a capacity of 875,000 gross tons of pig iron. However at the end of the year there was only one blast furnace under construction for probable completion in 1921, which was probably the smallest contemplated increase to the pig iron capacity of the country ever recorded. It represents an estimated new capacity of about 200,000 tons of pig iron per year. The accompanying table also from the *Iron Age* gives details of new blast furnaces completed in 1920 and at present under construction. In addition several companies rebuilt or enlarged their furnaces in 1920 or planned to do so in 1921.

Company	Completed in 1920	Under construction or projected
Trumbull Cliffs Furnace Co., Warren, Ohio		1
Ford Motor Co., Detroit, Mich.	2	..
St. Louis Coke & Chemical Co., Granite City, Ill.	1	..
Pittsburgh Crucible Steel Co., Midland, Pa.	1	..
Bethlehem Steel Corporation, Maryland plant	2	..

UNITED STATES STEEL PRODUCTION. The American Iron and Steel Institute's annual summary for 1920 recorded a total output of crude steel for 1920 of 34,432,252 tons, against 36,671,232 in 1919 and 43,051,022 in 1918, but well above the rates in pre-war years. The crude steel output in December was 2,340,365 tons, the lowest of any month in 1920. These statistics covered the operation of 30 companies which in 1919 produced 85.12 per cent of the total American output in that year, and compare with 2,638,670 tons in November, and 3,015,982 in October, a decrease of 675,617 tons in two months.

According to this statement in December the heaviest slump was in open hearth operations, which were 274,699 tons under the figures for November and over 800,000 tons below the high peak in March. Bessemer also showed a reduction, but other grades were but slightly changed. The most material reductions at the end of the year were in independent mills which ran between 50 and 60 per cent of capacity as compared with 90 per cent or more for United States Steel Corporation plants. In connection with the 1920 production it was clearly recognized that the total output in 1920 was from 8,000,000 to 10,000,000 tons below the known capacity of the United States.

Production of all kinds of crude steel from January, 1919, to the end of 1920, are given herewith (figures for last four months of 1919 were not compiled owing to the steel strike):

1919	Open hearth	Bessemer	All other	Total
January	2,351,158	749,846	7,279	3,107,778
February	2,043,635	655,206	5,842	2,704,683
March	2,100,528	555,332	6,405	2,662,265
April	1,732,447	500,770	6,494	2,239,711
May	1,506,015	414,392	8,617	1,929,024
June	1,692,257	521,634	5,328	2,219,219
July	1,875,630	625,246	7,300	2,508,176
August	1,988,651	748,212	9,218	2,746,081

Total 26,197,843 8,112,753 121,656 34,432,252

COMPARISON OF TOTAL STEEL PRODUCTION BY YEARS

	Tons		Tons
1912	80,284,682	1917	43,619,200
1913	80,280,180	1918	43,051,022
1914	22,819,784	1919	36,671,232
1915	81,284,212	1920	34,432,252
1916	41,401,917		

OPEN HEARTH FURNACES. In 1920 there were completed 20 new open-hearth furnaces with a capacity amounting to 675,000 gross tons and there were under construction 15 new furnaces with a capacity of 430,000 tons. The 1920 increase in capacity compared with 625,000 tons added in 1919, with 1,945,000 tons added in 1918, with 4,326,500 tons in 1917 and with 4,205,000 tons in 1916. The 20 open-hearth furnaces completed in 1920 compared with 9 in 1919, with 46 in 1918, with 97 in 1917, and with 103 in 1916. The 1920 construction was entirely by independent companies for the first time in some years. The United States Steel Corporation made no additions to its open-hearth capacity at any of its plants. In 1919, however, it had put into operation a third 100-ton open-hearth furnace at its Gary works.

The open-hearth furnaces under construction during the year 1920, most of which will probably be completed in 1921, numbered 15, which was the smallest total for many years and compared with 22 projected for 1920, with 16 under construction for 1919, with 35 for 1918, with 72 for 1917 and

total in the world on Jan. 1, 1920, was estimated very roughly at about 815. The combined actual and estimated data as of Dec. 31, 1920, indicated about 961 furnaces of all types in the world's electric steel industry. The total might actually reach 1000. The number, types, and distribution of the various electric furnace installations are shown in the accompanying tables from *The Iron Age*.

* Largely estimated. * Obtained by adding the known new installations to the estimate for Jan. 1, 1918.

with 91 for 1916. The total estimated capacity of the furnaces projected for completion in 1921 was 430,000 gross tons and included the new Bessemer plant of the Steel & Tube Co. of America, at Indiana Harbor. This compared with 875,000 tons planned for 1920, with 1,130,000 tons planned for 1919, with 1,645,000 tons for 1918 and with 4,515,000 tons for 1917.

ELECTRIC STEEL FURNACES. On Jan. 1, 1920, according to *The Iron Age's* annual review of the electric steel industry, the United States was credited with 323 furnaces of all types, with 40 in Canada. On Jan. 1, 1921, this total has been increased to 356 in this country and 43 in Canada. On July 1, 1913, there were only 19 such furnaces in the United States and three in Canada, or eight and one-half years earlier. The

MONTHLY AVERAGE PRICES OF PIG IRON, 1920

(From *Iron Age* Annual Summary)

	Bessemer pig iron at Pittsburgh	Bessemer steel billets at Pittsburgh	Basic pig valley	Southern No. 2 foundry dry pig at Cincinnati	Local No. 3 foundry, Chicago

MARKET CONDITIONS OF 1920—UNITED STATES. The year in the iron and steel industry was extraordinary in many respects. Prices rose steadily at the beginning of the year reaching a peak from which there was a steady and continual decline until the end of the year. There were maintained in the industry two sets of prices, the United States Steel Corporation maintaining the prices set by the so-called Industrial Board on March 21, 1919, while the independent producers taking advantage of the active demand due in large measure to the scarcity of steel in 1919 were able to secure very high prices on a certain amount of the year's business, in a few instances reaching a maximum of four cents a pound for plates and shapes and 8.50 cents a pound for No. 28 black sheets, when the latter were quoted at 4.35 cents by the Steel Corporation. In other words while the Steel Corporation sold bars at 2.35 cents, plates at 2.65 cents, and structural shapes at 2.45 cents at Pittsburgh, the independent companies were able to secure for most of the year three cents to four cents for bars, 3.25 to four cents for plates and three to 3.50 cents for structural shapes. Accordingly the range of prices from the date of the announcement of the schedule of the Industrial Board in March, 1919, to Dec. 16, 1920, as given by *The Iron Age* is of interest and is shown herewith.

INDEPENDENT PRICES OF BLACK SHEETS, TANK PLATES, BEAMS, AND STEEL BARS, GROSS TONS, MARCH 21, 1919, TO DEC. 16, 1920

1919	Black sheets No. 28	Tank plates	Beams	Steel bars
April	\$97.44	\$59.36	\$54.88	\$52.64
May	97.44	59.36	54.88	52.64

December	97.44	59.36	54.88	52.64

UNITED STATES STEEL CORPORATION PRICES, GROSS TONS, MARCH 21, 1919, TO DEC. 16, 1920

Black sheets	Tank plates	Beams	Steel bars
\$97.44	\$59.36	\$54.88	\$52.64

Such a situation as outlined, however, needs explanation. The Steel Corporation in 1919 had sold to regular customers a large part of its future product, entering 1920 with 8,265,000 tons of unfilled orders on its books. Naturally it was not in a position to make prompt deliveries on outside orders which accordingly went to the independents at correspondingly increased prices. The switchmen's strike in April prevented production and distribution in large

measure and consequently added to the uncertainty which the shortage and belated production of the previous year had developed. In some industries, notably the automobile trade, steel was demanded at almost any figure and prices accordingly were forced up. In June the automobile industry began to slacken and then by September, other customers reduced their demands. There were many cancellations on orders in October and November so that by the end of that month and the middle of December prices were reaching the level set by the Steel Corporation. At the end of the year the Steel Corporation was operating on an 85 to 90 per cent basis, while the independent companies with few contracts ahead and having realized on their prompt deliveries at high prices were putting out somewhat less than one-half the output of the Steel Corporation.

EXPORTS FROM THE UNITED STATES. In regard to exports Department of Commerce reports compiled at the end of the year indicated that there was a gain of close to \$1,000,000 in the exports of iron and steel products in November over the preceding month, or \$104,837,628, against \$103,998,528 as compared with \$73,930,228 in November of 1919. This indicated an export trade for 1920 somewhat in excess of \$1,000,000,000. The November figures made a new record for any month since June, 1919. In view of the numerous difficulties of adverse exchange and of credits in the iron and steel markets of the world the volume of export was considered remarkable.

During the year there was manifested an increase in machinery exports, with gains also in wire, bars, rails, pipe, nails, cutlery, and track material. On the other hand a serious decline was shown in pig iron, iron ore, and scrap. This indicated clearly a heavy competition experienced in foreign markets by American exporters from Belgian and German interests, and lower consumption in general. Imports of iron and steel into the United States in November dropped to \$3,854,950 from \$4,851,522 in October and \$3,621,053 in November, 1919. As against an increase of 9 per cent in exports of 11 months of 1920, compared with 1919, imports gained over 100 per cent as the figures for 1920 showed \$47,348,319, against \$23,366,959 in 1919.

BRITISH IRON AND STEEL INDUSTRY. In Great Britain the iron and steel production in 1920 suffered from the coal strike and according to the report of the National Federation of Iron and Steel Manufacturers, the production of pig iron, fell from 741,000 tons in September to 533,200 tons in October and 403,200 tons in November. However, it rose in December to 675,300 tons, making the total production for the year 8,000,700 tons, compared with 7,398,000 tons for 1919. The production of steel ingots and castings, which fell from 834,700 tons in September to 544,300 tons in October and 505,100 tons in November, rose to 745,400 tons in December, bringing the total for the year up to 9,055,600 tons, compared with 7,894,000 tons in 1919.

IRON AND STEEL EXPORTS, 1919-1920, BY MONTHS

	1920	1919
January	\$70,226,411	\$81,778,426
February	71,893,929	85,328,456
March	98,756,388	84,621,054
April	87,496,643	88,896,975
May	99,461,058	88,899,126
June	87,496,643	121,036,322

	1920	1919
July	92,147,844	60,275,110
August	89,065,843	75,826,285
September	87,556,292	73,376,508
October	108,998,528	76,157,191
November	104,627,626	74,626,804
December		60,399,425

It must be borne in mind that a serious result of the war had been to keep British iron and steel products out of the export markets, while America also being similarly occupied, British colonial and foreign customers as never before had been forced to their own resources and naturally some developments resulted. Australia, New Zealand, South Africa, Japan, and even China, all erected large steel and iron works during or just after the war, and these, it was feared, would be increased and would act seriously to decrease British export trade.

Furthermore, in 1920, British manufacturers suffered seriously from the lack of transport facilities. While customers were clamoring for steel products finished and ready for shipping the railway facilities were utterly inadequate, and the goods were lying about the yards waiting for cars. An important effect suffered by the manufacturers was the locking up of capital, and the payment of interest at the onerous rate prevailing in the scarcity of money.

In 1920 there was an absence of serious labor troubles and the introduction during the war of labor saving machinery had contributed to the general efficiency of the industry. Reduced labor hours and a decreased output were considerations that were debated as to their immediate and remote effects on the industry.

In the British Board of Trade statistics on foreign trade in iron and steel products and coal for the calendar year 1920, comparing it with the preceding year and with the year before the outbreak of the war, it was shown that with the exception of new rails, which were unchanged, all materials were on the decline in December as compared with 1919 and considerably under the figures for 1913. However, with the exception of coal exports, which were over 10,000,000 tons below 1919 and 48,500,000 under 1913, iron and steel shipments in the calendar year 1920 were well above the totals for 1919 and close to the aggregates for the pre-war year.

The following is a comparison:

	Tons—000 omitted		
	12 months		
	1920	1919	1913
Total iron and steel	3,253	2,283	4,969
Pig iron	579	357	1,124
New rails	185	126	507
Galvanized sheets	411	186	762
Tin plates	853	289	494
Coal	24,982	35,250	73,400

The British iron and steel industry indeed ran a spectacular course in 1920 which included an extraordinary boom reaching its high water mark in the early autumn. The crest of the boom brought prices to a level twice as high as that scored in the previous great boom after the war of 1870, which trade historians recalled was followed by a decline that brought prices down to an unheard of level where No. 3 pig iron sold at less than 30 shillings a ton and new steel rails at 75 shillings a ton. The end of the year 1920, in the opinion of many trade authorities was witnessing the beginning of a

slump. However, in the present record it is of interest to trace the movement of prices from the beginning of the year to their high mark and these are summarized herewith:

COMPARATIVE PRICES PER GROSS TON OF FINISHED STEEL		
	Jan. 1	Oct. 1
	£ s	£ s
Bar iron	23 0	30 0
Iron bolts and nuts	45 0	57 10
Steel strips	22 0	28 0
Steel bars (5 to 8 in.)	19 10	26 10
Steel sheet bars (semi-steel)	18 0	21 0
Steel hoops	26 15	38 15

Now with the high prices of iron and steel products naturally there came increased imports into Great Britain from America and the Continent. Prices at the end of the year in Great Britain and at Continental ports for similar products were as follows:

	British at works, per ton	Continental at ports, per ton
	£ s	£ s
Steel billets, rolling quality ...	17	11 15
Steel bars up to 6 in.	26	17 0
Bar iron	30	20 0

At the top of the boom No. 3 pig iron varied in the different markets, the Cleveland iron trade endeavoring to steady prices and prevent a runaway market. The high prices of 1920 as given below for the various districts together with those at the end of the year can be compared with prices of £2 10 s to £3 10s per ton before the war.

VARIOUS PIG IRON PRICES PER TON AT TOP OF BOOM AND AT END OF 1920

	£ s	£ s
Cleveland	11 5	11 5
Scotch	13 10	13 0
Derbyshire	14 0	18 0
Staffordshire	14 10	13 10
Lincolnshire	14 5	13 10
Northamptonshire	18 0	12 6

Naturally with the high prices prevailing in the British markets imports increased.

BRITISH RECEIPTS OF BILLETS FOR 10 MONTHS COMPARED

	1913	1919	1920
From Germany, tons	243,458	none	11,047
From Belgium, tons	89,240	514	
From United States, tons ...	64,945	30,335	200,394
From all other countries, tons	22,324	12,226	

The above statistics indicated that where during 1919 Germany was unable to export at all and Belgium was not in a much better plight, France had begun to work and the comparatively high prices attracted imports from the United States. In 1920 increased demands and local high prices led to considerable importing of foreign billets, the total imports for the 10 months being 211,441 tons, against a total of 43,075 tons in 1919. Germany, however, was only beginning to send billets to Great Britain up to October and the bulk of the imports came from the United States and from "other countries" including France, viz., 200,394 tons out of 211,441 tons.

BELGIAN IRON AND STEEL INDUSTRY. Belgian manufacturers during the year suffered from competition from Germany during 1920 in their efforts to reestablish their industry on its for-

mer basis. An agreement made between the iron men of France, Luxemburg and Belgium to maintain prices, failed during the year and pig iron prices became lower with a deep depression in the Belgian iron and steel market at its close. The costs of fuel, wages, and transportation at the close of the year were said to be such as to render impossible profits at the prevailing prices for finished materials, especially with a decreased demand. There were during the year 1920 exports to Great Britain totalling some 33,903 tons as against 5547 in 1919, an amount not quite half the exports to that country in 1913.

Belgium's exports of iron and steel for the 10 months ended November 30 are reported as follows:

	10 months ended Nov. 30, 1920	10 months ended Nov. 30, 1913
	Tons	Tons
Billets	8,000	89,000
Blooms	5,000	36,000
Beams	43,000	83,000
Rails	37,000	136,000
Sheet iron	110,000	162,000
Bars	324,000	532,000
Wire	35,000	46,000
Wrought steel	48,000	116,000
Rolling stock	14,000	109,000

Belgium at the end of 1920 was offering iron bars at £15 12s 6d, billets at £11 10s and finished steel at £14 10s, all delivered in the Midlands. German products were competing with Belgium and at the end of the year it was reported from Sheffield that marine forgings were being offered there by German makers at 50 per cent less than the prices quoted for the British made commodity.

GERMAN IRON AND STEEL INDUSTRY. The German iron and steel plants were active in 1920 and for the majority of them the year was considered one of prosperity, notwithstanding many adverse conditions. It was believed that the production of steel would run ahead of that of pig iron as there was much scrap and old material coming on the market which was utilized in the open hearth steel plants. One of the tendencies of the year in the iron and coal industries was the organization of a number of big trusts, on a greater scale than ever before. This gave rise to many interesting political and commercial speculations, and the opinion was advanced that it was a movement on the part of German iron and coal magnates to annex various coal fields and so combine the various industries by what was known as "vertical annexations," so that there would be a single organization including iron ore and coal mines, blast furnaces and steel plants, rolling mills, and even down to machine shops, that could turn out electrical and other machinery. Such consolidations were economically necessary as with the loss of large and efficient plants in Lorraine and Luxemburg as a result of the Versailles treaty, the most economical and complete organizations for effective production with the cutting out of incidental losses was necessary. This naturally involved the turning out from raw material of highly finished products with a minimum of lost motion. Notwithstanding the loss of the ore fields, during the year German iron works were receiving the minette ores and also they were using their own ores together with Swedish and Spanish ores, foreign supplies figuring to an extent of from 50 to 75 per cent at the

end of the year, with rumors that German iron masters were securing iron and manganese ore fields in Brazil and the Black Sea regions.

In Germany, as elsewhere in the iron and steel business, there was in 1920 an advance of prices followed by a decline, caused in fact by the depreciation of the German mark in the final months of the preceding year. The price movement of the year as given in the foreign correspondence of *The Iron Age* (New York), is summarized for four staple products below, prices being quoted in marks per metric ton (2205 pounds):

	Foundry iron, No. 1	Best steel scrap	Blooms	Bars
January	1324.50	1300	1465	1745
March	1625	2700	2225	2600
May	1790.50	1200	2900	3650
July	1740	600	2650	3200
October	1660	1025	2360	2840
November	1660	850	1895	2440
December	1660	875	1895	2440

In 1920 German manufacturers were active with export business, occupying to a large degree the markets of Holland, where some three-fourths of the iron and steel imported was said to be from Germany. France and Belgium were beginning to compete vigorously in this field, while even the Dutch manufacturers were asking for protection on the finished products of the Dutch boiler, machine, and motor shops. In 1920 there were also exports from Germany to the Scandinavian countries. In the second half of the year France began to figure as a more active competitor in the foreign market, a condition made possible by the increased coal and coke supply. At the same time in accordance with the Spa agreement in July, increased coal deliveries were required from Germany so that the supplies available for iron and steel production were greatly reduced and on account of lack of fuel some of the largest plants had to shut down a number of their furnaces.

All things considered German iron and steel companies had a year of prosperity and large earnings, setting aside large amounts for betterments and renewals and in some cases increasing their capital. During the year a new steel works began operation at Düsseldorf, the Mannstaedt Company erected new blast furnaces, while other plants were engaged in improvements, certain concerns in the Silesian district building new open-hearth plants. Even with the vastly increased costs of labor and plant, much new work was under way and many of the great western companies were engaged in sinking new shafts.

An interesting tendency of the year was the increased attention that was being made to fuel economy for the very obvious reasons already mentioned. Like other German ventures it was attacked through an organized technical commission, the "Waermestette," or fuel economy section of the Verein Deutschen Eisenhütteleute, and some 200 experts were engaged from the middle of 1919 to work in conjunction with plant engineers to save fuel. Independent research was also carried on and surprising results in fuel economy were secured. Savings of coke also were made by using rich foreign ores and much scrap in furnace charges. Many metallurgical developments had resulted during the war, a number of which were adopted as standard practice. Churchbells of electric steel were said to answer as well as those of bronze while the use

of lead instead of tin in brazing metals was also an economy. Several improved machines such as one for drilling holes in ship and boiler plates and a simplified drill of electric steel more economical than the spiral drill, were brought out during the year.

IRRIGATION. See **RECLAMATION**.

ISOTOPES. See **PHYSICS**.

ISTRIA. Before the downfall of the Austro-Hungarian empire a crownland of the former kingdom of Austria, consisting of a peninsula extending from Trieste and Carniola to the Adriatic Sea; comprised after 1918 in the new state of Jugo-Slavia. Area: 1914 square miles; population according to census of Dec. 31, 1910, 403,566, of whom 43.52 per cent spoke Croatian; 38.15 per cent, Italian; and 3.3 per cent, German. Capital, Capodistria with a population of about 9000 in 1910. See **JUGO-SLAVIA**.

ITALIAN. See **PHILOLOGY**.

ITALIAN SOMALILAND. An Italian colony and protectorates on the east coast of Africa, extending from British Somaliland southward to the Juba River. Area, about 139,430 square miles; population about 450,000. It consists of three protectorates, namely, the Sultanate of the Mijertins, the territory of the Nogal and the Sultanate of Obbia, and of the colony which comprises four administrative divisions. In 1918, the imports were valued at 14,827,370 lire and the exports at 6,064,782 lire. The budget for 1919-20 was as follows: Revenue 7,471,000 lire; expenditures, 7,467,000 lire. Governor in 1920, Carlo Riveri.

ITALY. A constitutional monarchy in southern Europe comprising Italy proper, the islands of Sardinia, Sicily, Elba, and between 60 and 70 small islands, together with territory on the eastern coast of the Adriatic Sea whose limits at the close of 1920 were subject to the execution of the Treaty of St. Germain and the arrangement with Jugo-Slavia. (See **JUGO-SLAVIA** and **WAR OF THE NATIONS**). Area before the war, 110,632 square miles; pop. estimated, Jan. 1, 1915, 36,120,118. For details, see preceding **YEAR BOOKS**. Emigration, 1918: 28,311, of whom 24,301 went to European or Mediterranean countries, and 4010 overseas (2739 to the United States). In 1918, 9025 Italians returned to Italy (8763 from the United States). Capital, Rome, with a population estimated Jan. 1, 1915 at 590,960; other large cities: Naples 697,917; Milan 663,059; Turin 451,994 and Palermo 345,891.

EDUCATION. No later figures for elementary education were available than those given in preceding **YEAR BOOKS** which gave the public elementary schools at 120,196 in 1916 with 3,792,024 pupils and 75,993 teachers. In 1916-17 the students in universities numbered 29,075.

PRODUCTION AND INDUSTRY. Of the total acreage, namely, 71,652,592, about 65,995,000 were under crops and 5,662,500 were waste lands. The following table shows the acreage and production in cwt. of the principal crops for 1918 and 1919:

	Acreage		Produce in Cwts.	
	1918	1919	1918	1919
Wheat..	10,914,250	10,694,000	99,776,000	92,296,000
Barley..	488,500	485,500	4,218,000	3,626,000
Oats...	1,228,525	1,142,750	13,166,000	10,080,000
Maise...	3,598,000	3,757,350	38,798,000	43,498,000
Rye....	278,000	276,500	2,658,000	2,822,000
Rice...	346,000	329,250	10,470,000	9,784,000

Beans..	1,077,000	979,000	8,362,000	5,948,000
Potatoes.	747,250	770,250	28,198,000	27,726,000
Sugar				
Beetroot.	107,000	107,500	22,920,000	28,000,000
Vines..	7,261,000	10,759,000	1,237,632	726,000
Olive...	5,750,000	5,786,750		852,000

¹ Produce in thousand gallons.

The production of silk cocoons for 1920 was placed at 59,500,000 pounds, as compared with 43,500,000 pounds for 1919. While the 1920 crop showed an increase (about 37 per cent) over the previous year, it was still considerably below the average production for the 10 years from 1910 to 1919, which was 77,500,000 pounds. Italy's production of cocoons greatly decreased after the country's entrance into the war in 1915. The average from 1910 to 1914 was 88,853,440 pounds. Raw silk has been the most important commodity in Italy's export trade from the standpoint of value, especially so far as the United States is concerned. In 1919, of Italy's total exports to the United States of about 453,000,000 lire, 189,000,000 lire was made up of raw silk and silk waste. See **AGRICULTURE**; **AGRICULTURAL EXPERIMENT STATIONS**; and **AGRICULTURAL EXTENSION WORK**.

In 1918 the mineral output was valued at 369,753,447 lire and employed 59,962 workers.

The following table gives the estimated mineral production in Italy during 1920 as compared with production in 1919:

Minerals	1919 Tons	1920 Tons
Iron ore and ferro manganese..	465,655	423,300
Manganese ore.....	30,841	29,140
Copper ore.....	16,653	6,860
Lead ore.....	32,130	36,325
Zinc ore.....	65,629	98,090
Silver	8,240	500
Antimony	10	125
Iron pyrites (inc'd'g cupriferous)	372,474	322,450
Mercury	548	1,325

Minerals	1919 Tons	1920 Tons
Fuel:		
Lignite		1,662,430
Anthracite	1,158,541	28,600
Coal (Triassic).....		120,715
Bituminous shale.....		22,000
Shale (ichthyolic).....		495
Sulphur, raw and ground.....	255,316	298,000
Petroleum	4,851	4,750
Asphalt and bituminous rock...	78,635	108,600
Bauxite		37,980
Graphite	7,626	4,190

FOREIGN TRADE. The following table shows the imports and exports in thousands of dollars for the years 1913, 1918 and 1919:

Date	Imports	Exports
1913	\$703,608	\$484,746
1918	2,820,329	496,705
1919	3,803,281	1,037,724

In 1919 the leading imports in respect to value were: Wheat, raw cotton, coal and coke, and wrought iron and steel, and the leading exports were: Cotton manufactures, raw silk, silk manufactures, hemp, fruits, and wines. The chief origin of the imports was the United States as in the preceding year and the chief country of destination for exports was France as in the preceding year.

RAILWAYS. The following information was supplied by the United States Bureau of Foreign and Domestic Commerce in 1920:

Railway transportation in Italy at the close of the war presented two distinct problems: The reorganization of existing facilities, including the repairing of existing rolling stock and the purchase of additional equipment; and the extension of the old system through the construction of new lines, in order to meet the growing needs of the country for means of communication. In spite of the efforts made by the government to afford relief, the inadequacy of the Italian railway service, which made itself felt soon after the signing of the armistice, continued in 1920; and the inability to obtain the reasonably prompt movement of goods, either raw materials or finished products, was by no means the least of the many difficulties with which Italian industry and commerce were confronted. During the war all of the belligerent nations were obliged to postpone railway repairs which would normally have been effected immediately, and Italy was no exception to the rule. Consequently, on the signing of the armistice, the few large Italian establishments which were in position to carry on work of this character, found themselves faced with an accumulation of repairs and orders for new equipment sufficient to occupy their entire capacity for several years. Furthermore, in 1919-20, they were severely hampered in the matter of production on account of the constant shortage of raw materials (notably steel and coal) and repeated labor troubles, resulting in long-drawn-out strikes and enforced periods of idleness. Since the same demand for railway material existed in other countries, the measure of relief that it was possible to obtain from the outside was limited, and progress with regard to the rehabilitation of Italian rolling stock was slow. As to the lack of coal, it suffices to say that at no time after the end of the war did the supply of coal exceed more than one-half of the quantity normally consumed, and that the Italian railroads were obliged to eke out their scanty allotment by employing lignite, wood, and other unsatisfactory substitutes. Of necessity, irregular service resulted.

With regard to new construction, the execution of new projects for railway extension in Italy, which had already been approved, was necessarily held up during the war, except where these presented some special military advantage; and, owing to the shortage of steel for munitions, etc., it was even found necessary, in certain cases, to dismantle sidings and double-track lines that were not considered essential. After the armistice special attention was devoted by the government to the railway problem, but the high prices, both of materials and labor, and the difficulty of obtaining the former at any figure, constituted a serious obstacle to rapid progress with regard to new construction, especially as far as private undertakings were concerned.

When the principal railway systems of Italy were taken over by the government on July 1, 1905, and became the Italian State Railways, their length was about 6961 miles, while the length of the roads which continued under private management was about 1924 miles, making a total mileage for the Italian railroads on that date of 8885 miles. In 1920 the length of the state railways was slightly in excess of 9920 miles and that of the private roads about 3845 miles, making a total of about 13,765 miles, so that during the past 15 years Italy's railway mileage had increased approximately 55 per cent,

the annual average of new construction being 325 miles.

The following information was supplied by the *Railway Age*. A project announced during the year called for the electrifying of 2750 miles and the laying of 6070 miles of new rails. The plan involved (1) the immediate electrifying of 803 miles and the laying of 1780 miles of rails; (2) the electrifying of 635 miles and the laying of rails over 1410 miles in the period immediately following the execution of the first group; (3) the electrifying of 1080 miles and the laying of rails over 2640 miles by private industry; and (4) the electrifying of 158 miles and the laying of rails over 242 miles, in which group experiments were to be made with new methods of electric traction. The government for this work apportioned about \$154,000,000 to be distributed over eight periods, about \$11,600,000 to be expended in the financial year 1920-1921.

New construction as well as operation had to be considered in view of the large deficit on the Italian railway. This deficit on the Italian government railways for the fiscal year ending June 30, was reported to be \$163,400,000.

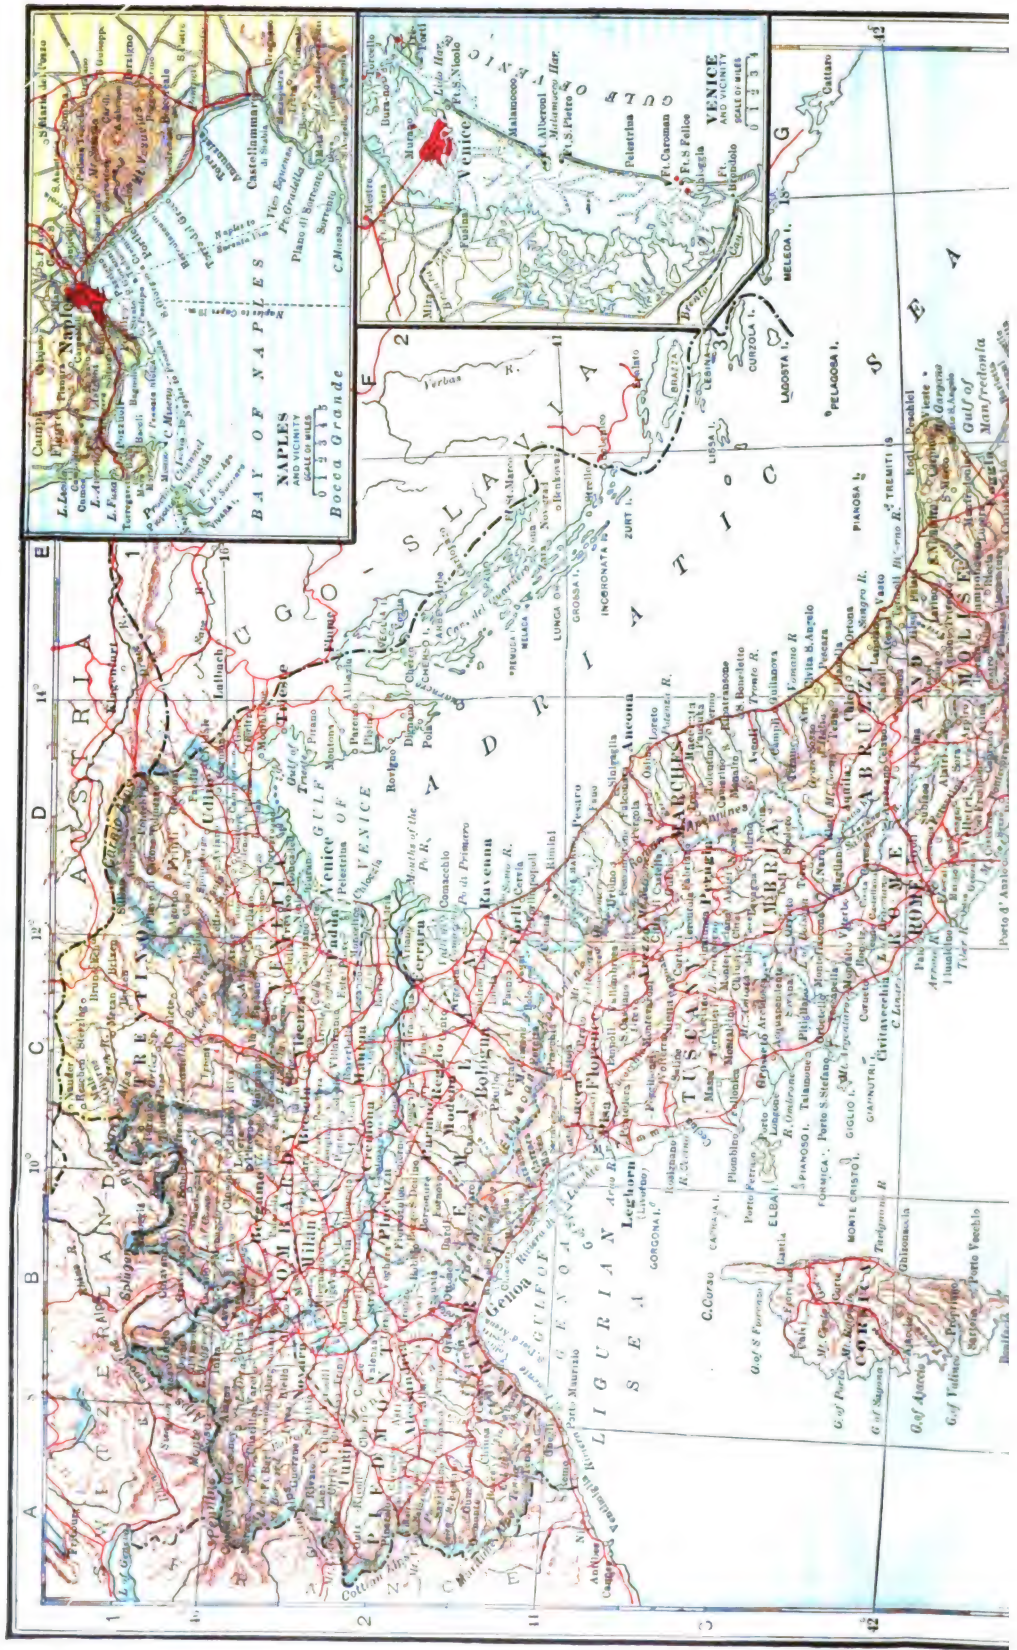

The total revenue from all sources was \$415,910,000 and the total expenses \$579,310,000. In an addition it was suggested that this figure for the deficit was probably too small considering the deterioration of the lines during the period due to the lack of adequate maintenance.

FINANCE. On June 27 Minister of the Treasury Meda made the following statement on the financial position of the Italian government: The total revenue of the government for the coming year, 1920-21, was estimated at 10,500,000,000 lire (lira at par of exchange = \$0.193). Its ordinary expenses, however, were estimated to be 11,535,000,000 lire. This was an increase of 3,066,112,000 lire, or about 36 per cent, over the estimate of 8,468,888,000 lire made in December, which increase was principally accounted for by the necessary increases in the salaries of government employees during the time which had elapsed since then. On this basis, expenses would exceed the estimated total revenue by about 1,000,000,000 lire. Moreover, 1,500,000,000 lire of the revenue was of a temporary character.

For extraordinary expenses, it was stated that in spite of the notable reductions already made, an estimate of less than 13,200,000,000 was not justified, this amount being made up for the most part by the following items:

	Lira
Deficit in connection with food supplies, not including the cost of transportation	5,500,000,000
Additional deficit in the administration of State railways	600,000,000
Recent allowances to employees on account of high cost of living	650,000,000
For Ministries of War, Navy, and Colonies	2,850,000,000
For the new territories, including the settlement of claims for damages	2,000,000,000
For marine transportation, including the cost of transporting foodstuffs (estimated at 800,000,000 lire)	1,200,000,000
Pensions, etc.	300,000,000

Unless additional revenue is secured, on the basis of the estimates just given, there would be a deficit of about 14,000,000,000 lire. The Minister of the Treasury, in giving these figures, justified the radical financial measures just presented to Parliament for enactment into law, and

pointed out that, in addition to the revenue which it was hoped these would provide, during the last half of the year the receipts from new taxes, etc., already in effect, ought to afford considerable relief. Furthermore, an improvement in the general economic situation of the country and a rise in the purchasing power of the lira abroad would make possible large savings over the above estimates.

DEFENSE. The strength of the field army at the end of 1919 was placed at about 800,000 and measures had been proposed to reduce it gradually to 250,000. According to figures published by the United States War Department the permanent Italian army at the end of 1920 numbered 350,000, while its total forces including reserves was placed at 4,163,000. The following table shows the number of war vessels that were completed at the end of 1920:

	Completed at the end of 1920
Dreadnoughts	6
Pre-dreadnoughts	6
Armoured cruisers.....	5
Protected cruisers, scouts and flotilla leaders..	23
Torpedo gunboats, etc.....	4
Destroyers	50
Torpedo boats	74
Submarines	80

See NAVAL PROGRESS.

GOVERNMENT. King, Victor Emmanuel III., born Nov. 11, 1869; succeeded to the throne, July 29, 1900; prime minister in 1920, G. Giolitti. For constitution of the ministry see *History* below.

HISTORY

CABINET CRISIS. Railway and postal strikes paralyzed industry during January. They arose from a demand for increase in wages, reduction of hours and government recognition of unions. The government in reply offered bonuses and shorter hours, but declined to recognize the unions. Discontent of the working classes continued and resulted in movements described in the press as amounting to an industrial revolution (see paragraphs below). A ministerial crisis occurred in March, after a debate lasting for several days and resulting in a hopeless deadlock. The prime minister, Nitti, re-organized his cabinet on March 13. It contained no representatives of the Catholic party, the Popular party, or Socialists. Its programme announced, March 22, included a policy of conciliation toward Jugoslavia, the renewal of economic relations with Germany and Russia, and financial retrenchment. It seemed to have the support of the Chamber as was shown by a vote of confidence, March 31, of 250 to 195. On May 11, the government was defeated by a vote of 193 to 112, and an attempt to reconstruct the cabinet with the inclusion of Catholics followed, but the government could not stand in face of the Socialist opposition and resigned, June 9. In the following week a new ministry was formed, under the former prime minister, Giovanni Giolitti. It was constituted as follows: President and minister of the Interior, Francesco Tedesco (Liberal); Colonies, Luigi Rossi (Liberal); Finance, Francesco Tedesco (Liberal); Public Works, Camillo Peano (Liberal); Liberated Provinces, Giovanni Raineri (Liberal); Treasury, Filippo Meda (Catholic); Agriculture, Giuseppe Michelli (Catholic); Justice, Luigi Fara (Radical); Industry, Giulio Ales-

sio (Radical); Posts and Telegraphs, Rosario Pasqualino-Vassallo (Radical); War, Ivanoe Bonomi (Socialist); Labor and Social Welfare, Arturo Labriola (Socialist). Three non-political experts were also included: Count Carlo Sforza, Foreign Affairs; Admiral Giovanni Sechi, Navy; Prof. Benedetto Grace, Education.

AGRARIAN REVOLT. Seizure of landed estates by the peasants developed during the summer and autumn into a systematic movement and in many parts of the country new local authorities supplanted the central government. According to reports published in October the conditions indicated a social revolution but in the main peaceful. It was described by French writers as a sort of peaceful *Jacquerie* whereby the working and peasant classes were rapidly gaining possession of the land. It originated according to them in the demand of the government during the war that agriculture should produce more and that the motive of production should be the welfare of the entire people. The Socialists had taken advantage of this and urged the peasants not only to destroy what remained of the old feudal tenure but actually to assume ownership of the land. After the war, the movement was aided by over-population and insufficient emigration, which caused a general lack of employment. The centre of the new movement was Bologna, the seat of the federation of agricultural workmen. At the beginning of 1920 this association had 500,000 adherents and it rapidly increased during the year. Its programme called for the socialization of the soil and its policy consisted in annulling the rights of owners, and forcing upon them a rigorous contract for the cultivation of the soil; in invading private estates, whether large or small, and placing them under a coöperative system of culture under the national federation of agricultural coöperatives, founded in December 1918. The extent of the territory under this collective system was increasing daily during the year. Associations were rapidly formed and under their direction posts were set up in pastures, olive groves, vineyards and agricultural lands flying the red flag with the inscription "Requisitioned by such and such a Coöperative." These acts were ratified in many instances by the authorities. The process was extremely simple. In the words of a well-known Italian Socialist, all that was necessary to bring about a revolution in any municipality was to replace the portraits of the King by the portraits of the commissary of the people. It was reported that in the province of Rome more than 100 communes covering an area of 13,000 hectares had been expropriated in this manner. The following instances were given as illustrative: The Marquis of Terraioli was deprived in this manner of 1000 hectares and the Princess Altaire was deprived of 888. A Spanish proprietor, the Duke de Bivona in Sicily, was besieged three days in his castle which the people pillaged. The Countess de Cambray-Digny was besieged in her villa near Florence. The estate of a celebrated singer Mattia Baltistini was seized and held for months by the peasants. It was reported that in three provinces of Sicily 100,000 peasants had possessed themselves of the great estates; that in Tuscany bands of peasants with the red flag at their head traversed the fields, invaded farms, burned down store-houses of grain and forage, stole farm implements and pillaged houses. In some parts of the country murders

were reported and acts of violence were said to have been committed in the liberated regions of Venetia and in the provinces of Cremona, Ferrara and Reggio. In the province of Emilia 190 incendiary and other attacks on property were reported, May-December. To a certain extent the government ratified acts of dispossession in that it recognized the occupation for a fixed period of time of lands that were uncultivated or ill-cultivated. It was reported, however, that the invaders made no distinction between the cultivated and the uncultivated lands and that certainly they did not regard their occupation as a temporary one. Nominally the principle of compensation was recognized but as a matter of fact it was said to be practically ignored. In the neighborhood of Bologna and Reggio associations of colonists, small farmers and day laborers determined the hours of labor, the kind of cultivation, rate of wages, distribution of manual labor and employment of machines, according to rules laid down by local bodies affiliated with the federation. Protest was useless and disobedience was severely punished. It was reported, for example, that a peasant who tried to dispose of his crop without regard to the order of requisition of the Bologna bureau of labor was shot and killed and that farmers who had attempted to thresh their wheat were lynched. The federation refused to treat with the association of landowners of Bologna, but would treat only with each individual owner. The union organizations completely controlled the situation. Writers who visited Italy at this time (October) declared that at that moment the individual right to property in the whole province of Emilia had ceased to exist. It was a system of collective purchase and collective farming. The unions fought against any attempt to build up private estates and whoever tried to acquire private property in land for this purpose was boycotted. It was described as a system of trusts in the interest of the agricultural workingmen—a trust of manual labor, a trust of farm implements, and trusts of purchase and sale. The experiment in the Bologna region was described as a particularly thorough-going one. The revolutionary organizations at the beginning of October were about to dispose of the real estate of the religious foundations amounting to 500,000,000 lire. At the close of the year, however, a partial return to the old régime was reported and the agrarian dictatorship in the provinces of Emilia and Bologna was said to have completely failed. The central authority had counted for little in this result which was chiefly due to the organization of bourgeois groups which in view of the importance of the government fought violence with violence.

Meanwhile the industrial workers were engaged in a similar warfare with the capitalist employers.

LABOR AND THE CONTROL OF INDUSTRY. By September, a large number of factories especially in the metal-working region were in the hands of the workingmen and on many of them red flags were flying. Soviets had been set up in a large number. The conditions resulting from the war, especially in those industries which had developed in order to meet the necessities of the war, such as the metal industry, left large establishments without the means of continuing their activities. The discharge of the workingmen would lead to a labor war which might have serious results.

The reduction of the output to a pre-war basis would be satisfactory to neither the employees nor the employers. At this crisis the workingmen forcibly took possession of the shops. The government remained neutral until the situation resulted in a spirit of compromise on the part of both the employers and employees, whereby the latter moderated their demands and the employers agreed to admit the participation of the workingmen in the direction of industry. Thereupon the government offered to arbitrate on the basis of a combination for control between the workingmen and employers. The representatives of both sides were invited to a conference by the prime minister on September 15 and as a result, the employers admitted the workingmen as participants in control, but not as the dominant factor. It was also agreed that the workingmen should evacuate the plants. The confederation of employers held a meeting at Milan and ratified this agreement and the metal-workers voted their approval of evacuation in a referendum of September 26 by vote of 127,904 against 44,531. The General Confederation of Labor as represented by the Commission of Workers drew up a programme containing the following main points: The employers were not to resort to artificial industrial crisis; they must prevent "dumping"; they must admit the Workers Council to participation in the purchase of raw materials and in the unloading of goods and must allow it to superintend the sale and fix the price of finished products, to superintend the grading of wages, to assign work to employees according to their abilities, to oversee the general expenses and limit the expenses of present owners, to decide when new machinery was needed, to supervise sanitary conditions, etc. The government was criticised by certain public men, but in general it seemed to have the support of the country. Its attitude was defined by the prime minister in a programme published in a leading official newspaper. This declared that the system in which single men could control thousands of others who had no redress, was no longer possible. Workingmen must be placed in a position in which they can contribute to its administration. They must have a share in the responsibility. The Popular or Catholic party issued a manifesto demanding co-operation between the employer and employee, the safe-guarding of legitimate private ownership, and an inquiry under government control into the present state of industry and into the need of land reforms.

Among the aspects brought out in the press in regard to the labor situation the following may be noted. In industry the mass of the workingmen were gaining the upper hand. The middle or capitalist class had tried in vain to control the situation. The lowering of the rate of exchange and the increase in the cost of living had thrown things into confusion and in the presence of the general unrest even the constitutional parties had yielded to the demands for reform. Thus in the programme of the Catholic party itself were found such reforms as woman suffrage, general establishment of coöperative production, internationalization of raw materials and transport. The government had gone to astonishing lengths in its financial measures. The land system under the pressure of some 700,000 or 800,000 laborers was undergoing radical changes from day to day without any interference on the part of the state. Landed property was rapidly pas-

sing into the hands of those who cultivated it while workingmen were invading uncultivated lands and taking possession of them for the purpose of exploiting them. These changes were effected with far less violence than might have been anticipated and this was no doubt due to the moderation of the government. In many places red flags bearing the emblems of the Soviet were flying on industrial buildings and there were signs that they might soon be flying on the public buildings. The attitude of many of the middle-class journals appeared to be that of desperation in regard to economic conditions and a willingness to accept anything for a change. According to the terms arranged between the employers and the workingmen in the metal industries, the former paid the cost of the change but they consented to this because the government ordered them to do so. In this respect the government vindicated itself in a remarkable manner from the charge so often made by the Socialists that it always took the side of the employer against the workingman on principle. The prime minister was certainly showing himself partial to the working class. A committee was appointed representing both sides equally to prepare the basis of a law organizing industries on the principle of the participation of workingmen in the technical and financial control and in the administration of the industry to which they belonged. The question arose whether the workingmen once admitted to this position of responsibility would not show a spirit so hostile to the employers that it would paralyze the industry. The trade unionist leaders promised that these reforms while satisfying the workingmen would at the same time stimulate them to work more efficiently. They made the same promise, however, in respect to the eight hour day and the results had not conformed to it. The more radical journals of the Socialist party did not conceal their belief that these measures for working class participation in industrial control were merely a step in a social revolution and they hailed it as the first surrender of the middle class and the capitalist system. And the same spirit ran through the comments in foreign Socialist papers. For example, the well-known Socialist paper in Paris, *L'Humanité*, said, "The central point of the struggle is the taking possession of the factories by the workers; it is a blow at private property."

A mixed commission formed in the autumn of representatives of the employers and the labor organizations failed to come to an agreement in respect to the control of plants and was dissolved. By the end of the year the government had gained strength and was more successful in the maintenance of order. Soldiers took the places of strikers on several occasions in November. A riot at Bologna, November 21, attributed to Socialist attempts to control the city government resulted in the killing of eight persons and the wounding of others. It was promptly followed by a measure imposing severe punishment on persons having explosives in their possession. A *modus vivendi* was arranged by the government between workingmen and employers and was in effect at the close of the year. The extreme radical element seemed to be under control and in general an approach to normal conditions was reported.

THE ITALIAN RADICALS. There was a considerable Communist element in the Italian labor

movement which threatened to turn it into a social revolution after the model of Russia, and there were many radical sympathizers with the government of Lenin. A mission was sent to Moscow from the Italian Socialists which brought back a report in September (?) along with an order from Lenin to the Italian council of the Third International to expel certain moderate leaders from the party. The report declared that while the capitalist system had been destroyed in Russia, nothing had been set up in its place that could meet the simplest needs of civilized people. The Bolshevik system was entirely unsatisfactory. It seemed well entrenched there, for although the number of Bolsheviks was small—some 600,000 out of a population of 160,000,000—they had seized all the political and social power and were doing their utmost to suppress all other parties. They were forbidding them to use propaganda or press. Lenin's order greatly offended the Italian moderate Socialists. It said that the moderate leaders were guilty of wrecking the revolutionary government in Italy just at the moment when it was beginning to ripen. On the other hand, there were still many strong supporters of the Russian Soviet government and of the Third International. One of the secretaries of the Socialist party and a deputy in the Italian parliament declared the Third International to be the highest authority, accepted by all true Socialists of the world.

SOCIALISTS AND FOREIGN POLICY. In general the effect of Socialist influence in Italian politics was precisely what might have been foreseen, that is to say a tendency toward pacification and the repression of anything that savored of imperialism. The discussion of the Treaty of Saint Germain, for example, was violently attacked as not providing for peace in the future. There was a compact group of 150 deputies who had been elected on a revolutionary programme. Their influence upon the foreign policy could not be withstood. They opposed the alliances resulting from the war and above all they wished to enter into cordial relations with the former enemy countries. Everything they said was inspired by a profound hatred of the war and its results. As to the Albanian situation they vigorously opposed the sending of troops and demanded an independent Albania. When it was decided that the Italian forces should be withdrawn from Albania, this was proclaimed as a Socialist victory. As to Poland they opposed the sending of arms and munitions which would be used against the Red army of Russia. Toward Russia they expressed good-will and they persistently commanded the renewal of diplomatic and commercial relations. After the first session of the Chamber which was elected soon after November 16, 1919 a motion to this effect was voted and since it was diversely interpreted it passed almost unanimously. At that time it was hoped that a vast quantity of grain could be procured in Southern Russia and the resumption of trade relations appealed to all parties in view of Italy's need of food. Gradually Socialist projects of pacification were brought into conformity with the aims of the Catholic party and finally the whole Chamber was won over to the policy of renewed relations with Russia. An Italian diplomatic agent was sent to Moscow, and a Soviet agent, M. Vorosky, arrived at Rome, where there was already a commercial agent from Russia. Count Sforza justified the renewal of relations on the

ground that the opposite course would give Bolshevism the sentimental advantage of an apparent martyrdom. This was not good policy. Moreover, renewed relations would enlighten the people of the world as to what was really happening in Russia, and the more everybody knew about it, the less danger there was that the Russian example would be contagious. This was claimed by the Socialist party as a triumph for their own cause. Some of their organs were proceeding from it to demand the curtailment of Italy's colonial empire. Certain publications demanded that Libya should be evacuated. One of the Socialist leaders expressed the hope that there would soon be a Balkan confederacy based on communism extending all the way from the Adriatic and the Bosphorus by means of which Italy might communicate directly with Soviet Russia. Certain members of the party again insisted that the only way of settling the Adriatic question was by trading with a Jugo-Slavia that had turned communist.

RELATIONS WITH JUGO-SLAVIA. The Fiume situation continued to disturb Italian relations with their former allies down to the month of December. Throughout the greater part of the year D'Annunzio continued to hold the city in defiance of his own government and his country's allies. Inability to settle this matter was one of the causes of the downfall of the Nitti ministry in May. It was reappointed for a short time but gave way to the Giolitti government in June. The course of events included the setting up of the regency of Quarnero under D'Annunzio and the promulgation of a peculiar constitution; the discussion on the subject between Italy and the Allies; the final blockade by the Italian government; the surrender of Fiume and the departure of D'Annunzio at the close of the year as narrated in the **WAR OF THE NATIONS**. In July, there were local conflicts between the Italians and the Jugo-Slavs at various points during the year on account of the friction over this and other questions. An agreement was reached with Albania in August, whereby the independence and unity of that country was recognized. At the end of November after renewing direct discussions with Jugo-Slavia, the two governments signed the treaty of Rapallo (see **WAR OF THE NATIONS**) which in the main appeared to be advantageous to Italy.

AMNESTY. On October 14 there was a proclamation of general amnesty for all political and military crimes committed before Sept. 19, 1919, including deserters and former subjects of Austria-Hungary, now residing in Italy. It was required that deserters if they were to come within the terms of the amnesty, must appear before the proper authorities within a month, or if living abroad, within four months. See **ARCHÆOLOGY**.

IVORY COAST. A French colony forming a constituent part of the French government-general of West Africa, and situated between Liberia and the British colony of the Gold Coast. Area, about 125,000 square miles; population 1,562,023 of whom 738 were Europeans. Capital, Abidjan, so constituted in 1920, the former seat of administration having been Bingerville. The chief products are palm kernels, palm oil, cocoa, rubber and mahogany. The total foreign trade in 1919 was valued at \$10,038,970 as against \$5,586,685 in 1918. This was far in excess of any previous year. The imports amounted to \$4,542,648

and the exports to \$5,496,322. The leading imports in respect to value were: Cotton goods; metal manufactures and tobacco; and the leading exports were: Palm kernels; palm-oil; and mahogany logs. In 1919 England supplied 48.57 per cent of the imports; France, 26.69 per cent and the United States, 21.3 per cent. Of the exports France received 60 per cent and England 20 per cent. The tonnage of shipping in 1919 was as follows: Entered, 414,768; cleared, 439,931. There is a railway from Abidjan to Bouaké, 197 miles in length; an extension of it to the north was under construction. See **FRENCH WEST AFRICA**.

I. W. W. See **INDUSTRIAL WORKERS OF THE WORLD**.

JACKSON, JOHN BRINCKERHOFF. Former minister to Greece, died in Switzerland, December 20. In 1902 he was minister to Greece and subsequently to other Balkan states and to Persia and Cuba. He was born at Newark, N. J., in 1862; graduated at the United States Naval Academy in 1883, but resigned from the navy in 1886. Three years later he was admitted to the New York bar, but soon afterwards was appointed to the United States legation at Berlin, where he became secretary in 1894. He was diplomatic agent in Bulgaria in 1905, minister to Persia, 1907, to Cuba, 1909, Roumania, Serbia, and Bulgaria, 1911. He resigned in 1913. In 1914 he was made special agent of the State Department to report on the condition of prisoners of war.

JACOB, EDGAR. Bishop of St. Albans, 1903-1919, died at Winchester, March 25. He was born near Winchester, Nov. 16, 1844, and educated there and at Oxford. He was ordained deacon in 1868, served as chaplain in India and in 1878 became vicar of St. Mary's at Portsea. His success in developing the latter parish brought him into public notice and he was appointed Chaplain-in-Ordinary to Queen Victoria. In 1896, he became the second Bishop of Newcastle and in 1903 was appointed bishop of St. Albans.

JACQUERIE, See **MUSIC, Opera**.

JALOUX, EDMOND. See **FRENCH LITERATURE**.

JAMAICA. A British crown colony comprising the island of Jamaica, which is the largest of the British West Indies, and the following dependencies: The Turks and Caicos Islands, Cayman Islands, Morant Cays, Pedro Cays. Area, of Jamaica, 4207 square miles; of dependencies, 224 square miles. Population estimated, Dec. 31, 1918, 891,040. Capital, Kingston, with a population (1911) of 57,369. Public elementary schools in 1918-19 numbered 696 with an attendance of 60,248. Acreage under cultivation in 1918-19, 1,048,240 distributed as follows: Under tillage 298,411; pasture 749,813; sugar cane, 41,067; coffee, 196,545; bananas, 60,585; coconuts, 39,783; cocoa 16,978; ground provisions 83,549; guinea grass 150,087; mixed cultivation 33,450; commons 599,726. The exports in the calendar year 1919 were valued at \$27,385,389 and the imports at \$24,749,147. This was an increase of 109 per cent over 1918 for the exports, an increase of 50 per cent for the imports, and indicated the greatest revival in Jamaican trade for a century. During the preceding forty years the United States while losing its place in the export trade was a steady gainer in the import trade, its share increasing from 31.5 per cent in 1879 to 66.1 per cent in 1919.

During the same period England's share fell from 50.9 per cent to 10.9 per cent. Total tonnage in 1919, 1,046,953. Expenditures, £228,608; revenue, £157,304. Railway mileage, 197¼. Governor at the beginning of 1920, Sir Leslie Probyn. **JAMESTOWN, N. Y.** See **MUNICIPAL OWNERSHIP.**

JAN MAYEN. See **POLAR RESEARCH.**

JAPAN. An empire in the Far East. Capital, Tokyo.

AREA AND POPULATION. Exclusive of claims pending as result of the war, the empire consists of Japan proper, Korea (Chosen), Formosa (Taiwan), Karafuto, Kwantung, the Pescadores, and many other groups of islands, the total number composing the empire being placed at nearly 4000. Total area 260,738 square miles; total population, Dec. 31, 1918, 78,261,856, of whom 57,784,935 were in Japan proper which consists of four large and many smaller islands with an area of 148,756 square miles. Population of the three largest cities, Dec. 31, 1918: Tokyo, 2,244,796; Osaka, 1,460,218; Kyoto, 539,153. For further details as to area and distribution of population, see preceding **YEAR BOOKS.**

Japanese emigration was on the wane during the war, owing to prosperous industrial conditions at home, but with the arrival of business depression emigration to South America—particularly Brazil and Peru—gradually revived. During November, 1920, the *Nippon Yusen Kaisha* booked 480 emigrant passengers to Brazil, and the *Toyo Kisen Kaisha* 200 emigrant passengers to Peru. According to the latest returns available at the close of the year there were 35,000 Japanese men and women in Brazil and 14,000 in Peru.

PRODUCTION. Three-quarters of the land is reported to be under peasant proprietors and the remainder under tenants. The taxed land owned by private persons and local corporations was officially reported, Jan. 1, 1919, at 15,183,812 cho (1 cho = 2.4507 acres) of which 5,173,703 were under cultivation; 8,024,518 forests; 1,317,819 plains; and 44,839 pastures. The following table for principal crops in 1917 and 1918 is taken from the *Statesman's Year Book* for 1920:

Crop	Acreage		Produce (Quarters)	
	1917	1918	1917	1918
Rice	7,554,807	7,554,807	34,099,600	34,187,000
Wheat	1,392,219	1,392,000	4,241,757	4,053,420
Barley	1,314,979	1,372,090	5,730,522	5,200,800
Rye	1,572,405	1,562,269	5,123,187	5,249,180
Tobacco	69,726	65,290	888,626	840,776
Tea	118,898	121,675	752,591	762,300

¹ Produce in Cwts.

The wheat crop of 1920 was estimated at 5,890,859 koku (1 koku = 5.119 bushels) or a decrease of 469,941 koku compared with the crop of 1919, though an increase of 63,537 koku above the normal crop. The crop of barley was reported at 8,289,859 koku, a decrease of 1,544,077 koku compared with the previous year and of 1,377,603 koku compared with normal. The crop of naked barley totaled 8,297,090 koku, an increase of 675,893 koku over 1919 and of 334,461 koku compared with the normal crop. Rye was given at 40,536,433 bushels. The forecast of rice production for 1920 was 310,744,680 bushels, an increase of 10 per cent over the average of the past seven years. In Chosen the cotton crop promised to be abundant, an increase of 10 per cent over last year being predicted. Millet, rice, and other

cereals indicated better results than in normal years. See **AGRICULTURE.**

The mineral and metal products in 1918 were valued at 621,413,403 yen, the chief products in the order of value being coal, steel, copper, pig iron, and petroleum.

COMMERCE. The accompanying table gives imports and exports by groups and principal articles for 1919 and 1920, in yen (the present exchange value of the yen being \$0.485).

IMPORTS			
	1919	1920	
I.A. Food, drink, and tobacco, natural state..	254,655,000	129,079,000	
Rice	162,220,000	18,085,000	
Beans and peas....	35,303,000	47,648,000	
Others	57,132,000	63,346,000	
I.B. Food, drink, and tobacco, partly or wholly prepared	96,668,000	93,325,000	
Sugar	58,182,000	60,220,000	
Salt	19,008,000	16,411,000	
Others	19,398,000	16,694,000	
II. Raw materials.....	1,093,754,000	1,260,106,000	
Oil yielding material	21,232,000	16,581,000	
Hides and skins....	15,460,000	19,371,000	
Crude india rubber and gutta-percha..	17,365,000	13,417,000	
Chili saltpeter.....	13,838,000	24,740,000	
Sulphate of ammonium, crude	27,435,000	19,872,000	
Oil cake.....	135,187,000	150,909,000	
Cotton, raw.....	667,867,000	721,433,000

COMMERCIAL CRISIS. During the war Japanese foreign commerce and domestic industry grew enormously and there was a period of great extravagance and profiteering. After the armistice, when it was evident that the inflated values must collapse, there was a temporary depression, but the country recovered as soon as it was realized that the European markets would be sufficient for all that Japan produced. During the first six months of 1920 the excess of imports was nearly as great as the whole export trade in the year before the war. A considerable part of this consisted of raw materials and machinery, but conditions were uncertain because very high prices were paid for goods and there was a tendency to invest capital recklessly, and, moreover, there had been an enormous increase in wages. In 1919, there had been a heavy increase in wages, and in certain skilled trades wages even exceeded the British level before the war, although labor had not half the efficiency of the British. Cost of production in Japan in certain industries had become higher than that in the United States. The American demand for raw silk had in recent years been an important factor in Japanese prosperity. Between 1913 and 1919 exportation of raw silk to the United States increased four-fold in value and doubled in quantity. In the first six months of 1920, it fell off greatly in quantity but not proportionately in value. Cotton manufacture and shipbuilding showed considerable decline early in the year and shipbuilding was threatened by American competition and the decline in freights. The Chinese boycott on cotton did not have the disastrous effects described but the industry had suffered much from profiteering. The keeping up of excessive prices had caused a falling off of the exports to China. The crisis was impending early in 1920 and prices suddenly fell off after the Bank of Japan's refusal to lend money to private banks and began to call in its loans. In two months the price of cotton yarn fell off 50 per cent. The mills were more or less at the mercy of the brokers. In short, the commercial conditions in mid-summer were serious

and many Japanese orders in foreign countries were cancelled. The situation was thus described in United States official commercial reports at the close of the year: After September 1 the rate of exchange dropped gradually from \$0.50750, as the natural result of an accumulating adverse trade balance. In reality this was not such a reduction as circumstances might warrant, since the yen still remained at an appreciable premium in spite of the fact that the trade balance between Japan and the United States for the first nine months of 1920 was adverse to Japan in the amount of \$37,056,279. The rapid fall in silver quotations greatly reduced the buying power in China, where large quantities of Japanese textiles are consumed. There was a consequent diminution in demand with a subsequent slump in price. Tightness of money was in evidence on almost every hand, there being scarcely a single line of business where the supply of capital was sufficient for all requirements. This applied not only to the manufacturer but to the farmer as well, who suffered seriously through the slump in rice prices. The bankers, on the other hand, were practicing extreme caution at the close of the year, and unsecured loans to individuals had been reduced to the minimum. The financial situation seemed at that time to be growing worse. The least rumor of insecurity of a bank was cause for the withdrawal of accounts. Within two weeks there were runs on the Agricultural and Industrial Savings Bank (one of the best-known of the Tokyo savings banks) and on the Tokyo Savings Bank. The first-named bank was forced to close its doors November 18, while the latter paid out more than 8,000,000 yen on December 6. Minor failures were occurring almost daily. Many of these failures were due to speculation in the early part of the year, a condition which, owing to the tightness of money had ceased to exist at the year's close. The total amount of deposits with the associated banks of Japan on October 31 was 4,667,000,000 yen, an increase of 34,000,000 yen over the previous month. In savings accounts

the Governmental Postal Savings Bank reported a deposit of 834,792,407 yen on October 31, representing a consistent monthly increase since January 1, 1920, when deposits were 707,775,714 yen. The total of savings deposits with all other banks was roughly estimated at 150,000,000 yen.

Credit at the close of the year was so difficult to procure that loans were being secured on the mortgage of immovable properties. Evidences of this tightness of money for local credit purposes were the large amount of corporation debentures held by the banks, the government's new issues, and the comparatively high rates of interest paid. Although the policy of banking institutions was to discourage all loans and credits, local investment capital was nevertheless quite sufficient to meet demands. The Japanese Treasury had invested in foreign securities approximately 400,000,000 yen, of which 34,000,000 yen were invested in October. Besides its savings deposits, the nation's gold holdings on November 30 were 2,089,000,000 yen. The Mitsu Bank reported that promotion capitalization for October was 367,825,000 yen, an increase of 84,878,500 yen over the preceding months and a decrease of 194,540,000 yen over the same month of 1919. For the extension of old concerns, 65,435,000 was set aside in October. This was a decrease of 109,354,000 yen over the previous month and a decrease of 55,123,000 yen over the same month of 1919. Imports remained steady while exports showed rather appreciable declines. The trade balance reported for November, 1920, was unfavorable to Japan by 2,965,000 yen and for the year by 369,586,000 yen.

The large decrease in exports was due to depression of the silk trade. In normal times exports of raw silk in the latter part of the year more than compensate for an unfavorable balance of the first term. During 1920 the normal trade was reversed, so that both raw silk and silk tissues showed a decrease, the latter to the extent of 60 per cent. Cotton goods, the second export, likewise registered a decline. Of all exports, only rice and Portland cement registered gains, each of which was slight. In comparison with November, 1919, there were heavy declines in beans, tea, refined sugar, raw silk, silk tissues, matches, cotton knit goods, paper, and porcelain.

RAILWAYS. The Japanese railways are government owned and operated under the terms of the railway nationalization law passed in March, 1906. This act provided for government ownership of all except local lines and for the purchase of the seventeen main private railways by 1915, but within a few months this purchase period was reduced to one year. These railways aggregated 2824 miles. The nationalization of the Japanese railways was not at all revolutionary but a return to original policy as the first railways in Japan were built by the state and it was not until 1881, when 115 miles of line had been constructed and were under operation, that through difficulties in securing capital the government decided to grant concessions to private companies for the construction of railways. This led to extensive construction and by 1891 the private companies had built 1165 miles, while the state system amounted to about 557 miles. The private companies had been assisted by government guarantees of interest, and cash subsidies, however, had been granted to the private companies and naturally were of great assistance. The industrial growth and economic progress of Japan

was such that it was realized in 1891 that a network of 3600 miles was necessary to complete a railway system adequately serving the whole country, but the existing mileage was only about 1600 miles. Much of the proposed construction did not appeal to private capital and this condition, combined with financial failure of some of the private companies, led to the initiation of a movement in favor of government ownership of the entire system. However, construction was continued under dual control, so that at the beginning of 1906 the government had 1536 miles and the private companies 3248 miles. Consolidation of the lines was proposed at various times, but thirty-eight different private companies existed in 1906 and their 3248 miles of railway were made up largely of short and disconnected lines. Some of the more important through routes, therefore, were made up of parts of the government lines and parts of different private lines.

In 1917 after the nationalization and reorganization had been effected Japan had 5857 miles of state railways with 9029 miles of track, while the private local lines brought the railway total to 7621 miles. This total was equivalent to 13.80 miles per 100,000 inhabitants and 5.16 per 100 square miles of area. All main lines were of 3½-ft. gauge and the heaviest rails weighed 70 lbs. per yd. The equipment included 2725 locomotives (12 electric), 6867 passenger cars (125 electric and 22 steam motor cars), and 196,419 freight cars. During the European war the unity of management under a single authority had not only a thorough test but operation was continued under conditions where the railways might have experienced serious embarrassment, if not utter collapse, owing to the phenomenal flood of traffic forced upon them.

The organization of the Imperial Government Railways is directed by a minister of railways, a vice-minister and an engineer-in-chief. There are in this administration the six departments of finance, engineering, mechanical engineering, traffic, private railways and business affairs. The operating organization is on the divisional system. The financial programme, covering the period up to 1923, provided for annual expenditures of from \$5,000,000 to \$12,000,000,000 for construction and from \$2,500,000 to \$18,000,000 for improvements. These figures are based on a 50 cent value in the rate of exchange for the "yen."

Many engineering improvements had been effected and were in progress while more were contemplated with a return to normal conditions. Owing to the mountainous character of the country grades of 1 to 3 per cent are frequent, with heavy curvature, heavy earthwork and numerous tunnels and bridges. And these figured especially when new extensions were contemplated. New stations, city terminals, freight yards, car ferries, shops and extensive signal equipment were likewise included in the development of the railway system from 1906 to 1918, and similar works continued. Electrification was also taken up and was installed at several points for suburban and main line traffic. A notable instance was the rack-rail section of the Usui Pass, with grades of 6.7 per cent, where steam operation in the numerous long and badly ventilated tunnels was a serious trial to enginemen and passengers. Grade reduction and double tracking were being carried on, the grade reduction works of heavy character in progress being one to eliminate

a mountain crossing with grades of 1.4 to 2.30 per cent and provide a low-level line with grades of 0.3 to 0.7 per cent. This work involved a 5-mile tunnel. The other work involved substituting a tunnel line with 1 per cent grades for an open-pass line with grades of 2.5 per cent.

SHIPPING. The appended table giving the number and tonnage of vessels entering and clearing from Japanese ports during 1919 shows that, although the number of vessels in 1919 was greater than in either 1918 or the pre-war year, 1913, the tonnage exceeded only that of the previous year. American vessels arriving in Japan during 1918 were 136 steamships of 383,171 tons and 5 sailing ships of 4044 tons; in 1919 there were 356 steamships of 1,206,506 tons and 4 sailing ships of 3945 tons. The shipping movement in 1913, 1918, and 1919 was as follows:

	Class of vessels	1913		1918		1919	
		Number	Tons	Number	Tons	Number	Tons
Entered:							
Steam		9,888	24,658,874	9,881	17,771,848	12,485	22,743,173
Sail		354	61,451	494	71,824	524	80,303

The number of Japanese steamers as of August 31, 1920, is reported by the Department of Communications as follows: Less than 1000 tons, 2173, of 259,327 registered tons; 1000 tons to 5000 tons, 551, of 812,860 tons; over 5000 tons, 181, of 793,134 tons. The total gross tonnage is given as 2,981,815.

FINANCE. The following figures for recent budgets and for the budget estimates of the year ending March 31, 1920, was supplied by the *Statesman's Year Book* for 1920:

	1918-19 ¹	1919-20 ¹	1920-21 ¹
Revenue	Yen 902,373,475	Yen 1,064,190,340	Yen 1,275,000,000
Expenditure	902,373,475	1,064,190,340	1,275,000,000
Revenue 1919-20			
Ordinary:	Yen

Total expenditure	1,064,190,340		

The government budget proposed for 1921-22 totaled 1,562,000,000 yen. Of this 738,281,000 yen were for the army and navy, leaving only 823,719,000 yen for the other seven departments of the government, of which the department of education was to receive 268,000,000 yen.

Early in the summer Mr. Thomas W. Lamont went to Japan as the representative of Amer-

ican financial interests in order to secure the acceptance by Japan of the so-called consortium. This was an agreement on the part of England and France and the United States for the investment of money in China in order to effect internal improvements, especially in respect to railways, currency and industrial development. Japan consented to participate along with these three great Powers. The reasons for her doing so were given as follows: The desire to stabilize conditions in China by placing Chinese finances on a firm basis; the belief that Japan, owing to her situation, would profit more than any other Power from a stable and friendly China; Japan's desire to retain her place among the great Powers; the importance of remaining on cordial terms with the other members of the consortium, especially with the United States. At this time

Japan was making every effort to relieve the crisis in banking and industrial affairs resulting from abnormal war conditions (see above).

DEFENSE. The army consisted in 1920 of 76 infantry and 27 cavalry regiments, 150 field batteries, 9 mountain batteries, 19 battalions of garrison artillery, 19 battalions of engineers, and companies of railway and telegraph operators, and train troops, and one aviation battalion. Japanese official figures for war and peace strength were not published. Japanese forces

abroad at the beginning of 1920 included the division maintained on the island of Formosa, the garrisons in Sakhalien and Tsushima, and the forces in Korea and Manchuria, the last-named being placed at 30,000 men or less. In Siberia, the number was estimated in the spring of 1920 at about 50,000. According to the United States War Department the total military force of Japan,

December 31, numbered 1,645,000, of whom 273,000 constituted the permanent army.

The following list of vessels completed at the end of 1920 was supplied by the *Statesman's Year Book* for 1920:

Dreadnoughts	9
Pre-Dreadnoughts	18
Armoured cruisers.....	12
Light cruisers.....	13
Torpedo gunboats, scouts, etc.....	4
Destroyers	100
Torpedo boats.....	26
Submarines	43

See NAVAL PROGRESS.

The budget for 1921-22 provided about \$371,500,000 for the army and navy, that is to say, \$249,000,000 (498,000,000 yen) for the navy and \$122,500,000 (245,000,000 yen) for the army. The army estimates in the United States for the same year were nearly four times as much and the navy estimates were over twice as much.

GOVERNMENT. Executive power is in the Emperor who acts through a cabinet of ministers responsible to and appointed by him, and legislative power is in the Emperor and the Imperial diet which consists of two houses, namely, the house of peers and the house of representatives. Emperor Yoshihito (Harunomiya), born Aug. 31, 1869, succeeded to the throne July 30, 1912. The ministry in 1920 was constituted as follows: Prime Minister and Justice, M. Hara; Foreign Affairs, Count Uchida; Finance, Viscount Takahashi; Interior, M. Tokonami; War, Lieutenant-General, M. Tanaka; Education, M. Nakahashi; Agriculture and Commerce, Baron Yamamoto; Communications, M. Noda; Justice, Count Ohki; and Railways, M. H. Motoda.

JAPAN AND THE UNITED STATES. There was much ill-feeling between the two countries in the latter half of the year, arising especially from the vote in California in favor of restricting the purchase and ownership of land by the Japanese, (See CALIFORNIA). In September and October there was much excitement in Japan over this matter, and the general tone was hostile to the United States. Meanwhile, the two governments were trying to reach an understanding and a discussion was going on between the Japanese ambassador and the American Secretary of State. At a meeting of the Japanese cabinets, September 21, the energetic carrying on of these negotiations was approved and it was decided to bring up the question of race equality before the League of Nations. The government expressed its confidence that a satisfactory adjustment would be made, but the opposition party declared the situation to be extremely serious, and indicated dissatisfaction with the government's course. In September, a number of violent speeches and articles on the subject stirred up popular feeling against this country. The former Japanese prime minister, Marquis Okuma, declared that if the California question was not settled, Japan would have similar difficulties on her hands in Austria and Canada, New Zealand, and elsewhere. The essential points in the Japanese grievance were not the fact that Japanese alien residents of the United States were not eligible to citizenship or the contention on the part of Japan that its citizen residents of the United States should have greater rights than those bestowed on other aliens. Japan did not question the right of the United States to pass such laws as it sees fit

concerning the admission or residence of foreigners. The treaty of 1911 gave the Japanese full rights of admission and residence, but it was conditioned upon Japan's voluntarily limiting emigration to the United States as agreed upon in 1908. The protest of the Japanese applied simply to the discrimination in respect to property rights against Japanese aliens, to whom the said rights accorded to all other aliens had been denied.

THE RACE ISSUE: GENERAL CONSIDERATIONS. One of the chief arguments against Japanese immigration into the United States is that they do not inter-marry with other peoples. Other arguments are the familiar one that in the first place their low standard of life enables them to work at wages that Americans cannot accept without degradation; that they do not assimilate American ideas; and that they insist largely on remaining thoroughly Japanese, giving their own country the benefit of their experience and their earnings abroad. The Japanese view of the matter as frequently re-stated in 1920 emphasized the following points: As to inter-marriage it is argued that there has never been a chance to put the question to a test. As a matter of fact the marriages between the Japanese and the whites have been extremely rare, but everything has stood in the way of it. Owing to the legal and economic conditions of the situation, the Japanese have been herded together and, moreover, owing to race prejudice the marriage of whites with Japanese has led to the ostracism of the former. Then the Japanese immigrants have not been of the financial or social class that would readily admit of such marriages. Other races in the same condition have shown the same inability to intermingle even when they were not divided by any color line. The Portuguese in Hawaii, for example, have formed "little Portugals" and have not married with other races any more freely than have the Japanese. Conditions then, have been so unfavorable to racial inter-marriage that nothing can be definitely established for or against it and the question is one for the future to determine. Japanese writers pointed out that when marriages have occurred between whites and Japanese they have succeeded better in the case of marriages between Japanese and French and Germans, than between them and Anglo-Saxons on account of the different standard of the women on the European continent in the matter of personal liberty. The main consideration in the United States has been the danger of economic competition. Here the Japanese pointed out that the danger has been greatly exaggerated in that their immigrants have done the kind of work that the American laborer would not perform and that at present the danger scarcely exists. Formerly Japanese laborers worked at a wage that would have meant starvation for an American, but of late years and especially as a result of the war, the low standard of living on the part of Japanese laborers had largely disappeared. As to the view commonly held that Japan must, on account of the overcrowding, send her overflow to America, it was said on behalf of Japan that she does not desire large emigration to distant countries. Although Japan is densely populated and although the ratio of density is even more serious than appears from the figures, because much of the country is mountainous and therefore without economic value; nevertheless the change of Japan to an industrial

country might provide for this surplus, and Japan's national ideal being the concentration of her man power, she would desire to keep the outflow down to a minimum. The government therefore did not favor emigration to distant countries like the United States, Canada, and Australia, but rather a settlement of Japanese in Manchuria and Korea. As to the capacity of Japanese for American citizenship, the Japanese prime minister, M. Hara, expressed himself as follows, in an interview in 1920: "Despite the view of superficial observers that the Japanese cling to their habits and ideals, and insist upon Japanese language schools and publication of Japanese newspapers, they are in fact very proud of being Americanized. The Japanese in general regard the Americanization of the Japanese who were born in America as an entirely rational proceeding, and although a few extreme nationalists in Japan oppose it, the prejudice against it has almost disappeared."

One feature of the difficulty was the tendency in foreign countries to regard a war between Japan and the United States as probable, and in France especially, as inevitable. It was frequently predicted in the foreign press that a war would soon break out between the two countries. A French deputy, for example, summed up the opinions on this subject and the reasons for the belief in the approach of a Japanese-American war, in a long paper of which a brief outline is here presented, because it fairly illustrated a common point of view. The storm had long been gathering and the only reason why it had not already broken was the wish on the part of each nation to carry its military preparation to the highest degree of perfection. The conflict would certainly break out in the near future. In the United States there was not generally a strong anti-Japanese feeling, but in Japan on the other hand there was great exasperation against everything American. This hatred of the United States went back to the Peace Conference when the recognition of the principle of race equality was opposed by the United States. This was so much resented in Japan that upon the return of their representatives hardly any honor was bestowed upon them, in spite of their having obtained some real success. The exasperation was carried to a further point by the restrictions placed upon the Japanese who had settled in California and the present Californian bill would greatly aggravate the situation, since it forbade their purchasing or possessing or leasing any part of the soil of California or establishing any enterprise except in a provisional way. In the commercial rivalry in China and Manchuria, which latterly had taken a serious turn on account of conditions in Korea and Siberia where the Japanese nationalists believed that the United States had worked against them, the United States and Japan were rivals on many points and the anti-Japanese feeling in the far west of the United States was certain to cause an answering hatred in Japan. Japan could not rely upon the military aid of England in case of war, but England certainly would not lament an event which would ruin the merchant marine of the United States and at the same time damage the Japanese navy, since both of these things would tend to her supremacy. Moreover, economic necessity would drive the two nations to hostilities. In the United States, there was need of outlet for her industry, but Japan

stood in the way. In Japan on the other hand there was a bitter race antagonism and an equal necessity of an outlet for her trade. In the circumstances, it was impossible to foresee any way of insuring the peace.

In reply to those who in the United States as well as in foreign countries constantly insisted on the ultimate necessity of war Professor John Denely who for the past two years had been in China studying conditions in the Far East offered the following considerations:

"War deliberately entered into by Japan against the United States is unthinkable, as unthinkable as between the United States and Colombia. This extreme statement is made advisedly. Individuals in Japan commit hari-kari, but not the nation, and every intelligent person in Japan knows that for Japan an aggressive war with America would be national suicide. They did not know it before the last war; but then the demonstration was more than Euclidean in its rigor. When one thinks of how the United States was taxed in the last war, in spite of its railways, its financial resources and its raw materials, the idea of Japan, with its few narrow gauge railways, few forests, few mines, relatively few factories and shortage of food supply, waging a successful war with any first class industrial Power is simply silly.

"At present, having spent her war gains in enterprises in China which are not yet remunerative, and in Siberia—where they will never be remunerative until Kolchak comes to life and successfully resurrects the Omsk government—and having increased her already burdensome taxation to the stretching point, Japan is on her back financially. If she gets control of the manpower and natural resources of the continent, the case will be different. But, short of that time, which, of course, is artificially hastened by encouraging Japan to exploit Asia for her own benefit, any war between Japan and America will be the result of a series of accidents due to drifting and not to the deliberate choice of the rulers of Japan. There is at least one exception to every "never." The exception in this case is that militarists threatened with downfall at home might try to restore their prestige and power by the last desperate gamble of war."

ECONOMIC DIFFICULTIES. The series of strikes which began in December continued during the winter months, including strikes in the government steel mills and on the street car lines of Tokyo. There was a financial depression at the end of April after a period of great speculation and stocks on the Tokyo exchange underwent an enormous decline. Among other aggravating circumstances were the difficulty of securing loans, the disappearance of gold, and the unfavorable balance of trade, which was due largely to the Chinese boycott. During the first three months of 1920 the excess of imports over exports was \$130,000,000, which was equal to about 50 per cent of the total exports. Conditions grew worse and toward the close of the year the nation was facing a crisis. See above *Commercial Crisis*.

THE SUFFRAGE QUESTION. The willingness professed by the government to extend the suffrage was noted in the preceding YEAR BOOK. Measures to that end were prepared at the beginning of the year. There were three of these measures each supported by a group in parliament and when their discussion began February 14 the

government opposed them all on the ground that the time for action had not yet come. Thereupon there were scenes of great disorder in the house and people from the outside tried to break in. Manifestations in favor of extending the suffrage followed in the streets of the cities and in Tokyo attacks were made on persons and on houses. Finally, February 26, when the bills were up for final consideration the prime minister declared that it was doubtful whether the majority of the people desired universal suffrage, and he announced the dissolution of the Diet by imperial decree. Enemies of the government attributed this action to fear of defeat for other reasons, especially on the policy pursued in Siberia and criticisms of its failure to reduce prices, and of its policies in respect to national defense, taxation, and foreign affairs. Elections were held in May with the result that the government party, the Seiyu-Kai, won 265 seats while the three opposition groups won respectively 199, 29 and 39. After the elections there was still much agitation on the question of suffrage.

KOREAN POLICY. The severity of the Japanese continued and so did the resistance of the Koreans. Serious riots broke out at Gensan, where students destroyed a number of Japanese business houses and where twenty-five persons were killed. This was followed by a vigorous search on the part of Japanese troops and armed civilians throughout the country for suspected persons. It was decided at a cabinet meeting on October 9 to reinforce the troops along the Korean frontier on the Chinese side.

SIBERIA. The prime minister, Hara, declared, September 22 that the government had decided to withdraw Japanese troops from Siberia, except where their presence was absolutely necessary for the defense of the Empire. They had by that time evacuated the Ussuri Valley and the city of Khabarovsk and they were soon to leave Nikolaevsk. The regions formerly occupied by the Japanese were to come under the authority of the government of Vladivostok.

FOREIGN POLICY. The foreign policy of Japan is described in the article **WAR OF THE NATIONS**. The main point in it concerned relations with China, with the United States, and with the Russian government. In respect to its Russian policy there was wide divergence of view in Japan itself, where a strong element criticized the government for its course in Siberia. As noted under **WAR OF THE NATIONS** Japan had assumed control of Eastern Siberia, ostensibly for the purpose of counteracting Bolshevism. In the summer, the massacre of the Japanese garrison at Nikolaevsk further exasperated popular sentiment and a mass meeting at Tokyo made a demonstration against the government calling for the resignation of the prime minister, Hara.

JAYNE, HENRY LA BARRE. Lawyer, died, May 10. He was born at Philadelphia, Pa., Nov. 3, 1857; graduated at the University of Pennsylvania in 1879; and was admitted to the Philadelphia bar in 1881. During the next few years he pursued political and legal studies in Germany. He then returned to Philadelphia where he entered into partnership with Arthur Biddle, the firm subsequently becoming Biddle, Paul, and Jayne. He interested himself in politics, particularly on the side of reform. He was president of the American Society for the Extension of University Teaching and was prominent in va-

rious philanthropic, scientific, military, and legal societies.

JAYNES, ALLEN BROWN. Lawyer and politician, died, November 7. He was born in Delaware, Ohio, Dec. 4, 1879; and graduated at the Ohio State University in 1900. He went soon afterwards to Tucson, Arizona, where he became secretary of the Chamber of Commerce and published successively the *Tucson Post* and the *Tucson Citizen*. He was admitted to the bar in 1912. From 1916 to 1920 he was a member of the Republican National Committee.

JENNINGS, WILLIAM SHERMAN. Former governor, died, February 28. He was born at Centralia, Ill., Mar. 24, 1863; studied law in Chicago and was admitted to the Florida bar in 1886. He was elected county judge in 1888 and was a member of the Florida House of Representatives, 1893-5, being speaker in 1895. In 1898 he became chairman of the Democratic State Convention. From 1901 to 1905 he was governor of Florida. He was prominent in the project for the draining of the Everglades. He drew up the drainage law and the plan for the drainage and was special counsel in respect to the contract for the investigation and survey of the Everglades.

JETTE, Sir LOUIS AMABLE. French Canadian jurist, died in May, 1920. After 1909 he was chief justice of the Court of King's Bench, in Quebec. He was born in the province of Quebec, Jan. 15, 1836 and called to the bar in 1857. In the course of his career he practiced journalism; was elected to the House of Commons in 1872; was professor of Civil Law at Laval University, and dean of the law faculty at Montreal. From 1898 to 1908 he was Lieutenant-Governor of the province of Quebec. In 1903 he was one of the members of the Alaskan Boundary Tribunal.

JEWES. POPULATION. An attempt was made by the Jewish Bureau of Social Research in 1920 to estimate the Jewish population of the various countries as affected by the war and the resultant changes. The figures brought out the fact that while before 1918 nearly half of the Jews in the world were under the dominion of the Czars of Russia the partition of the Russian-Jewish community in the new states of Poland, Ukraine, Czechoslovakia, Lithuania, Hungary, and Rumania, and the distribution of the Jews in other countries left the Jewish population of the United States practically the largest of all the single Jewish communities in the world. The estimate of the total population of the Jews of the world was 15,744,662, of whom 11,435,968 were in Europe and 3,379,668 in North America. The following table shows Jewish population and per cent of total population by countries:

NUMBER OF JEWS AND PER CENT. OF TOTAL POPULATION BY COUNTRIES

Countries	Year	Jewish population	Per ct. of total
North America			
Canada	1911	75,681	1.05
Cuba	1916	2,000	.07

THE YEAR ABROAD. The following description of conditions in various foreign countries in 1920 was derived from the report of the American Jewish Committee:

Soviet Russia. There was little change in the condition of the Jews of Soviet Russia. The most trustworthy reports indicated that the bulk of the Jews there, while not victims of pogroms, were nevertheless in a wretched plight. Their economic situation was described as desperate. There was no place in the Bolshevik scheme of things for a middle, a mercantile class, to which the bulk of the Jews of Russia belonged. Besides this, the Soviet government was continually placing obstacles in the path of Jewish educational and spiritual effort, notably against Hebrew education, the use of the Hebrew tongue, and the Zionist movement. It was stated that while there was a comparatively small number of the younger Jews who were adapting themselves to the new order, the great mass of the Jews were longing for a way out of a life for which they were totally unfitted, their only hope lying in a gradual restoration of normal economic life under a stable democratic government recognized by the other civilized governments of the world.

Lithuania. The Jews of Lithuania would have been in a position of comparative ease and comfort, but for the recent war between Russia and Poland, and the difficulties resulting from the capture of Vilna by a Polish army which at the close of the year were the subject of consideration by the League of Nations Council. See **WAR OF THE NATIONS**. The Jews cooperated cordially with other elements in the struggle for the independence of Lithuania, and though it was not unnatural that in this as in other parts of the former Russian empire traces of anti-Semitism should survive, it was authoritatively stated by the representatives of the Jews, that the general population cherished nothing but good-will towards the Jews. A ministry was established for the purpose of looking after Jewish educational and cultural interests. The economic situation of the Jews was considerably altered by the war. While a considerable part of them were formerly engaged in mercantile pursuits, a large number followed industrial and professional callings. The war with the attendant uprooting of many Jews from their homes, greatly altered the situation and threw most of the Jews into mercantile lines. Active measures were being taken to restore industry and to assist professional men to reestablish themselves.

The Ukraine. There were insistent reports of the continuation of anarchy in the Ukraine. The Jewish community of America had tragic evidence in the murder of the two martyrs, Israel Friedlaender and Bernard Cantor, the former a member of the Joint Distribution Committee. At the close of the year there did not seem to be any indication that conditions were likely to improve in the near future, and the only hope for the restoration of order and civilized life in South-western Russia lay in the setting up of a constitutional government, amenable to the influence of the public opinion of the rest of the world.

Hungary. During the greater part of several centuries the Jews of Hungary were practically free from the discrimination from which their brethren suffered in Rumania and Russia. During the year 1920, however, conditions changed to such an extent that the Jews of Hungary were reduced to a deplorable condition. There were frequent outbreaks conducted by sections of what is termed the White Army, which resulted in the murder of many Jews, in the looting of their property, and in the perpetration of horrible indignities. They were humiliated and libeled, and the newspapers sought to make them responsible as a body for the actions of Bela Kun and his associates, with the result that conditions became intolerable and the Jews were practically driven to despair.

Rumania. The condition of Jews in Rumania has greatly improved and according to the most recent reports was considerably better than it had been since the Treaty of Berlin. This improvement came as part of the programme of a more enlightened governmental policy following closely upon the territorial enlargement of Rumania, which in 1920 had a Jewish population of about one million. Discriminatory laws and regulations were abolished in harmony with the terms of the treaty with the Allied and Associated Powers, and in this respect Rumania was rapidly taking its place beside the great liberal nations of the West.

Palestine. On April 25, 1920, the political status of Palestine was definitely settled at a

conference of the Allied Powers at San Remo, Italy. It was then announced that Great Britain would be appointed the mandatory over Palestine. Although the terms of the mandate have not at the close of the year been laid down by the League of Nations, the draft treaty with Turkey definitely stated that the mandatory "will be responsible for putting into effect the declaration originally made on November 2, 1917, by the British government and adopted by the other Allied Powers in favor of the establishment in Palestine of a national home for the Jewish people, it being clearly understood that nothing shall be done which may prejudice the civil and religious rights of existing non-Jewish communities in Palestine or the rights and political status enjoyed by Jews in any other country." There were indications that political conditions in Palestine were rapidly improving. Now that its status had been decided, there was no doubt that racial antagonisms would be soon allayed or disappear altogether and that the progress of Palestine towards the goal set by the Powers would be orderly, well-planned, and permanent. See SYRIA

Poland. Details of the present condition of the Jews of Poland indicated that it was just as pitiable as it was following the conclusion of the world war. The reports of the American and British Commissions to investigate the situation showed that there existed between the different classes of the population a mutual distrust and antagonism. In July, during the crisis in the Russo-Polish War, information received from reliable sources indicated that attempts were being made by the Polish press and anti-Jewish agitators to incite riots against the Jewish population of several large centres by seeking to identify the Jews with the Bolsheviks. The American Jewish Committee immediately transmitted this information to the American government with the prayer that it employ its good offices to prevent threatened outbreaks. The crisis passed without any concerted attacks, although sporadic disorders continued to occur. Conditions of the Jews in Poland were thoroughly gone over in correspondence and conference between the American Jewish Committee and the Polish minister at Washington with a view to mutual understanding and improvement.

The United States. In the United States Jewish organizations sought to defend themselves against charges expressed or implied in various widely circulated books, documents, and articles. They complained that a violent anti-Jewish propaganda was being carried on in this country and in England. Among the chief causes of offense was the circulation of the so-called "Protocols of the Elders of Zion" and the articles appearing in a newspaper of which Mr. Henry Ford was said to be the owner. On December 30th the American Jewish Committee made an appeal to the public on the subject, from which the following passages are extracted or summarized:

During the war a document variously called "The Protocols of the Elders of Zion," "The Protocols of the Meetings of the Zionist Men of Wisdom," "The Protocols of the Wise Men of Zion" was clandestinely circulated for the purpose of showing that the Jews along with the Freemasons had for centuries been engaged in a conspiracy to produce anarchy and revolution. It was published in England in the summer and afterwards printed in the United States where

it was extensively circulated. The London *Morning Post* published a series of articles as a commentary on the "Protocols" in which the charge of an unholy conspiracy between Jews and Freemasons is elaborated, and Bolshevism is characterized as a movement of, for, and by the Jews and is declared to be a fulfillment of the "Protocols." These articles, whose authorship was not disclosed, were afterwards published in book form under the title *The Cause of World Unrest*. During the latter half of the year were sent forth weekly in Mr. Henry Ford's organ, *The Dearborn Independent*, attacks upon the Jews, founded on the "Protocols" and on the discredited literature of Russian and German anti-Semitism. As to the authenticity and truth of these publications, the American Jewish Committee made the following assertions:

"The 'Protocols' are a base forgery. There has never been an organization of Jews known as The Elders of Zion, or The Zionist Men of Wisdom, or The Wise Men of Zion, or bearing any other similar name. There has never existed a secret or other Jewish body organized for any purpose such as that implied in the 'Protocols.' The Jewish people have never dreamed of a Jewish dictatorship, of a destruction of religion, of an interference with industrial prosperity, or of an overthrow of civilization. The Jews have never conspired with the Freemasons, or with any other body, for any purpose.

"To say that the Jews are responsible for Bolshevism is a deliberate falsehood. The originators of Bolshevism were exclusively non-Jews. While it is true that there are Jews among the Bolsheviks, notably Trotsky, they represent a small fraction of the Jews and of the followers of Bolshevism. Lenin, who belonged to the Russian aristocracy and has not a drop of Jewish blood in his veins, was the creator as he has been the motive power of the Soviets. Tchicherin, who has conducted their foreign affairs, Bucharin, Krassin and Kalinin, all non-Jews, are, with Lenin, the brains of the Communist party. The Bolshevik cabinet, known as the People's Commissars, consists of twenty members, of whom Trotsky and Sverdlov are the only Jews, and they are Jews merely by birth. Of the Central Committee of the Communist party, including Trotsky, there are four Jews out of thirteen. The so-called Extraordinary Commission, whose function it is to suppress opposition to the Bolshevik régime from within, is directed by a triumvirate consisting of a Pole and two Letts, none of whom is of Jewish origin. Although Trotsky is the head of the War Department, his General Staff is composed exclusively of non-Jews."

JOACHIM, PRINCE. Youngest son of the ex-Kaiser, committed suicide at Potsdam, July 17. He had been long a sufferer from nervous depression and shot himself while staying at the Villa Liegintz, inflicting injuries of which he died a few hours later. He was born in Berlin, Dec. 17, 1890, and entered the army in 1911. In the war he served as aid-de-camp in the firing line in September, 1914, where he was slightly wounded, and he was at the front for a short time in the Russian campaign of January, 1915. In March, 1916, he married Princess Marie Augusta of Anhalt, by whom he had one son. The princess left her husband in 1919, and previous to his death there had been talk of a divorce. He was in Munich during the Spartacist trouble in 1919.

JOCELYN, STEPHEN PERRY. Brigadier-general, died, March 8. He was born at Bennington, Vt., March 1, 1843, and enlisted in the Vermont volunteers in 1863. He entered the regular army as lieutenant in 1866 and became lieutenant-colonel, March 31, 1899. During this time he had served with distinction not only in the Civil War, but in Indian warfare in Idaho. He took part in the Spanish-American War and served in the Philippines where he commanded the forces in Samar in 1903 and was at the head of the department of the Visayas in 1904.

JOHNS, CLAUDE HERMANN WALTER. British educator and scholar, died, August 20. After 1909 he was master of St. Catherine's College, Cambridge. He was born at Banville, England, Feb. 4, 1857, and educated at Cambridge, where he graduated with honors in 1880. He was ordained to the ministry in 1887, having meanwhile taught in Tasmania, Australia. From 1895 to 1909 he was lecturer in Assyriology at Queen's College, and from 1904 to 1910 at King's College, London. Among his writings may be mentioned various works on Assyrian and Babylonian texts; *History of Assyria*; *History of Babylonia*; and a great variety of articles on Assyria and Bible Archaeology, contributed to the periodicals and dictionaries.

JOHNS HOPKINS UNIVERSITY. A non-sectarian institution of the higher learning, for men, but admitting women to some of its courses, at Baltimore, Md.; founded in 1876. There were 442 students enrolled in the summer session of 1920, 1100 in evening courses, and 1685 in the regular fall session of all other courses, including 725 in college courses for teachers allowing for duplications. The members in the faculty numbered 370. The university assets on June 30, 1920 were \$4,589,799 and the income from all sources during that year was \$1,168,814. The library contained 226,000 volumes. Fire destroyed McCoy Hall, November 27 and spread to Levering Hall. A fire in the Pathological Laboratory made it necessary to rebuild, and it was decided to replace it by a more commodious one. The General Education Board granted \$400,000 for this. Among the gifts and bequests made during the year the following may be mentioned: \$85,128.15 from W. H. Collins Vickers for the "W. H. Collins Vickers Chair in Archaeology," of which the income was to be used only; from William A. Marburg, "The William August Marburg Memorial Fund," \$40,000; for the support of the School of Hygiene and Public Health, the Rockefeller Foundation contributed \$393,994.61 to meet the expenses and cost of equipment of school; and the Jessie Gillender Bequest for investigation into the cause, prevention and cure of Epilepsy, \$110,000. In 1920 the university had received \$2,000,000 under the La Mar bequest. President, Frank J. Goodnow, Ph. D.

JOHNSTON, ROBERT MATTHEW. College professor, died, January 28. He was born in Paris, France, Apr. 11, 1867, and educated in the United States and in Europe. He graduated at Cambridge University, England, in 1899 and was admitted to the English bar; after 1908 he was professor of history at Harvard. His writings dealt with periods of Italian history, Napoleon, Malakoff, the French Revolution, etc. and among the later ones may be mentioned: *The Holy Christian Church* (1912); *Bull Run* (1913); *Arms and the Race* (1915). He was editor of the *Military Historian and Economist* and was a

historian of the American Expeditionary Forces.

JONES, ALFRED STOWELL. British sanitary engineer, died in May, 1920. He was born at Liverpool, Jan. 24, 1882, and served with distinction in the Indian Mutiny where he was severely wounded at Agra. He retired in 1872 and became the manager of the sewage works of the army corps at Aldershot until 1912. He wrote: *Will a Sewage Farm Pay?* (3 eds., 1874-87); *Natural and Artificial Sewage Treatment* (1902).

JONES, EVAN ROWLAND. British author and editor, died, January 16. He was born in Cardiganshire and coming to the United States in his youth served during the Civil War in the fifth Wisconsin infantry and on the non-commissioned staff. In 1869 he was appointed American consul at Newcastle-on-Tyne, and from 1884 to 1892 was consul at Cardiff, South Wales. He wrote volumes on Lincoln, Stanton, Grant; historical sketches; *Four Years in the Army of the Potomac*; *Heroes of Industry*, etc., besides a variety of papers on economic subjects. He was editor and proprietor of the *Shipping World*, and the *Shipping World Year Book*.

JONES, J. LEVERING. Lawyer, died at Philadelphia, Pa., November 24. For some years he had been a trustee of the University of Pennsylvania. He was born in Philadelphia, Pa., July 26, 1851; studied law at the University of Pennsylvania and practiced in Philadelphia after 1875. He was prominent in legal and civic bodies in the city of Philadelphia, where he was well known, and he was associate editor of the *Legal Gazette*.

JONES ACT. See SHIPPING.

JOPLIN, MO. See GARRAGE.

JUGO-SLAVIA. A new state formed after the war out of the component parts of the old Austro-Hungarian monarchy: consisting of old Serbia; new Serbia; Slovenia; parts of Hungary; Croatia and Slavonia; Bosnia, and Herzegovina; and Dalmatia. The estimated area and population exclusive of Fiume which was subject to disputed claims with Italy (see WAR OF THE NATIONS) were respectively, 101,254 square miles and 14,361,459. Statistics for the distribution of population, for education, etc., date mainly from before the war and will be found under the above titles and under *Austria-Hungary* in preceding YEAR BOOKS. See also the article SERBIA in the present volume. The latest figures for production were: Wheat, 24,694,726 cwts.; barley, 4,251,692 cwts.; and oats, 6,164,247 cwts. Live-stock were reported as follows: Horses, mules, and asses, 1,458,326; cattle, 5,496,531; sheep, 9,771,985; pigs, 4,849,457; and goats, 2,447,949. Forests cover nearly one-half the area. The mineral resources are considerable. Coal mines are widely distributed, the chief centres of production being the region just north of Zagreb, the region north of Serajevo, the region around Petchout, Baranya, and the northeastern section of Serbia proper. Practically all of the coal is either brown coal or lignite, none of which is suitable for the production of coke. There had been no careful survey of the coal producing possibilities of the country, but they were believed to be enormous. The production in 1919 was given at 2,494,058 tons as compared with 3,487,432 tons in 1913. In 1920 railway projects for a line from Belgrade to the Adriatic were under consideration. See NAVAL PROGRESS.

GOVERNMENT. Jugo-Slavia is a unitary kingdom under the dynasty of the former kingdom of

Serbia. Its independence was proclaimed, Oct. 30, 1918, by a National Assembly. At the end of November, 1918, a National Council assuming to represent all the Jugo-Slav provinces voted for union with Serbia and Montenegro (q.v.). The first ministry was constituted, Dec. 29, 1918, and the new state was afterwards recognized by the Allied governments. The organic law definitely constituting the new government was being worked out in 1920 and in the government then existing the executive power was vested in the king and a responsible ministry, and legislative power in the parliament, which in 1920 consisted in part of Serbian representatives whose election dated from before the war and in part of delegates from the new territories. The ruling king in 1920 was Peter I, and the ministry at the beginning of the year was constituted as follows: Prime Minister M. Vesnich; Foreign Affairs, Dr. Trumbitch; Interior, M. Davidovitch; Justice, M. Trifkovitch; Commerce, M. Yintchitch; Agriculture, M. Velisar Yankovitch; Posts and Telegraphs, M. Drinkovitch; Public Works, M. Yitisa Yovanovitch; Transport, M. Korisc; Public Instruction, M. Pribitchevitch; Food, M. Rista Yivitch; Religious Affairs, M. Marinkovitch; Forests and Mines, M. Kovatchevitch; Finance, M. Kista Stoyanovitch; Agrarian Reform, M. Kristan; Social Policy, M. Kiukovets; War, General Branko Yovanovitch; and Public Health, M. Rafailovitch.

HISTORY. Several ministerial crises took place during the year and at the end of December the cabinet was constituted as above. For leading events in foreign relations, especially with Italy, see WAR OF THE NATIONS. The plebiscite in the district of Klagenfurt resulted in favor of Austria. Fraud was charged by Jugo-Slav officials and Jugo-Slav troops were retained in the region but on the demand of the Council of Ambassadors were gradually withdrawn. The treaty of Rapallo (see WAR OF THE NATIONS) was ratified by the cabinet by unanimous vote, November 19. Elections for the constituent Assembly were held on November 28, and it met on December 12, the Croatian Peasant party and the Croatian Republicans refusing to take part. Its 416 delegates were apportioned as follows: Old Serbia, 158; Montenegro, 8; Bosnia-Herzegovina, 63; Batchka, 25; Banat, 20; Dalmatia, 11; Croatia and Slavonia, 93; Slovinia, 38. The prime minister at the close of the year declared in reply to the questions raised in the British House of Commons in respect to the status of Montenegro that in the elections of November 28 the Montenegrins had, as was their right, expressed their political preference for union. He added, "Montenegrins are Serbs, at least in the same measure as Yorkshire men are English and no one in the Kingdom of the Serbs, Croats, and Slovines thinks of subjugating them." As to the claims of the old dynasty, he referred to ex-King Nicholas as "the last tyrant in Europe that the great war swept from the world's stage." See MONTENEGRO.

JUVENILE COURTS. UNITED STATES. Juvenile Court legislation was enacted in four states during 1920. These laws may be briefly summarized as follows:

Alabama. The law creates and establishes Juvenile Courts in all counties having a population of not less than 75,000 and not more than 95,000.

Maryland. The law confers upon the other judges

of the Judicial Circuit of Maryland authority to sit in juvenile cases in Talbot County, etc.

New Jersey. Two laws were passed amending the law creating juvenile courts in counties of the first class which was passed in 1912 and amended in 1919.

Virginia. The law amends the Code of Virginia relating to contributing to the delinquency of minors.

The Children's Bureau of the United States Department of Labor published early in the year the report of a survey made in 1918 of the organization and regulation of 2034 courts in the United States hearing children's cases. (Courts in the United States hearing Children's Cases, by Evelina Belden, Government Printing Office, 1920.) This, with a study issued later in the year, of Juvenile Court Legislation in the United States, by Sophonisba P. Breckenridge and Helen R. Jeter, (Legal Series No. 5. Bureau Publication No. 70, Government Printing Office, 1920.) form the most careful and extensive statement of the conditions under which child offenders are tried, available to date.

The survey of courts hearing children's cases showed that every year 175,000 children's cases are brought into court. Of these, 50,000 are tried in courts that are not especially adapted to them. Frequently they are tried by the regular criminal process in use in the State or city, and the child is treated as a law-breaker and not, as all juvenile court jurists now consider desirable, as a dependent in need of protection. The Children's Bureau, in its survey, set as its minimum degree of specialization to be recognized as adequate, for a court having jurisdiction over children's cases separate hearings for children, official probation service, and records including some information regarding the social conditions in which the child was living. Of the courts studied, only 321, or 16 per cent, had this minimum degree of specialization, and over half of these were in five States.

Many States are not carrying out the provisions of their own laws regarding juvenile offenders. Children are detained in jails, in close contact with old and hardened offenders, in many States where the law provides for their proper separation. Routine physical and mental examinations to discover possible contributing causes of delinquency, are shown to be the exception rather than the rule, although the relation between delinquency and mental and physical defects is well established.

The summary of Juvenile Court legislation is based on data gathered prior to July 1st, 1919, but contains an appendix covering 1919 legislation. The legislation is summarized under eight main headings.

1. The court given jurisdiction, whether specially created or already existing, and the character of the jurisdiction conferred;

2. The extent of the jurisdiction, whether over children or adults or both;

3. The preliminary procedure, including the complaint, summons, investigation, care of child pending hearing;

4. The hearing, including the nature of the proceedings, the time and place, privacy, jury trials, mental and physical examinations, appeals;

5. The disposition of the case, including special care for the sick and feeble-minded, and requirement of parental support;

6. The relation of the court to coöperating agencies;

7. The organization of the court; judge, probation officers, advisory board, records and reports;

8. The construction and purpose of the law.

EUROPE. According to the United States Children's Bureau the example set by the United States in establishing juvenile courts has now been followed by all the principal countries of Europe. Spain, the last to fall in line, has now adopted the modern viewpoint that delinquent children should not be treated as criminals, but rather as victims of adverse conditions and surroundings. In working out the details of the law Spanish authorities have followed America's experience. Under the Spanish law the children's judge is not necessarily a member of the bench. He is assisted by two advisory members appointed by the Commission for the Protection of Children. Privacy is guarded very closely in the Spanish juvenile courts; no one except probation officers is allowed in the court except by special permission, and the press is forbidden to publish any information about cases of juvenile delinquents. Since Chicago established the first juvenile court in 1899 similar courts have been established in England, France, Belgium, Holland, Denmark, Switzerland, Italy, Germany, Russia, Austria, and Hungary.

KAISER WILHELMSLAND. A former German colony situated in the northern portion of southeastern New Guinea; lying between 2° 30' and 8° south latitude, and 141° and 148° east longitude. It was declared a German protectorate in 1884 and formed a part of what was known as German New Guinea. The area, including adjacent islands, is placed at 70,000 square miles. The interior is little known and the estimates of pop. vary from 110,000 to 530,000. At the outbreak of the war, it was occupied by the Australian forces, and from that time was under Australian administration.

KAMERUN, CAMEROON, or CAMEROONS. Formerly a German protectorate; situated in West Central Africa, between Nigeria (British) and French Equatorial Africa and extending north to Lake Chad and east to the Ubangi River. In 1911 a large tract of French territory (107,270 square miles) was transferred to Germany and is known as New Kamerun. During the war (1916) French and British troops occupied the territory of which the greater part was placed under French administration, the British controlling a strip on the southern border of Nigeria. The total area (not including the part ceded to Germany in 1911) is placed at 191,130 square miles; and the population at 2,540,000. The seat of government before the war was at Buša. The area of the French portion in 1920 was placed at 166,489 square miles and the British area at about 33,000 square miles.

In French Kamerun, the imports in 1918 were 13,528,967 francs and the exports, 7,857,214 francs. The chief exports were: Palm kernels and palm oil, rubber, ivory, and cocoa; and the chief imports were textiles, spirits, salt, iron-ware, colonial produce, etc. The French commissioner in 1920 was M. Garde. See *FRANCE, History*.

In British Kamerun the volume of trade was valued at \$1,465,936, as against \$1,170,565 in 1918. Imports in 1918 totaled \$626,629; in 1919, \$324,217, while exports in 1918 reached \$543,936, and \$1,141,719 in 1919. The principal exports were: Cocoa, palm kernels, and palm oil; and

the imports consisted of the usual African trade goods brought chiefly from England, but there were substantial imports from the United States and some trade with Fernando Po. The British colony was under the governor of Nigeria.

KANSAS. POPULATION. According to the preliminary report of the census, of 1920, there were 1,769,257 residents in the State, Jan. 1, 1920, as compared with 1,690,949 in 1910.

AGRICULTURE. According to the census of 1920, the number of farms was 165,287, a falling off of 7.1 per cent since 1910. The following table is compiled from the estimates of the United States Department of Agriculture, covering the years 1919 and 1920:

Crop	Year	Acreage	Produce Bu.	Value
Corn	1920	5,190,000	137,535,000	\$80,515,000
	1919	4,100,000	62,320,000	87,248,000
Oats	1920	2,241,000	68,799,000	26,832,000
	1919	1,574,000	44,229,000	32,287,000
Barley	1920	888,000	21,285,000	9,578,000
	1919	537,000	14,499,000	14,499,000
Wheat	1920	8,903,000	137,056,000	178,178,000
	1919	11,080,000	152,079,000	328,970,000
Flaxseed	1920	23,000	159,000	286,000
	1919	14,000	88,000	334,000
Clover Seed	1920	7,000	15,000	147,000
	1919	6,000	11,000	209,000
Rye	1920	124,000	1,612,000	1,612,000
	1919	200,000	2,520,000	3,553,000
Broom Corn	1920	20,000	3,800	338,000
	1919	20,000	2,900	435,000
Hay	1920	2,796,000	4,688,000	47,620,000
	1919	2,828,000	5,584,000	87,142,000
Potatoes	1920	68,000	5,780,000	8,670,000
	1919	68,000	5,168,000	9,819,000
Sorgh'm Si'p	1920	5,000	430,000	538,000
	1919	7,000	490,000	598,000

• Tons. * Gallons.

ELECTIONS. The vote in the presidential election of 1920 was: Harding (Republican), 396,195; Cox (Democrat), 185,447; Debs (Socialist), 15,510; as compared with the following vote in the presidential election of 1916: Wilson (Democrat), 314,588; Hughes (Republican), 277,658; Benson (Socialist), 24,685. The election for governor in 1920 was: Allen (Republican), 319,836; Davis (Democrat), 214,927; Stanton (Socialist), 12,544. The election for United States Senator was: Curtis (Republican), 326,991; Hodges (Democrat), 170,433; Reedy (Socialist), 13,416. Farm homes amendment 223,499 for and 201,559 against; finance and taxation amendment, 218,931 against and 170,710 for; good roads amendment, 284,689 for and 193,347 against.

POLITICS AND GOVERNMENT. The Kansas Court of Industrial Relations was organized on February 2 and its first annual report covered the period from that date to the close of the year. Twenty-eight industrial cases were filed, of which twenty-five were filed by labor, two were investigations by the court, and one was filed by capital. Twenty of the cases filed by labor were decided and in thirteen wage increases were granted. The following considerations in regard to the first year of the courts activities were advanced in the official report and the governor's comments: The number of cases filed and decided is a very poor indication of the activities of the Industrial Court. The work of the court was along various lines and in various fields. For instance, in the coal investigation, involving working conditions for from 8000 to 10,000 miners, three bench orders were issued by the court affecting working conditions, two of these admittedly favorable to the miners; the other, modifying what is known as the "check-off"

system, was not satisfactory to either the miners or mine operators, but was believed by the court to be fair to the public. The check-off system, is the name given to the rule by which the employers check off from the miners' pay the monthly dues, the special assessments and the fines imposed by the local miners' unions. One other very important matter which was given attention by the court was the investigation into the cost of producing and distributing coal from the mines of Kansas and within the State of Kansas. The court has worked under a severe handicap, which robbed it of an opportunity to rest its fate upon its own merits. It was established as a court to find solution for industrial controversies and to protect the public against the waste and danger of industrial war. It was meant to be a court of human relations, not a board of public utilities. Because of a desire to save the cost of an additional body, the Industrial Court was given the administration of the old public-utilities law. Public-utilities work had so increased that the court was robbed of the opportunity to do more than care for the acute industrial cases. As an indication of the relative time the court had at its disposal for industrial work and public-utilities work, it is only necessary to point out that there were 650 public-utilities cases as compared with the 28 industrial cases above mentioned. The American Federation of Labor at its annual convention at Montreal, June 7, sharply attacked this measure.

The adoption of the farm homes amendment noted above made possible the beginning of an important legislative programme for checking the growth of land tenantry in the State and strengthening the agricultural conditions as to farm labor and soil conservation.

By the good-roads amendment the State was authorized to extend its aid to road building. Limitation of the State's help was twenty-five per cent of the cost of the road, and this twenty-five per cent should not exceed in any county more than ten thousand dollars per mile for more than one hundred miles in any county. This practically meant that the State should not pay more than twenty-five per cent of the cost of any road built in any county.

OFFICERS. Governor, Henry J. Allen; Lieutenant-Governor, Charles S. Huffman; Secretary of State, L. J. Pettjohn; Treasurer, Walter L. Payne; Auditor, Fred W. Knapp; Attorney-General, Richard J. Hopkins; Superintendent of Public Instruction, Miss L. E. Wooster; Superintendent of Insurance, Frank L. Travis.

JUDICIARY. Supreme Court: Chief Justice, William A. Johnston; Justices, Rousseau A. Burch, Henry F. Mason, Silas W. Porter, Judson S. West, John Marshall, John S. Dawson.

KANSAS, UNIVERSITY OF. A co-educational State institution of the higher education at Lawrence, Kan., founded in 1864. The enrollment for the summer session was 925 and for the regular fall session 4500. The faculty numbered 235. Productive real estate was valued at \$250,000. The income for the year amounted to \$1,092,179. The library contained 133,000 bound volumes and 45,000 pamphlets. An important gift was the Thayer Collection of art pieces, valued at more than \$150,000. President, Dr. E. H. Lindley.

KANSAS CITY, KAN. See CITY PLANNING
KANSAS CITY, MO. See CITY PLANNING, and MUNICIPAL GOVERNMENT.

KARAFUTO. The Japanese portion of the island, Sakhalien, comprising all of the island that lies south of the fiftieth parallel of north latitude. Area, 13,048 square miles; pop., estimated in 1918 at 79,131.

KAUFMANN, MORITZ. British clergyman and writer on social economics, died, March 8. He was born Oct. 7, 1839 and educated at Trinity College, Dublin, winning prizes in ancient and modern languages and in English composition. He was engaged for many years in pastoral work in Great Britain and abroad, and after 1893 was vicar of Calthorpe, Norfolk. In 1899-1900 he lectured at the University of Dublin. His publications included various volumes on Utopias, Christian Socialism and other aspects of advanced economic thought, and among the later ones may be mentioned: *The Housing of the Working Classes of the Poor*. He contributed to the *Cambridge Modern History*, and translated and selected *Pascal's Thoughts*.

KELLOGG, DANIEL FISKE. Editor, died, October 28. He was born at Chittenango, N. Y., Mar. 19, 1865, and after graduating at Amherst college in 1886, joined the staff of the New York *Sun* of which he was city editor from 1891 to 1902 and financial editor from 1902 to 1913. He also wrote extensively on financial and social topics for many magazines and newspapers. After 1913 he was associated with J. P. Morgan and Company.

KEMPFF, LOUIS. Rear-admiral, died, July 29. He was born at Belleville, Ill., Oct. 11, 1841; appointed to the Naval Academy in 1857 and became a lieutenant in 1862. During the Civil War he took part in the battle of Port Royal in 1861 and served in the Atlantic blockade squadron in 1861-2, taking part in the capture of several Southern ports. In 1862-63 he was in the West Gulf blockading squadron and took part in the bombardment of Sewell's Point and the re-occupation of Norfolk. In 1863-4 he was in service on board the *Sonoma* and *Connecticut*. After the Civil War he served in the Pacific Squadron, 1865-70; on the training ship *Portsmouth*, 1867-68; and in the following year he was executive officer of the *Mohican* in the eclipse expedition to Siberia. His subsequent naval experience covered a wide range of duties, including those of ordnance officer at the Mare Island navy yard, inspection service, etc. He was commandant of the Mare Island navy yard, 1899-1900. In 1900-2 he was squadron commander of the Asiatic fleet and took part in the measures for the protection of the lives and property of the Americans. He was retired in October, 1903.

KENNEDY, DAISY. See MUSIC, Artists, Instrumentalists.

KENTUCKY. POPULATION. According to the preliminary report of the census of 1920, there were 2,416,030 residents in the State, Jan. 1, 1920, as compared with 2,289,905 in 1910.

AGRICULTURE. According to the census of 1920, the number of farms was 270,676, an increase of 4.4 per cent, since 1910. The following table is compiled from the estimates of the United States Department of Agriculture, covering the years 1919 and 1920:

Crop	Year	Acreage	Produc. Bu.	Value
Corn	1920	3,300,000	100,650,000	\$82,533,000
	1919	3,300,000	82,500,000	127,875,000
Oats	1920	350,000	8,225,000	6,004,000
	1919	350,000	7,875,000	7,166,000
Wheat	1920	550,000	5,610,000	10,715,000
	1919	900,000	10,350,000	21,838,000

Crop	Year	Acres	Prod. Bu.	Value
Clover Seed	1920	25,000	52,000	780,000
	1919	20,000	38,000	1,129,000
Rye	1920	40,000	480,000	720,000
	1919	50,000	600,000	1,050,000
Tobacco	1920	550,000	*467,500,000	70,125,000
	1919	600,000	*498,000,000	190,236,000
Hay	1920	1,103,000	*1,508,000	33,099,000
	1919	1,125,000	*1,573,000	39,853,000
Potatoes	1920	65,000	6,435,000	9,652,000
	1919	70,000	4,900,000	10,290,000
St. Potatoes	1920	18,000	1,890,000	2,835,000
	1919	18,000	1,890,000	3,024,000
Sorg'm St'p	1920	51,000	*4,845,000	5,184,000
	1919	50,000	*4,250,000	5,270,000
Cowpeas	1920	21,000	252,000	945,000
	1919	21,000	252,000	806,000
Soy Beans	1920	8,000	120,000	420,000
	1919	7,000	105,000	420,000

* Pounds. * Tons. * Gallons.

LEGISLATION. Among the measures passed in the regular session of the legislature the following may be mentioned: Provisions in respect to the care of neglected, dependent, and delinquent children, and child labor (see *CHILD LABOR, State Legislation*); requirement of teaching in the public schools; the humane treatment of animals; creation of an athletic board of control and regulation of boxing contests; creation of a State board of charities and corrections; provision for the employment of convict labor on State highways and bridges; regulation of the construction and maintenance of dwelling-houses; creation of commission to make a survey of the educational systems of the State; excise or license tax on gasoline sold at retail; creation of a State department of State roads and highways; annual license tax on distillation of spirits; prohibition of, manufacture of, and traffic in intoxicating liquors except for specified non-beverage purposes and regulation of the non-beverage manufacture and traffic; prevention of fraud in securities offered for sale in the State; provision for the suppression of mob violence and the prevention of lynching; provision for commission form of government for cities of the fifth and sixth classes choosing to adopt it; provision for physical education and training of all pupils in the public schools; authorization of any political party that had cast at least 20 per cent of the total vote of the State in the last presidential election to prescribe its own method of nominating candidates for governor, and certain leading State officials, and United States Senator; placing the nomination of judges of the court of appeals and circuit courts within the application of the State primary law; license tax on race tracks; provision for payment of a minimum salary for teachers outside graded school districts and incorporated cities and towns maintaining separate school systems; scholarships for veterans of the late war; definition and prohibition of "criminal syndicalism" and sedition; prevention of combinations in restraint of trade; inculcation of habits of thrift and industry in the schools; provision for State tuberculosis sanitarium; regulation of vehicles and registration and licensing of motor vehicles.

ELECTIONS. The vote in the presidential election of 1920 was: Cox (Democrat), 456,497; Harding (Republican), 452,480; Debs (Socialist), 6409; Watkins (Prohibitionist), 3325; as compared with the following vote in the election of 1916: Wilson (Democrat), 269,990; Hughes (Republican), 241,854; Socialist, 4734; Prohibitionist, 3036.

OFFICERS. Governor, Edwin P. Morrow; Lieutenant-Governor, S. Thurston Ballard; Secretary

Y-B-20-19

of State, Fred A. Vaughan; Treasurer, James A. Wallace; Auditor, John J. Craig; Attorney-General, Charles I. Dawson; Superintendent of Agriculture, Labor, and Statistics, W. C. Hanna; Superintendent of Public Instruction, George Calvin; Superintendent of Insurance Rates, N. O. Gray.

JUDICIARY. Court Appeals: Chief Justice, John D. Carroll; Justices, Rollin Hurt, Gus Thomas, Ernest Clarke, F. D. Sampson, W. E. Settle, Huston Quin, William Rogers Clay.

KENTUCKY, UNIVERSITY OF. A co-educational State institution at Lexington, Ky., founded in 1858. The enrollment for the summer session was 316 and for the fall session, 1717. There were 126 members on the teaching staff. The productive funds of the institution were: College, \$515,708; Trust Fund, \$10,571; Experiment Station, \$276,684; Extension, \$203,145. President, Frank LeRond McVey, Ph.D., LL.D.

KENYA COLONY. See *EAST AFRICA PROTECTORATE*.

KENYON COLLEGE. A Protestant Episcopal institution of the higher learning at Gambier, Ohio, founded in 1825. In the fall session the enrollment was 175. Members of the faculty numbered 20. Judge U. L. Marvin, LL.D., formerly of the Ohio Circuit Bench was added to the faculty. The endowment was estimated at \$867,662. The year's income was \$81,223. There were 35,000 volumes in the library. President, William F. Pierce, L.H.D., D.D.

KEREKJARTO, DUOI. See *MUSIC, Artists, Instrumentalists*.

KIAOCHOW. A town, harbor, and district on the east coast of the Chinese province of Shantung; before the war constituting a German protectorate; after Nov. 7, 1914, administered by the Japanese whose claim was recognized in articles 156-8 of the Treaty of Versailles, which, however, was not signed by China. Area, exclusive of the bay, about 215 square miles; pop., about 192,000, but including the neutral zone which comprises a strip along the coast with an area of about 2500 square miles, the pop. was estimated at over 1,200,000. On Aug. 30, 1919, the Japanese exclusive of the military numbered 27,600. The port and chief town is Tsingtao, which in 1919 was turned into a fortified coaling station. In 1918 the imports were 62,465,460 Mexican dollars and the exports 50,602,265 dollars. The chief imports were: Cotton, silk goods, metals, cigarettes, paper, etc., and the chief exports were: Straw, braid, silk, bean oil, etc. The tonnage of steamships entered and cleared in 1918 was 1,388,339 of which 1,090,801 were Japanese.

KIMBALL, FRANCIS HATCH. See *PAINTING AND SCULPTURE*.

KINCH, EDWARD. British chemist, died, April 6. For thirty-five years he was professor of chemistry at the Royal Agricultural College at Cirencester. He was born, Aug. 19, 1848, and was educated at the Royal College of Chemistry where he was a member of the teaching staff from 1876 to 1881. He was professor of chemistry at the Imperial College of Agriculture at Tokyo, Japan. He wrote many papers for the leading chemical journals.

KINKAID, THOMAS WRIGHT. Admiral, died August 11. He was born at Cincinnati, Ohio, Feb. 27, 1860; graduated at the Naval Academy, 1880, and became assistant engineer in 1882. He served during the Spanish-American War and was

on the *Oregon*, 1900-4. He was fleet engineer of the Asiatic fleet in 1904, and thereafter was on duty at the Norfolk Navy Yard and in the inspection service. In 1910 he was appointed head of engineering at the experiment station, Annapolis, Md.; promoted rear-admiral in October, 1917.

KLINGER, MAX. German painter, etcher, and sculptor, died in 1920. He was born in 1857; distinguished himself first by a series of etchings of which "A Life" (1882); "Eve and the Future" (1880); and "Death" are among the most famous; then by about fifty decorative paintings, and a series of monumental paintings, including "Judgement of Paris" (1886); "L'Heure bleue" (1889); a "Crucifixion" (1890); and "Christ on Olympus" (1897). Meanwhile he was engaged in mural painting and, after 1894, in polychromatic sculpture, executing "Cassandra," "Amphitrite," and the statue of Beethoven among others from 1894 to 1902. Later works include a "Crouching Diana"; colossal bronze "Athlete"; a tragic bust of Nietzsche; Brahms monuments at Hamburg and Vienna. By connoisseurs he has been placed in the front rank of modern plastic arts and compared in respect to the universality of his work with the great Florentines of the Renaissance.

KNIGHT, HENRY JOSEPH CORBETT. Bishop of Gibraltar, died at Hitchin, England, November 27. He was educated at Islington and the University of Cambridge, where he graduated with honors, and was ordained priest in 1886. He was for several years Fellow and Lecturer of Corpus Christi College, Cambridge, and principal of the Clergy Training School. In 1905-6 he was Hulsean lecturer and preacher at the university in 1887, 1895, 1905, and 1913. In 1911, he was appointed Bishop of Gibraltar, being the sixth Anglican incumbent of that office.

KNITTING INDUSTRY. See **TEXTILE MANUFACTURING.**

KNUPFER, PAUL. German dramatic basso, died in Berlin, November 7. He was born in Halle, June 21, 1866. After his debut in Sondershausen he was a member of the Leipzig Opera until 1898; thereafter to the Berlin Opera. He sang frequently at Convent Garden and at Bayreuth, being especially famed as a Wagner interpreter.

KOENEN, TILLIE. See **MUSIC, Artists, Vocalists.**

KOLCHAK, ADMIRAL. Russian Anti-Bolshevik leader, executed, February 7. He was born in 1874. He was one of the many Anti-Bolshevik leaders who were reported in the Allied newspapers to be certain of success. For several months a series of victories was announced, but toward the end of 1920 it was evident that his case was hopeless and in the concluding months of that year, he was a fugitive. He was executed by the Irkutsk revolutionary committee along with his former prime minister, Pepelaiev. On his fall from power, he named as his successor, General Semenov, who, however, also failed in his endeavors, as recounted in the preceding YEAR BOOK. See also the articles **RUSSIA** and **WAR OF THE NATIONS** in the present volume.

KOPPEL-ELFELD, FRANC. See **GERMAN LITERATURE.**

KOREA or **CHOSEN.** A country in eastern Asia dependent on Japan after Mar. 2, 1906 and formally annexed by Japan by the treaty of Aug.

22, 1920. Capital, Seoul. Area, 84,103,000 square miles; pop. Dec. 31, 1918, 17,412,871. The Japanese element at the end of 1919 was given at 336,872. The interests are wholly agricultural and the chief crops are grains, beans, rice, tobacco, and cotton. The rice crop in 1918 was 68,622,018 bu. There has latterly been a prospect of successful gold mining. In 1918 the total value of mineral products was 30,828,074 yen. The foreign trade (merchandise only) at the open ports in 1918 was as follows: Imports 158,309,363 yen; exports, 154,189,148 yen. The chief imports were: Cotton goods, machinery, coal, paper, sugar, timber, kerosene, and grass cloth; and the chief exports were: Rice, beans, cattle and hides, and gold ore. The larger part of the trade was with Japan. In 1919 the length of railways was given at 102 miles. The budget estimates for 1919-20 balanced at 77,560,690 yen. The Japanese Governor-General in 1920 was Baron Saito. See **JAPAN.**

KOVABOVIC, KAREL. Bohemian dramatic composer and conductor, died in Prague, December 6. He was born there on Dec. 9, 1862. After completing his studies at the Prague Conservatory, and later under Fibich, he began his career as conductor. In 1899 he became chief conductor at the Bohemian National Theatre in Prague. In the spring of 1919 he gave in London a Czech-Slavic Music Festival, for which he brought his entire orchestra and two of the foremost choral societies. In his own country his operas are immensely popular, almost rivaling those of Smetana. He also wrote seven ballets, a concerto for piano and orchestra, and choral works.

KRONOLD, SELMA. American dramatic soprano, died in New York, October 9. She was born in 1866. In the nineties she was a well known operatic singer, having created the roles of Santuzza and Nedda in the American premieres of *Cavalleria Rusticana* (1891) and *Pagliacci* (1893). In 1900 she became a Catholic and retired from the stage. After that she devoted her entire time to the Catholic Oratorio Society, of which she was the founder.

KUBELIK, JAN. See **MUSIC, Artists, Instrumentalists.**

KURDISTAN. A region lying to the south-east of Armenia and for the most part within the limits of the former Turkish Empire, but partly also within Persia. Area, estimated at 74,000 square miles and the pop. at about 3,000,000 of whom four-fifths were Kurds. In the old Turkish Empire, the region was included in the vilayet or province of Armenia and Kurdistan.

KUSTENLAND. See **COASTLAND.**

KUYPER, ABRAHAM. Dutch statesman and theologian, died at The Hague, November 8. He was born in 1837; became pastor at Amsterdam in 1870 of one of the chief congregations of the country; entered journalism and became involved in political and religious controversy; founded the Free Reformed Church after 1880; was elected to parliament in 1874, and again in 1897; organized the fusion of Catholic and Calvinist parties and in 1901 became prime minister. His party was defeated in June, 1905. He lectured in many places in the United States and delivered a lecture course at Princeton in 1898. He edited an *Encyclopædia of Sacred Theology* (2d ed., 1908-10), translated into English. He wrote works in theology and church history, and published an important edition of the Polish reformer John A. Lasco.

KWAKIUTL. See ANTHROPOLOGY.

KWANGCHOW-WAN. A small region on the coast of the Chinese province of Kwangtung, obtained by the French from China under a 99-year lease, in 1898, and administered under the governor-general of Indo-China. Area, about 190 square miles. Population about 168,000.

KWANGTUNG or **KWANTO.** A territory in the southern part of the Liaotung peninsula, leased by Japan from China as the successor to the Russian leasehold after the Russo-Japan war. Area, 538 square miles; pop. (Dec. 31, 1918), 583,458, of whom 60,237 were Japanese, exclusive of the army and navy. Imports (1918) 83,521,131 haikwan taels; exports 91,301,399 yen. The seat of administration is at Dairen, formerly known as Dalny, an excellent harbor, free from ice all the year round, and connected by railway with Mukden, Kharbin, and the Eastern Chinese Railway System.

Kwangtung is also the name of a province of China (q.v.).

LABOR. See CHILD LABOR; COÖPERATION; INDUSTRIAL WORKERS OF THE WORLD; LABOR ARBITRATION AND CONCILIATION; LABOR LEGISLATION; OLD AGE PENSIONS; STRIKES AND LOCK-OUTS; UNEMPLOYMENT; WOMEN IN INDUSTRY; WORKMEN'S COMPENSATION; and articles on GREAT BRITAIN, and other foreign countries.

LABOR, AMERICAN FEDERATION OF. The Federation held its fortieth annual convention at Montreal, June 7. A significant feature was the increased strength of the more radical element in respect to government ownership of railways. It was a substantial victory over Mr. Gompers and his conservative supporters, carrying a resolution in favor of government ownership and democratic operation by a vote of 29,058 to 8348. Many proposals favored by the Gompers element, however, were carried. Among them may be mentioned: Refusal to urge the recognition of the Russian Soviet government; endorsement of the League of Nations; demand for the self-determination of Ireland and the removal of the military; for the release of "political and economic" prisoners; measures for organizing international unions of policemen and office-men; support of steel, coal, and policemen's strikes; condemnation of the Kansas industrial court (see KANSAS), and of anti-strike laws, and the Transportation Act; endorsement of non-partisan political campaign; support of all unions demanding a shorter working-day, the union to decide the length of the day; criticism of labor planks in the Republican platform. Other resolutions included: Condemnation of compulsory military training and military training in the schools; support of the Nolan minimum wage bill providing a minimum wage of \$3 a day for Federal employees; demand for the repeal of Lever and Espionage Acts; condemnation of "outlaw" movement in railway unions (see RAILWAYS); support of free speech, etc.; demand for severe measures against Asiatic immigration in accordance with programme of California unionists including: Cancellation of the "gentleman's agreement," absolute exclusion of Japanese and other Asiatics as immigrants, and debarment of Asiatics from American citizenship forever. Efforts to prevent the drawing of the color line continued: A resolution was passed requesting the Brotherhood of Railway Clerks to eliminate the words "white only" in defining qualifications and to admit colored people into membership with full rights.

In 1920 out of 110 national and international organizations, 100 admitted colored members.

The number of members in the Federation, Apr. 30, 1920, was 4,078,740, an increase of 109.6 per cent over the number in 1915. In the year ending Apr. 30, 1920, strike benefits amounted to \$87,913. Officers elected in 1920: President, Samuel Gompers; secretary, Frank Morrison; treasurer, Daniel J. Tobin.

LABOR ARBITRATION AND CONCILIATION. The report of the second Industrial Conference which as noted in the preceding YEAR BOOK met Dec. 1, 1919, did not issue its final report till March 1, 1920. In this the Conference arguing that prevention was better than cure urged as the best means of avoiding industrial conflict the extension of the principle of labor representation in the direction of industries by means that were already in operation in certain trades, namely, by shop committees and councils, work councils, etc. These means had been successful, it is said, in union and non-union shops, and in shops where both union and non-union labor was employed. For disputes that failed of adjustment by means of these joint organizations, the report recommended a system national in application, to consist of a National Industrial Board, local Regional Adjustment Conferences, and Boards of Inquiry.

The local Regional Industrial Conference was to consist of four representatives elected under certain specified conditions by the parties in dispute, and of a regional chairman who should be a trained government official appointed by the President. Reference of disputes to this body was to be voluntary. If the Regional Conference were unanimously agreed, there should be a collective bargain; if it were not, the question might be submitted either to the National Industrial Board or to an umpire chosen by the parties to the dispute. Pending settlement of disputes referred to the Regional Adjustment Conference, production must continue. If one or both parties refuse to submit the dispute to this body, its chairman should constitute a Regional Board of Inquiry made up of two employers and two employees in the industry and not parties to the dispute, which Board should have the right to subpoena witnesses and publish its findings for the guidance of public opinion.

The National Industrial Board should consist of nine members,—three from representatives of the employers, three from representatives of the employees, and three from representatives of general interests especially conversant with economic questions—all to be appointed by the President and Senate without regard to political affiliations; the headquarters of the Board to be at Washington. It should serve as the board of appeal in all matters of wages, hours, and working conditions that cannot be adjusted by the Regional Adjustment Conference. Its decisions must be unanimous. Further features of the plan and the comment on it were thus summarized in the *Political Science Quarterly*. Besides acting as a board of appeal in the matters above mentioned it may so act on all other questions which come before a Regional Adjustment Conference, which may be submitted to it by the parties to the dispute, and which they have not been able to agree upon in the Regional Adjustment Conference, except questions of policy such as the "closed" or "open" shop. In case it cannot reach a determination it is to make and pub

lish majority and minority reports. The plan proposed may be applied to public utilities, in which case the governmental regulatory agency is to have representatives on the Adjustment Conference. It is to make no recommendations relative to railroads, but to provide machinery for the prompt and fair adjustment of wages and working conditions of government employees. The plan involves no penalties other than those imposed by public opinion. It does not provide for compulsory arbitration, nor does it deny the right to strike. The Industrial Conference declared itself in favor of collective bargaining as the most helpful approach to industrial peace. It denied the right of government employees to strike. Moreover, it declared strongly against the policy of allowing policemen and other employees engaged in the administration of justice and the preservation of life and property to join or affiliate with organizations that use the strike as a weapon of warfare. The report of the Conference was bitterly attacked by Mr. Gompers, who claimed that in seeking to further employee representation in shop councils it was advocating a system destructive of labor unions. Shop councils and committees, he maintained, "lend themselves to the designs of employers hostile to trade-unionism and are, in fact, almost without exception creatures of employers."

GREAT BRITAIN. The Industrial Courts Act of 1919 continued for twelve months certain features of the act for the temporary regulation of wages passed in the preceding year. With the expiration of that period in October, 1920, the last trace of war-time control of industry disappeared. In the joint industrial (Whitley) councils and the Industrial Court, however, machinery for industrial adjustment was in operation. The functions and results of these two instruments were summarized in as follows in October:

"The Industrial Court was established as an independent tribunal for the adjudication of disputed claims to act, if called upon, after the disputants have failed to reach agreement. Resort to the Court is entirely optional, and cannot be imposed by one party upon the other. The Court is not designed as a substitute for the conciliation machinery which ought to exist in every properly organized industry. Most industries have already provided themselves with such machinery. Excluding cotton, coal-mining and railway transport, which have their own special ways of dealing with disputes, and engineering, which is reconsidering its arrangements, there is not one well-organized trade in the country that has not set up what are popularly called Whitley Councils. Fifty-seven joint industrial councils have been formed in as many industries, and there are four or five in Government services. All but half a dozen are functioning healthily, and with good hope of long and useful activity. Four have come to an untimely end; two are in a state of suspended animation. The best results from some points of view have been obtained by the Councils in the industries that provide public services, like the tramways, electricity, gas, and water undertakings. The municipal authorities and the workmen's representatives are working well together, and developing mutual understanding and confidence. The principal occupation of joint industrial councils up to the present has been with wages and other conditions of employment. But everything that concerns the welfare of the industry may legitimately come within the scope of their activities."

LABOR BUREAU, INTERNATIONAL. After the Washington conference in 1919 the International Labor Bureau held its first meeting in Paris, January 26-29. Representatives of 11 governments were present, six from employers and six from workers. The resolutions of the Washington conference were carried into effect.

The second meeting was held in London, March 23-25. Here the main question discussed was that of hygiene in industrial plants.

LABOR LEGISLATION. Owing partly to the limited number of regular legislative sessions in 1920, but more significantly as a result of the spirit of reaction that had grown so prevalent and temporarily blighting, the year's output of protective labor legislation, in the light of all legislative experience, is conspicuously meagre and ill-considered. Yet a few measures, especially in the field of social insurance, have been gained. The following analysis of labor legislation is compiled from *The American Labor Legislation Review* for September, 1920, for American subjects, and from the *Bulletin of the International Labour Office* of the League of Nations for foreign subjects. In addition labor legislation for specific subjects is discussed under CHILD LABOR; MINIMUM WAGE; OLD AGE PENSIONS; SOCIAL INSURANCE; WOMEN IN INDUSTRY; and WORKMEN'S COMPENSATION.

THE UNITED STATES. Two measures to be credited as outstanding gains were finally enacted into law by Congress. One establishes a system of compulsory, contributory old age and disability insurance for the government's 300,000 employees in the classified civil service. The other creates the machinery for Federal-State coöperation in the vocational rehabilitation of industrial cripples. Twenty-four States have taken action looking to such rehabilitation—18 States having, by legislative enactment or through proclamations by their respective governors, accepted the provisions of the new Federal law. This is all a part of a campaign begun two years ago for the enlightened development of workmen's compensation legislation so as to make possible not only cash payments and medical care, but also the reclamation and restoration to useful, self-sustaining occupations of the maimed victims of industrial accidents.

MISCELLANEOUS LEGISLATION. Kentucky and New York appointed child labor commissions to investigate and suggest remedies for child welfare in the state. New York also appointed a legislative committee to recodify the labor laws, as well as Maryland. Massachusetts passed a no-discrimination law for applicants for positions in the State civil service. New Jersey passed a law providing for the issuance and sale of stock to the employees of a corporation. Kansas passed a law allowing non-profitmaking corporations to promote welfare of labor and industry to be tax-free.

INDIVIDUAL BARGAINING. Congress passed laws restricting still further the paying of wages to seamen. The prohibition of advance payments to seamen or deductions from their wages was strengthened. The fine for violation of this law is from \$25 to \$100. Allotments to members of the family are no longer permitted. Demanding or receiving remuneration for procuring employment for seamen is made a misdemeanor with a maximum penalty of \$500, or imprisonment for six months. Louisiana passed a law declaring that discharged employees must be paid within 24 hours upon demand. An employer who fails to pay is liable for full wages from the date of demand until payment. Mississippi made provision for the payment of wages of a deceased person to the nearest of kin, and defined who the nearest of kin should be. Minor changes were made by Massachusetts, New Jer-

sey, Kansas, New York, and Virginia in labor laws under this head.

COLLECTIVE BARGAINING. The transportation bill (passed by Congress in February, 1920), provides for a railroad labor board to consist of three persons representing the employees, three representing the employers, and three representing the public to adjust labor disputes arising in any carrier by rail except that be a local electric railway. Virginia officially recognized labor organizations. District of Columbia police and firemen were forbidden to join any union which would countenance strikes. Kansas officially recognized the right of collective bargaining. Nebraska, New York, and South Dakota made provision for the settling of labor disputes by arbitration. Texas passed a law heavily penalizing the impeding or interfering with the operations of common carriers.

MINIMUM WAGE. The salaries of civilian employees of the United States and District of Columbia were increased by temporary bonus as last year. The salaries in New Jersey and Virginia were increased also. In Massachusetts and Nebraska provision was made for minimum wage laws to be enacted during the coming year.

HOURS OF LABOR. Ohio, Kentucky, Nebraska, and New Jersey, enacted minor restrictions on employment hours, while New York and South Carolina lifted restrictions. Virginia reduced child employment from 10 to eight hours a day. Employment between nine P. M. and seven A. M. is forbidden. Provision was made by the United States, Maryland, Massachusetts, New York, and Virginia for annual vacations to government and state employees.

EMPLOYMENT. Georgia passed a law requiring every private employment agency to procure a license from the department of commerce and give a \$500 bond. Emigrant agents, seeking employees for work outside the state must give a \$1000 bond. Employment agencies were established in Kansas, Massachusetts, and South Dakota. The appropriation for the Farm Labor and State Employment Bureau in New Jersey was raised to \$30,000. The Federal appropriation was cut from \$400,000 to \$225,000.

SAFETY AND HEALTH. Regulation of child labor was made in Maryland, Massachusetts, and Virginia. Regulation of factories, workshops, and mercantile establishments was effected in Kentucky, Nebraska, New Jersey, New York, Oregon, and Rhode Island. Safety regulation of mines was effected in Kansas, Kentucky, and Ohio. Safety regulation of transportation was effected in New York, North Dakota, and Virginia. For further social insurance, see **WORKMEN'S COMPENSATION.**

ADMINISTRATION. A woman's bureau was established in the Federal Department of Labor to investigate and report on matters pertaining to the welfare of women in industry. The bureau is also to formulate standards and policies to promote the welfare of wage-earning women, improve their working conditions, increase their efficiency and advance their opportunities for profitable employment. Appropriations were increased in a number of the states, and salaries were increased at the same time.

FOREIGN. Reports continue to come in showing that foreign countries are passing labor legislation tending toward a universal eight-hour day for all employees in industries and mercantile concerns. Countries that had previously en-

acted eight-hour day legislation have been forced to modify their decrees to cover special cases, but in no case has the total number of hours of employment in three weeks been increased. In a number of cases the number of hours of overtime within a given period has been limited. In Austria notification to the industrial authority that overtime is going to be asked of certain employees, may be given, and permission for this may or may not be given by that authority. An Act of Feb. 12, 1919, amends the Act of Dec. 19, 1918, to make special regulations in certain industries. In Czecho-Slovakia an act dated Dec. 19, 1918, provides that: "In undertakings subject to the Industrial Code or carried on as factories, the actual hours of work of workers shall, in principle, not exceed eight hours within 24 hours, or 48 hours in the week." This is made to cover even persons employed in agriculture and forestry. Also "it shall not be lawful for the employer to give out work to workers employed in his undertaking to be done at home for the purpose of lengthening the hours of work." The act also provides for a break in the work, 15 minutes every five hours, or for employees under 18 years of age, every four hours, as a minimum. Further, "The worker must be allowed in every week an uninterrupted period of rest of at least 32 hours." Eight-hour decrees were issued in Luxemburg and Poland, similar to that of Czecho-Slovakia. In Poland the decree provides that employment on Saturday shall be only six hours. The decree also states that "this decree shall not entail any reduction in the wages of workers and employees." A royal decree was issued in Spain providing for an eight-hour day and a 48-hour week. Reports come from a number of countries respecting eight-hour day agreements between employers and employees which have proved just as effective as laws. The legislatures in these countries will doubtless pass laws to the same effect during the next few years.

MISCELLANEOUS: Argentina. A number of detailed regulations covering workers who do not work in the usual factory manner were made by an act of Oct. 8, 1918. The Department of Labor was given authority to appoint wage boards in the communes for every trade in which homeworkers are employed, whenever requested in writing to do so by at least 50 workers in any branch or trade. These boards have complete authority.

Austria. In the latter part of 1918, Austria established conciliation boards for the regulation of wages and work conditions. "A document to attest his capacity as an industrial worker, shall be provided by the communal authority at the request of a worker." Regulations governing work on Sunday and at night were made.

Belgium. An act of Feb. 28, 1919, makes extensive restrictions for the employment of women and children in industry, including restrictions on night work. "Night work shall be prohibited for all women, irrespective of age," in most of the industries.

Czecho-Slovakia. In the Eight-Hour Day Act of Dec. 19, 1918, regulations are made concerning night work, allowing only males over 16 years of age to be employed at night. One section reads as follows: "Male young workers up to 16 years of age, and female workers up to 18 years of age shall only be employed on light

work which is not injurious to their health and does not check their physical development." The penalty for the violation of any provision of this act is made very severe.

France. By act of March 28, 1918, regulation of night work was made, and on April 23, 1919, the eight-hour day was introduced. It contains provision for a partial holiday on Saturdays. This act was made to apply also to Algeria and to the French colonies.

Great Britain. In July, 1918, the Workmen's Compensation Act was passed, and in August of the same year an extensive act to regulate education and child labor was passed.

Spain. A royal decree prohibiting night work in bakeries and similar establishments during six consecutive hours was issued in April, 1919.

Sweden. A Fisherman's Compensation Act was passed in June, 1918, providing insurance for the injured or his family.

Switzerland. A resolution of March 14, 1919, makes many regulations in regard to unemployment. For instance, "when it is necessary to restrict the operations of an undertaking, the employer shall arrange for a general reduction of hours for employees, or a readjustment to their duties, instead of dismissing them," and further, that, "when the customary hours in any undertaking are reduced by not more than 20 per cent, the employer shall continue to pay full salaries." Provision is made for compensation to the unemployed.

LABOR LEGISLATION, AMERICAN ASSOCIATION FOR. This is the American branch of the International Association for Labor Legislation. Mr. John B. Andrews is its secretary, with offices at 131 E. 23rd St., New York City. This organization collects data on labor legislation, conducts propaganda for the passage of desirable legislation, and issues a quarterly, *The American Labor Legislation Review*.

LABRADOR. The peninsula in British North America between the Atlantic and Hudson Bay, within the province of Quebec, except for the small strip along the northeast coast which is a dependency of Newfoundland. See *EXPLORATIONS AND NEWFOUNDLAND*.

LABUAN. A small island off the northwest coast of Borneo, under the administration of Singapore in the Straits Settlements (q.v.).

LAFAYETTE COLLEGE. An institution for the education of men at Easton, Pa., founded in 1826. There were 767 students enrolled for the fall session of 1920. The faculty numbered 58, including two additions. The endowment fund amounted to \$1,248,198. The library contained 49,098 volumes. The Kirby Professorship in Civil Rights was established. A gift of \$100,000 was received, and the endowment fund for \$1,000,000 was completed successfully. A new gymnasium is to be built for \$400,000. President, John Henry MacCracken, Ph.D., LL.D.

LAKEWOOD, OHIO. See *CITY PLANNING*

LAMBS. See *LIVE STOCK*.

LAMMASCH, HEINRICH. Former premier of Austria and international jurist, died at Salzburg, January 7. He was born in 1853; educated at the University of Vienna, where he became professor of international and criminal law. He was afterwards Conservative leader in the Austrian upper house. In 1903 he was one of the Venezuela arbitrators; in 1910 president of the board that decided the Newfoundland fisheries dispute; and in 1911, president of The Hague

Tribunal, having been Austrian representative in the first Hague Peace Conference. He had a large part in framing the Austrian penal code. In October 1918 he formed the cabinet that assumed office on the eve of the collapse of the Empire. Among his later writings may be mentioned: *Grundriss des österreichischen Strafrechts* (1899, 4th ed., 1911); *Rechtskraft internationaler Schiedsdisprüche* (1913, a Nobel Institute publication), *Schiedsgerichtbarkeit* (1914). See articles *LAMMASCH* and *WAR OF THE NATIONS IN YEAR BOOK* for 1918.

LAMPE, JOSEPH JOACHIM. Professor of theology, died, April 21. He was born in Holstein, Germany, May, 19, 1837; came to the United States in 1853; graduated at Knox College, Illinois in 1864 and studied at the Union Theological Seminary. He was ordained to the Presbyterian ministry in 1867 and after doing pastoral work in New York City was professor of Hebrew and Old Testament literature from 1896 to 1917 in the Presbyterian Theological Seminary at Omaha, Neb. After 1917 he was professor emeritus.

LANDS, PUBLIC. According to the annual report of the Commissioner of the Land Office, the total area of public and Indian lands originally entered and allowed during the fiscal year ending June 30, 1920 was 16,437,491.55 acres not including 422,984.44 acres embraced in finals not previously counted as original disposition of land. The latter area was constituted as follows: Public auction, 174,499 acres; abandoned military reservations, 6,414.91 acres; cash and private sales, individual claimants and small holding claims, 219,498.19 acres; preemption entries, 10,456.56 acres; soldiers' additional homesteads, 12,115.78 acres. The area of 16,437,491.55 acres is an increase of 4,566,310.05 acres, as compared with the area originally entered and allowed during the fiscal year 1919. Of the total area originally entered and allowed during the fiscal year, 8,103,844.81 acres were allowed under the stock-raising homestead act of Dec. 29, 1916. The area patented during the fiscal year was 11,850,401,337 acres, an increase of 1,073,399,988 acres, as compared with the fiscal year 1919. Of the above area 9,239,903.257 acres were patented under the homestead laws, an increase of 927,584.369 acres, not including as homesteads 11,666,546 acres patented as soldiers' additional entries.

The total cash receipts from the sales of public lands, including fees and commissions (\$1,587,060.79), sales of reclamation town sites (\$124,147.26), sales of lands and timber in the Oregon and California railroad grant (\$184,168.10), and sales of lands and timber in the Coos Bay wagon road grant (\$80,811.30), for the fiscal year 1920 were \$3,974,979.17. The total receipts from the sales of Indian lands were \$2,063,186.06. Other receipts aggregated \$93,611.18. The total receipts of this bureau during the fiscal year 1920 were \$6,131,776.41.

LANGELIER, CHARLES FRENCH. French Canadian jurist, died, February 2. He was born, Aug. 23, 1852, and was educated at Laval University, afterwards becoming one of its governors. He was admitted to the bar in 1875 and served as member of the Dominion parliament and as member of the Quebec legislature. After 1910 he was judge of the court of sessions, Quebec. He wrote: *Souvenirs Politiques* (2 vol., 1878-96); and *The Criminal Procedure* (1916).

LANGUAGES, MODERN. See *PHILOLOGY*.

LAOS. See FRENCH INDO-CHINA.

LATVIA. A new republic in the neighborhood of the Baltic, formerly within the old Russian Empire, and comprising the former Russian province of Courland, together with the four southern districts of Livonia and the three western districts of Vitebsk. It claimed also strips of territory in the former provinces of Grodno and Pskov and in East Prussia. Total area, about 24,000 square miles; pop., Jan. 1, 1914, over 2,500,000, of whom about 78 per cent were Letts. The interests are mainly agriculture, but the forest resources are extensive. The chief exports have been flax and timber. The flax crop available for export in 1919-20 was estimated at about 10,000 tons—less than one-third of the pre-war average. Other statistics published in 1920 dated from before the war. The free state of Latvia was proclaimed at Riga, Nov. 18, 1918, and was recognized *de facto* by Great Britain, Japan and Italy, and several of the smaller states. The constitution was in process of formation during 1920, elections to the constituent assembly having been held April 17-18 on the basis of universal suffrage for both sexes. The provisional government consisted of a state council of 102 members. Prime minister in 1920, K. Umanis.

A peace treaty was signed with Moscow August 11 and ratified by the Latvian Constituent Assembly, September 2. It provided for the return to Latvia of public property and property belonging to commercial and industrial concerns and of the means of transport; for the payment to Latvia by the Soviet government of 4,000,000 rubles in gold; and for the release of Latvia from the liabilities of the former Russian empire. At the close of the year, the boundaries of the country were still subject to final decision of the Allies or the League of Nations. Events of 1920 indicated that while the government was socialistic in tendency it continued to be steadily opposed to Bolshevism. Recognition of the *de jure* independence was still withheld during 1920 by the United States and France on the ground that Latvia had formed an integral part of the former Russian empire. At the close of the year France was considering recognition, but there was no sign of change in the policy of the United States in that respect as set forth in the note on the subject of American relations with Russia by Secretary Colby. See RUSSIA, *Baltic Provinces*; also WAR OF THE NATIONS.

LASCCELLES, Sir FRANK. British ambassador to Germany from 1895 to 1908, died in London, January 2. It was during his ambassadorship that the famous Kruger telegram was sent by the Kaiser. He was born March 23, 1841. He entered the diplomatic service in his youth and was secretary of legation at Berlin in 1867-8. He next served in Paris during the period of the siege and the Commune. In 1879 he was appointed consul-general to Bulgaria, in 1886 minister to Rumania, and in 1891 minister to Persia. In 1894-5 he was ambassador to St. Petersburg and in October, 1895 was transferred to Berlin. He interpreted the Kaiser's conduct at this time as due to natural capriciousness, rather than to any definite policy and he did not attach sufficient importance to the Kruger telegram. He was popular at the imperial court and is believed to have had considerable influence there. He was on familiar terms with the Kaiser, about whom he recounted a number of

anecdotes which exhibit him as a man of changeable and impulsive character and much given to a rather boisterous humor. In general Lascelles' record was not that of a very active and far-seeing diplomat.

LASH, ZEBULUN ATTON. Canadian lawyer and financier, died, January 24. He was born at St. Johns, Newfoundland, Sept. 29, 1846, and was educated at the University of Toronto. He was called to the bar of Ontario in 1868 and practiced law in Toronto till 1876. He was president of the Great Northwestern Telegraph company, and an officer of other important railway and financial institutions in Canada. He wrote besides various pamphlets and articles on legal subjects a volume entitled *Defense and Foreign Affairs*.

LAUCHHEIMER, CHARLES HENRY. Officer of the Marine Corps, died, January 15. He was born at Baltimore, Md., in September 1859; and graduated at the Naval academy in 1881. After 1883 he served in the United States Marine Corps and was promoted through the various grades to the rank of brigadier-general, Aug. 29, 1916. He was the author of *Forms and Procedure for Naval Courts and Boards* (1896-1902).

LAUDER, CHARLES JAMES. British artist, died, April, 1920. He was the son of James Thompson Lauder, the portrait painter, and was educated at Glasgow. He pursued his art studies in various countries of Europe and exhibited frequently in London and Glasgow. For fifteen years he lived at Richmond on the Thames and executed many scenes in that neighborhood. He published: *Picturesque London*; *Hampton Court*; and *Royal Richmond*.

LAW, EVANDER MOLVER. Confederate officer, died at Bartow, Fla., October 31. At the time of his death he was the ranking surviving officer of the Army of the Confederacy. He was born in 1836 and at the beginning of the Civil War was a professor in the King's Mountain Military Academy. He entered the war as lieutenant-colonel of the Fourth Alabama Infantry and served till the war's close, attaining the rank of major-general.

LAWN TENNIS. See TENNIS.

LEAD. The following information in regard to lead production in 1920 was supplied by the United States Geological Survey: The output of soft lead by mines of the Mississippi Valley and Eastern States was about 275,000 short tons, and that of argentiferous lead by mines of the Western States was about 236,000 tons, a total of 511,000 tons. The corresponding figures for 1919 are 237,000, 206,000, and 443,000 tons, and for 1918, 267,184, 314,470, and 581,654 tons. The total increase in 1920 was 68,000 tons, as compared with a decrease of 138,500 tons in 1919. The southeastern Missouri district made the largest production, 183,000 tons, as compared with 157,158 tons in 1919, and the Cœur d'Alene district of Idaho came next, with about 121,000 tons, as against 83,833 tons in 1919. Utah had an output of 67,000 tons, an increase from 61,915 tons in 1919. The imports of lead in ore were about 15,000 tons and in bullion about 49,000 tons, a total of 64,000 tons, as compared with 65,799 tons in 1919. Of the imports in 1920 Mexico furnished about 54,000 tons and Canada 4000 tons. The lead content of lead ore in bonded warehouses on November 30 was 16,187 tons and of base bullion 32,671 tons. Part of this may have been smelted or refined, but not shipped, and thus may be included in smelter stocks.

The production of primary domestic desilverized lead in 1920 was about 215,000 short tons, of soft lead about 189,000 tons, and of desilverized soft lead about 70,000 tons, making a total output from domestic ores of about 474,000 tons of refined lead, compared with 424,433 tons in 1919, made up of 208,751 tons of desilverized lead, 147,744 tons of soft lead, and 67,938 tons of desilverized soft lead. The output of lead smelted and refined from foreign ore and bullion was about 64,000 tons, compared with 57,787 tons in 1919. The total lead smelted or refined in the United States was thus about 538,000 tons, compared with 482,220 tons in 1919.

While the production of lead in the United States (estimated at 471,744 short tons) had decreased from 1916 when a record of 592,241 tons was made, yet in 1920 there was a slight increase in production over the previous year (454,921 short tons) and a continuation of the demand for the metal that developed early in 1919. As a result there was a continuance of the high prices at the end of 1919 into 1920, reaching a maximum of 9.37½ cents a pound in New York in March and then after some recession going up to a second high price of 9 cents in August. But in this upward trend the London market was a dominant factor and when the decline began there it was followed in the United States, but it also permitted imports from Mexico and Europe to America. Naturally as industrial conditions grew less promising in the United States the demand slackened during the autumn and there was a rapid fall in price from 8.9 cents a pound on September 8 to 4.5 cents on December 5. The lead market was interesting in 1920 as it was truly a world market though to a degree speculative. England imported from Spain as in 1919, but considerably less from Australia than in 1920 an account of a strike. It is also of interest to realize that the American paint industry in 1920 was the largest consumer of pig lead, and after this came the manufactures of storage batteries and the manufactures of lead-increased cables, these three industries probably requiring in 1920 a greater amount of lead than the domestic production of the United States. There was also a demand from manufacturers of sheet lead and pipe and also for shot, baring metals, solder, caulking metal, type metal, foil, etc. Of course considerable reclaimed lead was available commercially and it was estimated in 1920 that over 150,000 tons of secondary lead was made available for consumption. The production of lead in the United States as given in the Annual Review of the *Engineering and Mining Journal* is shown herewith:

LEAGUE OF THE NATIONS. On December 31, the League of Nations had nearly completed its first year having come into official existence January 10. Only three nations entitled to membership remained outside, namely the United States, Costa Rica and Honduras. The first meeting was held in Paris, January 16 and was presided over by M. Bourgeois, the French representative. By the provisions of the Covenant it comprised as will be remembered the following elements: (1) an Assembly, which was to consist of at most three delegates from each member of the League each delegation to have but one vote; (2) the Council consisting of the permanent representatives of the four chief Allied Powers, namely, France, Great Britain, Italy, and Japan, and provisional representatives from four other Powers, namely, Belgium, Brazil, Greece and Spain; (3) the permanent secretariat to consist of a chief secretary with an assistant-secretary and a numerous staff. The last of these elements, the secretariat, was the essential organ of administration. It was to arrange the order of business, determine the subjects to come before the Council and Assembly, correspond with members of the League, collect documents, keep the records, etc. Between January 16 and the beginning of December, the Council had met ten times and subsequent meetings were to be held every two months thereafter. Among the matters that engaged its attention were the administration of the basin of the Saar and the city of Danzig; the Belgian questions of Eupen and Malmédy; the question of mandates; and the racial minorities. More specifically it discussed the matter of the Aland Islands, the dispute between Lithuania and Poland, and the constitution of the permanent court of justice etc. In its administrative work it participated in the campaign against typhus in Poland, the repatriation of prisoners of war, the control of the white slave traffic, and the suppression of the opium trade. It organized an office of international hygiene, a permanent committee on Armaments, and a commission on communications and transit. In the financial field it organized the conference at Brussels where twenty-nine states were represented by eighty-six delegates. At the recommendation of the president of the League, M. Leon Bourgeois, it was decided to create an advisory committee divided into two parts, one for economic questions and the other for financial, under the presidency of M. Gustave Ador, President of Switzerland. Finally the most important event in the League's history was the meeting for the first time of its Assembly at Geneva on November 15. An account of the meetings, discussions, and results

PRODUCTION OF LEAD (REFINERY STATISTICS)*

of the meetings of the Council and of the session of the Assembly in Geneva will be found in the article **WAR OF THE NATIONS**.

LEATHER. The production of leather in the United States during 1920 was far below normal and while there was a good demand at the beginning of the year it fell away, and with the decline came lower values. The prices of hides and leather which had reached a maximum in August 1919, steadily receded with but few rallies so that by the end of 1920 values on a lower basis than ever before the war were reached. The prices of hides and calfskins fell from 50 to 75 per cent in this interval and naturally this led to a decline in the price of leather from 30 to 40 per cent, and of shoes from 20 to 30 per cent. At the end of 1920 packer hides ranged from 20 and 21 cents for spready native steers to 10 cents for branded bulls, where at the beginning of the year these hides had sold for 40 and 41 cents and 26½ cents respectively. The same ratio of decline was experienced with country hides, the prices at the beginning and end of the year being 28 to 30 cents and 13 to 14 cents for heavy steers; 25 to 26 and 8 cents for bulls; 50 and 75 to 10 to 17 cents for calfskins; 9 to 11.50 to 3.50 to 5.50 for horsehides; and 1.25 to 1.75 to 25 to 65 cents for hogskins. The 1920 monthly average per packer hides ranged from 31.65 for heavy native steers to 22.25 for branded bulls. The average for the year of the various kinds of packer hides dealt in was 27.131 as compared with 35.177 in 1919. 24.775 in 1918; 28.846 in 1917 and 23.537 in 1916.

For country hides the 1920 monthly average ranged from 24.20 for heavy steers to 14.94 for country brands and 40.98 for city calfskins. The yearly average prices were for 1920, 23.237, for 1919, 36.036; for 1918, 21.390; for 1917, 25.342; and for 1916, 21.969. The average prices of packer and country hides may be compared with earlier years (see **YEAR BOOK** for 1916) and especially with those for 1910 when they were 11.931 and 11.373 respectively.

Representative of the decline in the number of beef cattle in the United States was the condition in Kansas where the State Board of Agriculture reported the smallest number in five years. According to the assessors' returns of March 1, 1920, there were excluding dairy animals 2,132,733 cattle in Kansas, which number by the end of the year it was estimated had shrunk to approximately 1,843,000. Taking the assessors' figures as of March 1 for successive years the number of cattle in Kansas was as follows:

1916.....	2,201,000
1917.....	2,337,592
1918.....	2,329,717
1919.....	2,200,714

Leather suffered in the period of commercial upheaval and deflation for the packers were unable to sell their hides and the values of leather, shoes, harness, belting, gloves and other leather commodities fell to practically before the war prices or even lower. In 1920 there were from one and a half to two million less head of cattle slaughtered than in 1919, and likewise a decrease from 1918 of over a million. See **LIVE STOCK**. The total imports of cattle hides and calfskins in eleven months of the year 1920 amounted to 259,045,220 pounds as compared with 376,761,106 pounds for the corresponding eleven months ended November, 1919. Likewise the exports of leather and leather products de-

creased and Japan was the only foreign country where American exports gained. In the foreign business in hides and leather the difficulties and uncertainties of exchange interfered with trade.

As a result of the slump in the steer trade (see **BOOTS AND SHOES**) the tanners immediately curtailed their operations and for the greater part of the year their output was adjusted to the demand. There was no overproduction of either shoes or leather during the year and at its end stocks were not large. The foreign shipments had been only about one half of those of 1919. All in all considering the remarkable shrinkage in values due to enforced deflation the industry came through the year in fair condition and at its close was hopeful. However an uncertain note was struck towards the end of the year in connection with the proposed revision of the tariff by Congress. It was suggested that a duty should be placed on hides, which as the domestic supply was far from adequate would have been felt by the leather industries generally.

During the year the foundation of the American Leather Research Laboratories at the University of Cincinnati was determined on by the Tanners Council of the United States. These laboratories were to be in charge of G. D. McLaughlin and would carry on chemical and other research of interest and benefit to the industry.

LEGIEN, CARL RUDOLPH. German trades union leader and Socialist, died in Berlin, December 26. He was born about 1860 and had been a member of the German parliament since 1893. About 1890 he was elected chairman of the general federation of the German trades unions, which at that time numbered only about 250,000. The federation in 1920 comprised 8,250,000 classified paying members, representing some 60 trades and professions. He had been prominent in politics for many years.

LEGION, AMERICAN. Incorporated by Act of Congress, Sept. 16, 1919, and organized Nov. 8, 1919, this is a national organization of ex-soldiers of the World War. It professes to be "patriotic, non-partisan, non-political, non-military, and permitting of no distinction due to rank or place of service." Membership is open to any soldier, sailor, or marine who served between April 6, 1917, and Nov. 11, 1918, and to all women enlisted or commissioned in either branch of the service during the same period. Figures for Dec. 31, 1920, showed a marked increase over those of 1919. There were 9978 posts, as against 6561 in 1919, or an increase of 3417 posts, and a membership almost doubled. Abroad posts were formed in 10 countries where there had hitherto been no posts at all, and in those countries where there had been posts in 1919, the number was increased in 1920. Alaska jumped from four in 1919 to 14 in 1920; Canada has one; England has one; France increased from one to four in 1920; Hawaii from five to eight; Panama from one to two; Philippine Islands from one to six; and Mexico from one to two. During the year posts were formed in Argentine, one; Belgium, one; Chile, one; China, one; Guatemala, one; Japan, two; Poland, two; Samoa, one; Santo Domingo, one; Peru, one. During the year the Legion was active in pushing the program decided upon early in the year, of welfare legislation for service men and women, and aggressive Federal action against disloyalty, draft evaders, slackers, and propagandists seek-

ing to overthrow the government. Different posts were called upon to do special police work, and in some communities Vigilance Committees were formed by the posts to combat the unusual amount of crime. Over the Christmas holidays special attention was given by the Legion to the disabled soldiers in hospitals in this country. Several posts were called upon to act as arbitrators in labor disputes. Administration is conducted through a national commander, five vice-commanders, an adjutant, state departments, and post commanders. The national commander in 1920 was Franklin D'Olier of Philadelphia, Pa.

Even more rapid was the rise, during 1920, of the Women's Auxiliary. Starting with 50 units and 5000 members on Dec. 31, 1919, the Auxiliary had at the end of 1920 1695 units and a membership of approximately 200,000 women. Posts are maintained in every State in the Union. Besides these there are two posts in Alaska, three in Hawaii, two in Panama, and one in Cuba.

The Legion will push its expansion plan in 1921, and every effort was being made to obtain new members. Money was being raised to provide club-houses and meeting rooms for the various posts by means of subscriptions, theatricals, and other entertainments. A large number of posts already had club-houses, and others were in the process of construction. The official organ of the Legion is *The American Legion Weekly*, subscription to which is included in the membership fee.

LEGISLATION, AGRICULTURAL. See AGRICULTURAL LEGISLATION.

LEHIGH UNIVERSITY. A non-sectarian institution for the education of men, at Bethlehem, Pa., founded in 1866. For the fall of 1920 there were 1029 students enrolled. The teaching staff numbered 94. The enrollment in extension courses was 650. The productive funds amounted to \$3,000,000, and the income to \$487,329. An extension to the Chemistry Laboratory which was completed cost \$75,000. In addition to the general extension courses, evening schools were established in Business Administration and Naval Architecture. The library contained 148,000 volumes. President, Dr. Henry S. Drinker.

LEHMAN, SAMUEL. American composer, died in New York, August 29. He was born in 1882. For a number of years he was conductor at the Winter Garden in New York, for which he wrote much incidental music. He was chiefly known for the catchy lyrics he wrote for many of the popular stars of the vaudeville stage (*Everybody Works but Father*, etc.).

LELAND STANFORD JUNIOR UNIVERSITY. A non-sectarian, co-educational institution of the higher learning at Palo Alto, Cal., founded in 1891 as a memorial to Leland Stanford, Jr. The enrollment for the summer session was 685 and for the regular fall session, 2489. There were 320 members of the faculty.

According to the latest published figures (1918-19) the productive funds amounted to \$24,000,000 and the income to \$1,580,000. The library contained 320,000 volumes. The most important gifts for the year were: \$80,000 raised from subscriptions from alumni, students and friends for a War Service Memorial building; \$100,000 toward a new dining hall; and a very large collection of books and documents relating

to the great war including all the official records and reports of the Belgian Relief Commission. President, Ray Lyman Wilbur, M.D.

LEMAN, G. G. French general, celebrated as the governor and defender of Liège in 1914, died, October 17. He was born in 1851 and a short time before the beginning of the late war was commandant of the military school in Belgium. On the outbreak of the war he was in command of Liège, which he held heroically against the Germans thus checking their advancing for several days. This delay, which had not been foreseen by the German general staff, contributed to their subsequent failure on the Marne. He was wounded in the fight and made prisoner, Aug. 22, 1914. From that time he was interned in Germany till 1917, when he was released on account of ill-health and returned to France. After the victory he accompanied King Albert in his triumphal entry into Liège. On October 21 an impressive ceremony was held in his honor. A crowd passed before the palace where his body lay in state and the officers of the "Iron Division" stood guard. Masses of people followed the cortège to the station.

LE SUEUR, DANIEL. (Pen name of JEANNE LAPAUZE née LOISEAU). French novelist and poet, one of the best known women writers of her time, died in 1920. She was born in 1860 and in 1904 married Henry Lapauze, an art critic. She was a voluminous writer and published in her later years one or two novels annually. Her work was crowned by the French Academy and she was awarded several prizes and appointed Knight of the Legion of Honor. Her writings began with a volume of poems called *Flowers of April* (1882), and included: *Love To-day* (1888), *Mysterious Love* (1882), *Invisible Charm* (1887); *Beyond Love* (1889); *A Woman's Honor* (1901). In 1905 *Her Feminine Evolution* was written at the request of the committee on Industry and Commerce at the 1900 Paris exposition and in the same year she published *The Force of the Past*. In 1911 she published *A Soul of Twenty Years*, and in 1912, *At The Turning of The Days*. She also wrote several dramas.

LEVEY, CHARLES JOSEPH. South African soldier and civil official, died in October. He was born in Grayhamstown, Cape Colony, in 1846, and served with distinction in the Boer War. Before that he had distinguished himself in wars with the native tribes and served as magistrate on several occasions. He succeeded Lord Cecil as Imperial Commissioner of Western Transvaal in 1901, and in 1909 he was returned to parliament for the Transkeian territories.

LEYGUES, GEORGES. French statesman appointed, September 24, prime minister in succession to M. Millerand (q.v.), assuming also the portfolio of foreign affairs. He was born at Villeneuve-sur-Lot; entered political life in his youth; and was elected a deputy in 1884. From that time on he was continually reflected from his district. He was minister of state six times. In 1894, minister of public instruction in the Dupuy ministry; in 1895 minister of the interior in the Ribaud ministry; in 1898 minister of public instruction in the second Dupuy cabinet; in 1899 minister in the Waldeck-Rousseau cabinet; in 1906 minister of the colonies in the Sarrien cabinet; and during the great war a minister of the Clemenceau government at the most critical period of the conflict. In 1917 when

the government was threatened by the activities of the disloyal elements and when the success of the Allies was in doubt, he was a strong partisan of vigorous measures. He was a member of the Republican group of the Left at the time of his appointment to the Clemenceau cabinet (November 13, 1917) and president of the foreign affairs committee of the Chamber. He was in sympathy with a more radical policy than had been followed by the retiring Painlevé, and welcomed the aggressive measures of Clemenceau. As minister of marine he was an enthusiastic member and supporter of the Inter-Allied Naval Council and presided over the naval technical committees of that body which planned a formidable programme to combat the German submarine menace. He favored a policy of publicity somewhat at variance with that generally followed by the government and on May 26, he published a report showing that in the preceding month America and England had built 40,000 tons more of shipping than had been lost by the enemy's submarine campaign. He announced on June 25, 1918, that the U-Boat peril was ended. He supported Clemenceau's demand of retribution for Germany's failure to carry out the armistice terms and the terms of the Treaty and after the Scapa Flow incident he insisted that the Allies should be reimbursed ship for ship. On the retirement of Clemenceau Jan. 1, 1920, he returned to his seat on the Republican Left. Aside from politics he had a distinguished career as a lawyer and literary man, the main body of his writings consisting of papers on diverse subjects collected under the title of *School and Life*. He is well known also as a traveler and Alpine climber.

LIBERIA. An African negro republic on the western coast extending from the French Ivory Coast on the east to the British colony of Sierra Leone on the west. Area variously estimated at 35,000 to 41,000 square miles, and population, from 1,500,000 to 2,100,000, all of the African race, but including about 12,000 Americo-Liberians. Capital, Monrovia, with an estimated population, including Krutown, of about 6000. The staple product is the native coffee. No later figures for trade were available than in the preceding **YEAR BOOKS**. The President in 1920 was C. D. B. King, elected for the term, 1920-4.

LIBRARY ASSOCIATION, AMERICAN. This organization was founded in Philadelphia in 1876 with the purpose of promoting library interest in general, and in particular in bringing about needed reformation and improvements; in lessening cost and labor of administration by coöperation; in interchanging advice and by frequent meetings to promote *esprit du corps*. The 42d Annual Conference was held at Colorado Springs, Col., in June, 1920. At this conference the enlarged programme of the Association was presented and accepted. It provided for the raising of \$2,000,000 to finance the programme. The programme itself included the promotion of legislation and adequate appropriations for State, municipal, county, and school library work and work with children. It was brought out that only 40 per cent of the people of the United States have direct access to public libraries, and that only 27 per cent of the counties in the United States have within their borders any one library of 5000 volumes or more. One of the greatest opportunities for library extension is through further development in the schools. The Association plans to do extensive work

among the foreign born in this country in preparing them for citizenship. It was brought out that there are more than 6,000,000 of them in the country and that 1,500,000 were illiterate. Coöperation in the preparation of reading and study courses is also planned for the self-education of adults. The blind of the country, of whom there are 75,000, will receive attention at the hands of the Association. Along this line, the work in the hospitals, prisons, orphanages, etc., will be continued. The American library in Paris is about to become the American Library in Paris, Inc., where Europe may find the best in American thought and literature and in turn, guide America to the best in European thought and literature. General publicity work will be continued to provide information on libraries and library service by means of magazine and newspaper articles, and exhibits at State and county fairs. Due to poor salaries a large number of librarians have resigned during the last three years, and the Association is planning to conduct a recruiting campaign for this profession.

The work of the War Service Committee has been continued in our army and navy. On Oct. 31, 1919, the War Department took over the entire library establishment, books, buildings, equipment, and a considerable portion of the personnel in the army camps and posts within continental United States. The Association also turned over more than \$100,000 for use in maintaining libraries until Congress should make specific grant for this new work. Work in the merchant marine, coast guard, and lighthouses was continued during the year. The final report of the Association representative in Europe shows that the Association did valuable work among the soldiers right to the end.

The officers of the Association for 1920 were President, Alice S. Tyler, Library School, Western Reserve University, Cleveland, Ohio; first vice-president, H. H. B. Meye, Library of Congress, Washington, D. C.; second vice-president, Louise B. Krause, H. M. Bylesby & Co., Chicago; treasurer, Edward D. Tweedell, The John Crerar Library, Chicago; secretary, Carl H. Milam, 78 East Washington Street, Chicago; executive board, the president and vice-presidents, and Linda A. Eastman, Cleveland Public Library; Adam Strohm, Detroit Public Library; J. C. Dana, Newark Free Library; Edith Tobitt, Omaha Public Library; George B. Utley, Newberry Library, Chicago; and Azariah S. Root, Oberlin College Library. The *Library Journal*, *Public Libraries*, and *Special Libraries* are monthly periodicals devoted to matters concerning library economy and administration, and in addition there are many bulletins and pamphlets concerning the work of the Association. The headquarters of the Association are at 78 East Washington Street, Chicago.

LIBRARY PROGRESS. As a result of the increased reading done during the war in all branches, library progress has been marked during the last two years. Not only are more libraries being established, especially in small communities, but all of them are being used more than previously. The city or town library is coming to be looked upon as an essential to the welfare of the community. The war gave a great impetus to the reading of technical books, due to the specialized war activities of many men, and the constant changing of jobs of those who were in industry. This impetus has not slackened

since hostilities have ceased. During the war 75 per cent of the money expended for the Library War Service went to buy technical books because of the large demand for them. To-day many workmen are training themselves at home to be fit for a higher position, a position that requires a man with training. During the year an endeavor was made to buy certain technical books for certain communities because those communities contained certain industries. This specialization was found to be of great value, especially where the library was comparatively small.

Another advance among libraries during the year was the increased number of high school libraries established. An effort is being made to introduce the high school student to the joys and advantages of books. The pupils have responded enthusiastically, so that more and more high schools are taking this up. In some of them, reading rooms have been established with easy chairs where students may come after school hours.

War service still continues independently, for the most part, but it is hoped that the government will gradually take all this work over, or failing that, it will be dropped. The government has already taken over a good share of the work. It is interesting to note that one of the first things the League of Nations did was to establish a library in London.

Increased appropriations have been made in many of the States and cities for library work during the year. Georgia made its first appropriation of \$6000 this year. The salaries of the library employees have been increased in all of the big cities, ranging from 5 per cent to 20 per cent during the year, but these employees are still poorly paid.

The Fifth International Conference of Bibliography and Documentation was held under the auspices of the International Institute of Bibliography at Brussels, September 7th to 20th. France, Switzerland, Holland, Italy, Poland, Spain, Luxembourg, Czechoslovakia, and Belgium were represented. The United States was too far away to send delegates, and Great Britain held her own Annual Meeting at the same time. Enlargement plans were made, among which were the following: To establish a national central library of native authors in each country, similar to the Library of Congress in this country; to establish a national catalogue of all the books in all the libraries in a given country; to establish in different countries, different international departments according to subjects where a complete work catalogue would be available; to urge each country with a central library of native authors, to make résumés of all the books in the library to be used for reference; to organize exchanges between different countries, and also loans of books; and in general to further organization and cooperation throughout the world.

The Forty-Third Annual Meeting of the Library Association of England was held in September. Library progress in the British Isles is greatly hampered by lack of funds. This was considered very serious.

LIBYA. An Italian colony on the north coast of Africa, comprising the two provinces of Tripolitana and Cyrenaica, lying between Tunis on the west and Egypt on the east. Area, estimated at 405,800 square miles; population, Aug. 3, 1911, 523,176 natives, but later estimates placed it higher. The capital of Tripolitana is Tripoli with 73,000 inhabitants and of Cyrenaica, Benghazi with 35,000. According to a British authority, the imports in 1918 were £3,939,402 and the exports £300,309. The revenue for 1919-20 was 158,510,910 lire which balanced the expenditure. Governor of Tripolitana at the beginning of 1920, V. Menzinger; governor of Cyrenaica, G. De Martino.

LICENSING ENGINEERS. See **ENGINEERING.**

LIDDELL, ADOLPHUS GEORGE CHARLES. British official, well known for his reminiscences of prominent persons of his day, died in London, August. He was born June 29, 1846, educated at Eton and Oxford, and was admitted to the bar, but soon left the legal profession in order to serve as secretary on Royal Commissions and in other government positions. He was private secretary to the Lord Chancellor from 1909 to 1915. He is best known for his reminiscences, *Notes From the Life of an Ordinary Mortal* (1911) in which he records anecdotes and impressions of a great number of British celebrities.

LIESEGANG, ADOLF. American orchestral conductor and teacher, died in Cleveland, June 8. He was born in Germany in 1850. He came to America in 1893 as conductor at the Chicago World's Fair. Then he was conductor for the Savage Opera Company for 10 years, finally settling in Cleveland as teacher.

LIFE INSURANCE. See **INSURANCE.**

LIGHTHOUSES. The United States Lighthouse Service is the most extensive lighthouse organization in the world, being charged with the lighting and marking of all coast, lakes and navigable rivers under the jurisdiction of the United States excepting the Philippine Islands and Panama. Its responsibility covers 49,000 statute miles of coast line and river channels, and beyond the borders of the United States extends to the Virgin Islands, Porto Rico, islands in the Caribbean Sea, Alaska, the Hawaiian Islands, Guam and Samoa. The Commissioner of Lighthouses in his Annual Report for the fiscal year 1919-1920 stated that the number of aids to navigation, including lighthouses, lightships, buoys, and beacons, maintained by the United States Lighthouse Service on June 30, 1920 was 16,324, there having been an increase of 256 during the year. In Alaska 60 additional aids were established during the year, making the total there 535, of which 206 were lighted, but the great extent of the Alaska coasts was still quite inadequately marked.

[The accompanying table gives a summary of the aids to navigation under each class established and discontinued during the fiscal year, and also the net increase and the number in commission at the end of the fiscal years 1919 and 1920:

Class	Established	1920		Total, June 30— 1919	1920
		Discontinued	Increase		
Lighted aids:					
Lights (other than minor lights).....	82	14	68	1,768	1,836
Minor lights	125	136	11	3,129	3,118
Lightvessel stations.....	...	1	1	50	49
Gas buoys.....	60	32	28	554	582

Class	1920			Total, June 30—	
	Established	Discontinued	Increase	1919 ¹	1920
Float lights.....	19	12	7	162	169
Total.....	286	195	91	5,663	5,754
Unlighted aids:					
Fog signals.....	5	3	2	534	536
Submarine signals.....	1	1	² 1	49	48
Whistling buoys, unlighted.....	2	3	² 1	79	78
Bell buoys, unlighted.....	5	7	² 2	245	243
Other buoys.....	328	183	145	7,050	7,195
Day beacons.....	62	40	22	2,448	2,470
Total.....	402	237	165	10,405	10,570
Grand total.....	688	432	256	16,068	16,324

¹ Differences from statistics published in 1919 report are due to minor discrepancies in previous count.

² Decrease.

The commissioner of Lighthouses also presented in his report an interesting summary of the progress of the United States Lighthouse Service in the ten years 1910 to 1920. In this period there was a net increase of 4611 in the total number of aids to navigation, the number of gas buoys increased 2½ times and the number of lighthouses equipped with brilliant oil vapor lamps increased four times. The number of automatic gas lights ashore increased nearly seven times, effecting an important economy in the cost of attendance. Radio had been placed on more than half of the tenders and the light vessels, and telephone communication had been extended to a large number of light stations. During this period also many measures had been put into effect for the benefit of the personnel, including a retirement system for the lightkeepers and others of the field force. A large proportion of the Lighthouse Service, including 50 vessels and 1132 persons, were transferred by the President to the Navy Department during the World War, and the whole organization cooperated actively with the military services. Statistics as to increase in total number, in improved types, and in aids in Alaska in the 10 years period are given herewith:

fiscal year were range lights for the newly dredged Chester and Marcus Hook Channels in the Delaware River, a light and fog signal at Manitowoc Breakwater, Wis., a light and fog signal near Cape Charles City, Va., and a light tower at Huron Harbor, Ohio. The improvement of the lighting of Ambrose Channel, New York Harbor, by the use of modern acetylene buoys was completed during the year. Important improvement works were in progress on the St. Johns River, Fla., the Mississippi River, below New Orleans, the St. Marys River, Mich, Keweenaw Waterway, Lake Superior, Conneaut Harbor, Ohio, two light stations in Porto Rico, and two stations on the Florida Reefs.

Progress was made in the development of radio fog signals at lighthouses and the tests made give indication of success in what will doubtless be an important addition to the safeguarding of navigation through radio fog signals from lighthouses.

Congress on June 5, 1920 authorized \$5,000,000 for a building programme to replace vessels of the Lighthouse Service which have been lost or worn out in service or which will soon have to be condemned. Appropriation of funds for this purpose was urgently needed, as well as

Class	July 1, 1910	June 30, 1920	Increase in 10 years
Aids to navigation, total number.....	11,713	16,324	4,611
Gas buoys.....	225	582	357
Lighthouses equipped with oil vapor lamps.....	80	320	240
Lights changed from fixed to flashing.....	334
Fog signals (including submarine bells, but not buoys).....	540	584	44
Whistling and bell buoys.....	303	522	219
Alaska, total number of aids.....	160	535	375
Alaska, total number of lights.....	37	196	159

The increases given are net increases, the total number of new aids established having actually been 9366 in the 10 years. The total number of light-vessel stations had diminished from 54 in 1910 to 49 in 1920, seven vessels having been replaced by other efficient aids, at a considerable saving, and two new vessel stations established.

The number of automatic gas lights on fixed structures was increased in the period 1910 to 1920 from 98 to 663. The important resulting economy in wages and other expenses is shown by the diminution in the same period in the number of light keepers from 1530 to 1471, and in the number of stations with resident keepers from about 780 to 721. Allowing for new stations with keepers which have been established, keepers were discontinued at about 80 stations because of the introduction of automatic apparatus.

The most important new light and fog-signal stations completed and established during the

for adding reasonable vessel equipment to meet the considerable increase of the previous 10 years in the aids to navigation maintained. Congress at its 1920 session also authorized \$875,500 for establishing or completing various special works for the Lighthouse Service, including new depots, new light stations, and improvements at existing stations and depots; funds for these works are yet to be appropriated. Congress also authorized the establishment of aids to navigation on the Yukon River and its tributaries.

It required 6,002 persons to operate the light-house system at the end of the fiscal year 1920. Incidental to their regular duties, many opportunities arise for rendering aid to those in distress, because of the location of the light stations and vessels; during this year 129 instances of saving of life and property, or rendering valuable aid, were reported.

LIME. About 3,350,000 short tons of lime, valued at \$33,518,000, was produced and sold

in the United States, including Porto Rico and Hawaii, in 1920, according to an estimate of the United States Geological Survey from figures furnished by the principal producers. The quantity reported was more than that produced in any year since 1917 and was 9 per cent more than that produced in 1919. It did not, however, quite equal the average pre-war production. The value of the lime produced in 1920 was considerably more than the value in any previous year. The average value per ton in 1920 was \$10, in 1919 it was \$9.50, and in 1918, \$8.36. Of the 42 States and Territories that produced lime in 1920, 32 increased the output and only seven decreased it as compared with 1919. Three States made about the same production as in 1919.

LIND, JENNY. See *MUSIC, Festivals.*

LINTILHAC, M. See *FRENCH LITERATURE.*

LIPPINCOTT, WILLIAM HENRY. Artist, died, March 17. He was born at Philadelphia, Dec. 6, 1849, and studied at the Philadelphia Academy of Fine Arts and at Paris, where he was a pupil of Bonnat. He exhibited regularly at the Paris Salon and American art exhibitions. For three years he was a professor of painting in the National Academy of Fine Arts in New York. His work includes portrait paintings, figures, and landscapes, and among his paintings may be mentioned the "Duck's Breakfast," "Un Jour de Congé," "Pink of Old Fashion," "Helena," "Infantry in Arms," "Love's Ambush," and "Pleasant Reflections."

LIQUORS. On January 5, the United States Supreme Court upheld validity of the Volstead Prohibition Enforcement act as constitutional. Meanwhile steps had been taken in those States which had referendum provisions to submit to popular vote the question of ratifying the Eighteenth Amendment, on the ground that they were a part of the law making body and that a law was not valid till after they had voted upon the proposition. In Ohio and Washington the courts had decided that the amendment should have been referred to the people; in Oregon the court decided that this was unnecessary. In certain States also it was held that the enforcement of the amendment interfered with the police power of the States. Several States authorized the manufacture and sale of liquors having more than the one half of one per cent allowed by the Volstead Act. On January 16, as provided by law, the Eighteenth Amendment went into effect. On June 1st the Supreme Court revised the decision of the Ohio supreme court and decided unanimously that ratification of the amendment by the State legislatures was final and could not be submitted to a referendum even in States having a referendum clause. It declared void the provision in the Ohio constitution requiring a referendum or the ratification of amendments. Other cases based on various contentions were decided by the Supreme Court, June 7, and in every respect the validity of the Eighteenth Amendment and the Enforcement Act was sustained. The court held that the words "concurrent power" in the amendment did not imply the reservation to the States of rights equal to those of the Federal government; that the amendment applied to liquors manufactured before as well after its adoption; that State laws authorizing light wines and beers were invalid;

and that Congress had the authority to define "intoxicating liquors."

During the last six months of the year the newspapers abounded in details of liquor raids by agents of enforcement and reported seizures aggregating many millions in value. Whiskey rings were frequently discovered. A great quantity of liquor fraudulently taken from bond was seized in transit. "Boot-legging" was a common practice in various localities throughout the year and the smuggling of liquor across the Canadian border continued to give trouble. The amount of liquor withdrawn from warehouses during the year was placed at 43,000,000 gallons as compared with 81,600,000 the year before. From January 16 to November 30, 24,469 persons were arrested.

As a result of the order of the Commissioner of Internal Revenue that all ships carrying intoxicating liquors must have cleared customs by midnight of January 16 and that otherwise spirits were forfeitable, the exports of domestic spirituous liquors during the first sixteen days of the year amounted to \$14,178,793. See *UNITED STATES, Prohibition Convention.*

LITERATURE. ENGLISH AND AMERICAN. The year 1920 maintained a constant and high grade output of literature in various fields in spite of the difficulty of procuring paper and the indifferent quality of it even when procured, in spite of labor complications and the inevitable high cost of books to publisher and to reader. Taking an average of the several departments which may legitimately be called literature, we are probably justified in ranking the output of 1920 higher than that of any year since 1914 at least. The tremendous stimulus of the war has yet to show itself. It may however be consoling to reflect that, if such striking reaction is to show itself, it may, by historical precedent, take 20 years to do it in. Nevertheless, the effect of the war is increasingly to be seen in a growth of international and inter-racial interests, in a changing attitude toward both racial and industrial enfranchisement, and in a more honest rendering of the facts of life in fiction.

The number of personal narratives of the war has dwindled rapidly. But the continued appearance of such stories proves that publishers have not dogmatically shut the door in their faces, and the quality of such as have appeared shows a proper discrimination between what was only temporary and what may have permanent value. Outside of larger general histories of the struggle, the books of 1920 which dealt with the war were for the most part more intimate personal accounts or documents furnished by those in positions of authority, military or civil. Such records should have permanent historical value. For the most part, however, discussions of the war and its immediate effects have been displaced by inquiries of a wider scope and calmer judgment into problems of history—not forgetting Irish national aspirations—political science, particularly on its international side, economics, as represented largely in contemporary industrial problems, and sociology, especially as it concerns the applied phases of labor and religion. It is significant, also, that philosophy and religion are finding more in common, as evidenced by the fact that the more fruitful studies of the year have been in the philosophical and psychological phases of religion.

It was only natural that increasing facilities

for travel should increase the narratives of travel and out-door life, and the charm of the South Seas has been particularly potent over both publishers and readers this year. Books of essays have grown in number and quality, which means that many skillful pens are returning to their earlier loves. Biography for the year shows many titles, though little of unusual interest, unless our palates crave the spice of Margot Asquith and Colonel Repington. The novel maintains its position in numbers—almost double that of other departments—and exhibits also a sound development, particularly in the United States. The large number of collected short stories indicates the increasing interest in that form of fiction. The fields of poetry and of drama both continue to manifest the quickening of emotional life which has, at least, been co-incident with the war.

FICTION. Fiction for the year is of particular interest by reason of the striking way in which American novelists have realized the power and meaning of commonplace American life and have successfully combined the two essential elements of faithful realism in detail and sympathy in delineation and interpretation. For the first time in American literary history a half dozen novels offer an unsentimentalized yet illuminating picture of American life as it is actually lived by the vast majority of Americans in the new and crude and blatant, yet vigorous and potential communities in the small towns. In comparison with this group of American novels, with their fidelity to fact, their freedom from sophistication, their broad human sympathy, the English contemporaries seem limited and a bit devitalized, in spite of the richness of their material and the deftness of their technique. The old struggle of the individual against the tribal pressure is being staged—not in the complicated and artificial life of the great cities—but upon the Main streets that make the real America.

Out of the novels of the year a certain number call for detailed mention. *Miss Lulu Bett*, by Zona Gale, is a compact bit of sympathetic realism, keen in analysis, warm in humor, and pungent in phrase. Quite as unexpectedly, Sinclair Lewis has drawn in *Main Street* an unsentimentalized, yet understanding picture of life as it is symbolized by the small town. Edith Wharton has done a skillful satire of sophisticated New York in the late 70's, in *The Age of Innocence*. Joseph Conrad makes *Rescue* a powerful and atmospheric study of conflicting types and civilizations in his own romantic East. In *The Captives* Hugh Walpole interests himself in youth dominated and warped by its elders in the name of various religious creeds. May Sinclair displays an increasingly effective technique in the service of psycho-analysis in *The Romantic*; and Clemence Dane tries an interesting piece of preciosity in *Legend*. *One After Another*, by Stacy Aumonier, is the simple, sympathetic telling of an ordinary life. In *Chancery*, by John Galsworthy, continues the dissection of the possessive instinct in the Forsyte family; and *Mainwaring*, by Maurice Hewlett, concerns an egotist and demagogue in England of the 80's. Hewlett also writes *The Light Heart*. Sarah G. Millin, in *The Dark River*, shows the relentless working out of character and destiny against a vivid South African setting. In *A Gift of the Dark* R. O. Prowse describes the struggle for sane living by a man and a woman condemned by disease. A. P.

Herbert does some delicate work in *The House by the River*; and an anonymous writer contributes a much-talked-of social comedy laid in a Swiss chalet and entitled *In the Mountains*.

Distinguished mention must also be made of *Spendthrift Town*, a vivid picture of New York, by one who signs himself Henry Hudson, Jr.; of William McFee's study of men, a girl, and the sea, in *Captain Macedoine's Daughter*; of Francis Scott Key Fitzgerald's *This Side of Paradise*, a college-and-after story which has captivated younger readers; of Rose Macaulay's *Potterism*, a satire upon sentimentalism et al., which has pleased many; of *The Old Man's Youth and the Young Man's Age*, another posthumous novel by William De Morgan; of Compton MacKenzie's *Vanity Girl*; of J. D. Beresford's *The Imperfect Mother*; of Olive Eleanor Douglas' charming *Penny Plain*; of G. A. Birmingham's *Inisheeny*; of Eden Phillpotts' *Orphan Dinah*; of D. H. Lawrence's *The Lost Girl*; of E. V. Lucas' novel-sketch-book *Verena in the Midst*; of Hope Merrick's posthumous *Mary-Girl*; of W. L. George's *Caliban*; of W. H. Hudson's *Dead Man's Plack*; of Ida A. R. Wylie's *Children of Storm*; of William Dean Howells' posthumous *The Vacation of the Kelwyns*; of Margaret Deland's *An Old Chester Secret*; of Patrick MacGill's *Maureen*; of Catherine Carswell's feminist *Open the Door*; and of Sir Harry Johnston's second literary continuation, *Mrs. Warren's Daughter*.

Perhaps not less deserving of serious attention are Anne Douglas Sedgwick's psychic story, *The Third Window*; Mary Borden's study of divorce, *The Romantic Woman*; Mary S. Watts' Mid-Western *The Noon-Mark*; Sherwood Anderson's story of town-building, *Poor White*; Floyd Dell's study of youth, *Moon-Calf*; Edith Somerville's and Violet Martin's *Mount Music*; Horace Annesley Vachel's *Whitewash*; Alan Monkhouse's *True Love*; J. C. Snaith's *Adventurous Lady*; E. F. Benson's satire "*Queen Lucia*" and *The Countess of Lowndes Square*; Forrest Reid's story of adolescence, *Pirates of Spring*; Francis Brett Young and E. Brett Young's South Wales' story, *Undergrowth*; Gerald O'Donovan's *Conquest*; Carrol O'Riordan's *Adam of Dublin*; Mrs. E. B. C. Jones' *Quiet Interior*; Bohun Lynch's *Forgotten Realms*; William Caine's *The Strangeness of Noel Carton*; Alexander MacFarlan's *The Inscrutable Lovers*; Stephen McKenna's *Lady Lilith*; Brinsley MacNamara's grim *Clanking Chains*; Sir Philip Gibbs' post-war study, *Wounded Souls*; Margaret and Henry de Vere Stackpoole's *The Man Who Found Himself*; and Elizabeth S. Holding's rather pagan *Invincible Minnie*.

Fiction for the year was further represented by the following: *Basil Everyman*, by Elsie Singmaster; *Marbeck Inn*, by Harold Brighouse; *The Happy Woman*, by Maurice Wevl; *Mary Wollaston*, by Henry Kitchell Webster; *The Prairie Mother*, by Arthur Stringer; *I've Married Marjorie*, by Margaret Widdemer; *The Other Woman*, a case of dual personality, by Norah Davis; *A World to Mend*, a tract by Margaret Sherwood; *Growing Up and Men of Steel*, by Mary Heaton Vorse; *The Green Bay Tree*, a political study by Winston Churchill; *Painted Veils*, by James G. Huneker; the anonymous *Book of Marjorie*; *Free Soil*, a Kansas novel, by Margaret Lynn; *Happily Married*, by Corra Harris; *Double Life*, by Grant Richards; *Harvest*, the last book by Mrs. Humphrey Ward;

Tension, by E. M. Delafield; *The Green God's Pavilion*, a vivid story of the Philippines, by Mabel W. Martin. Most of these novels attempt a realistic picture of life or concern themselves with some social or psychic problem. Particularly concerned with problems are Ernest Poole's industrial tract, *Blind*; Andreas Latzko's pacifist *The Judgment of Peace*; Mary White Ovington's negro study, *The Shadow*; W. B. Maxwell's prodigious *A Remedy Against Sin*; Alice Brown's antipsiritualistic *The Wind Between the Worlds*; Clement Wood's *Mountain*; Adriana Spadoni's *The Swing of the Pendulum*; Basil King's *The Thread of Flame*; E. L. Grant Watson's *Deliverance*; and Rupert Hughes' *What's the World Coming To?*

Of somewhat less serious intent, though touching from time to time on the popular theme of spiritualism, are: St. John Edvine's *Foolish Lovers*; George Woden's *Our Peter*; Edgar Lee Master's *Mitch Miller*; Jessie Champion's humorous *Sunshine in Underwood*; J. E. Buckrose's *Young Hearts*; Helen R. Martin's *The Schoolmaster of Hesseville*; Douglas Goldring's *The Fortune*; Lee Wilson Dodd's *Book of Susan*; Edward M. Forster's *Where Angels Fear to Tread*; Francis W. Bain's *The Substance of a Dream*; Arthur Bullard's *The Stranger*; Gilbert Frankau's *Peter Jameson*; Irving Bachelor's *Prodigal Village*; Norma O. Lorimer's *With Other Eyes*; Eric Leadbitter's *Road to Nowhere*; Anthony Hope's *Lucinda*; Beatrice Mantle's *In the House of Another*; Almer Newton's *A Jewel in the Sand*; Mrs. Henry Dudeney's *Manhood End*; Louis Joseph Vance's *Dark Mirror*; Mary Johnston's *Sweet Rocket*; and *Just Open* by W. Pett Ridge. Other novels which must be mentioned are: *A Tale that is Told*, by Frederick Niven; *The Amorous Cheat*, by Basil Cheighton; *The Granite Hills*, by C. E. Weanley; *The Widow's Cruise*, by Hamilton Fyfe; *They Went*, by Norman Douglas; *Egan*, by Holworthy Hall; *John Seneschal's Margaret*, by Agnes and Egerton Castle; *A Poor Wise Man*, by Mary Roberts Rinehart; *Colour Blind*, by S. P. B. Mais; *Love of Brothers*, by Katherine Hinkson; *The Chinese Coat*, by Jennette Barbour Lee; *The Lost Fortnight*, by Mary A. Hamilton; and *The Headland*, by C. A. Dawson-Scott. In addition to these Edward Shanks writes *The People of the Ruins*; Christopher Stone, *The Valley of Indecision*; Joseph C. Lincoln sticks to Cape Cod in *The Portygee*; Cynthia Stockley returns again to the eerie in *Pink Gods and Blue Demons*; George Barr McCutcheon rebuilds society in *West Wind Drift*; Hal George Everts tells, in *Cross Pull*, an excellent dog story; and Robert W. Chambers and Harold Bell Wright, the ever popular, for opposite reasons, contribute respectively *The Slayer of Souls* and *The Re-creation of Brian Kent*—titles which it is interesting to compare.

New York's ghetto is represented by Bertha Pearl's *Sarah and Her Daughter*; Marie Ganz and Nat. J. Ferber's *Rebels*; and John Cournos' *Mask*. Historical novelists, it seems, have run to cover, leaving only: Charles S. Brooks, with *Luca Sarto*, a French and Italian adventure of around 1470; Justin Huntly McCarthy, with *Henry Elizabeth*, a narrative of sixteenth century England; and John Fox's last, *Erskine Dale*, *Pioneer*, a Revolutionary story.

That the publishers, if not the readers, are still pleased with thrills might be gathered from the number and excellence of the year's output of

adventure, crime, and mystery. Different spines are affected in different ways, but the following have thrilled many. Of adventure stories: Jack London's further legacy, *Hearts of Three*; Henry M. Rideout's *Foot-Path-Way*; Ralph D. Paine's *Ships Across the Sea*; Zane Grey's *Man of the Forest*; William P. White's *Paradise Bend*; James Oliver Curwood's *Valley of Silent Men*; Edwin Balmer's *Resurrection Rock*; James B. Connolly's *Hiker Joy*; Bennet Copplestone's *The Last of the Grenvilles*; Jeffery Farnol's *Black Bartlemy's Treasure*; Henry C. Rowland's *The Peddler*; George Kibbe Turner's *Hager's Hoard*; Talbot Mundy's *Told in the East*; and L. Frank Tooker's *Middle Passage*. There is also Ridgwell Cullum's *The Heart of Unaga*; Henry de Vere Stackpoole's *A Man of the Islands*; and once more our old friend Rider Haggard in *The Ancient Allan*. Crime, mystery, and the detective art exhibit themselves in *The Flying Bo'sun*, by Arthur Mason; *Malcolm Sage, Detective*, by Herbert Jenkins; *Samuel Lyle, Criminologist*, by Arthur Crabb; *The Cask*, by F. W. Crofts; *She Was Helena Cass*, by Lawrence Rising; *The Green Eyes of Bast*, by Sax Rohmer; *No Olue*, by John Hay, Jr.; *Vanishing Men*, by Richard Washburn Childs; *A Hand in the Dark*, by Arthur J. Rees; *The Paradise Mystery*, by James S. Fletcher; *The Man with Three Names*, by Harold MacGrath; *Gray Dusk*, by Octavus Roy Cohen; *From Now On and White Moll*, by Frank L. Packard; *The Fortieth Door*, by Mary Bradley; *The Skeleton King*, by Bernard Capes; and *Lotus Salad*, a South American tale by Mildred Cram. An inspired list of titles these, certainly. And what is more, Susan C. Jones writes *The La Chance Mine Mystery*; Harold Lamb, *Marching Sands*; Louis Tracy, *The Strange Case of Mortimer Fenley*; Maurice Leblanc, *The Secret of Sarek*; and Beatrice Ethel Grimshaw caps the list, perhaps, with *The Terrible Island*.

The year 1920 saw published in English, among many other titles, Martin Anderson Nexö's *Bitte, Girl Alive*; Johan Bojer's *Treacherous Ground*; Madelaine Marx's *Woman*; Louis Couperus' *The Tour* and *The Inevitable*; Jens Peter Jacobsen's *Niels Lyhne*; Pierre Benoit's *Atlantida*; three stories from the Spanish of Ramón Pérez de Ayalá; Shalom Aleichem's *Jewish Children*; Clemenceau's *The Surprises of Life*; Anatole France's *Little Pierre*; Garca Aranha's Brazilian novel *Canaan*; Rufino Blanco Fombona's Venezuelan *Man of Gold*; Dostoevskii's *Honest Thief*; Anton Chekhov's *Chorus Girl*; Wladslaw S. Reymont's *The Comédienne*; Knut Hamsun's *Hunger*; Sofja R. Nalkowska's *Kobiety*; and Blasco Ibanez's *Woman Triumphant* and *Enemies of Women*. There were also a half dozen books of short stories from as many foreign countries.

Volumes of short stories increased in number for the year 1920, the majority of the contributors being, as heretofore, Americans. There were Willa Seibert Cather's *Youth* and *The Bright Medusa*; Alice Hegan and Cale Young Rice's *Turn About Tales*; Mary Roberts Rinehart's *Affinities*; Francis Scott Key Fitzgerald's *Flappers and Philosophers*; Will Levington Comfort and Zamin Dost's *Son of Power*; Stewart Edward White's *Killer*; Henry James' posthumously issued *Master Eustace*, and four others: O. Henriana, a further collection of stories; Alice Brown's *Homespun and Gold*; Margaret Widdemer's *The Boardwalk*; Irvin Cobb's *Abandoned Farmers*

and *From Place to Place*; Melville Davisson Post's *The Mystery at the Blue Villa* and *The Sleuth of St. James Square*; Roy Octavus Cohen's *Come Seven*; Mrs. George Madden Martin's *Children in the Mist*; Mary Stewart Cutting's *Some of Us are Married*; Edna Ferber's *Half Portions*; and Stephen Leacock's second series of nonsense novels, *Winsome Winnie*. The best English collections were *My Neighbors* by Caradoc Evans; *Rort Allington Stories* by the late Robert E. Vernède; *Eve of Pasqua* by Richard Dehan; and *Tatterdemalion and Awakening* by John Galsworthy. There were also Anne Douglas Sedgwick's *Christmas Roses*; Ethel Dell's *Tidal Wave*; George A. Chamberlain's *Pigs to Market*; Arthur B. Baxter's *Blower of Bubbles*; Aldous L. Huxley's *Limbo*; Frank Linderman's sketches, *On a Passing Frontier*; Anzia Yezierska's ghetto stories, *Hungry Hearts*; Ida A. R. Wylie's *Holy Fire*; Seumas O'Kelly's fanciful *Golden Barque*; Seumas MacManus' *Top o' the Morning*; F. W. Moorman's *More Tales of the Ridings*; Rupert Hughes' *Momma and Other Unimportant People*; Rider Haggard's *Smith and the Pharaohs*; George Ade's *Hand-Made Fables*; and *The New Decameron, Second Day*. As for anthologies Edward J. O'Brien edits *The Best Short Stories of 1919*; Joseph L. French, *Masterpieces of Mystery and The Best Psychic Stories*; J. W. McSpadden, *Famous Detective Stories and Famous Psychic Stories*; William Dean Howells collected, before his death, a conservative *Great Modern American Stories*; Benjamin A. Heydrick issues a collection called *Americans All*; and there is an *O. Henry Memorial Award* volume containing 15 prize stories of 1919.

POETRY. The output of poetry for the year has been considerable, but there has been little of signal value. Of first importance undoubtedly are John Masfield's two contributions: *Enslaved*, a volume of poems showing a fine mellowing of the poet's soul, and *Right Royal*, an account of a steeple-chase; Edwin Arlington Robinson's *Launcelot and The Three Taverns*; Sara Teasdale's delicate *Flame and Shadow*; Winifred Welles' *The Hesitant Heart*; Gladys Cromwell's posthumous *Poems*; and William A. Percy's *In April Once*. With these must be bracketed Carl Sandburg's incisive *Smoke and Steel*, Vachel Lindsay's less effective *Golden Whales of California* and *The Golden Book of Springfield*; Edgar Lee Masters' Browningsque *Doomsday Book*; Conrad Aiken's *The House of Dust*; Stephen Vincent Benét's *Heavens and Earth*; Robert Underwood Johnson's *Collected Poems*; William Rose Benét's *Perpetual Light and Moons of Grandeur*; Francis Carlin's *The Cairn of Stars*; and Thomas Burke's *Song Book of Quong Lee of Limehouse*. There are also *Two Foemen*, by H. E. Palmer; *Ships and Folks*, by C. Fox Smith; *The Passenger*, by Helen Dircks; *Blue Smoke*, by Mrs. Karle Baker; *Poems*, by Walter de la Mare; *Birds*, by J. C. Squire; *Roamer*, by George E. Woodberry; *As the Wind Blows*, by Eden Phillpotts; *Neighbors*, by Wilfred Wilson Gibson; *The Happy Bride*, by Fryniwyd Tennyson Jesse; *Songs from the Journey*, by Wilton Agnew Barrett; and *Songs of Three Friends*, by John G. Neihardt.

It is necessary to chronicle also Alfred Noyes' *The Elfyn Artist*; Robert Bridges' *October*; Grace W. Conkling's *Wilderness Songs*; Robert Graves' *Country Sentiment*; John Chipman Farrar's *Forgotten Shrines*; Robert H. Hillyer's *Alchemy*;

Howard S. Buck's *Tempering*; D. H. Lawrence's *New Poems*; Max Bodenheimer's *Advice*; Hilda Conkling's quaint and delightful *Poems by a Little Girl*; *Flowers in the Grass*, by Maurice Hewlett; *The New Adam*, by Lewis Untermeyer; *Many, Many Moons*, by Lew R. Sarett; and *Junk-Man*, by Richard le Gallienne. In addition Harry Kemp published *Chanteys and Other Ballads*; Arthur Guiterman *Ballads of Old New York* and *Chips of Jade*, being renderings from the Chinese. Arthur Waley contributed *Japanese Poetry—The Uta*; Yone Noguchi *Japanese Hokkus*; and Witter Bynner *The Canticle of Pan*.

The position held by poetry to-day is indicated in part by the number of anthologies. These include: Louis Untermeyer's *Modern British Poetry* and *Modern American Poetry*; L. D. Walter's *Anthology of Recent Poetry* (British); W. K. Seymour's *Miscellany of British Poetry*; Margaret Widdemer's *The Haunted Hour*, a collection of ghost poems; William Stanley Braithwaite's *Anthology of Magazine Verse for 1919* and *Book of Modern British Verse*; Henry T. Schneitkind's *Poets of the Future*, a collection of college verse; *A Miscellany of American Poetry*; *Contemporary Verse Anthology*; and Harold J. Massingham's *Treasury of 17th Century Verse*.

DRAMA. Of books concerned with the contemporary drama the year 1920 shows several which may be listed here: Frank W. Chandler's *Contemporary Drama of France*; Lander MacClintock's *Contemporary Drama of Italy*; Oliver M. Saylor's *Russian Theater Under the Revolution*; Clayton Hamilton's *Seen On the Stage*; Roy Mitchell's *Shakespeare for Community Players*; Frederick Warde's *Fifty Years of Make-Believe*; and Agnes Platt's *Practical Hints on Playwriting*.

Professor George P. Baker, of Harvard, edits *Modern American Plays*, *Plays of the Harvard Dramatic Club*, and *The 47 Workshop*, second series. Other collections are: Stuart Walker's third volume of *Portmanteau Adaptations*; Samuel A. Eliot's second volume of *Little Theater Classics*; Pierre Loving and Frank Shay's *Fifty Contemporary One Act Plays*; and Burn Mantle's combination of digest and excerpt, *The Best Plays of 1919-20*.

Individual playwrights are pretty effectively represented by *A Kiss for Cinderella*, by James M. Barrie; *Pawns*, by John Drinkwater; *Back to Methuselah*, by G. B. Shaw; *Plays*, 4th series, by John Galsworthy; *Sophie*, by Philip Moeller; *The Dragon*, by Lady Gregory; *Sacred and Profane Love* and also *Body and Soul*, by Arnold Bennett; and *Beyond the Horizon* and also *Gold: The Straw*, by Eugene O'Neill. Significant also are D. H. Lawrence's *Touch and Go* and the *Widowing of Mrs. Holroyd*; Arthur Symonds' *Cesare Borgia*; Vernon Lee's *Satan the Waster*; Leslie Noel's *Three Plays*; Charles Rann Kennedy's *Army with Banners*; James Forbes' *The Famous Mrs. Fair*; Percy W. Mackaye's *Rip Van Winkle*, a folk-opera; Thacher H. Guild's posthumously published *Power of a God*, and *Other Plays*; George Middleton's *Masks*, six one act plays, and George Middleton and Guy Bolton's *The Light of the World*; Susan Glaspell's *Plays*; J. Hartley Manners' *Happiness and The Woeing of Eve*; and Edna Ferber and Newman Levy's farce, *\$1200 a Year*. In addition to these may be mentioned among a number of plays translated

into English: Maxim Gorky's *Night's Lodging: Ten Plays* by David Pinsky; and *Three Plays of the Argentine* translated by Jacob S. Farssett.

ESSAYS Among a considerable number of significant essays must be mentioned: *Sir Roger de Coverley and other Literary Pieces*, by James George Frazer; *Roman Essays and Interpretations*, by William W. Fowler; *Collected Essays and Reviews*, by William James; *Essays Speculative and Political*, by Arthur J. Balfour; *Modes and Morals*, by Katharine Fullerton Gerould; *Bedouins*, by James Gibbons Huneker; *Supers and Supermen*, by Philip Guedella. Many of this year's essays are concerned with phases of American life. Among these are: *Darkwater*, studies in negro life by W. E. B. DuBois; *Character and Opinion in the United States*, by George Santayana; *The American Credo*, a satire by George Jean Nathan and H. L. Mencken; *Prejudices, Second Series*, by H. L. Mencken; *Everyday Americans*, by Henry Seidel Canby; *Hey-Rub-a-Dub-Dub*, by Theodore Dreiser; *Democracy and Ideals*, by John Erskine; *People of Destiny*, by Sir Philip Gibbs; and *In the Days of the Pilgrim Fathers*, by Mary C. Crawford.

Other noteworthy volumes of essays are: Sir William Osler's posthumous work, *Old Humanities and the New Science*; George E. Woodberry's *Collected Essays*; Arnold Bennett's *Our Women*; G. K. Chesterton's *The Superstition of Divorce*, *The New Jerusalem*, and *The Uses of Diversity*; Maurice Hewlett's *In a Green Shade*; E. V. Lucas' *Specially Selected*, and *Adventures and Enthusiasms*; Walt Whitman's *Gathering of the Forces*, a collection of miscellaneous writings; and William Dean Howells, last work, *Essays*. There are also: Gilbert Cannan's *The Release of the Soul*; G. Lowes Dickinson's *The Magic Flute: a Fantasia*; A. A. Milne's *If I May*; Edward, Viscount Grey's *Recreation*; Christopher Morley's *Pipefuls*; Max Beerbohm's *And Even Now*; Charles Whibley's *Literary Studies*; Agnes Repplier's *Points of Friction*; John Stuart Mackenzie's *Arrows of Desire*; Carl Van Vechten's *In the Garret*; and Paul Rosenfeld's *Musical Portraits*.

CRITICISM AND THE HISTORY OF LITERATURE. Significant among the season's books on literary criticism in its various phases are the following: George Moore's *Avowals*; Van Wyck Brooks' *The Ordeal of Mark Twain*; Douglas Goldring's *Reputations*; *Essays in Criticism*; A. Clutton-Brock's *Essays on Books*; Charles M. Gayley and Benjamin P. Kurtz' *Methods and Materials of Literary Criticism*; "Solomon Eagle's" (J. C. Squire's) *Books in General, Second Series*; W. H. Mallock's *Memoirs of Life and Literature*; J. Middleton Murry's *Aspects of Literature*; Robert Lynd's *The Art of Letters*; Walter de la Mare's *Rupert Brooke and the Intellectual Imagination*; John Erskine's *The Kinds of Poetry*; Bliss Perry's *A Study of Poetry*; Conrad Aiken's *Scepticisms*; *Notes on Contemporary Poetry*; Mary C. Sturgeon's *Studies of Contemporary Poets*; James Russell Lowell's *The Function of the Poet, and other Essays*, for the first time collected in book form; Percy Holmes Boynton's *A History of American Literature*; Ashley H. Thorndike's *Literature in a Changing Age*; Blanche Colton Williams' *Our Short Story Writers*; George Henry Payne's *A History of Journalism in the United States*; Henry A. Beers' *The Connecticut Wits, and Other Essays*; Barrett

Wendell's *The Traditions of European Literature*; Isaac Goldberg's *Studies in Spanish-American Literature*; Mary Duclaux' *Twentieth Century French Writers*; Albert Schinz' *French Literature of the Great War*; Moissaye Joalph Olgin's *A Guide to Russian Literature (1820-1917)*; Joseph Collins' *Idling in Italy*; Thomas Dwight Goodall's *Athenian Tragedy*; Flora Ross Amos' *Early Theories of Translation*; William Roscoe Thayer's *The Art of Biography*; Henry C. K. Wyld's *Modern Colloquial English*; George C. D. Odell's *Shakespeare from Betterton to Irving*; Joseph Quincy Adams' *Shakespearean Playhouses*; Mark van Doren's *John Dryden*; James H. Robinson's *The Battle of the Books*; A. H. Cruickshank's *Philip Massinger*; Oscar W. Firkins' *Jane Austen*; Augustus Ralli's *Guide to Carlyle*; J. H. Whitehouse's *Ruskin the Prophet*; J. W. Graham's *The Harvest of Ruskin*; Francis C. Holland's *Seneca*; Watson Nicholson's *The Historical Sources of DeFoe's Journal of the Plague Year*; Myra Reynold's *The Learned Lady in England, 1650-1760*; and Frances Theresa Russell's *Satire in the Victorian Novel*.

BIOGRAPHY AND AUTOBIOGRAPHY. Among the important biographies and autobiographies are: the last two volumes of *The Life of Benjamin Disraeli*, by George E. Buckle; *Letters to X*, by John Harold Massingham; *Lord Grey of the Reform Bill*, by George Macauley Trevelyan; *The Autobiography of Margot Asquith*; *Mr. Balfour*, by E. T. Raymond; *Steeplejack*, by James Gibbons Huneker; *Lincoln, the World Emancipator*, by John Drinkwater; *Theodore Roosevelt and His Time*, by Joseph B. Bishop; *Talks with T. R.*, by John J. Leary; *The Letters of Henry James*; *The Letters of William James*, edited by his son, Henry James; *The Autobiography of Andrew Carnegie*; *My Quarter-Century in American Politics*, by Champ Clark; *The Life of Joseph Hodges Choate*, by Edward S. Martin; *The Pastor of the Pilgrims*; *a Biography of John Robinson*, by Walter H. Burgess; *A Cycle of Adams Letters*, by Charles Francis, Charles Francis, Jr., and Henry Adams; *Letters to a Niece and Prayer to the Virgin of Chartres*, by Henry Adams; *The Americanization of Edward Bok*, by Edward W. Bok; *The Story of Opal*, by Opal Whiteley; *The Youth of James Whitcomb Riley*, by Marcus Dickey; *Memoirs of Buffalo Bill*, by Louisa Cody; *Autobiography of Buffalo Bill*, by William F. Cody. There were also: the *Life of Thomas Coutts, Banker*, by Ernest H. Coleridge; *Life of Lord Kitchener*, by Sir George C. A. Arthur; *Francis and Riverdale Grenfell*, by John Buchan; *Memoirs from My Life*, by Gen. Paul von Hindenburg; *Venizelos*, by Herbert Adams Gibbons; *Villiers*; *His Five Decades of Adventure*, a fascinating account by Frederick Villiers; *Memoirs of the Empress Eugenie*, by Comte Fleury; *Robert Owen*, by Joseph McCabe; *Mazzini's Letters to an English Family*, edited by E. F. Richards; *Mrs. Gladstone*, by Mary Gladstone Drew; *Reminiscences of Tolstoy*, by Maxim Gorky; *Letters of Anton Chekhov to His Family and Friends*, translated by Mrs. Garnett. In addition to these appeared: *George Meredith*, by S. M. Ellis; *Memoirs of George Meredith*, by Alice May Butcher; *Our Family Affairs*, by E. F. Benson; *Personal Aspects of Jane Austen*, by M. Austen-Leigh; *Herbert Beerbohm Tree*, edited by Max Beerbohm; *A Last Diary*, by W. N. P. Barbellion; *Some Contemporary Novelists (Women)*, by R. B. Johnson; *Life of William Booth*, by

Harold Begbie; *Finding a Way*, by Robert R. Moton; *Day Before Yesterday; Reminiscences of a Varied Life*, by Maitland Armstrong; *A Quaker Singer's Recollections*, by David Bispham; *Recollections*, by Georgianna Adelaide Peel; *The Reign of Patti*, by Herman Klein; *Frederick Locker-Lampson*, by Augustine Birrell; *Letters of a Japanese Princess*, by Raden Kartini; *Looking Back*, by Sir Seymour John Fortescue; *Wild Turkeys and Tallow Candles*, by Ellen Hayes; *From Friend to Friend*, a volume of recollections by Thackeray's daughter, Anne Isabella Ritchie; and, finally, *Memoirs*, by Lord Redesdale.

FINE ARTS. Noteworthy among books dealing with the Fine Arts are: Jay Hambridge's *Dynamic Symmetry: The Greek Vase*; Bernard van Dieren's *Epstein and His Work*; Lorado Taft's *Modern Tendencies in Sculpture*; Joseph Pennell's *The Graphic Arts*; Martin Birnbaum's *Introductions: Painters, Sculptors, and Graphic Artists*; Samuel Colman and C. A. Coan's *Proportional Form*; G. T. Rivoira's *Moslem Architecture*; Winefride de L'Hopital's *Westminster Cathedral and Its Architect*; *Modern Movements in Painting*, by Charles Marriatt; *Japanese Color Prints*, by Basil Stewart; *Chinese Painters*, by Raphael Petrucci; *Principles of Aesthetics*, by Henry D. Parker; and *The American Expeditionary Forces in Action*, drawings by Capt. George Harding.

PHILOSOPHY, PSYCHOLOGY, AND THE SCIENCES. Among the significant books on philosophy, psychology, and science are: Henri Louis Bergson's *Mind-Energy*; George Wilhelm Friedrich Hegel's *The Philosophy of Fine Art*, translated by F. P. B. Osmaiston; Josiah Royce's *Lectures on Modern Idealism*; G. Stanley Hall's *Morale*; Francis S. Marvin's *Recent Developments in European Thought*; C. A. Richardson's *Spiritual Pluralism and Recent Philosophy*; Reinhold Hoernle's *Studies in Contemporary Metaphysics*; John B. Bury's *The Idea of Progress*; John Cowper Powys' *The Complex Vision*; H. Wildon Carr's *The General Principle of Relativity*; Albert Einstein's *Relativity*; George Santayana's *Little Essays*, a compilation from Santayana's works by D. P. Smith; John M. Mecklin's *Introduction to Social Ethics*; John Theodore Merz' *A Fragment on the Human Mind*; William S. Walsh's *The Psychology of Dreams*; William Alanson White's *Thoughts of a Psychiatrist on the War and After*; W. R. Sorley's *The History of English Philosophy*; Frederick Soddy's *Science and Life*; and J. Arthur Thomson's *The System of Animate Nature*.

RELIGION. Significant among works on religion are: *Religious Consciousness*, by James B. Pratt; *The New Social Order*, by Harry F. Ward; *Pagan and Christian Creeds*, by Edward Carpenter; *Europe and the Faith*, by Hillaire Belloc; *Where Science and Religion Meet*, by William Scott Palmer; *Religion and the New Psychology*, by Walter T. Swisher; *Divine Personality and Human Life*, by Clement C. J. Webb; *Can the Church Survive the Changing Order*, by Albert Parker Fitch; *Education for Democracy*, by Henry F. Cope; *It's a Good Old World*, by Bruce Barton; *A Jewish View of Jesus*, by H. G. Enelow; *The Life and Letters of St. Paul*, by David Smith; *The Apocalypse of John*, by Isbon T. Beckwith; *St. Luke, The Man and His Work*, by Herbert MacLachlan; *The Book of Job*, by Morris Jastrow; *The Lollard Bible*, by Margaret Deanesley; *Spiritualism*; *A Popular History*

from 1847, by Joseph McCabe; *The Doughboy's Religion*, by Ben B. Lindsay and Harvey O'Higgins.

SOCIOLOGY AND EDUCATION. Of the books on sociology and education, the following are noteworthy: *The Principles of Sociology*, by Edward H. Ross; *Social Theory*, by George D. H. Cole; *What The Workers Want*, by Arthur H. Gleason; *The Casual Laborer*, by Carleton H. Parker; *The Intellectuals and the Wage Workers*, by Herbert Cory; *Common Sense and Labor*, by Samuel Crowther; *The New Industrial Unrest*, by Ray Stannard Baker; *Labor and the Common Welfare*, by Samuel Gompers; *Current Social and Industrial Forces*, edited by Lionel D. Edie; *Organized Labor in American History*, by Frank T. Carlton; *The Great Steel Strike and Its Lessons*, by William Z. Foster. There are also: *The Group Mind*, by William McDougall; *The Ground and Goal of Human Life*, by Charles G. Shaw; *Economic Liberty*, by Harold Cox; *Primitive Society*, by Robert H. Lowie; *Children of the Slaves*, by Stephen Graham; *The Rising Tide of Colour*, by Lothrop Stoddard; *Cause of World Unrest*, anonymous; *Human Costs of the War*, by Homer Folks; *Liberty and the News*, by Walter Lippmann; *Liberalism in America*, by Harold E. Stearns; *The Brass Check*, by Upton Sinclair; *Satanism and the World Order*, by Gilbert Murray; *The Unsolved Riddle of Social Justice*, by Stephen Leacock; *A Defence of Liberty*, by Oliver Brett; *The Place of Science in Modern Civilization, and other Essays*, by Thorstein B. Veblen; *The New Frontier*, by Guy Emerson; *Educational Sociology*, by W. E. Chancellor; *The Liberal College*, by Alexander Meiklejohn; *The College and the New America*, by Jay William Hudson; *The Human Factor in Education*, by James P. Munroe; *A Lover of the Chair*, by Sherlock B. Gass; and *Education During Adolescence*, by Ransom A. Mackie.

POLITICAL SCIENCE AND ECONOMICS. Among the more important books for the year on politics and economics may be listed: John Foster Bass' *The Peace Tangle*; G. Lowes Dickinson's *Causes of International War*; G. P. Gooch's *Nationalism*; C. F. G. Masterman's *The New Liberalism*; Charles G. Fenwick's *Political Systems in Transition*; Bertrand Russell's *The Practice and Theory of Bolshevism*; John Spargo's *Greatest Failure in All History and Russia as an American Problem*; R. W. Postgate's *The Bolshevik Theory*; Harry W. Laidler's *Socialism in Thought and Action*; J. Bruce Glaisier's *The Meaning of Socialism*; Sidney and Beatrice Webb's *A Constitution for the Socialist Commonwealth of Great Britain*; J. Ramsay MacDonald's *Parliament and Revolution*; J. H. Thomas' *When Labour Rules*; A. F. Pollard's *The Evolution of Parliament*; Charles Edward Russell's *The Story of the Non-Partisan League*; Herbert E. Gaston's *The Non-Partisan League*; G. H. D. Cole's *Guild Socialism Re-Stated*; L. S. Woolf's *Economic Imperialism*; and *Empire and Commerce in Africa: A Study in Economic Imperialism*; C. H. Douglas' *Economic Democracy*; Henry Adams' *The Degradation of the Democratic Dogma*; Elisha M. Friedman's *America and the New Era*, a symposium on social reconstruction; Herbert A. L. Fischer's *Studies in History and Politics*; *The Taint in Politics*, anonymous; R. L. Buell's *Contemporary French Politics*; A. M. Pooley's *Japan's Foreign Policies*; and W. W.

Willoughby's *Foreign Rights and Interests in China*.

HISTORY. Of the books of general history, the following are important: H. G. Wells' monumental and controversial autobiography entitled *The Outline of History*; Ramsay Muir's *A Short History of the British Commonwealth*, volume I; Viscount Haldane's *Before the War*, concerned with British attempts to avert the war; Abbott Payson Usher's *An Introduction to the Industrial History of England*; William T. Morgan's *English Political Parties and Leaders during the Reign of Queen Anne*; Walter G. Bell's *The Great Fire of London in 1666*; C. H. Lockitt's *The Relations of English and French Society, 1768-1793*. On Ireland: Robert Lynd's *Ireland a Free Nation*; Grenville H. J. Cole's *Ireland the Outpost*; and D. A. Chart's *The Economic History of Ireland*. There are also: Wallace E. Caldwell's *Hellenic Conception of Peace*; J. A. Farrer's *The War for Monarchy*; Janet Penrose Trevelyan's *A Short History of the Italian People*; Maurice G. Hindus' *The Russian Peasant and the Revolution*; Richard Dawson's *Red Terror and Green*; the Sinn Féin-Bolshevist Movement; Reginald C. F. Maugham's *The Republic of Liberia*. Americas are represented in: David Jayne Hill's *American World Policies*; Frederick J. Turner's *The Frontier in American History*; Archibald Henderson's *The Conquest of the Old Southwest*; Willis F. Johnson's *The History of Cuba*, five volumes; Blasco Ibanez' *Mexico in Revolution*; Edith O'Shaughnessy's *Intimate Pages of Mexican History*; Cunningham Graham's *A Brazilian Myatio*; and Joseph B. Lockey's *Pan-Americanism*. Asia appears in: William M. McGovern's *Modern Japan*; Frank Brinkley and Dairoku K. Kuchi's *History of the Japanese People*; Sih Gung Cheng's *Modern China*; Frederick A. McKenzie's *Korea's Fight for Freedom*; Morris Jastrow's *The Eastern Question and Its Solution*; and Kevork Astan's *Armenia and the Armenians*.

Of books relating to the war, the more noteworthy are: *The First World War, 1914-1918*, by Col. Charles & C. Repington; *A Brief History of the Great War*, by Carleton J. H. Hayes; *A Short History of the Great War*, by Albert F. Pollard; Volume V of *History of the World War*, by Frank Simonds; *History of the War*, by H. C. O'Neill; Sir Archibald Murray's *Despatches*; *The General Staff and Its Problems*, by General Ludendorff, translated from the German; *The German General Staff and Its Decisions*, by Gen. von Falkenhayn; *Letters from the Kaiser to the Czar*; *Naval Operations*, by Sir Julian Stafford Corbett; *The Victory at Sea*, by Rear-Admiral Sims; *The United States in the World War*, by John Bach McMaster; *My Three Years in America*, by Count von Bernstorff; *The Dardanelles*, by Charles Edward Callwell; *A Gallipoli Diary*, by Gen. Sir Ian Hamilton; *My Campaign in Mesopotamia*, by Gen. Sir Charles V. F. Townshend; and *Last Days of the Romanoffs*, by Robert Wilton.

Among the books about the Peace Conference, we find the following: *The Economic Consequences of the Peace*, by John M. Keynes; *Some Problems of the Peace Conference*, by Charles H. Haskins and Robert H. Lord; *The Making of the Economic and Reparation Sections of the Treaty*, by Bernard M. Baruch; *International Law and the World War*, by J. W. Garner; *The Inside*

Story of the Peace Conference, by E. J. Dillon; *History of the Peace Conference of Paris*, edited by H. W. V. Temperley; *The Nations and the League*, by 10 representatives of different nations, including Leon Bourgeois, Sir George Paish, Nicholas Murray Butler, and others; and *England After the War*, by Frank Dillnot.

Of war narratives, the following may be noted: *Cardinal Mercier's Own Story*; Evelyn, Princess Blucher's *An English Wife in Berlin*; Philip Gibbs' *Now It Can Be Told*; Elias Henry Jones' *The Road to En-Dor*; Francis Charles C. Yeats-Brown's *Caught by the Turks*; Col. John Ward's *With the Die-Hards in Siberia*; Vira Whitehouse's *A Year as a Government Agent*; and J. C. Lawson's *Tales of Aegan Intrigue*.

TRAVEL AND OUT OF DOORS. Among the noteworthy books of travel and the out-of-doors we may mention: Hector McQuarrie's *Tahiti Days*; A. Safroni-Middleton's *South Sea Foam*; Fredrick O'Brien's *Drifting Among South Sea Isles*; Walter Pritchard Eaton's *In Berkshire Fields and On the Edge of the Wilderness*; Harry A. Franck's *Roaming through the West Indies*; Joseph Hergesheimer's *San Cristobal de la Habana*; John G. Neihardt's *The Splendid Wayfaring*; Rockwell Kent's *Wilderness*, describing Alaska; Hudson Stuck's *A Winter Circuit of Our Arctic Coast*; Charlotte Cameron's *A Cheechako in Alaska and the Yukon*; William B. Cabot's *Labrador*; Rudyard Kipling's *Letters of Travel*; Beatrix Bulstrode's *A Tour in Mongolia*; V. C. Scott O'Connor's *The Charm of Kashmir*; Sidney Greenbie's *Japan, Real and Imaginary*; A. S. Roe's *Chance and Change in China*; John and Alice Hattie Dewey's *Letters from China and Japan*. Of interest also are: Mrs. Cecil Clementi's *Through British Guiana to the Summit of Koraima*; E. Hadfield's *Among the Natives of the Loyalty Group*; Harold Raeburn's *Mountain-ering Art*; Frederick Hale's *From Persian Up-lands*; H. G. Mainwaring's *A Soldier's Shikar Trips*; William S. Maugham's *The Land of the Blessed Virgin*; Eliza Osborn Heaton's *By-Paths in Sicily*; Lewis R. Freeman's *In the Tracks of the Trades*; William Dean Howells' *Hither and Thither in Germany*; Archibald Marshall's *A Spring Walk in Provence*; Enos A. Mills' *Adventures of a Nature Guide*; *The West African Negro*, by G. T. Basden; *The Call of the Surf*, by Van Campen Heilner and Frank Stick; *The Art of Lawn Tennis*, by W. T. Tilden; *The Glamour of Prospecting*, by F. C. Cornell; *The Book of Good Hunting*, by Henry Newbolt; and *Garden of Peace*, by H. Frankford Moore.

LITHUANIA. A newly created republic whose boundaries in 1920 had not been definitely established, but comprised roughly, nearly all the former government of Kovno, the greater part of the government of Suvalki and a part of the government of Vilna. The following estimates were supplied by the United States Bureau of Foreign and Domestic Commerce in 1920:

According to Russian statistics, this territory had in 1914 a population of about 2,400,000. Taking into consideration, however, that a considerable proportion of the population was forced to evacuate during the war, the present population is probably rather under than over 2,000,000; according to some estimates it is not over 1,500,000. The table opposite shows the distribution of population in 1914:

	Kovno	Vilna	Grodno	Suwalki	Total
Area in square verst ^a	35,316	36,826	33,900	10,825	116,867
Number of inhabitants.....	1,857,100	2,075,900	2,048,200	718,000	6,699,200
Number of inhabitants per square verst ^a	53	56	60	66	59
Number of administrative units:					
Town administration.....	9	10	25	10	54
Rural administration.....	141	147	178	92	558

^a Square verst = 0.44 square mile.

For discussions of boundary disputes and the respective claims of Poland and Lithuania as well as the terms of the treaty with the Soviet government on July 12th, see below under *History* and the article *WAR OF THE NATIONS*.

PRODUCTS. The country is primarily agricultural and a very large proportion of the people live in the country districts. In 1914 it was 80 per cent. The resources include timber, grain, potatoes, flax and cattle, among the principal ones. As it had no well developed industrial system it suffered less than the other Baltic regions during the war. There was a comparatively small falling off in the area of grain cultivation in 1919 as compared with 1914; nor was the production greatly diminished. In 1919 the area under grain was placed at 3,132,000 acres and the production at about 1,129,000 tons. Potatoes were produced in the same quantity in 1919 as in 1914 and the production of flax and linseed considerably increased. A little over 50 per cent of the land is held by peasant proprietors and the state owns a little less than 13 per cent. During the war the estates of the large land-owners suffered more than the peasant farms. They are estimated at about 30 per cent of the total area of cultivated land. Cattle-raising is important, but it is carried on by primitive methods and the same is true of dairying. The chief natural resource of the country is the forests which cover an enormous area, the largest being the forest of Bialowiez in the province of Grodno. A little over 50 per cent of the forests belonged to the large estates and 44.26 per cent was the property of the Russian crown and presumably passed over to the new Lithuanian government.

COMMERCE. In the past the principal articles of export were grain, cattle, poultry, pork, eggs, butter, timber, linseed, flax, hides, and wool; and the chief imports, manufactured articles. The following information in regard to commerce was supplied by the United States Bureau of Domestic and Foreign Commerce: The only available information in regard to trade is given by statistics compiled during the war by the Polish society at Petrograd. According to this report, the Lithuanian governments of Kovno, Grodno, and Vilna, taken as a unit, had a positive trade balance of 11,500,000 francs (franc = \$0.193 normal exchange). Kovno led with a positive balance of 16,000,000 francs, Grodno followed with a positive balance of 3,000,000 francs, and the third place was occupied by Vilna with a negative balance of 7,000,000 francs. The principal imports consisted of textiles, 47,000,000 francs; cereals (mostly wheat flour), 24,500,000 francs; and sugar, 22,200,000 francs. The principal exports were timber and timber products, 68,000,000 francs; woolen goods, 49,500,000 francs; tanned leather, 53,000,000 francs. The annual export of flax amounted to 9,600,000 francs. The exportation of flax has been made a government monopoly; and maximum prices were fixed at which the peasants were obliged to give up their holdings. It was estimated by the government

that the peasants were still holding Jan. 1, 1920, some 15,000 tons of the 1918 crop of flax.

FINANCE. The legal tender of the country is the ostmark which was introduced by Germany in 1915 and which has been exchanged at the same value as the reichsmark. As to the amount of circulation, the following figures were given in 1920 by a British report: The total amount issued was about 1,250,000,000 marks, which, however, was not confined to Lithuania but circulated throughout the occupied regions of Russia. The amount now in circulation in Lithuania proper is estimated at about 800,000,000 marks. In addition to this currency there is probably a total of 200,000,000 reichsmarks in circulation.

The state property was estimated according to a British authority as follows in 1919: State forests, £47,445,500; confiscated lands, £7,371,000; state lands, £8,840,000; other property and lands and water, £10,000,000; total, £71,650,500, exclusive of state property and railways, etc.

COMMUNICATIONS. The following information in regard to transportation was supplied by the United States Bureau of Foreign and Domestic Commerce in 1920: The total length of rivers in the governments of Kovno, Vilna, and Grodno is nearly 8000 kilometers (4970 miles). Of this, in round figures, 1700 kilometers (1050 miles) are navigable for boats while the rest is navigable only for rafts. Of principal importance is the River Niemen connecting Lithuania with the Baltic Sea. By means of the Oginsky Channel, the Niemen is connected with the Dnieper and the Black Sea. Before the war the shipping on the Niemen averaged 2,000,000 tons per year. Of this 1,780,800 tons were carried on rafts, about 300,000 tons on vessels other than steamships, and 9,800 tons on steamships.

The railway system of Lithuania (present borders) consists of 880 kilometers (547 miles) of track. All of this has been changed by the Germans from Russian to standard gauge. In addition, there are 654 kilometers (406 miles) of narrow-gauge railways of from 60 to 100 centimeters (centimeter = 0.39 inch) gauge. Of the standard-gauge railways, 80 per cent are in operation and of the narrow-gauge, about 50 per cent. The rolling stock for the standard gauge consists of 74 locomotives, mostly German, 60 cars for passenger trains, and 719 freight cars. For the narrow gauge there are 28 locomotives, 36 passenger cars, and 461 freight cars. A large proportion of the rolling stock is not in working condition and badly needs repairs which are impossible owing to lack of material and repair parts. The fuel used is wood.

GOVERNMENT. In 1917, 200 representatives of the people met at Vilna and chose a state council. A proclamation of independence was issued, Feb. 16, 1918, and by the beginning of 1920 the authorities in control were recognized as a *de-facto* government by the following Powers: Great Britain, the Holy See, Sweden, Norway, Denmark, and Finland. The government was recognized as a government *de jure* by Italy and Germany. On April 4, 1919, a provisional con-

stitution was adopted to remain in force until a constituent assembly should have framed a permanent constitution. Under this provisional constitution, executive power is vested in a president, who is assisted by a cabinet of ministers, and the legislative power is vested in a state council to which the cabinet is responsible. By the provisional constitution, all class privileges were abolished and equal rights were bestowed on all citizens without distinction of race, sex or religion. The basis for the election of the constituent assembly was to be universal adult suffrage, irrespective of sex. The state council at the beginning of 1920 consisted of 40 members, of whom 30 were Lithuanians, seven White Ruthenians and three Jews. At the beginning of the year the president, prime minister, and minister of finance and commerce was M. Galvananski a member of the Popular Socialist party.

HISTORY. On September 20 the Council of the League of Nations took up the matter of peace with Lithuania. The Bolshevik government after long negotiations with Lithuania had come to an agreement with that state and a treaty of peace was signed at Moscow, July 12. A few days before (July 6), Poland had agreed to recognize the independence of Lithuania. In the treaty between the Soviet government and Lithuania, the former recognized Lithuanian independence, released the country from its share of the old Russian debt, promised the payment of 3,000,000 rubles in gold, and defined the boundary. The limits were to include the cities of Vilna, Lida, and Grodno and certain parts of the province of Grodno which were inhabited by Lithuanians. The Bolsheviks handed over Vilna, the ancient capital, after having occupied it for three weeks. The treaty, however, surrendered to Lithuania territories claimed by the Poles, who asserted their rights over the old province of Suwalki, a part of Grodno, the city of Vilna itself and certain other portions. The treaty boundaries cut off Lithuania from Russia and bestowed on Poland a corridor running between Russian and Lithuanian territories to the border of Latvia and thence through a point northwest of Minsk past the Oginski canal along the Pripiet to the Rumanian frontier. This made the Polish line nearly what it had been after the second partition of Poland in 1793. The Polish territory was larger than that fixed by the Peace Conference, but on behalf of the Poles it was argued that the added portion had a considerable Polish population and that since the Russians were willing to grant it, there was no reason why the Council of the League should object, especially as the Treaty had left the boundary on the east indeterminate. After the Poles had driven back the Soviet troops and cleared the frontier the natives turned against them and in so doing were believed to be acting under Bolshevik suggestion and in the hope of gaining territory for themselves. Negotiations were undertaken for a peaceful settlement but these ceased on the advance of the Poles, and as a result of their demand that they should make use of the Lithuanian railways and should occupy Vilna, provisionally. It was at this time that the Riga government sent protests to the Allies and to Washington, and Lithuanian delegates in United States asked the Secretary of State to stop the shipment of arms to Poland and to demand the withdrawal of Polish troops from Lithuania. On September 2 the Lithuanians

checked the Polish troops and recaptured the town of Seiny. Lithuania now proposed a new peace settlement to Poland. This was the state of affairs when the Council of the League of Nations on September 21 took up the question. Polish and Lithuanian delegates appearing before the Council asserted their desire for peace. The Council decided to mediate and commissioners were appointed to visit Poland and Lithuania and study their respective demands. They met at Suwalki in the first week of October and proposed the line which the Council had defined in December, 1919. The Poles were induced to accept this, but they objected to turning over to Lithuania under the Treaty with Soviet Russia, Lida, Grodno, and Vilna, especially the last named, where it was said that many Poles had been massacred by the Bolsheviks during their occupation. Then occurred the Zellgouski episode (See WAR OF THE NATIONS). After resigning from the Polish army, General Zellgouski in command of two Polish divisions, occupied Vilna, October 9, thus creating a situation not unlike that brought about by the adventure of D'Annunzio at Fiume.

LIVE STOCK. The following table shows the volume of meat production in the United States according to estimates of the United States Department of Agriculture for the calendar years 1917, 1918, 1919, and 1920, the latter being based on data for the first nine months and subject to correction. Figures are shown in millions of pounds:

	1917	1918	1919	1920
Beef	6,658	7,650	6,571	6,058
Veal	781	815	851	941
Pork	8,450	11,248	11,888	10,458
Lamb and mutton ..	478	522	626	570
Goat	18	15	9	6
Total	16,325	20,250	19,445	18,028

Production in 1920, as estimated, is 92.71 per cent of that in 1919. Still further reductions may be expected during 1921 and in the case of beef production in 1922 also.

Reports to the United States Department of Agriculture indicate a decided reduction in the calf and pig crop of 1920 as compared with 1919. For every 1000 head on hand January 1 the births of calves for the first seven months were: 1920, 327; 1919, 409; of hogs, 1920, 1128; 1919, 1290. Deaths of cattle and hogs were also greater in 1920 and the number of animals purchased was less. The number remaining on August 1 of each year for each 1000 on hand January 1, was as follows: Cattle, 1920, 1040; 1919, 1139; hogs, 1920, 1298; 1919, 1351. Similar information appears in the Department's estimates of the number of hogs on farms on September 1. There were 62,073,000 on Sept. 1, 1919, and 56,534 on the same date in 1920—a decline of 8.9 per cent. Some persons in touch with the swine industry in the corn belt are inclined to think that the decrease is greater than this in the large pork producing sections. If so, these declines are offset to some extent by the increase in hog raising elsewhere, especially in the Southern States.

The export of meat products reached its highest point both in volume and value during the fiscal year ended June 30, 1919, during which period almost three and one-third billion pounds of meat went abroad. Dairy products likewise

reached their maximum in exports during this time. The following table shows these facts in detail:

half the amount exported during the same period of 1919, the largest relative declines being in canned beef (23 per cent), bacon (55 per cent),

EXPORTS OF MEAT AND DAIRY PRODUCTS, FISCAL YEAR ENDED JUNE 30, 1919

	1918 Quantity Pounds	1918 Value Dollars	1919 Quantity Pounds	1919 Value Dollars	1920 Quantity Pounds	1920 Value Dollars
Beef, canned	97,843,283	30,034,707	108,459,660	44,803,015	81,166,814	9,386,860

Still more illuminating is the information shown in the following table for exports of meat and dairy products for the calendar year 1919 and for the nine months ended Sept. 30, 1919 and 1920:

hams and shoulders (73 per cent), and canned pork (63 per cent). The value of all meat products exported during the first nine months of 1920 was 60 per cent of that exported during the same period of 1919 and the value of meat

EXPORTS OF MEAT AND DAIRY PRODUCTS FOR THE CALENDAR YEAR 1919, AND FOR 9 MONTHS ENDED SEPTEMBER 30, 1919 AND 1920

	12 months, 1919 Quantity Pounds	9 months, 1919 Quantity Pounds	Value Dollars	9 months, 1920 Quantity Pounds	Value Dollars

Total meat and dairy	966,846,925	414,579,869

The quantity of meat exported during the first nine months of 1920 was only slightly more than

and dairy products combined, which were exported from January to September inclusive, was

58 per cent less than that of the value of these animal products exported during the same period of 1919.

At the same time, considerable quantities of both meat and dairy products were imported. During the nine months ended September 30, the imports of meat and dairy products imported in 1919 and 1920 are shown in the following table:

IMPORTS OF MEAT AND DAIRY PRODUCTS, 9 MONTHS ENDED SEPT. 30—			
	1919	1920	
Fresh beef and veal	28,860,827	37,335,048	
Fresh mutton and lamb	6,109,519	49,703,802	
Fresh pork	2,251,510	807,730	
Bacon and ham	2,446,509	581,101	
Bologna sausage	36,482	82,611	
All other	20,731,051	4,614,410	
Tallow	6,901,252	9,341,068	
Oleo stearin	1,819,902	853,243	
All other, free	6,005,518	2,560,283	
All other, dutiable (excluding sausage casings)	571,983	2,453,477	
Sausage casings	(8,406,783)	(9,887,400)	
Beef	37,118,463	47,611,988	
Pork	32,006,571	11,017,001	
Mutton	6,109,519	49,703,802	
Total	75,234,553	108,332,791	
Butter and substitutes	5,405,142	28,187,379	
Cheese and substitutes	4,513,855	10,693,642	
Milk and cream, gallons	2,485,003	3,232,090	
Condensed milk, pounds	13,765,808	20,254,373	

The most significant facts in this table are the increase in the amount of beef products imported, in spite of the fact that beef exports were maintained at a much higher relative figure than pork exports, and the large relative increase in the importation of lamb and mutton. The beef was mainly from Argentina, the lamb and mutton was practically all New Zealand lamb. This lamb began coming early in the year, part of it via English ports and part direct. The New Zealand lamb has a well-deserved reputation for excellence and that brought to the United States bore out its reputation. Plump, well-finished carcasses, trimmed with short shanks, proved attractive, especially when the price was observed to be much less than domestic lamb. The importations of foreign lamb, following stagnation in the wool market added to the concern of sheep raisers for the future of their business.

LIVE STOCK PRICES. The price situation in the live stock business in the United States was discouraging during 1920. The annual review of the Department of Agriculture may be summarized as follows: At the opening of the year, prices for meat animals were still close to the high levels of 1919. In beef steers, however, there was an extremely wide spread between the best and the common grades, amounting to nearly \$10. Prices on upper grades declined rapidly from February to May and the spread narrowed. Prices on all grades of steers advanced in June and from then until October 16 prices of better grades continued to improve when the average for choice and prime steers was \$17.75 per 100 pounds. Prices declined from this point until the end of the year when choice and prime steers averaged \$13, compared with \$19.25 when the year opened.

Sheep and lamb prices advanced during January, lamb prices breaking in February, all classes advancing again in March and early April. Dur-

ing the last of April lambs and sheep started on the down grade. At the end of the year medium to prime lambs were selling at an average of \$11.45 which was \$5.75 less than that at the opening of the year and \$9 less than the high point in January. Ewes and wethers declined \$8.50 and \$9.60 below the high points of April while cull sheep and common ewes hardly returned marketing costs.

The hog prices did not fluctuate so widely as those for cattle and sheep during the first eight months. Daily averages of shipper and packer purchases ranged between \$14 and \$16 until the middle of September when prices advanced until a top of \$18.25 was reached during the week of September 25. From this time the decline began, the bottom apparently being reached on December 15 with an average price of \$8.97. Prices reacted somewhat, the year closing with a weekly top price at \$10.80.

THE WOOL MARKET. If the cattle and hog producer may be said to have closed the year with reduced credit and a badly impaired bank account, the sheep raiser, especially the wool grower, was in a state closely approaching demoralization. From prices which were as high as 72 cents on the range for fine wools, the market suddenly stopped on May 20. At the close of the year, the situation was little better than six months before. A large proportion of the 1920 clip is unsold, the amount being estimated as much as 80 per cent by dealers and as much as 95 per cent by growers' representatives. Wool from farm flocks is largely pooled and in storage. Wool from range flocks is stored largely under consignment orders. Some demand for fine wool exists, a little for medium wools, and low grade coarse wools are practically unsaleable. Such a situation, with the shearing season only a few weeks away, is not a hopeful one for the wool grower, especially those who do not have good feeder lambs in prospect. Apparently the wool situation will not begin to improve until the retail outlets for clothing are again consuming normal amounts and the woolen mills again operating at full capacity.

THE PUREBRED SIRE CAMPAIGN. On Oct. 1, 1919, the Bureau of Animal Industry launched what is officially called the "Better Sires-Better Stock" campaign. The purpose of this movement is to direct attention to the need for a wider use of purebred sires on farms, to encourage farmers who own purebred stock to take greater pride in them and to spread the gospel of better blood and breeding. The cooperation of the agricultural colleges was enlisted and through them, the owners of purebred animals were enrolled in the campaign. While the actual number of owners enrolled and of animals represented is not imposing, the moral effect has been tremendous. The announcement that the campaign was planned met with instant approval from breeders and from the agricultural press. The bulletins and posters used in connection with the campaign are being widely distributed, even to foreign countries, at least one of which has used the posters after translating them into the language of the country. That the campaign is timely is shown by the reports of purebred live stock on farms now being issued by the United States Bureau of the Census. For example, in West Virginia the percentage of farms which have any kind of purebred live stock is only 8.18 per cent. The percentage in Massachusetts

is 11.09: in Michigan, 11.12; in Ohio, 13; and in New Hampshire, 13.52. The farms in the South which have purebreds are much less numerous. South Carolina has been reported thus far, with a percentage of 3.21 of her farms which have any kind of purebred live stock. Two-thirds of these are farms with purebred hogs.

With such a large number of farms without purebred live stock, the field for the "breed missionary" is an attractive one.

THE EXPORT TRADE IN PUREBRED LIVE STOCK. The export trade continues to attract interest among North American breeders. Early in the year, the National Swine Growers Association arranged through the breed associations to send a "view herd" of registered hogs to South America to be exhibited at leading live stock shows and sold at auction. Ninety head were shipped in June. They were shown at Montevideo, Uruguay, and later shipped to Buenos Aires where they were shown and sold at the great annual show of the Sociedad Rural Argentina at Palermo. The hogs shipped comprised Poland Chinas, Spotted Poland Chinas, Berkshires, Duroc Jerseys, and Chester Whites. Average prices at the sale were: Chester Whites, \$100; Spotted Poland Chinas, \$272; Berkshires, \$388; Duroc Jerseys, \$792; Poland Chinas, \$1035. The average of all was \$493—all prices being in gold.

Shipments of horses to Europe continued in a rather small way, and a shipment of Morgan horses, Southdown and Rambouillet sheep and Jersey cattle was made to Japan in June.

LIVE STOCK DISEASES. See VETERINARY MEDICINE.

LIVING, COST OF. See FOOD AND NUTRITION.

LIVONIA. One of the Baltic Provinces (q.v.); formerly a province of the Russian Empire; on the Gulf of Riga between Esthonia and Courland. Area, variously estimated at from 16,930 to 18,158 square miles; population, estimated, Jan. 1, 1915, at 1,778,500. After the war it was divided between the two new republics of Esthonia and Latvia (q.v.).

LOCKE, ROBINSON. Journalist, died, April 20. He was born at Plymouth, Ohio, March 15, 1856, and educated in Switzerland and France. He went into newspaper work in 1873 and after 1888 was president of the Toledo *Blade*. From 1883 to 1885 he was American consul at Newcastle-on-Tyne, England.

LOCKS. See CANALS; DAMS.

LOCKYER, Sir (JOSEPH) NORMAN. British astronomer, died at Sidmouth, England, August 16. His name has been celebrated among astronomers since 1868 when he and Jansson made the independent discovery that the sun's chromosphere was visible by daylight. He was born at Rugby, May 17, 1836, and received instruction from his father, who was among the first to study the new science of telegraphy. After an education in private schools and on the Continent, he was appointed in 1857 to the war office where in 1865 he became editor of the *Army Regulations*. He founded, in 1869, the weekly scientific magazine called *Nature* which promptly gained its present high position among scientific periodicals. In 1870 he was made secretary of the Duke of Devonshire's Royal Commission on Science. He began his scientific work as a pastime, but soon devoted his entire life to it. He was director of the Solar Physics Observatory, 1885-1913, and took part in eight expedi-

tions to observe eclipses of the sun between 1890 and 1905. Besides writing books on astronomy, several of which have been translated into foreign languages, he organized classes and gave lectures on the subject. His main research work was in the field of solar and stellar physics to which he contributed over 200 papers, for the most part published by the Royal Society. Two books which sum up a considerable part of his work are: *The Chemistry of the Sun* (1887), and the *Meteoritic Hypothesis* (1890). After paying several visits to Egypt, he published *The Dawn of Astronomy*, in which he attempted to decline the dates of certain Egyptian temples.

LOUISIANA. POPULATION. According to the preliminary report of the census of 1920, there were 1,798,509 residents in the State, Jan. 1, 1920, as compared with 1,656,388 in 1910.

AGRICULTURE. According to the census of 1920, the number of farms was 136,455, an increase of 12.4 per cent since 1910. The following table is compiled from the estimates of the United States Department of Agriculture, covering the years 1919 and 1920:

Crop	Year	Acreage	Produc. Bu.	Value
Corn	1920	1,906,000	36,595,000	\$31,106,000
	1919	1,850,000	32,875,000	48,562,000
Oats	1920	60,000	1,880,000	1,132,000
	1919	75,000	1,650,000	1,650,000
Hay	1920	320,000	542,000	8,828,000
	1919	290,000	510,000	11,870,000
Rice	1920	700,000	25,200,000	27,720,000
	1919	560,000	19,712,000	53,420,000
Potatoes	1920	27,000	1,755,000	3,563,000
	1919	25,000	1,600,000	3,520,000
Cotton	1920	1,442,000	380,000	26,980,000
	1919	1,527,000	298,000	52,094,000

* Bales. * Tons.

See AGRICULTURAL EDUCATION.

EDUCATION. The figures for "educables," six to eighteen years of age, in Louisiana, June 30, 1919, were as follows: White, 335,854; colored, 228,939. Pupils enrolled the public schools for whites 1919-20, numbered 236,301, an increase of 13,000 over the preceding session, with an average attendance of 172,636; teachers numbered 7129, of whom 6259 were women. The average salaries of teachers were \$794 for women and \$1199 for men, an increase of twenty to thirty per cent over the preceding session. In the negro schools the pupils enrolled numbered about 118,000, an increase of nearly 20,000 over the preceding session, with an average attendance of about 82,000; teachers numbered 1837 of whom 1483 were women. The average salaries of teachers in the negro schools were \$374 for women and \$369 for men. Data in regard to teachers' scholarships in 1920 were not available but in the session of 1918-19 of the teachers employed in the public schools for whites 863 were college graduates, 3113 were normal school graduates, 1365 held first grade certificates earned in examinations, 1231 second grade certificates, and 557 third grade certificates. In the ensuing year an unusual increase in the number of teachers required involved the appointment of larger numbers of low grade teachers than ever before.

ELECTIONS. The vote in the presidential election of 1920 was: Cox (Democrat), 87,354;

Harding (Republican), 38,538; as compared with the following vote in the presidential election of 1916: Wilson (Democrat), 79,875; Hughes (Republican), 6466. Progressive, 6349.

OFFICERS. Governor, John M. Parker; Lieutenant-Governor, Hewitt Bouanchaud; Secretary of State, James J. Bailey; Treasurer, Howell Morgan; Auditor, Paul Capdevielle; Attorney-General, A. V. Coco.

LOWER AUSTRIA. Before the downfall of the Austro-Hungarian Empire, a crownland of Austria. Area, 7654 square miles; population, Dec. 31, 1910, 3,531,814 of whom 3,130,536 were German-speaking. Capital Vienna. See AUSTRIA.

LOWRY, Sir ALBERT SWINBURNE. British admiral, died, May 29. He was born at Zante, Mar. 4, 1854, and entered the navy in 1867. He received the Royal Humane Society's bronze medal for saving life in 1873 and the thanks of the French government for the rescue of a corvette at Jaffa, in 1892. He was in the intelligence service from 1897 to 1900 and became rear-admiral in the Channel fleet in 1907 and admiral in 1913. He was the admiral commanding in Scotland in 1913-16 and commander-in-chief at Rosyth in 1916. He retired in the following year.

LUDWIG, DUKE OF BAVARIA. Senior member of the House of Wittelsbach, died at Basle, Switzerland, November 10. Duke Ludwig was a brother of the late Empress Elizabeth of Austria. He was born in Munich, June 21, 1831; served in the Bavarian cavalry; and was made a general in 1859, when he renounced his rights to the throne in order to marrymorganatically an actress. At the death of this wife, he contracted a second morganatic marriage with a Munich ballet dancer, from whom he was divorced at Munich in 1913. He was not on good terms with his family and was often in financial difficulties.

LUMBERING. See **FORESTRY.**

LUTHERANS. The Lutherans in the United States are divided under three general heads. The first, the National Lutheran Council, is an association of the United Lutheran Church in America, the Evangelical Lutheran Joint Synod of Ohio and other States, the Evangelical Lutheran Synod of Iowa and other States, the Lutheran Synod of Buffalo, the Immanuel Synod of the Evangelical Luthtran Church in North America, continue the work of the National Lutheran Evangelical Lutheran Augustana Synod of North America, the Norwegian Lutheran Church of America, the Lutheran Free Church, the Evangelical Lutheran Church of America (Eielsen's Synod), the Church of the Lutheran Brethren, the United Danish Evangelical Lutheran Church in America, the Icelandic Lutheran Synod of America, the Finnish Evangelical Lutheran Church of America (Suomi Synod), the Finnish Evangelical Lutheran National Church of America, and the Finnish Apostolic Lutheran Church of America. The second division is known as the Evangelical Lutheran Synodical Conference of North America, and contains: the Evangelical Lutheran Synod of Missouri, Ohio, and other States, the Evangelical Lutheran Joint Synod of Wisconsin, Minnesota, Michigan, and other States, the Slovak Evangelical Lutheran Synod of America, the Norwegian Synod of American Evangelical Lutheran Church, and the Negro Mission. The third division is composed of in-

dependent congregations. There were in the United States and Canada in 1920, 3,753,805 baptized members, 2,493,894 confirmed members, 10,061 ministers, and 14,955 congregations. These congregations reported a total church property valuation of \$187,231,000, a total benevolent expenditure of \$10,762,208. It is estimated that the Lutheran members enrolled and un-enrolled in America are 15,000,000. Preaching is conducted in the United States in 17 different languages.

During the war the National Lutheran Commission for Soldiers' and Sailors' Welfare did much work with the American forces here and abroad. As an outcome of this work, in the fall of 1919, the National Lutheran Council appealed to the Lutheran Church in America for clothing to forward to the needy in Poland and other parts of Europe. The response was more than 2,000,000 pounds of clothing and \$279,327.40. On Jan. 1, 1921, a new appeal was made to the Lutheran Church for \$1,250,000 to continue the work of the National Lutheran Council during the year 1921, and another appeal for additional clothing for relief work purposes. The Council maintains relief organizations in the countries of Poland, Latvia, Esthonia, Finland, Germany, Czechoslovakia, Jugo-Slavia, Austria, Hungary, Roumania, Italy, France, and other European countries.

The various branches maintain a large number of educational institutions in all parts of the country. In 1919 there were 24 theological seminaries, 39 colleges, seven ladies' colleges and seminaries, 52 academies, five normal schools, nine Bible schools. The Inner Mission work may be summed up as follows: 62 orphans' homes, 48 homes for the aged. Also there were nine deaconess motherhouses, 47 hospitals, 13 hospices, seven homes for defectives, eight immigrant and seamen's missions, and 11 miscellaneous institutions. There are 14 Inner Mission Societies and City Missions.

Both foreign and home missions are maintained. There are 12 American societies for missionary work in India, China, Persia, Turkey, Japan, Africa, Madagascar, South America, Australia, New Guinea, Virgin Islands, West Indies, Philippine Islands, and among the American Indians and Esquimaux. In 1919 there were 394 missionaries, 2648 native helpers, 123,927 native Christians, 14,214 candidates for baptism, 42,415 pupils in mission schools, and a total income of \$696,362. Total reported contributions for benevolences in this country for 1920, were \$10,762,208. There are 36 European missionary societies operating in many more fields. There were in 1919, 2355 missionaries, 12,014 native helpers, 964,580 native Christians, 68,190 candidates for baptism, 230,500 pupils in mission schools, and a total income of \$3,308,500. Contributions for this work ran into very large figures. The church maintains 35 publishing houses in various parts of the country, which publish 312 periodicals, a large number being in foreign languages. For further information on the Lutheran church in general, see the *Lutheran World Almanac and Annual Encyclopedia*. The national headquarters of the denomination are at 437 Fifth Ave., New York City.

The following figures are for 1920 for the three divisions of the church:

National Lutheran Council: 6634 ministers

in America, 11,037 congregations, 2,459,392 baptized members, 1,651,609 confirmed members, 7090 Sunday schools, 82,894 teachers, and 798,672 scholars. Evangelical Lutheran Synodical Conference of North America: 3415 ministers in America, 3905 congregations, 1,298,213 baptized members, 839,685 confirmed members, 2151 Sunday schools, 11,407 teachers, and 216,358 scholars.

Independent Congregations: 12 ministers in America, 13 congregations, 5200 baptized members, 2600 confirmed members, two Sunday schools, 30 teachers, and 605 scholars.

LUXEMBURG. A small state of central Europe, bounded by Germany, Belgium, and France; neutralized by the Treaty of London, 1867; occupied by the Germans during the late war; restored to independence after the armistice in 1918. Area, 998 square miles; pop., Dec. 1, 1916, 263,824. Capital, Luxembourg, with a population of 20,355 in 1916. In 1918 the country produced iron to the amount 1,266,671 tons valued at 254,590,396 francs; and steel to the amount of 857,937 tons valued at 199,573,800 francs. The revenue, 1919-20, including the loan of 90,000,000 francs, was 126,018,256 francs; expenditure including deficits of previous years, 170,547,229 francs. Railways in 1918 had a mileage of 330. Luxembourg is a grand duchy, the ruling grand duchess in 1920 being Charlotte Adelgonde (born, Jan. 23, 1896; succeeded to the throne Jan. 9, 1919). The legislative power is in a chamber of deputies of 48 members elected for six years. The chamber elected in October, 1919 was distributed among the political groups as follows: Catholics 22; Dissenting Catholics, 4; Socialists, 13; Independent Socialists, 2; Liberals, 7. The referendum taken, Sept. 28, 1919, to decide on the political and economical future of the country resulted as follows: Votes for the reigning grand duchess 66,811; for the continuance of the dynasty under another grand duchess, 1286; for a republic 16,885; for economic union with France, 160,135; for economic union with Belgium, 22,242. Total number of voters, 90,984.

LYALL, Sir CHARLES JAMES. British Orientalist and civil servant, died in London in September. He was born, March 9, 1845, and educated at Kings College, London, and at Oxford; joined the Indian civil service in 1867 and became under-secretary to the Central government in the revenue and Agricultural Department. In 1880 he was secretary to the chief commissioner at Assam and later was commissioner of the Valley Districts. From 1889 till his retirement in 1910 he served as secretary in the Home, Judicial, and other departments of the Indian service. Aside from his official activities he devoted his life to the study of Hindustani and Arabic literature and his writings and translations are widely known to the Orientalists. He was an active member and vice-president of the Royal Asiatic Society. Among his works may be mentioned: *Translations of Ancient Arabic Poetry* (1885); an edition of *Ten Ancient Arabic Poems*; articles in the *Encyclopedia Britannica*; and an edition of two ancient Arabic *dirans* with translations (1913).

LYDECKER, CHARLES EDWARD. Lawyer, died, May 6. He was born in New York City, May 26, 1851; graduated at the College of the City of New York in 1871; and in law at Columbia in 1873. He was engaged for many years in corporation work, will contests, ad-

ministration of estates, etc., and interested himself in the State military service. He was a member of the council of the United States Military Service Institute after 1903, and he was a founder of the National Security League and the chairman of its committee on militia.

LYMAN, BENJAMIN SMITH. Geologist, died, August 30. He was born at Northampton Mass., Dec. 11, 1835; graduated at Harvard in 1855 and subsequently studied in France and Germany. In 1870 he was engaged in mining and engineering under the Indian government and from 1873 to 1879 was chief geologist and mine engineer to the Japanese government. His geological researches extended over many parts of the United States, and the Far East. He was the author of more than 150 papers, reports, etc. on geological and mining subjects.

LYNCHING. The following report in regard to lynchings in 1920 was compiled by Monroe N. Work, of the Department of Records and Research of the Tuskegee Institute: There were 56 instances in which officers of the law prevented lynchings. Of these, 10 were in Northern States and 46 were in Southern States. In 42 of the cases, the prisoners were removed or the guards were augmented or other precautions taken. In 14 instances armed force was used to repel the would-be lynchers. In four of these instances the mobs were fired upon and as a result, seven of the attackers were killed and several wounded.

There were 61 persons lynched in 1920. Of these, 52 were in the South and nine in the North and West. This is 22 less than the number, 83, for the year 1919. Of those lynched 53 were negroes and eight were whites. One of those put to death was a negro woman. Eighteen, or less than one-third of those put to death, were charged with rape or attempted rape. Three of the victims were burned to death. The charges against those burned to death were: rape and murder, one; killing landlord in a dispute, two.

The offenses charged against the whites were: murder, 5; insulting woman, 1; no charge except being a foreigner, 1; killing officer of the law, 1. The offenses charged against the negroes were murder, 5; attempted murder, 4; killing officer of the law, 5; killing landlord in dispute, 6; rape, 15; attempted rape, 3; assisting fugitive to escape, 3; wounding another, 2; insulting woman, 2; knocking down guard, escaping from chain gang and then returning and surrendering, 2; jumping labor contract, 1; threatening to kill man, 1; cutting a man in a fight, 1; for receiving stay of death sentence because another confessed crime, 1; peeping through window at woman, 1; insisting on voting, 1.

The States in which lynchings occurred and the number in each State are as follows: Alabama, 7; Arkansas, 1; California, 3; Florida, 7; Georgia, 9; Illinois, 1; Kansas, 1; Kentucky, 1; Minnesota, 3; Mississippi, 7; Missouri, 1; North Carolina, 3; Ohio, 1; Oklahoma, 3; South Carolina, 1; Texas, 10; Virginia, 1; West Virginia, 1.

LYON, EDMUND. Philanthropist, died, April 24. He graduated at the University of Rochester and studied law at Columbia, where he took his degree in 1880. After practicing for a short time he became interested in real estate and mining and was manager and director of the North East Electric Company, Rochester, and a director of the Lincoln National Bank. After 1890, he de-

voted himself to writing and lecturing on the teaching of the deaf and was subsequently active in that and other works of welfare. He was the author of *The Lyon Phonetic Manual* (1891).

LYON, LEROY SPRINGS. Army officer, died, February 23. He was born at Petersburg, Va., Oct. 15, 1866, and graduated at Richmond College in 1886 and at the United States Military Academy in 1891. He was transferred from the cavalry to the artillery and on June 13, 1911, became inspector-general. He was made brigadier-general of the National Army, Aug. 5, 1917, and major-general, April 12, 1918. He served in Cuba in 1899-1900 and against the Moros in the Philippines, 1906-7; in the Canal Zone, 1916-17; and in France in 1918-19, where he participated in the Meuse-Argonne offensive. On July 26, 1919, he was placed in command of the field artillery school at Camp Taylor, Kentucky.

LYSTER, CECIL RUPERT CHATWORTH. British surgeon and X-ray specialist, died, Jan. 26. He was born, Dec. 14, 1859, and travelled in the United States and Europe. He was medical superintendent of the Bolingbroke Hospital from 1885 to 1903 and made a special study of electro-therapeutics. He wrote the *Treatment of Disease by Different Forms of Rays*.

MACALPINE, Sir GEORGE WATSON. British coal-owner, died April 18. He was born at Paisley, England, in 1850; educated in schools there and was chairman of several great coal and brick companies and prominent in Baptist circles, being the chairman of the committee of the Baptist Missionary Society and former president of the Baptist Union. He wrote the *Days of the Son of Man*.

MACAO. A province belonging to Portugal, consisting of the island of Macao at the mouth of the Canton River and the two small adjacent islands of Taipa and Colôane. The city of Macao, situated on the island of the same name, is divided into two parts, inhabited by Chinese and non-Chinese respectively, and under separate administrations. Population, Dec. 31, 1910, 74,866, of whom the Portuguese numbered 2171 and the Chinese 71,021.

MACDONALD, Sir DONALD ALEXANDER. Canadian general, died May 3. After 1904 he was quartermaster-general of the Canadian militia. He was born Oct. 31, 1845, and joined a rifle company in 1863. He served during the Fenian raids in 1866; in the Red River expedition, 1870, where he won a medal; and in the Northwestern rebellion in 1885, where he also received a medal. He held for a time the office of chief superintendent of military stores and in 1903-04 was director-general of ordnance.

MACDONALD, WALTER. British theologian, died, May 2. He was born in Ireland, in 1854 and educated at St. Patrick's College, Maynooth. Having been ordained priest in 1876, he taught philosophy, theology, and English literature at St. Kieran's College for five years and was then made professor of theology at St. Patrick's, Maynooth (1881). In 1906 he founded the *Irish Theological Quarterly* which he edited for three years. His writings included, *Motion: Its Origin and Conservation*, which was condemned by the Index and withdrawn from circulation; *The Principles of Moral Science*; and many papers on literature, theological, and philosophical subjects for the *Catholic Review*.

MACEDONIA. A region of southeastern

Europe, nearly corresponding to the former vilayet of Saloniki in the Turkish Empire, lying to the west and south of the Rhodope Mountains, with its southeastern part bordering on the Aegean; after the Balkan wars partitioned among Greece, Serbia, and Bulgaria, Greece receiving the largest part. The departments controlled by Greece are Saloniki, Serres, Drama, Cozani, and Florina, with a total population of 1,194,002, according to the provisional census of 1913.

MACKENZIE, KENNETH ALEXANDER J. Surgeon, died at Portland, Ore., March 16. He was dean of the medical department of the University of Oregon and enjoyed a national reputation. He was born in Manitoba, Canada, Jan. 13, 1859. He studied in Scotland, then at Montreal and Toronto, and finally in London, Edinburgh, and in the universities of the Continent. He went into the practice of medicine at Portland, Ore., in 1882 and was from 1887 to 1907 professor of the theory and practice of medicine, and afterwards professor of operative and clinical surgery at the University of Oregon, holding the latter chair until the time of his death. He was the chief surgeon in the Oregon and Washington Railway and Navigation Company after 1895, the director and medical director of the Lewis and Clark expedition, and the holder of other important posts. He was the head of the relief corps of physicians and nurses in San Francisco in 1906 and he organized and took charge of the Harbor View Relief Station under the United States military authorities.

MACKIE, CHARLES H. See PAINTING AND SCULPTURE.

MACKINNON, ALAN. British founder of the Oxford University Dramatic Society, died at the beginning of April. He was born in 1861. During his student days at Oxford he interested himself in amateur theatricals and succeeded along with others in founding the Oxford Dramatic Society in spite of the strong prejudice against it. He has left an account of it in a book entitled *The Oxford Amateurs*.

MACLAURIN, RICHARD COCKBURN. Educator, died, January 15. From 1909 to the time of his death he was president of the Massachusetts Institute of Technology. He was born at Lindean, Scotland, June 5, 1870, and educated in New Zealand and at Cambridge, England, where he graduated with honors in 1897. He was professor of mathematics at St. John's College, Cambridge, 1898-1905, and then after serving several years in the University of New Zealand was elected professor of mathematical physics at Columbia University. He was a student of law as well as of physics and wrote on both subjects. Among his works may be mentioned *Title to Realty* (1900); *Lectures on Literature* (1909); he was also author of various scientific memoirs published by scientific bodies and in the scientific reviews.

MACLEAN, HARRY AUBREY DE, known as KAID, Sir HARRY MACLEAN. British military officer, celebrated as the captive of the Arab chief, Raisuli, died at Tangier, February 4. He was born in 1848, entered the military service and served at Gibraltar. In the course of a visit to Tangier he received the offer of the post of instructor to the Moroccan army with which he served for about 30 years. He was celebrated for his daring and as an excellent shot and many stories are told of his adventures. On July 1, 1907, he was kidnapped by the bandit Raisuli and

all attempts at rescue failed. The British Legation finally obtained his release by the payment of a ransom of £20,000. During his captivity Mulai Hafid became Sultan and during the succeeding period of French control, Maclean's association with Morocco ceased.

MACLEOD, ANGUS. British admiral, died, April 29. He was born June 11, 1847, and entered the navy in 1860. He served on the Gold Coast in 1874 and received the Ashantee medal. He was aide-de-camp to Queen Victoria and King Edward, 1899-1901; director of naval ordnance; senior officer on the coast of Ireland, 1904-06; and retired in 1910.

MACLEOD, SIR EZEKIEL. Canadian jurist, died June 11. He was born in New Brunswick, Oct. 29, 1840; was educated in the schools of New Brunswick and at Harvard College; and was called to the bar in 1868. From 1914 to the time of his death he was Chief Justice of the Supreme Court of New Brunswick. He was a member of the provincial Legislature, 1882-86, a member of the Canadian House of Commons, 1891-96, and a senator of the University of New Brunswick.

MACLOSKE, GEORGE. Biologist, died, January 4. He was born in Castledown, Ireland, in 1834, studied at Queen's University, Ireland, and at the University of London, graduating with honors. He was a pastor for 13 years in Ireland, meanwhile pursuing studies in natural history. He was called to the chair of natural history in Princeton University, N. J., and served the college for 31 years, retiring in 1906 as professor emeritus. Although a theologian, he was in sympathy with new biological theories and a believer in the harmony between science and religion, writing frequently on that subject. Through his wide readings he kept abreast of the progress of science and at the same time pursued interests in many different fields especially in that of modern languages. He was one of the early promoters of the Esperanto movement in the United States. Besides writing many monographs for the learned periodicals he published *Elementary Botany with Student's Guide to the Examination of Plants* (1883).

MACMAHON, JOHN EUGENE. Army officer, died, January 30. He was born at Buffalo, N. Y., Dec. 8, 1860; educated at Fordham University, and graduated at the United States Military Academy in 1886. He served during the war with Spain, being adjutant general in the fifth army corps and adjutant-general of the forces at Puerto Principe, 1898-99; and he was in the Philippines in 1901. Just before the late war he was on duty with the general staff, 1911-14, and in September, 1917, he was placed in command of the 160th field artillery brigade at Camp Custer.

MACCOUN, JAMES MELVILLE. Canadian naturalist, died, January 8. At the time of his death he was chief of the biological division of the Canadian Geological Survey, and he was also generally regarded among the best informed systematic botanists of his day. He was born in Belleville, Ontario, Nov. 7, 1862, educated at Albert University there, and became assistant botanist and naturalist to the Geological Survey of Canada in 1883. He remained in the service of the Geological Survey until his death, specializing from the first in botany. In 1917 he was appointed botanist of the Survey and in 1918 chief of the botanical division. He

was also celebrated as an expert in the fur seal industry and took part in the expeditions of the Pacific Islands in 1892-93, and also in the subsequent measures for the arbitration of the fur seal question. He made expeditions into the Behring Sea in 1896-1914 and meanwhile had taken part in many other expeditions including a visit to the west coast of Hudson Bay for the purpose of studying the flora and fauna. He there narrowly escaped with his life from a wreck of the vessel, finding his way to the shore in a small boat and journeying thence overland to Lake Winnipeg on foot in the winter. To him and his father were due the collection in the National Herbarium comprising more than 100,000 specimens of Canadian flora and also the collection of 6000 or 7000 ornithological specimens in the museum. He was active in the affairs of his city and province and in Dominion politics and contributed largely to the improvement of the civil service.

MACSWINEY, TERENCE. Lord Mayor of Cork, Irish hunger striker, died at Brixton jail, London, England, as a result of voluntary starvation, October 25. His hunger strike, undertaken as a protest against a sentence to two years' imprisonment, had lasted 74 days, during which it was a subject of newspaper comment all over the world. He was born March 27, 1879, son of a Cork manufacturer of tobacco and snuff; he was educated in the Christian Brothers' School at Cork; and studied later at the Royal University in Dublin, where he took several degrees. He was a diligent student and fond of books, his favorite readings being in Irish history, and he was from the first an intense partisan of the native Irish movement, always employing the native Irish tongue when circumstances permitted. For 16 years he served as an accountant in a warehouse establishment. In his spare time he attended meetings and addressed his fellow Irishmen on national topics. He threw himself into the Sinn Féin as soon as it began and from the moment when the so-called Irish Republic was proclaimed he ceased to regard himself as a subject of the King. He edited a number of small journals in the revolutionary interest, which were suppressed, and he was one of the leaders in the Easter rebellion. Before that rebellion broke out, however, he was arrested. After the rebellion, he was chief of the Cork volunteers. Meanwhile he had been elected alderman of the corporation of Cork and was later chosen Lord Mayor of that city to succeed McCurtain who had been killed. He was arrested August 12th on charges under the Defense of the Realm Act and immediately began a hunger strike. He was taken to Cork jail and guarded by the military and in the trial was accused of having a cipher corresponding to that which had been issued to the Royal Irish constabulary and of having also the copy of a resolution and the notes of a speech, both of which indicated seditious activities. He was sentenced on August 17th to two years' imprisonment and was deported to England on board a torpedo boat destroyer and placed in Brixton jail. On hearing his sentence he said that he intended to put a limit to any term of imprisonment that might be imposed and that he had been without food since August 12th. The cipher mentioned above was that in which messages had been sent resulting in the decoying of policemen into ambush where they were murdered. Many appeals were made

for his release to the Prime Minister or the King, but these were refused. The Prime Minister declared that a law which was a respecter of persons was no law and that if the cabinet departed from its decision, the whole machinery of government in Ireland would break down. The subject attracted the widest interest in the United States, where the Secretary of State was approached by the Irish element and requested to intercede on behalf of MacSwiney with the British government: and a strike was called in New York and other ports for the purpose of tying up British shipping. There was much discussion over the question whether, from the point of view of the Roman Catholic Church, suicide resulting from hunger striking was a crime and whether the sacraments could be administered in such cases and it was said in a dispatch from Rome on October 17th, that the Pope had referred the question to the Congregation of the Holy Office. The intense Irish sympathies of the Irish element in America caused the death of MacSwiney to be denounced widely as a murder. Prominent Irish city officials in the United States referred to him as one of the noblest martyrs in history. The Irish leader, De Valera, made it the occasion for an appeal for American support and for further denunciation of the British government. At the time of his death only his brother and his private chaplain were with him, though his wife and two sisters were in a hotel nearby. In general, the British public showed courtesy and even sympathy toward the relatives of the prisoner. In the British press there was much comment to the effect that the government ought to have avoided this outcome.

MADAGASCAR. The large island lying off the southeastern coast of Africa, from which it is separated by the Mozambique Channel. The shortest distance to the continent is 240 miles. The length of the island is 980 miles and its greatest breadth 300. It became a French possession in January, 1896, and along with its dependencies was constituted a French colony in August of that year. Its dependencies consist of a number of small islands, namely: Diégo-Suarez, Nossi Bé, and the Saint Marie, Mayotte, and Comoro groups. Capital, Antananarivo. Area, estimated at 228,000 square miles. Population, Jan. 1, 1918, 3,545,264, of whom 15,157 were French, and 3101 other Europeans. The population is composed of numerous Malagasy tribes, of which the chief is the Hova, numbering 1,097,458, whose language prevails throughout the island. The population of Antananarivo is placed at 63,115. The next largest towns are Famatave, the principal port, with about 15,000 inhabitants, and Diégo-Suarez, with 10,388. No later statistics for schools were available than those given in the preceding YEAR BOOK, which showed 745 official schools with 76,243 pupils, Jan. 1, 1918. The chief occupations are cattle-breeding and agriculture and the chief crop is rice. Gold is found in commercial quantities, and there are deposits of iron, copper, lead, zinc, sulphur, silver, coal, and other minerals. The industries include silk manufacture and cotton-weaving, metal-working, and the making of straw hats. Imports (1918), £4,090,792; exports, £3,671,308. The leading imports were clothing, cotton, and metals. The leading exports, hides, rice, and rafia fibre. By far the greater part of the trade is with France and the French colonies.

Next in importance is the trade with the British possessions. In 1918 the imports from France amounted to £1,763,021 and the exports to £2,441,369. The main sources of local revenues have been direct taxation, customs, etc. On June 30, 1919, the railway mileage was 776. In 1918 the vessels entered had a tonnage of 630,320 and those cleared had a tonnage of 632,133; of the total tonnage, 490,563 was French. The colony is under a governor-general who acts by the advice of a consultative council. The governor-general in 1920 was M. Garbit, appointed, March 14.

In recent years the discovery of rich deposits of radium-containing minerals were reported. In 1920 it was said that the undeveloped resources were richer than in any field elsewhere exploited.

MADAME CHRYSANTHEME. See MUSIC, Opera.

MADELEINE, PAUL. See PAINTING AND SCULPTURE.

MADISON, WIS. See MUNICIPAL OWNERSHIP.

MADRAZO, Don RAIMUNDO. Spanish painter, died in Paris, September 15. One of the most celebrated members of a Spanish family of painters, and known as one of the greatest portrait painters in Spain. He was born in Rome July 24, 1841, and studied under Cogniet and at the Beaux Arts at Paris. Some of the best examples of his portraits are those of the queen regent of Spain and various members of prominent families in New York City. The portraits are remarkable for brilliancy of execution, grace, and finish. His genre paintings also have these qualities and include: "The End of a Masked Ball," "Fête During Carnival," "A Lady with a Parrot," "Pierrette," etc.

MAGNESITE. The production of magnesite in the United States in 1920 increased 94 per cent in quantity over that of 1919. The entire output was made by two States, California and Washington. California mined 63 per cent more magnesite in 1920 than in 1919 and more than eight times as much as it mined seven years ago. Washington increased its production 109 per cent over that of the preceding year, making by far the largest output it has yet made. According to the United States Geological Survey, Department of the Interior, the total production of magnesite in the United States in 1920 was 303,767 short tons, which was valued at approximately \$2,748,150. The imports of magnesite in 1920, reported by the Bureau of Foreign and Domestic Commerce as calcined, not purified, amounted to 43,154 long tons, valued at \$780,078. Although the quantity of magnesite imported in 1920 was nearly three times as great as in 1919, it was only about one-seventh of the quantity commonly imported before the war.

MAGOON, CHARLES E. Former governor of the Canal Zone, died January 14. He was born in Steel County, Minn., Dec. 5, 1861; educated at the University of Nebraska; studied law, and was admitted to the bar in 1882. From 1882 to 1889 he practiced at Lincoln, Neb., and then became a law officer of the Bureau of Insular Affairs in the War Department, 1899-1904. In 1904-05, he was the general counsel of the Isthmian Canal Commission, and from May 25, 1905, to Oct. 12, 1906, he was the Governor of the Canal Zone. During his term of office he served also as minister to Panama, and on Oct. 12, 1906, became the provisional governor of Cuba, hold-

ing that office to Jan. 28, 1908. In politics he was a Republican. He was the author of a work entitled *The Law of Civil Government Under Military Occupation* (1902).

MAIL BY AIRPLANE. See AERONAUTICS.

MAINE. POPULATION. According to the preliminary report of the census of 1920, there were 768,014 residents in the State, Jan. 1, 1920, as compared with 742,371 in 1910.

AGRICULTURE. According to the census of 1920 the number of farms was 48,228, a falling off of 19.6 per cent since 1910. The following table is compiled from the estimates of the United States Department of Agriculture, covering the years 1919 and 1920:

Crop	Year	Acreage	Produce, Bu.	Value
Corn	1920	5,000	226,000	\$289,000
	1919	5,000	300,000	585,000
Oats	1920	119,000	4,974,000	4,228,000
	1919	115,000	3,910,000	3,597,000
Wheat	1920	7,000	159,000	366,000
	1919	8,000	150,000	330,000
Hay	1920	1,192,000	*1,215,000	29,779,000
	1919	1,185,000	*1,534,000	28,670,000
Potatoes	1920	123,000	22,140,000	27,675,000
	1919	106,000	25,440,000	35,616,000

* Tons.

CHARITIES AND CORRECTIONS. There are State hospitals at Augusta and Bangor; tuberculosis sanitariums at Hebron and Fairfield; a State school for boys at South Portland and for girls at Hollowell; a school for feeble-minded at Pownal (West); State reformatory for women at Skowhegan; State prison at Thomaston; military and naval orphan asylum at Bath.

ELECTIONS. The vote in the presidential election of 1920 was: Harding (Republican), 138,355; Cox (Democrat), 58,961; Debs (Socialist), 2214; as compared with the following vote in the presidential election of 1916: Hughes (Republican), 69,506; Wilson (Democrat), 64,188; Benson (Socialist), 3177. The vote for governor in 1920 was: Parkhurst (Republican), 135,353; McIntyre (Democrat), 70,237.

OFFICERS. Governor, Carl E. Milliken; Secretary of State, Frank W. Ball; Treasurer, Joseph W. Simpson; Attorney-General, Guy H. Sturgis; Superintendent Public Schools, A. O. Thomas; Adjutant-General, George McL. Presson.

JUDICIARY. Supreme Court: Chief Justice, Leslie E. Cornish; Associate Justices, George M. Hanson, Warren C. Philbrook, Albert M. Spear, Charles J. Dunn, John A. Merrill, Scott Wilson Luere B. Deasy.

MAINE, UNIVERSITY OF. A co-educational, non-sectarian State institution, at Orono, Me., founded in 1862. In 1920 there were 1461 students enrolled. The faculty numbered 105. The income amounted to \$1,572,000. In the library there were 60,000 volumes. President, Robert Judson Aley, LL.D.

MAINE FESTIVAL. See MUSIC, *Festivals*.

MAIR, WILLIAM. Scottish minister and church historian, died, January 27. He was born at Savoch, Scotland, in 1830, and educated at the University of Aberdeen. After serving many years as a parish minister, he became Moderator of the Church of Scotland in 1897. He published many works relating to the laws and history of the Scottish churches including a digest of laws and decisions which passed through its fourth edition in 1911; *Speaking*, which

passed through its fourth edition in 1908; *The Truth about the Church of Scotland* (1891); and a large number of special monographs on the Scottish churches. In 1911 he published his autobiography.

MAIZE. See CORN.

MALACCA. One of the Straits Settlements (q.v.).

MALARIA. For the status of malaria in the United States the reader is referred to the YEAR BOOK for 1919. In regard to malaria as a world scourge, the experience of the late World War has taught that of all the plagues which visit mankind malaria is perhaps the worst. Our former knowledge of tropical malaria has been enhanced and the old truths that the disease in these areas is a much more serious affair than malaria as it occurs in temperate zones, have been visualized anew. There are types of malaria which do not yield to quinine and which are diffused by insects other than the *anopheles* mosquito. In an editorial on the "Problem of Malaria" in the *Medical Record* for Dec. 11, 1920, attention is called to the extremely wide diffusion of this affection; to the fact that it may be very rapidly diffused from an old to a new focus; and to the existence of types which are quinine-resistant. Failure of the latter medicament in the United States would justly be imputed to defective technic. In Salonika where the disease flourished during the war the climate was less a factor than the number of troops assembled there. The region is easily accessible from Egypt and Syria. In addition many soldiers were stationed in the latter countries and despite prophylaxis with quinine not over 20 per cent are said to have escaped. On the Salonikan front 90 per cent of the troops are said to have had the disease. Sanitary experts have obtained the impression that the future of the British Eastern Empire may come to depend on the success in antagonizing malaria. Without reference to tropical types the mere fact of an entire vast army stricken with the disease appears to intensify the infection to the point that the action of quinine while specific, is defective. It was learned that *culex* mosquitoes and day-flying insects can give the disease as well as the night-flying *anopheles*.

MALAY STATES. See FEDERATED MALAY STATES.

MALLINGER, MATHILDE. Hungarian dramatic singer, died at Berlin, April 19. She was born at Aram in Hungary in 1847 and studied at Prague and Vienna. She made her first appearance in Munich as Norma and drew the attention of Wagner by the remarkable quality of her voice and by her dramatic ability. As a result, she became the original interpreter of Eva in *Die Meistersinger* (1868). She was one of the leading singers of the Royal Opera in Berlin until 1882, when she retired from the stage. She taught singing at the Prague Conservatory 1890-1905, and after that at the Lichberg Conservatory in Berlin. In 1869 she was married to Baron Schimmelpennig.

MALONE, JAMES THOMAS. Judge, died in New York City, December 2. He was born at Norwich, Conn., Jan. 9, 1865; studied at Phillips Exeter Academy, and graduated at Harvard, in 1889. After studying law, he was admitted to the New York bar in 1891 and practiced in New York City, where he was corporation counsel from 1894 to 1908 and judge of the Court of General Sessions for the term 1918-22. He was nomi-

nated by Tammany Hall to the last-named office, but afterwards broke off relations with that organization. He was held in high esteem by the profession and the public generally. In 1919 he attracted much attention by his efforts to expedite the trial of cases in the courts, declaring that 1267 bail cases had remained untried, though some of the indictments were six years old.

MALTA. An island and naval base in the Mediterranean Sea, constituting along with the islands of Gozo and Comino, a British crown colony, important for its harbor, which is one of the finest in the world. It is a port of call, headquarters of the British Mediterranean fleet, and strongly fortified and garrisoned. Total area, 118 square miles; the area of Malta itself being 91½ square miles. Civil population, April 2, 1911, 211,868; estimated, April 1, 1919, 224,655. The chief town and port is Valetta. In 1918-19 there were 142 public schools, with 22,331 pupils; a university with 139 students; a Lyceum, two secondary, and seven technical manual schools. Acreage under cultivation, 1918-19, 43,117; chief products, vegetables and fruits. The chief occupation is farming. Imports and exports (1918-19) respectively amounted to £2,863,920 and £779,925. During the first three quarters of 1920 there was a considerable increase in the foreign trade, especially in coal and fuel oil, for the merchant shipping, the coal coming from England and the fuel oil from the United States. Tonnage (exclusive of transports) entered in 1918-19 amounted to 692,643 (503,271 British); cleared, 688,118. Governor in 1920, Field Marshal Lord Plummer.

MANCHURIA. The region belonging to China between the Province of Chihli and the Amur River, which separates it from Siberia, extending eastward from Hingan Mountains to Korea, and constituting the three Chinese provinces of Fengtien, Heilongchuang, and Kirin. Estimated area, 363,310 square miles; estimates of population vary from about 6,000,000 to about 29,400,000 but a 1920 estimate placed it at about 19,000,000, of which 90 per cent were Chinese. The chief seaport is Dairen which is a port of call for steamers bound for Europe and America. The next seaport in importance is Newchwang, whose trade is confined chiefly to the ports of Japan and China. Another important centre is Harbin, which is connected with Vladivostok, Dairen, and Tientsin by railway. The city of Antung is also an important port for the transshipment of Japanese-borne goods. The following information in respect to production, trade, etc., was supplied by the United States Bureau of Foreign and Domestic Commerce in 1920:

Manchuria is primarily an agricultural country, and owes recent economic development chiefly to agricultural products. It is rich in great, level, fertile plains, adapted for agriculture on an extensive system. The total area of arable land is roughly estimated at 20,000,000 acres. The cultivated area in South Manchuria is estimated at 5,000,000 acres, and the number of people engaged in farming as close to 2,700,000. About 90 per cent of the cultivated land is taken up by soya beans, wheat, millet, and kaoliang (tail millet), these four being cropped in rotation. In all Manchuria nearly 4,900,000 acres are devoted to cultivation of beans, with an annual production of 100,000,000 bushels. About 70 per cent of this production is exported either in original form or in oil or bean cake, annual ship-

ments being estimated at 1,000,000 tons for beans and bean cake and 120,000 tons for bean oil. Soya beans and their by-products constitute about 75 per cent of the export values of the country. Kaoliang is used as a foodstuff and for brewing native spirits. Its estimated annual production is 165,000,000 bushels, with a normal brewery product valued at more than \$7,500,000. Millet is also a staple food product, especially in North Manchuria. Maize is grown chiefly in South-eastern Manchuria, where it takes the place of kaoliang and millet as a food product. Wheat is grown abundantly in North Manchuria, and many flour mills are found in and about Harbin. The sugar beet is cultivated to a small extent; but it is well adapted to Manchurian soil and has a promising future.

Manchuria is rich in lands easily convertible into good grazing ground, but stock farming is conducted only on a small scale. Recent statistics give the number of cattle as 1,000,000, horses about twice that number, and sheep 600,000. As elsewhere in China, only pigs are numerous, being raised by most Chinese households and totaling more than 5,000,000.

A large part of South Manchuria is level and destitute of trees, but in the basin of the Yalu the forest area is estimated at 715 square miles and in its tributary (Hun) basin at 480 square miles, the trees being mostly pine and cypress. In North Manchuria nearly half the region is covered with forests, those along the Changpai and Hsingan Mountains being particularly rich. Forests convenient to transportation have been sadly depleted, but those in remote regions are as flourishing as ever. Chinese authorities have been utterly neglectful in afforestation work, but Japanese authorities in the Kwantung territory and other places have done excellent work in this regard.

Manchuria is rich in minerals such as coal, iron, gold, lead, silver, and asbestos, but the only large mines worked in 1919 were at Fushun, Penhsihu, and Anshanchan. Although there are valuable coal deposits throughout Manchuria, the fact that transportation is controlled by Japanese makes it practically impossible for Chinese to operate on a paying basis any of the smaller mines in the vicinity of the Japanese railway zone. Realizing this fact, certain Chinese in Mukden, with government support, engaged the services of American and Chinese mining experts with a view to opening and developing as many mines as possible along the Peking-Mukden line (Chinese government railway) to be entirely under Chinese control. The Anshanchan iron works were developed by the South Manchuria Railway and operated jointly by Japanese and Chinese. An output of 1,000,000 tons of pig iron per annum was anticipated. Gold is found almost everywhere in North Manchuria, but its mining has been little developed. Alluvial gold is found along the banks of the Amur River. The outlook for the manufacturing industry in Manchuria seemed promising, owing to abundance of coal, labor, and raw material. Much progress has been made in the manufacture of agricultural products, especially bean oil, bean cake, wheat flour, glass, paper, tobacco, matches, pongee, and sugar; also in brewing and tanning. Manufacture of bean cake and bean oil is the most important industry, in a good year shipments aggregating approximately 125,000 short tons of oil valued at more than \$26,000,000, and

1,250,000 tons of cake valued at \$44,000,000. The brewing of native wine ranks next in importance. Flour mills are situated for the most part around Harbin, in North Manchuria, for easy access to the wheat districts.

The total net trade in 1919 for the whole of Manchuria, as included in customs statistics of Dairen, Newchwang, Hunchun, Lungchingsun, Antung district, and Harbin district reached \$482,438,676—in point of value the largest amount ever shown and constituting an eloquent argument for the opportunities this region presents to American merchants. It should be borne in mind that these figures represent values rather than quantities, the high prices prevailing during 1919 making comparisons with previous years somewhat misleading as to actual material handled in trade. For comparison, the figures for the three years are given below:

Item	1917	1918	1919
Total net importation of foreign goods	\$116,169,316	\$127,292,793	\$202,676,923
Total net importation of Chinese goods	24,370,924	42,229,907	55,668,595
Total net exports, local goods	130,603,819	149,251,197	224,093,158
Grand total of trade	\$271,144,059	\$318,773,897	\$482,438,676

The hold of Japanese merchants on the trade of Manchuria grows stronger each year, the boycott having had practically no effect in this locality. The total value of Japanese manufactured goods imported into Manchuria during 1919 exceeded \$65,000,000 a large increase over the previous year, due probably to the advance in price of silver. The policy of the Japanese in relation to trade with Manchuria is a close partnership between the government, trading concerns, banking institutions, and railways, this condition no doubt being responsible for the contention of foreign firms that the slogan is "Manchuria for the Japanese." The growth of Japanese influence in North Manchuria was especially marked during the year, owing chiefly to introduction of the gold yen and to Japanese commercial and financial activity. Japanese real-estate holdings in Harbin greatly increased. Japanese firms were heavily interested in handling soya beans and bean cake, and practically controlled the export of soya-bean oil. The principal electric lighting plant in Harbin became the property of Japanese, and a Japanese company was negotiating for construction and operation of an electric street railway. A number of steamers on the Sungari River had become the property of Japanese.

The railway lines comprise the South Manchuria railway (Japanese), 730 miles; the Chinese Eastern Railway (Russian), 1074 miles; and the Chinese government railways, 465 miles, of which 134 miles have been managed by the Japanese. The postal and telegraph services have been conducted by the Japanese in the Province of Kwantung and the South Manchuria Railway zone, by Russians in the Chinese Eastern Railway zone, and by Chinese in the rest of the country. The mileage of telegraph and telephone systems was placed at 2400. Of the post offices, the Chinese had 335 and the Japanese 198.

MANEN, JOAN. See MUSIC, *Artists, Instrumentalists.*

MANITOBA. The easternmost of the Prairie Provinces of Canada, east of Saskatchewan and west of Ontario and Hudson Bay, and

extending from the American border northward to latitude 60°. Estimated area, 251,832 square miles; population (1916), 553,880, of which the rural population was 312,846. Chief cities with population in 1916: Winnipeg (capital), 163,000; Brandon, 15,225; Portage la Prairie, 5892; and St. Boniface, 10,022. It is under a lieutenant-governor and a Legislative Assembly of 49 members elected for five years by male and female suffrage. Women are entitled to sit in Parliament. The Lieutenant-Governor in 1920 was Sir J. A. M. Aikins; prime Minister, T. C. Norris.

MANN, WILLIAM D'ALTON. Editor, died, May 17. For many years he was a conspicuous figure in New York as editor of the well-known society weekly, *Town Topics*. He was born at Sandusky, Ohio, Sept. 27, 1839, and educated as a civil engineer. During the Civil War he was a captain in the first Michigan cavalry. Later he

organized additional troops in the Michigan cavalry brigade and became a colonel in 1862. He acquired a fortune from the invention of improvements in the equipment of troops. After the war he was for several years proprietor of the *Mobile Register* and became the first Democratic candidate for Congress from the Mobile district under Reconstruction. In 1871 he invented and patented the celebrated boudoir car which bears his name and which was introduced not only in this country but throughout Europe; and he organized the Mann Boudoir Car Company in 1883, which was later bought out by the Pullman Company. After 1891 he was the editor and president of *Town Topics*. He also founded and became the manager of the monthly magazine entitled *The Smart Set*.

MANURES. See FERTILIZERS.

MAPPING. See AERONAUTICS.

MARATHONS. See CROSS COUNTRY RUNNING.

MARCHANT, CHARLES GEORGE. Eminent English organist, died in Dublin, January 16. He was born in Dublin in 1857. From 1879 until his death he was organist at St. Patrick's Cathedral, Dublin, and conductor of the Dublin University Musical Society.

MARGULES, MAX. See METEOROLOGY.

MARIETTA COLLEGE. A non-sectarian, co-educational institution at Marietta, Ohio, founded in 1835. For the fall session of 1920 there were 192 men and 96 women enrolled. The faculty consisted of 19 members, four having been added in the course of the year. The productive funds amounted to \$726,740, and the income to \$70,716. There were 82,000 volumes in the library. The college was conducting a campaign to add \$500,000 to the endowment and already about \$425,000 had been pledged which sum included a promise from the General Education Board of \$150,000 on the completion of the balance of the sum to be raised. President, Edward Smith Parsons.

MARINE DISASTERS. See SAFETY AT SEA.

MARINE ENGINES. See INTERNAL COMBUSTION ENGINES; SHIPBUILDING.

MARINE INSURANCE. See INSURANCE.

MARITIME PROVINCES. The name applied to the Canadian provinces of New Brunswick, Nova Scotia, and Prince Edward Island.

MARKETING FARM PRODUCTS. See AGRICULTURE, UNITED STATES DEPARTMENT OF, and AGRICULTURAL EXTENSION.

MARQUETTE UNIVERSITY. An institution of the higher learning under Roman Catholic direction at Milwaukee, Wis., founded in 1907. The enrollment for the fall session of 1920 was 3426 and for the summer session 195. There were 210 members in the faculty. The income for the year amounted to \$1,500,000. There were 30,000 volumes in the library. Plans were under way for the building of the School of Dentistry and the College of Medicine. President, Rev. H. C. Noonan, S.J., M.A.

MARSHALL, CHARLES. See MUSIC, *Opera*.

MARSHALL, WILLIAM LOUIS. Army officer, died July 2. He was born at Washington, Ky., June 11, 1846; educated at Kenyon College, Ohio, and enlisted in 1862 as a private in the Kentucky cavalry. After the war he studied at West Point, where he graduated in 1865, and where he taught in the department of natural and experimental philosophy, 1870-71. In 1873 while he was in charge of the Colorado section of explorations west of the 100th meridian, he discovered Marshall Pass across the Rocky Mountains and later while still engaged in the work of exploration he found the gold placers of Marshall Basin in Colorado (1875). He had charge of the construction of levees in the Southern States, of improvements in the Mississippi River, of the harbors of Lake Michigan, and of various river improvements in Illinois and Wisconsin, from 1881 to 1890; and for the next 10 years he was in charge of the construction of the Hennepin Canal. From 1900 to 1905 he had charge of the construction of fortifications in New York Harbor and of improvements in the main channels; and he was in command of the corps of engineers, United States army, at the time of his retirement, June 11, 1910. After his retirement he was still active in various important engineering enterprises including the protection of Imperial Valley, Cal., from the overflow of the Colorado River, 1914-15.

MARTIN, Sir THOMAS CARLAW. Scottish journalist, died at Edinburgh, Scotland, at the end of October. From 1911 to 1916 he was director of the Royal Scottish Museum. He was born in 1850 and first entered the civil service but subsequently went into journalism. For 18 years he was editor of the *Dundee Advertiser* and he continued in newspaper work until 1910.

MARTINIQUE. An island in the West Indies, forming one of the Lesser Antilles; a French colony. Area, 385 square miles; population (1916), 193,087. Capital, Fort de France, with a population of 26,399. Imports (1918), 54,770,959 francs; exports, 90,800,171 francs, rum and sugar being the main exports. In 1918 the budget balanced at 11,079,999 francs. Tonnage of vessels entered in 1918 was 328,269; cleared, 218,780. The steamships of French and American companies visit the island regularly and there is communication with the Continent by means of cables. It is under a governor and general council, and an elective municipal council, and is represented in the French Parliament by a Senator and two Deputies.

MARYLAND. POPULATION. According to the preliminary report of the census of 1920,

there were, 1,449,661 residents in the State, Jan. 1, 1920, as compared with 1,295,346 in 1910.

AGRICULTURE. According to the census of 1920, the number of farms was 47,908, a falling off of 2.1 per cent since 1910. The following table is compiled from the estimates of the United States Department of Agriculture, covering the years 1919 and 1920:

Crop	Year	Acreage	Produc. Bu.	Value
Corn	1920	670,000	25,795,000	\$20,894,000
	1919	680,000	27,880,000	39,032,000
Oats	1920	65,000	2,112,000	1,478,000
	1919	65,000	1,820,000	1,492,000
Wheat	1920	670,000	11,390,000	18,794,000
	1919	785,000	10,598,000	22,788,000
Tobacco	1920	85,000	30,825,000	8,881,000
	1919	29,000	19,575,000	5,872,000
Hay	1920	478,000	741,000	18,453,000
	1919	456,000	688,000	15,296,000
Potatoes	1920	60,000	6,120,000	5,814,000
	1919	55,000	5,170,000	6,721,000

* Pounds. * Tons.

See AGRICULTURAL EDUCATION.

TRANSPORTATION. In 1919 the total mileage of first line track was 1409. The Public Service Commission reported 26 steam railway corporations in the State on Jan. 1, 1920. Of these the Baltimore and Ohio, and the Philadelphia, Baltimore, and Washington are the longest.

LEGISLATION. Among the measures passed in the regular session of the legislature the following may be mentioned: Provision for the "merit system" and for a commission to be appointed by the governor for six years to insure the enforcement of the civil service law; centralization of the State purchasing department; creation of a State athletic commission to supervise boxing and wrestling; creation of State racing commission; creation of a commission to revise and prepare industrial and welfare laws; prevention of fraud in respect to securities offered for sale; revision and codification of mining laws; requiring the singing of "The Star-Spangled Banner" at the opening of certain schools; increasing compensation of members of legislature; authorizing motion pictures on Sunday subject to a referendum vote; creation of war records commission.

ELECTIONS. The vote in the presidential election of 1920 was: Harding (Republican), 238,117; Cox (Democrat), 180,626; Debs (Socialist), 8876; Christensen (Farm-Labor), 1645; Cox (Socialist Labor), 1178; as compared with the following vote in the presidential election of 1916: Wilson (Democrat), 138,359; Hughes (Republican), 117,347; Hanly (Progressive), 2903; Benson (Socialist), 2674; Reimer (Socialist-Labor), 756. The vote for United States Senator in 1920 was: Weller (Republican), 184,299; Smith (Democrat), 167,200; Iverson (Independent), 21,345; Toole (Socialist), 6559; Hawkins (Independent), 6538; Lang (Socialist-Labor), 2569.

OFFICERS. Governor, Albert C. Ritchie; Secretary of State, Geo. L. Radcliffe; Comptroller, Hugh A. McMullen; Treasurer, William P. Jackson; Attorney-General, Alexander Armstrong; Superintendent of Education, McCoy Hall; Adjutant-General, Henry M. Warfield.

JUDICIARY. Supreme Court: Chief-Judge, Andrew Hunter Boyd; Associate Judges, John R. Pattison, Albert Constable, T. Scott Offutt, William H. Thomas, Hammond Urner, John P. Briscoe, Henry Stockbridge.

MARYLAND, UNIVERSITY OF. An institution of higher learning at College Park, Md., founded in 1856. The number of students enrolled in 1920 was 666. There were 54 members in the faculty. President, A. F. Woods.

MASSACHUSETTS. POPULATION. According to the preliminary report of the census of 1920, there were 3,852,356 residents in the State, Jan. 1, 1920, as compared with 3,366,416, in 1910.

AGRICULTURE. According to the census of 1920, the number of farms was 31,982, a falling off of 13.4 per cent since 1910. The following table is compiled from the estimates of the United States Department of Agriculture, covering the years 1919 and 1920:

Crop	Year	Acreage	Produc. Bu.	Value
Corn	1920	21,000	840,000	\$1,050,000
	1919	26,000	1,508,000	2,594,000
Tobacco	1920	10,200	15,810,000	6,419,000
	1919	10,000	15,400,000	7,130,000
Hay	1920	457,000	633,000	17,540,000
	1919	456,000	677,000	18,204,000
Potatoes	1920	32,000	4,000,000	6,000,000
	1919	31,000	2,790,000	5,301,000

* Pounds. ° Tons.

FINANCE. Cash on hand, Dec. 1, 1919, \$12,065,772; receipts during year, \$136,588,178; payments, \$132,353,938; cash on hand Dec. 1, 1920, \$16,300,012. The net receipts for the ordinary expenses of the department for the year ending Dec. 1, 1920, from taxes, licenses, etc. were \$70,751,917 and the net payment for the running expenses of the department were \$70,543,183. Total bonded indebtedness, Dec. 1, 1920, \$143,150,662; sinking funds, \$50,914,469; total net bonded debt, \$92,236,193. Net direct debt, \$35,128,240, a decrease for the year of \$5,304,965; net contingent debt, \$57,107,953 an increase of \$5,982,311.

LEGISLATION. Among the measures passed by the legislature may be mentioned: A daylight saving law; relief to tenants in the housing crisis; the appointment of a fuel administrator; authorization of amateur sports on Sunday afternoons; creation of a State boxing commission; authorization of the regulation of billboard advertising; continuance of the commission on the necessities of life; authorization of purchase of waste land for reforestation; act relative to the appointment of police-women in Boston; and provision of facilities for women's voting when the suffrage amendment was ratified; many measures on behalf of the veterans of the late war; extension of borrowing power of coöperative banks; removal of technicalities from the workmen's compensation law; simplification of remedial wage board legislation and of the minimum wage scale; provision for public clinics. Among the measures lost were the 2.75 per cent beer bill; the bill providing for the censorship of motion pictures; the loan shark bill; and measures believed to be injurious to insurance and saving institutions. The Governor's message on the subject of his veto of the beer bill contended that at that time such legislation was merely deceptive—that no one would really dare to act upon such laws.

ELECTIONS. The vote in the presidential election of 1920 was: Harding (Republican), 681,153; Cox (Democrat), 276,691; Debs (Socialist), 32,265; Cox (Socialist Labor), 3583; as compared with the following vote in the presidential election of 1916: Hughes (Republican), 268,784; Wilson (Democrat), 247,885; Benson (Socialist), 11,058; Hanly (Prohibitionist), 2993.

The vote for governor in 1920 was: Cox (Republican), 643,869; Walsh (Democrat), 290,350; Hutchins (Socialist), 20,079; Mulligan (Socialist Labor), 6383.

OFFICERS. Governor, Calvin Coolidge; Lieutenant-Governor, Channing H. Cox; Secretary of the Commonwealth, Albert P. Langtry; Treasurer, Fred J. Burrell; Attorney-General, J. Weston Allen; Auditor, Alonzo B. Cook.

JUDICIARY. Supreme Court: Chief Justice, Arthur Prentice Rugg; Justices, Henry King Braley, Charles Ambrose De Courcy, John Crawford Crosby, Edward Peter Pierce, James Bernard Carroll, Charles Francis Jenney. See EDUCATION IN THE UNITED STATES.

MASSACHUSETTS INSTITUTE OF TECHNOLOGY. A non-sectarian Technological institution at Cambridge, Mass., founded in 1861. There were 1401 students in the summer school and 3500 were enrolled for the regular fall session. The faculty numbered 141. The income for the year was \$525,285. There were 140,730 volumes in the library. A Pratt School of Naval Architecture was under construction from funds left by Mr. Pratt prior to the war. During the year the endowment fund, including the \$4,000,000 given by Mr. George Eastman, came to a little over \$8,000,000. Acting president, Dr. Elihu Thomson, succeeding Dr. MacLaurin, who died January 15th.

MATCHAM, FRANK. Theatrical architect, died in England in May. He was born in 1854. He was one of the most successful theatrical architects in England where more than 100 theatres and music halls were designed by him including the Coliseum and Palladium.

MATERNITY INSURANCE. See SOCIAL INSURANCE.

MATHERS, HELEN. British novelist, died, March 11. She was born in Somerset in 1853 and began writing in childhood. Before she was 20 years old she began work on a novel published in 1875 under the name of *Comin' Thro' the Rye*, which won an immediate popularity and passed through many editions during the next 25 years, being translated into several languages. Another popular novel of hers was *Cherry Ripe* (1877), and still another, *Bam Wildfire* (1897), but these though successful did not repeat the success of her first novel. Other novels were: *My Lady Greensleeves*; *Sam's Sweetheart*; *Story of a Sin*; *A Man of To-day*; *Murder or Manslaughter*; *Found Out*; *Blind Justice*; *Becky*; *Cinders*; *The Ferryman*; and *Love the Thief*.

MURITANIA. A so-called Civilian Territory of French West Africa (q.v.), consisting of eight districts with a total area of 344,967 square miles. The natives, who are for the most part Moorish Mohammedans, number about 250,000. It is under a commissioner of the government-general.

MAURITIUS. An island belonging to Great Britain in the Indian Ocean, 500 miles east of Madagascar, constituting a British crown colony. Area, about 720 square miles; population (1911), 377,083; estimated, Jan. 1, 1918, 384,951. Capital, Port Louis, with a population in 1911 (with suburbs) of 50,060. The greater part of the population is Indian (252,251 in 1911). Total imports (1918) £2,861,417; exports £3,715,445. Revenue, 1917-18, £903,776; expenditures, £857,359. The railway lines have a mileage of 119½. Dependent on Mauritius are a number of small islands, including Rodrigues and the St. Bran-

don, Chagos, and Eagle groups. Mauritius is under a governor aided by an executive council and a council of government, which is in part elective. Governor at the beginning of 1920, Sir H. Hesketh Bell.

MAXWELL, WILLIAM HENRY. British admiral, died July 1. He was born July 30, 1840; entered the navy in 1854 and was midshipman in the Baltic during the Crimean War. He subsequently was engaged in the African coast service for the suppression of the slave trade. In 1869, while commanding the *Dryad*, he captured a slaver on the Madagascar coast and freed 200 slaves. He became a rear-admiral in 1889 and vice-admiral in 1895. During his retirement he was promoted to the rank of admiral.

MAXWELL, WILLIAM HENRY. Educator, died at Flushing, L. I., May 3. For many years he was superintendent of the public schools of Greater New York. He was born in Ireland, March 5, 1852; educated at Queens University, Ireland; and came to the United States soon afterwards. From 1887 to 1898 he was superintendent of the public schools of Brooklyn. He was then appointed to the same office for Greater New York. He was president of the National Educational Association in 1905; and published a number of text books, including *Elementary English Grammar*, *School Grammar*, etc.

MAYFLOWER. See **PLYMOUTH TRICENTENARY.**

MAYOTTE AND THE COMORO ISLANDS. An archipelago belonging to France and administered by the governor-general of Madagascar. Area, 837 square miles; population estimated at 197,000.

MCCARTHY, JAMES P. Newspaper editor, died in New York City, December 26. He was born at Worcester, Mass., in 1871, and went into a newspaper office when he was still a boy. Among the newspaper positions held by him were those of city editor of the *Worcester Telegram* and of the *Brooklyn Standard Union*; also that of Brooklyn manager of the *New York Herald*. He afterwards was on the editorial staff of the *New York Evening Telegram*. He wrote a textbook on journalism called the *Newspaper Worker* and he also wrote the *Rise of Dennis Haight*.

MCCLAUGHRY, ROBERT WILSON. Criminologist and prison warden, died in Chicago, Ill., November 9. He was born at Fountain Green, Ill., July 22, 1839, and graduated at Monmouth College in 1860. He served throughout the Civil War, reaching the rank of major when mustered out. In 1874 he was appointed warden of the Illinois State Penitentiary at Joliet, remaining in that office until 1888, when he became general superintendent of the Pennsylvania Industrial Reformatory. Three years later he was appointed Chief of Police in Chicago (1891-93) and then became successively general superintendent of the Illinois State Reformatory (1893-97); warden of the Illinois State Penitentiary (1897-99); and warden of the United States Penitentiary at Leavenworth, Kan. (1899-1913). He was regarded as an authority on criminology.

MCCLELLAND, JOHN ALEXANDER. British physicist, died April 13. He was professor of experimental physics at University College, Dublin, and commissioner of education for Ireland. He was born in 1870 and educated at Queens College, Galway, Royal University, graduating with honors. He became professor of physics at

the University College, Dublin, in 1900, and wrote largely on the subject for the scientific journals. He was known especially for his work in radio-activity.

MCGRAW, JOHN THOMAS. Lawyer, died at Grafton, W. Va., April 29. He was born at Grafton, W. Va., in 1856, and was educated at St. Vincent's College in that State and at Yale College. From 1885 to 1889 he was collector of internal revenue in West Virginia, and he was a member of the Democratic State Executive Committee for 12 years. He was a delegate to the Democratic National Conventions of 1896 and 1908, and a member of the Democratic National Committee for West Virginia after 1896.

M McNALLY, JAMES CLIFFORD. American consul, died August 5. He was born at Stratfordshire, England, May 12, 1865; was brought to the United States in 1868; graduated at St. Vincent's College, Latrobe, Pa.; and studied subsequently at St. Laurent's College, Montreal. He practiced law in Salt Lake City, 1891-1903, and was appointed by President Cleveland as Probate Judge (1894-1906). He was secretary of the American Legation and consul-general at Bogota, Colombia, 1898-99, and subsequently held diplomatic offices in Guatemala, Belgium, China, and Germany. From May 8, 1917, he was consul-general at Zürich, Switzerland.

MEAGHER, JOHN LUKE. Clergyman and writer, died at Long Island City, N. Y., May 8. He was born at Drangan, Ireland, Aug. 14, 1848; studied at Montreal, Canada, and was ordained to the Roman Catholic priesthood in 1875. He was pastor at Cazenovia, N. Y., for 10 years and for a long time was president of the Christian Press Association and the Christian Literary Union. He wrote *Truth Teaching by Signs and Ceremonies*; *The Festal Year*; *Man, the Mirror of the Universe*; *The Religion of the World*; *The Tragedy of Calvary*; *The Seven Gates of Heaven*; *What is man?* and other works. His books passed through many editions.

MEAT. See **LIVE STOCK.**

MECHLENBURG-SCHWERIN. Formerly a grand duchy and constituent state of the German Empire. The throne was vacated in November, 1918. For statistics, see **YEAR BOOKS** preceding 1919.

MECHLENBURG-STRELITZ. Formerly a grand duchy of the German Empire; proclaimed a republic in November, 1918. For statistics, see **YEAR BOOKS** preceding 1919.

MEDICAL PROGRESS. There has been no great outstanding fact in the evolution of medical and sanitary science during 1920. The menace of typhus fever to western Europe from the extensive foci in eastern and southeastern portions of the Continent is the most impressive to date. The persistence of so-called sleeping sickness or as it is now termed Epidemic Encephalitis is of importance but thus far there is no suggestion of a large incidence, victims being comparatively few and scattered. Yellow fever has reappeared in several small foci but the cause is now known and the prospects of keeping it under control by preventive vaccination are excellent. In theory bubonic plague is a menace but outside of its habitat the disease seldom gets beyond a few seaports. Under the head of nutrition the subject of internal secretions has received a great impetus through the writings of the biologist Steinach of Vienna; and the prospect of "rejuvenation" by transplantation of sex glands has

been entirely supplanted by the so-called autoplasmic method, in which a simple operation—ligation of the sexual duct—may accomplish all that has been claimed from transplantation. The subject of vitamins has reached the public and there is a large demand for preparations for self-medication. There is no expectation of benefit in the case of adults unless there has been some deprivation of them in the diet: hence their restriction to convalescence from serious disease. Under the head of psychotherapy it is noted that lay persons are practising psycho-analysis on a considerable scale, such practice not conflicting with any law; and certain abuses are said to have resulted even at this early stage. Under the head of radium its use in medical diseases is mentioned—it has generally been regarded as a surgical resource. Under the head of cancer we may mention that it continues to increase despite all measures intended to check its spread.

For details of Medical Progress the reader should consult the following sections: ALCOHOL SUBSTITUTES; ANÆMIA, SURGICAL TREATMENT OF; BUBONIC PLAGUE; CANCER; DIETETICS AND DISEASE; DIPHTHERIA; EPILEPSY; ENCEPHALITIS, EPIDEMIC; HAY FEVER AND ASTHMA; INSANITY; INTERNAL SECRETIONS; INFLUENZA; MALARIA; MENINGITIS; MENTAL CONFLICTS; PELLAGRA; RADIUM, MEDICAL USE OF; TUBERCULOSIS; TYPHOID FEVER; TYPHUS FEVER; VITAL STATISTICS; YELLOW FEVER.

MELTZER, SAMUEL JAMES. American physiologist, died in New York City, November 7. He made a number of important medical discoveries including a new method of artificial respiration. He was born in Russia in 1851; studied philosophy and medicine at the University of Berlin, and came to the United States in 1883, beginning his practice in New York. From 1906 to the time of his death he was the head of the Department of Physiology and Pharmacology at the Rockefeller Institute. Among his discoveries may be mentioned a method of reviving animals by "pharyngeal insufflation" and a new method of treating lockjaw (1914). He was a major in the Medical Officers' Reserve Corps and a member of many medical bodies.

MELVIN, HENRY ALEXANDER. Judge, died, April 24. He was born at Springfield, Ill., Sept. 28, 1865, and studied at the University of California. Having been admitted to the bar, he was district attorney and prosecuting attorney in Alameda County, where from 1901 to 1908 he served also as judge of the Superior Court. After Sept. 28, 1908, he was justice of the Supreme Court of California. After 1906, he held the chair of legal medicine in the Oakland College of Medicine and Surgery.

MENINGITIS. Inflammation of the membranes covering the brain is perhaps less understood by the great mass of people than any other serious and fatal malady. Its mortality is very high and it causes a great loss of life. Epidemic meningitis so called occurs sporadically and causes an average of about five deaths a week in New York in non-epidemic years; and the mortality from tuberculous meningitis is about the same. Chronic syphilitic meningitis which also involves the brain substance is the cause of the well known fatal type of insanity known as paresis which causes several deaths weekly. There is also the so-called simple meningitis, which according to textbooks does not occur alone but only as a complication of some general infec-

tion. Be this as it may, the vital statistics of cities in tropical and subtropical countries show that very many death certificates are filled out "simple meningitis." In New York statistics show that there are several deaths weekly from this cause, and that they occur at all periods of life. There appears to be some connection between simple meningitis and hot climates. It has been said that some of these cases may be due to overindulgence in alcohol, and fear of meningitis appears to be a deterrent to the use of spirits in some of these countries. In general meningitis differs from other secondary lesions because it need not be due to the infected state of the blood. Infections and even the mere presence of infectious germs in the vault of the pharynx are often sufficient to infect the interior of the brain. Our knowledge of the diagnosis and treatment of meningitis has been greatly increased of late years by the common practice of puncturing the spinal canal and examining the contents for bacteria and the products of inflammation. The withdrawal of a certain amount of this fluid which is present under pressure gives great relief and may lead to recovery. During the war there was an extensive prevalence of epidemic meningitis and despite the deadly character of this affection repeated tapplings for relief sometimes led to recovery. The principal resource was however the use of the specific anti-serum.

MENTAL CONFLICTS AND MENTAL DISORDERS. Professor Jung of Zurich, one of the leading authorities on psychoanalysis in the cure of mental disorders delivered an address on the mental mechanisms through which psychical affections are generated, before the Royal Medical Society of Great Britain. The regularly trained physician who looks for an organic causation of mental disease is usually unable to recognize the true motivation of the latter. The action of strong emotional states like fright and the effects of mental overexertion, insomnia, etc., are sufficiently obvious but the most common factor, to wit, a mental conflict, is generally overlooked, although he may seek for one. The trained psychoanalyst will recognize it at once. The ordinary practitioner will frequently unearth some organic disease and will perhaps attribute the mental state to this lesion but usually he will be mistaken. Jung devotes most of his effort to the subject of mental conflicts. They are very common among parents and among others in association with parents. Thus a mother may wish a son or daughter all happiness in regard to the great adventures of life such as love and marriage, education, religion, choice of a business career, etc., but will at the same time look forward with the greatest dread to the separation which may be involved. When this separation is impending the mother may fall ill with a disease picture at once recognizable as of psychic origin. The type of disease is comprised under hysteria.

But there are also subjects whose disease picture comes under the head not of hysteria but of precocious dementia, and in these subjects there is no evidence of the organic lesions of dementia but instead a well known history of mental conflict. These subjects are often so ill mentally that they are committed to asylums where the fear that they will never be released precipitates much more serious alienation; yet these

can be cured if taken at an early period before they have become truly insane.

MERCHANT MARINE ACT. See SHIPPING.

MEREDITH, EDWIN T. Secretary of Agriculture, assuming office February 2. He was born and reared on a farm in Iowa, and soon after leaving Highland Park College he became associated with the *Farmers' Tribune*, subsequently becoming owner and publisher. In 1902 he started a new paper under the name of *Successful Farming*, which under his management became a large and thriving enterprise. In 1917 he was appointed by the Secretary of the Treasury a member of the Board of Excess Profits Advisors. He served for several years as director of the Chicago Federal Reserve Bank, was a member of a commission appointed by the President to visit Great Britain and France in 1918 for the purpose of advising in the industrial and labor policies of our allies in the great war, and in 1920 was elected president of the Associated Advertising Clubs of the World. On the transfer of David F. Houston to the Secretaryship of the Treasury, Mr. Meredith became Secretary of Agriculture (February 2). As Secretary he conducted a wide campaign of education on the work of the Department and its importance not only to the farming people but to the business world and life of the whole country.

MERSON, LUC OLIVIER. French painter, died in Paris, November 14. He had been a professor at the Ecole des Beaux-Arts. He was born May 21, 1846, and made his success at an early age, winning the Grand Prix of Rome in 1869. He was a member of the Institute and Commander of the Legion of Honor.

MESOPOTAMIA. The region of the Euphrates and Tigris rivers between northern Arabia and Persia; formerly a division of the Turkish Empire in Asia, comprising the vilayets of Mosul, Bagdad, and Basra (Busrah); overrun by the British during the war and occupied by them since. The British captured the town of Basra, Nov. 22, 1914, and Bagdad, March 11, 1917. For status as determined under the Treaty, see below and see also article WAR OF THE NATIONS. Area, 143,250 square miles; population, according to the census of 1920, 2,840,282, divided as follows: Bagdad, 1,360,304; Basra, 785,600; Mosul, 703,378. According to religion, the population consisted of 1,146,685 Sunnite Mohammedans; 1,494,015 Shiite Mohammedans; 87,488 Jews; 78,792 Christians; 42,302 of other religions. The chief seaport is Basra at the head of the Persian Gulf. In 1920 there were 13 government primary schools, 4 municipal schools aided by the state, a teachers' training school, and a survey school had been opened, and a beginning had been made in agricultural education. Resources are extensive but undeveloped. The oil deposits have been noted since the time of the Romans, and according to experts rich unworked oil wells are to be found in the vilayets of Bagdad and Mosul. Oil wells near Kerkook have been used for centuries, and wells are now exploited at Gayara near Mosul and at Mandali on the Persian frontier northeast of Bagdad. Oil sources have been discovered in Kurdistan. Asphalt deposits at Hit have been used since the time of Nebuchadnezzar. The following information in respect to production and commerce was supplied by the United States Bureau of Foreign and Domestic Commerce in November, 1920:

PRODUCTION. Much attention has been devoted

recently to agriculture. Experimental farms for ascertaining the most profitable kinds of wheat and barley to raise have been started in different parts of the country. Model dairy farms for improving the methods and placing before the inhabitants practical working dairy farms on modern principles are in operation. Experimental cotton farms have demonstrated that cotton can be profitably grown in all parts of Mesopotamia, and already a good many farmers have started the cultivation of cotton with the aid of experts from Egypt and India. Groundnuts or peanuts have also been successfully raised at Fellujah on the Euphrates. In 1919 and 1920, however, cultivation of the land was greatly hampered by the lack of farm labor, the price of labor of all kinds having gone up 100 or 150 per cent.

In June, 1919, the ancient canal Saqlawiyah, near Fellujah, was formally reopened and the waters of the Euphrates were allowed to pass through. This canal follows approximately the course of the ancient Nahr Isa Canal, once navigable, which was constructed in 762 A.D. The present canal provides water enough for the irrigation of 70,000 acres in winter and 36,000 acres in summer. The level of the bed of the canal, which is 25 feet wide, will allow a depth of 5 feet of water flowing through the regulator when the river is at its lowest, and in times of flood this depth can be increased to 10 feet.

Some idea of the magnitude of the work done to improve and enlarge the irrigation system of Mesopotamia may be gathered from the following budget for the year ending March 31, 1920: Irrigation maintenance, \$648,800; irrigation new works, \$2,358,388; flood protection maintenance, \$778,560; flood protection new works, \$389,280; buildings and roads maintenance, \$194,640; total, \$4,369,668.

The Yousoufieh Canal has been reopened, bringing water from the Euphrates to the vicinity of Bagdad and greatly increasing the production of vegetables for the Bagdad market. Other canals opened, considerably increasing the cultivated area of Mesopotamia, are: New Khalis Canal, from the Diala River; Beni Hassan Canal, from the Euphrates River; and the Georgivah Canal, from the Euphrates River.

COMMERCE. The total commerce of Mesopotamia for the calendar year 1919 amounted to \$95,453,362, which is a much larger volume of business than ever transacted before in one year. The division of this business is shown in the following figures: Imports through Bassorah, \$45,390,819; imports through Bagdad, \$14,311,201; total imports, \$59,702,020; exports through Bagdad, \$24,038,166; exports through Bassorah, \$11,713,176; total exports, \$35,751,342; total foreign trade, \$95,453,362.

Cotton goods amounting to over \$28,000,000 accounts for 47 per cent of the total importation into Mesopotamia. It is estimated to be four times the amount in value and double the quantity compared with the normal importation before the war. The cause of this unusually large importation was the depletion of the markets in Mesopotamia and Persia during the war. For about four years the only imports reaching Bagdad came in through the desert from Bassorah at great risk and expense, as ordinary communication between Bagdad and Bassorah was cut off. About one-half of the cotton goods imported by Bagdad merchants goes ultimately to Persia. On

account of the disturbances in Russia, the route to northern Persia via Batum has been unsafe for some time, and consequently Persia has been supplied to a larger extent than usual through Bagdad.

Sugar is the next largest item in imports, shipments amounting to \$7,078,719 and accounting for 11 per cent of the total imports in 1919. A large quantity of sugar is consumed in Mesopotamia and much is exported to Persia. From 12,000 to 15,000 bags of sugar (220 pounds each) arrive monthly in Bagdad via Bassorah. During 1919 nearly all the sugar came from India, but was originally from Java and China with the exception of loaf sugar from Egypt. Recently Belgium shipped 20,000 bags of loaf sugar directly to Bassorah for Bagdad.

Tea is imported chiefly from India and Ceylon for the Persian market. There is a large stock on hand in Bagdad and the market prices has depreciated. The total value of the amount imported during 1919 was \$2,115,478, equal to 3.5 per cent of the total imports for the year. Silk manufactures were imported to the extent of \$2,089,367, being 3.5 per cent of the total imports.

The largest item of export was cotton piece goods, valued at \$17,154,059, sent into Persia from Bagdad. The total imports amounted to \$28,558,632, and reexports, \$17,154,059, leaving \$11,404,573 for consumption in Mesopotamia. This business is nearly all in the hands of local Bagdad merchants having branches in Manchester. The 1919 date crop was unusually good, and the total exports amounted to \$7,183,203, greatly exceeding the average value of pre-war annual exports.

Since the occupation of Mesopotamia by the British, but a limited quantity of grain has been exported, but with the increased acreage now, under irrigation and with the introduction of labor-saving machinery, the country may become a grain-exporting country.

COMMUNICATIONS. The question of river transportation from Bassorah to Bagdad, although much improved over 1918, has been the cause of considerable complaint. The military authorities undertook to relieve the situation by carrying for merchants a certain amount of freight per month, but they have now turned back to the Mesopotamia-Persia Corporation (Ltd.), formerly Lynch Bros., all the requisitioned river steamers and have also sold it some of the new steamers constructed for the government during the war for military purposes. In addition, the railway between Bagdad and Bassorah is carrying freight and passengers.

Before the war the only railway in Mesopotamia was the small section of the Bagdad Railway running from Bagdad north to Samara, about 80 miles, which was built by the Germans. During the war several lines were built for military purposes, aggregating 1100 miles. At the present time 937 miles of these railways have been turned over to the civil administration for commercial purposes, and the remainder taken up. The line running from Bassorah to Bagdad was opened up to traffic on Jan. 15, 1920, and it is now possible to go from Bassorah to Bagdad in 22 hours by a comfortable train instead of the long voyage by river steamer against a swift current. Freights will be much reduced as soon as sufficient rolling stock can be obtained to accommodate the increased business. The line running from Bagdad to the Persian frontier at

Quarato has already materially reduced the freight rate into Persia. Engineers have arrived to survey the railroad on to Teheran via Kermanshah and Hamadan. The Persian Gulf will thus soon be linked up with the capital of Persia by railway via Bagdad.

There are not direct steamers running between American ports and the Persian Gulf. Shippers from America to Bagdad and Bassorah can occasionally get freight accommodation directly to Bombay, but generally it is necessary to ship to England with transshipment to Bombay and then another transshipment is necessary to Bassorah. The India Office is now running some of the old German steamers from London to the Persian Gulf once a month.

GOVERNMENT, ETC. In 1920 the country was under a military administration pending the determination of the British mandate. Local political officials were appointed for the districts under the direction of the Secretary of State for India and under the control of a civil commissioner. The work of administration was divided into a number of departments including law, education, customs, agricultural development, etc. Municipal governments had been established where possible and tribal councils had been created. At the beginning of 1920 the commander in charge of the British force was Lieut.-Gen. Sir J. A. L. Haldane and the civil commissioner was Lieut.-Col. Sir A. H. Wilson.

Revolts against British rule were reported at intervals throughout the year and in the autumn resistance continued. A holy war had been preached and it was greatly feared that the Mohammedan population would respond to the appeal. In the lower Euphrates region the natives refused to join, but around Samara in the autumn, serious conditions were reported. Several attacks were made upon the town. In the middle Euphrates region, British Indian troops gained control of the water supply of the district in the autumn. A section of the railway was held by a hostile tribe, but they were driven out by British air bombers. In October and November conditions seemed to be improving everywhere, except in the region around Samara. See **GREAT BRITAIN, WAR OF THE NATIONS AND PETROLEUM.**

MESSEL, RUDOLPH. British chemist, died, April 18. He was the manager of the Royal Institute and president of the Society of Chemical Industry. He was born at Darmstadt, Germany, Jan. 14, 1848, and educated there and in the universities of Germany. In 1870, he went to England and applied himself to the chemical industry, in which he introduced a number of new processes, including a successful process for the manufacture of sulphuric anhydride by catalysis.

METALLURGY. In 1920 there were few new developments or extensive improvements in metallurgy. The coming deflation and curtailment of production of many metals, early was realized and in the case of gold there was restricted output in view of market conditions. The conditions of labor however made it necessary at most metallurgical plants to pay increased attention to the use of mechanical appliances and in place of common labor to utilize the services of a few skilled men. In fact as never before in the industry was the labor question so prominent not on account of strikes and other troubles, but as an element in economic

operation which must be considered in the future following any return to normal conditions.

During the year however there were some developments worthy of mention and consideration and as usual the YEAR BOOK summarizes the more significant of these from the authoritative annual reviews appearing in *Engineering and Mining* (New York) and the *Iron Age* (New York).

GOLD AND SILVER. An outstanding feature of the metallurgy of the precious metals in 1920 was the interest manifested in improvements for the cyanide process. This was further emphasized by the death on March 16, 1920, of John Stewart MacArthur who with R. W. and William Forrest of Glasgow in 1886 began experiments that resulted in the cyanide process which in 1890 found commercial application in South Africa as a substitute for the chlorination process. This cyanide process for 30 years had remained virtually unchanged save in mechanical details, and in its increased application to refractory gold and silver ores. There was discussion during the year of the use of bromo-cyanogen, which seemed to act as an oxidizing agent assisting the solution of the gold in an alkaline cyanide. However roasting and aëration in most cases had supplanted the use of bromo-cyanogen, and in Western Australia a large mine which had been unable to secure bromide salts during the war adopted the more usual alkaline cyanide treatment and decided to retain it permanently. Low grade cyanide salt was used during the year with considerable success in American and Canadian mills, and was produced at Niagara Falls from cyanamid, manufactured there for the fertilizer industry. Increased extraction from 68 to 86 per cent was secured at the Connemara Mine in Rhodesia by heating the ore previous to cyaniding. This was known as "baking" to distinguish it from a higher degree of heating or roasting, and served to remove the water of crystallization from the hydrated oxides of iron so that the ore was more amenable to cyanidation. In connection with cyaniding flotation was applied to the recovery of slime concentrates at the Belmont Shawmut mill in California. The process involved classifying and treating the various concentrates. The granular concentrate was roasted, then mixed with the raw slime concentrate and then cyanided. It was claimed that while cyaniding the raw concentrate would afford an extraction of only 60 per cent, the treatment outlined would increase it to from 91 to 94 per cent.

Flotation methods were increasingly used in various fields. At the Shattuck mill at Bisbee, Ariz., the concentration of the silver-lead carbonate ores was so treated with satisfactory results. A flotation method to eliminate graphitic material in certain ore bodies which produced gold losses by precipitation was reported from the McIntyre-Porcupine mines of Ontario. In the cobalt district of Ontario flotation methods were used to aid in the recovery of silver with considerable economies, in the Coniagas mill by means of a cleaner cell flotation concentrates were increased from 150 ounces per ton to 450 ounces per ton.

COPPER. The use of pulverized coal in place of coke in both blast and reverberatory furnaces was an interesting development of the year in the metallurgy of copper. At the new Cerro de Pasco Mining Company smelter at Oroya, Peru, under construction with a daily capacity of 2500

tons, the blast furnaces were designed to burn pulverized coal and were the first furnaces of this type to be installed in a large plant. In large installations operating with pulverized coal it was claimed that for about 30 per cent of the coke of the charge an equal weight of pulverized coal could be substituted. In a large plant equipped with reverberatory furnaces in South-western United States the coal was fed directly to the furnace by fan pressure after it had been pulverized, omitting the complicated drying and separating apparatus required when, as in most instances, the coal used varied in its moisture content. In the plant in question the coal used was remarkably free from moisture and assisted in the operation. The year's noteworthy feature in this respect was the size of the plants thus equipped, for small reverberatory furnaces had used pulverized coal for some time. An innovation in preparing the charge for the blast furnace, where nodulizing had been practiced, adopted at Chrome, N. S., was to flatten out the nodules by passing the product so treated between rolls. Several improvements in the hydro-metallurgy of copper were practiced during the year or were under experimental test. A process of using liquid sulphur dioxide as the precipitant of the copper from the leach solution, under development in the Anaconda research laboratory was adopted by the Andes Copper Company. An improvement in handling the cement copper from rejected electrolyte was reported from Ajo, Arizona, and consisted in dissolving the cement copper in agitation tanks in a portion of the electrolyte containing approximately 0.5 per cent ferric sulphate. The effect was to reduce the ferric sulphate to the ferrous state and the solution was then added to the purified electrolyte from the sulphur-dioxide and then the combined solutions returned to the electrolytic tanks.

In copper concentration, as in other fields of metallurgy, flotation continued to be of leading interest, though not on account of any great increase in knowledge of the various phenomena nor in presenting any adequate explanation. One of the chief engineers of Mineral Separation, the owner of the patents under which the process is worked, a Mr. Sulman of London, published a long paper on the subject, which was generally discussed, and both favorably and unfavorably criticized. In the United States Mineral Separation continued its various infringement suits and in its turn was under investigation by the Federal Trade Commission and the American Mining Congress. The whole question of flotation engrossed the attention of many competent investigators and there were a number of new machines placed on the market. Various flotation reagents other than oils were being investigated, and it was believed that the discovery of selective flotation reagents that would finally solve the complex sulphide ore problem might be expected.

The concentrates obtained from flotation were the subject of sintering to prepare them for blast-furnace treatment in considerable experimentation that was under way during the year. These developments indicated a considerable control of the product for subsequent treatment.

As showing the high development of copper smelting it was stated that the industry had reached a point where in many cases the by-products produced showed a greater profit than the principal profit. In not a few instances

this condition was brought about by outside influences seeking to eliminate and curb the nuisance of smelter smoke. However, the result was that the collection of flue dust through the agency of bag houses or the Cottrell electrical precipitation method served to secure large quantities of rare metals and metallic and other compounds. In some cases even the sulphur gases can be utilized and the Tennessee Copper Co. turns practically all its sulphur into sulphuric acid. In other cases the sulphur is reclaimed in the form of liquid sulphur dioxide to be sold to the pulp mills and also to be used in the manufacture of concentrated sulphuric acid by the contact process. In fact, a list of the recovered and saleable by-products of the industry as obtained by the larger smelting companies included sulphuric acid, liquid sulphur dioxide, gold, silver, lead, zinc, zinc oxide, zinc dust, test lead, blue vitriol, litharge, cadmium, bismuth, thallium, selenium and its compounds, tellurium, arsenic, fungicides, insecticides, phosphate fertilizers, aluminum and aluminum compounds, antimony, lithopone, platinum, palladium, iridium, nickel and nickel sulphate, fire brick and common brick.

The copper industry in 1920 was reaching a high degree of efficiency and economy and it was believed that in the near future practically everything in the ore would be saved and put to practical use. Long since the slag from the smelters had been used for railway ballast, for building highways and for concrete, particularly in foundation work. Moreover, the waste heat was being recovered from all reverberatory furnace installations, and in a few cases was recovered from slag in the form of low-pressure steam. At the Tacoma Smelting Company's plant the slag pots were used to heat certain buildings, the only requirement being to change the slag pots at intervals. Considerable coal consumption was saved in this way.

LEAD. The introduction of labor-saving devices and machinery for handling ores, fluxes, and by-products and the installation of improved crushing and sampling facilities characterized lead metallurgy in 1920 rather than any special advances in technical processes. Pulverized coal as a substitute for coke figured in the lead blast furnace as in copper, but not so thoroughly or with the same degree of success, though to an encouraging degree. However, where coke was expensive and bituminous coal was available at reasonable cost, substantial economies could be and were secured. Nevertheless, pulverized coal was used in many departments of lead smelting and refining, a comparatively recent use being as a substitute for oil for ignition of the charge with the Dwight and Lloyd sintering apparatus.

The Cottrell fume precipitating apparatus was finding increased application in lead smelters of the Western United States, being used in some cases not only for the treatment of roaster gases, but for blast furnace gases. At various plants modifications of the fundamental devices had been made which had resulted in important economies and increased facility of operation.

Zinc. By 1920 the electrolytic process in the metallurgy of zinc had demonstrated its success and further improvements were in process. Methods of specially treating the ores had been developed such as roasting in such a way that no sulphuric acid was required for the lixiviation of the zinc, and various methods for the removal

of other impurities so as to facilitate electrolysis. The main obstacle in the way of the electrolytic process becoming a formidable competitor of the older method of distillation, was that it must be done on a large scale involving a plant whose cost per unit of capacity was greater than in the distillation process. Special roasting furnaces for zinc ores were developed during the year, showing important improvements and economies.

By 1920 the production of electrolytic zinc had risen to 57,441 tons from 10,963 tons in 1916, or nearly 12 per cent of the total production for 1920. Electricity was also applied to the smelting of zinc ores in Norway and Sweden and in some large and encouraging experiments in the United States by Professor C. H. Fulton. In addition to two Scandinavian electrothermic plants that had been in operation for several years, a third plant at Glomfjord, Norway, began work in 1920, its method as in the case of the others being to fuse the gangue or useless minerals of the ore, drawing it off in the form of slag as was done in lead smelting. In the Fulton experiments the process in course of development was one of electrothermic dry distillation, as it was termed, and the work though not entirely completed commended itself to many experts.

NICKEL. In the metallurgy of nickel the three great producing companies of the world each employed different methods of refining, which they constantly seek to improve on the score of efficiency and economy and to obtain greater amounts of the valuable metals found in the nickel ores. The British American company used the electrolytic process invented by Hybinette. The International Nickel Co. of Canada, Ltd., employed the Orford salt-cake process, both at Port Colborne, Ontario, and Bayonne, N. J. The Mond works, in Wales, were using a process invented by and named from Dr. Mond, the original founder of the company.

The Sudbury ores of Ontario carry appreciable quantities of gold, silver, and metals of the platinum group. From the International Nickel Co.'s mattes, in 1910, a total of 1770 ounces of the platinum group metals was recovered, which included 642 ounces of platinum, 842 ounces of palladium, 227 ounces of rhodium, and 76 ounces of osmium, iridium, and ruthenium. The Mond Nickel Co.'s mattes furnished about 3078 ounces of platinum in 1915, 5474 ounces of palladium, and 917 ounces of iridium and rhodium. In 1916, 1917, and 1918 the recovery of platinum amounted to 3372 ounces, 4719 ounces, and 4958 ounces respectively.

IRON AND STEEL. Few important changes in theory or practice were to be recorded in the Metallurgy of Iron and Steel during 1920. There were many practical problems due to changing conditions which manufacturers had to meet and but little experiment was conducted. In the blast furnace increased bosh angles and wider hearths had demonstrated the possibility of increased tonnage and a lower fuel return. In fact so pronounced was this tendency that a bosh angle of 90 degrees was considered possible. In an open hearth plant using coke oven gas for fuel increased economy over current practice was secured by burning gas containing benzol and the light oils. This principle was also proposed for producer gas fired furnaces. It was suggested, however, that where the recovery of benzol was carried on in the plant the

same degree of economy might not be secured. An innovation of the year in producer gas-fired furnaces where coke oven gas was burnt, was to introduce the gas directly into the gas uptakes instead of through burners. Furnace construction change was suggested successfully in one instance on account of the coal shortage. This modification was with the object of changing from producer gas to oil without a delay of more than six hours.

One of the changes wrought by metallurgical developments in the automobile industry was the use of the electric furnace for tool and special steels to an extent that had almost eliminated the crucible process from American practice. In the making of ferro-alloys in the electric furnace one of the developments was the use of the Söderberg self-baking continuous electrode, a steel tube filled with carbonaceous material which bakes itself in the furnace as it is used. As the electrode is consumed an extension is welded on the top and the whole after being charged with the carbonaceous material is lowered into the furnace as the bottom part is consumed. This invention was used with economy of electrode cost and maintenance in ferrosilicon furnaces in Norway and its use in electric steel furnaces was considered a possibility. Electric steel installations in the United States continued (see IRON AND STEEL) and at the great United States Navy Ordnance plant at Charleston, W. Va., 35 ton Heroult furnaces, the largest to be built in the United States, were being installed for use early in 1921.

The electric furnace in the manufacture of cast iron was increasingly prominent in 1920, for it was especially available for the production of thin walled and complicated castings as an adjunct to the cupola for desulphurizing and for the manufacture of malleable iron. The ease of super-heating, the quick and complete desulphurization, and the ready control of the product rendered it especially useful in foundries where difficult shapes and exact specifications were the rule. The Sandberg method for the heat treatment of heads of rails with air or steam was in use in 1920 in several European and one American rolling mills. The result of the treatment was said to be increased life of track and facilities were being established so that the system could be followed without interfering with the ordinary processes. Experimental work of the year included the development of several grades of steel for resisting corrosion by water or acids and oxidation by heat. Both rolled products and castings of these types were made.

METALS. See CHEMISTRY, INDUSTRIAL and METALLURGY.

METCALF, LORETTUS SUTTON. Editor, died, January 15. He was born at Monmouth, Me., Oct. 17, 1837, and educated in the schools of Monmouth and Boston. After editing in succession several weekly journals in Massachusetts he was managing editor of the *North American Review*, 1876-1885. In 1886 he founded the *Forum*, which he edited till 1891. He founded the *Florida Daily Citizen*, at Jacksonville, Fla., in 1893, and was its editor until 1897.

METCALF, THEODORE A. See ROMAN CATHOLICS.

METEOROLOGY. Perhaps the most striking aspect of contemporary meteorology is the growing importance of several definite fields of application of this science, each having its own

devotees and its own literature. Thus we now recognize as fairly distinct branches of applied science Marine Meteorology, Agricultural Meteorology, Physiological and Medical Meteorology, Hydrological Meteorology, Aeronautical Meteorology, Military Meteorology, and Commercial Meteorology. Each of these is capable of furnishing ample occupation for a large group of specialists and offers or soon will offer remunerative careers to those who specialize therein. Thus with respect to the last three in the list, which were the latest to crystallize. Large aircraft concerns now have their own meteorological staffs; meteorological units have become a regular feature of armies; and a few "consulting meteorologists" already find employment in providing data of weather and climate for the use of business and industrial enterprises. The first formal treatise on agricultural meteorology that lives up to its title, written by J. Warren Smith, of the United States Weather Bureau, was published late in 1920. Physiological meteorology has lately attracted much attention. The "katathermometer" (a special form of dry-and-wet-bulb thermometer) for measuring the cooling effect of the atmosphere upon the human body, devised by Prof. Leonard Hill, has been the subject of considerable literature. Hill, in England, Ellsworth Huntington, in this country, and Griffith Taylor, in Australia, are blazing new trails in the important border science between physiology and medicine on the one hand and meteorology and climatology on the other. A symposium on this subject was a feature of the annual meeting of the American Meteorological Society in Chicago, December, 1920.

Organized meteorology is still in process of adjusting itself to the changes in human affairs arising from the war. The world-wide interchange of telegraphic weather reports has generally been resumed, but with the improvements that such reports are now, especially in Europe, largely distributed by radio-telegraphy and are more frequent and detailed than in the former epoch. Even Soviet Russia has been broadcasting, by wireless from Moscow, daily weather reports from a group of stations. Arrangements were made during the year to extend the European weather maps far to the northward by including reports from Jan Mayen, and plans were also set on foot to obtain radio weather reports from Greenland.

The most important advance in the organization of meteorology during 1920 was the establishment by Dr. O. L. Fassig of a general climatological service in the West Indies, under the direction of the United States Weather Bureau, with headquarters at San Juan, P. R. Although meteorological observations have been taken for years at hundreds of places in the West Indies, the stations have been maintained by a multitude of local authorities and the results have mostly been published in a very fragmentary way and in widely scattered documents (such as the blue books of the various British colonies, etc.). The new organization will comprise upwards of 400 stations, most of which already exist, and all their data will be published, according to a uniform plan, in a single monthly or quarterly report. Probably a number of stations on the adjacent continental coasts will eventually be included in this *réseau*.

The Czecho-Slovak Republic has established a meteorological service, with headquarters at

Prague, under the direction of Dr. Rudolph Schneider. The meteorological service of Roumania, which some years ago was relegated to a minor rôle as a branch of the astronomical observatory in Bucharest, has now, to the great satisfaction of meteorologists, resumed an independent status. In Germany, which has hitherto labored under the disadvantage of having a number of mutually independent meteorological establishments, a *Reichsausschuss* has been appointed to coördinate the work of these institutions and enlarge the practical weather service. Dr. Gustav Hellmann, director of the Prussian Meteorological Institute, is president of this new central committee, which proposes to maintain a number of stations, open day and night, for the interchange of wireless weather reports. An extensive *réseau* of meteorological stations has been established in Ecuador by the *Asociación de Agricultores del Ecuador*, with headquarters at Guayaquil. The meteorological service of Brazil has been reorganized and much enlarged by Senor J. de Sampaio Ferraz, and will hereafter include in a single system the previously independent provincial services of that country. New meteorological services, on a tentative scale, are in operation in Venezuela and the Dominion Republic.

In contrast to these hopeful undertakings, most discouraging reports have come from Vienna concerning the affairs of the *Zentralanstalt für Meteorologie und Geodynamik*, the official meteorological service of Austria, and one of the oldest and most fruitful institutions of its kind in the world. In common with the representatives of other sciences in Austria, the Viennese meteorologists have been reduced to dire extremities by the monetary situation in their country, and during the year were forced to appeal for aid to their colleagues in other countries to save them from starvation. Dr. Max Margules, who, before he retired from meteorological work some years ago, was perhaps the foremost contributor to dynamic meteorology in the world, actually starved to death, but partly because he was living in strict seclusion and declined proffered aid. Food drafts were sent to the *Zentralanstalt* by the American Meteorological Society, and help was also provided from other sources in America and Europe. In December, 1920, the *Zentralanstalt* issued a circular, signed by the world-renowned meteorologist, J. Hann, former director, and by F. M. Exner, present director, indicating that the collapse of the institution was at hand, unless financial aid could be secured from abroad.

An international congress of meteorologists was held in Venice at the end of September under the auspices of the Italian Meteorological Society. This meeting had no connection with the series of congresses, conferences, and committee and commission meetings that have been held during the past half-century by the representatives of the official meteorological services of the world. On the other hand, the Commission on Weather Telegraphy, which is under the official International Meteorological Organization, held a meeting in London November 22-27. At the latter meeting a new code was adopted for the interchange of weather telegrams, and one for weather reports from ships, and a schedule was drawn up indicating the hours at which collective reports of meteorological observations are to be sent out from high-power wireless stations in the different countries of Europe. The new

international weather code, which is much more elaborate than the one used before the war, is to come into general use in Europe by Jan. 1, 1922, but each country is asked to begin its use as long before that date as practicable.

The meteorological services of the Americas are not yet participating in the general interchange of weather reports by wireless that prevails in the Old World, but it seems inevitable that, in a few years, all countries will be linked up in this system of reports. In the meantime, the United States Weather Bureau has inaugurated a system of wireless weather reports for the benefit of mariners in the western part of the North Atlantic Ocean. Reports of the winds and barometric pressure observed at a large number of stations in the eastern United States and the West Indies at 8 P. M., 75th meridian time, are broadcast at specified hours in the evening from the Naval radio stations at Arlington, Key West, Point Isabel, Tex., Great Lakes, Ill., and San Juan, Porto Rico. The Bureau has supplied ships with base-maps on which these data may be charted, so that such ships are now in a position to draw their own weather maps each evening. Besides the reports of observations, these wireless bulletins contain forecasts and information concerning the location and movements of storms, etc. This service was begun Nov. 20, 1920. A similar service is projected for the Pacific Ocean.

During the summer of 1920 the Weather Bureau carried out a series of upper-air observations in and about the West Indies with a view to obtaining further knowledge of West Indian hurricanes. Another line of attack upon the problem of forecasting the movements of these tropical storms was marked out by Dr. I. M. Cline in a paper published in the *Monthly Weather Review* (Wash., D. C.) for March, 1920. Dr. Cline finds that as hurricanes approach our coasts, the waves spreading out in advance of the storm produce abnormal tide-levels, observations of which at several points furnish useful indications of the location and movements of the storm. In accordance with Dr. Cline's suggestions, Weather Bureau stations on the southern coasts of the United States reported all abnormal tides by telegraph throughout the hurricane season of 1920.

Meteorologists have been watching with much interest the development of new methods of forecasting by Prof. V. Bjerknes and his associates, J. Bjerknes, H. Solberg, and T. Bergeron, at Bergen, Norway. The Bergen meteorologists find that there is a well-marked surface of discontinuity (called the *polar front*) between the warm air blowing from low latitudes and the cold air of polar origin, and that the cyclones of the temperate zone follow one another along this line, "like pearls on a string." The contrast in temperature and humidity between the masses of air lying on either side of the line, together with the vertical movements of the conflicting polar and tropical currents, leads to the formation of cloud, fog, and rain. In fact, cyclones, with their attendant weather phenomena, appear to be episodes of the wavy and undulating polar front, extending around the globe, while anti-cyclones are explained as tongues of polar air that have pushed too far south and have been cut off by the intrusion of warm air to the northward of them. (*Nature*, June 24, 1920. *Meteorological Mag.*, Sept., 1920.) To a certain extent

these ideas are an interesting revival of the views of H. W. Dove, which prevailed in meteorological circles before the middle of the nineteenth century. Dove similarly attributed the weather changes of the middle latitudes to a conflict between equatorial and polar air currents.

Some prominence has lately been attained by the views of A. Schmauss, in Germany, and others to the effect that examples of colloidal phenomena may be found in the behavior of moisture and suspended dust in the atmosphere.

The number of condensation nuclei in a given volume of air is so great that it has not been clear how the drops formed on each of them could grow to such a size as to fall as raindrops. Dr. W. J. Humphreys, of the Weather Bureau, in his new *Physics of the Air*, has suggested that the small droplets first formed in an ascending current of humid air filtered out most of the nuclei, so that the number of the latter rising to higher levels is small enough to permit the formation of drops of "falling" size at such levels.

Prof. Carl Störmer, of the University of Christiania, Norway, has enlarged his remarkable work in taking simultaneous photographs of the aurora from different stations until he now has seven such stations in operation. They are connected with one another by telephone, and their distances apart, ranging from 26 to 89 kilometers, provide base-lines large enough to ensure the accurate determination of the actual positions in space of auroral features by the photogrammetric method. During the splendid auroral displays of March 22-23, 1920, observed very widely in both Europe and North America, Störmer secured photographs of streamers extending up to the unprecedented altitude of 500 kilometers (310 miles). A map showing the horizontal distribution of this aurora over the United States was published by Brooks and Lyman in the *Monthly Weather Review* (Washington, D. C.) for July, 1920.

Sir Napier Shaw has retired from the directorship of the British Meteorological Office, and has been succeeded by Dr. G. C. Simpson. Shaw remains, however, at the head of the International Meteorological Committee. Prof. K. Nakamura, director of the meteorological service of Japan, retired at the end of 1920 and was succeeded by Prof. T. Okada.

Among the well-known meteorologists who died during the year were: Dr. Max Margules, of Vienna; Alexander Freiherr von Danckelman, a leading contributor to the climatology of Germany's former colonies; and Alexander Supan, of Breslau, physical geographer, climatologist and former editor of *Petermanns Mitteilungen*. Gen. M. A. Rykachev, retired director of the Russian meteorological service, is reported to have died in Petersburg late in 1919.

Two new meteorological journals were launched in 1920: viz, the *Bulletin of the American Meteorological Society* (Washington, D. C.) and *La Meteorologia Pratica*, published bi-monthly at the Osservatorio di Montecassino, Italy. Meteorological books published during the year include W. J. Humphreys, *Physics of the Air* (Phila.), J. W. Smith, *Agricultural Meteorology* (N. Y.); Griffith Taylor, *Australian Meteorology* (Oxford); R. K. G. Lempfert, *Meteorology* (London); F. D. Young, *Frost and the Prevention of Damage by It* (Washington, D. C., U. S. Dept. of Agriculture).

METHODIST EPISCOPAL CHURCH.

Statistics for 1920 show this denomination had 3,944,911 full members on roll, 286,227 non-resident members, making a total with preparatory members of 4,392,520 members, with 18,575 ministers in full connection and 1847 on trial and 14,505 local preachers. The above figures include missions in foreign countries. The church property included 29,854 buildings with an estimated value of land and buildings of \$255,718,293. The parsonages numbered 15,495, with an estimated value of land and buildings of \$46,194,086. Sunday schools numbered are 35,668, with total enrollment in all departments of 4,338,523 pupils and 391,604 officers and teachers. The Epworth League reports show 508,027 senior members and 218,415 junior members. This denomination has affiliations with churches in Denmark, Finland, Korea, North China, North Germany, Norway, South Germany, Sweden, Switzerland. The Mission Conferences were held in Austria, Bulgaria, and Sweden. The second largest in the United States, this denomination has many branches. Statistics for many of these will be found under their separate headings.

Statistics for the United States for 1920 show that this denomination had 2,262,247 full members on roll, 173,303 non-resident members, total membership of 2,333,224. There were 9996 ministers in full connection and 1004 on trial and 4105 local preachers. Church buildings numbered 16,269 with total estimated value of land and buildings of \$146,546,668. Parsonages numbered 8264 with estimated value of land and buildings of \$26,160,243. Sunday schools numbered 15,715 with a total enrollment of 2,419,921 with 225,317 officers and teachers. Epworth League reports showed 256,534 senior members and 84,982 junior members.

Missionary work was carried on in Africa, China, Japan, Korea, Malaysia, Philippine Islands, India, South America, and Mexico. This work is carried on by the Board of Foreign Missions and the Woman's Foreign Missionary Society. Total receipts for foreign country work were: \$5,352,973 for the year ending Jan. 1, 1920, of \$1.28 per capita. Report of the Board of Foreign Missions, 1920, showed 1049 missionaries and the Woman's Missionary Society showed 559 workers, besides 84 for foreign workers making a total of 2741 missionaries. Native workers numbered 14,430. There were 235,530 full members and 259,601 probationers, making a total of 505,131.

Reports of education in the foreign field showed 12 colleges or universities with 2373 students. Theological and Bible Schools numbered 65 with 1786 students. High schools numbered 102 with 15,773 students. Elementary schools numbered 2726 with a total under instruction of 100,415. Sunday schools numbered 9267; total enrollment of 405,246. Estimated value of churches and chapels was \$9,149,362, or adding schools and hospitals, etc., a total valuation of \$17,001,697. Total contributions in the foreign field were \$1,849,026.

The Centenary Conservation Committee carried on the work of the centenary campaign during 1920 with unequalled success. At the close of the financial campaign of 1919, \$112,000,000 was pledged. During the year which followed, the amount of pledges was raised over \$3,000,000, so that the complete amount of centenary pledges is now more than \$115,000,000. The cost of the

campaign is estimated not to exceed 4 per cent of the amount collected. During the year \$700,000 was given for the relief of starving women and children. A share was taken in the rebuilding of 31 villages in the Marne Region of France on which \$100,000,000 was spent. Over half a million dollars was spent in evangelistic work and church building in all the countries of Europe; \$250,000 was spent on orphanages, homes and industrial schools in which to care for orphans and others ruined by the war. Three hospital schools were established in Africa. Mass movement was carried on in India where \$6,438,882 was promised for the furtherance of Christianity in that country. Thirty new missionaries were sent to Latin America and work was begun in Costa Rica and continued in a number of other countries down there. Reports show that the "first and most important effect of the centenary at home has been the awakening of hundreds of churches that were asleep." Over \$250,000 was spent in helping soldiers and sailors resume their educational work where the war broke it off, or enabling men to begin college work. Other appropriations were made to carry on work in industrial centres, caring for negroes who have come to the North, Americanization on a Christian basis, work among students and State colleges and universities, building churches and supplementing the equipment and making more efficient the work of our army and navy chaplains.

Home missionary work is carried on by the Board of Home Missions and Church Extension. Total receipts by the Board were \$9,003,300. The work is divided up into different departments; the Department of Church Extension, an important sub-division of which is the Bureau of Architecture (over 2000 requests for help was received since the establishment of the bureau in 1919); Department of City Work through which a large number of city societies have been organized; Department of Rural Work which offered the following plan for its future work: (1) to study conditions affecting the welfare of the rural church, (2) to develop a programme of education to promote leadership in the rural church, (3) to organize the rural work for the more efficient administration of missionary funds and (4) to establish "demonstration" work in selecting places to stimulate a more effective rural service and for working out methods of church work; Department of Frontier Work, where special attention has been given during the past year to work among the Indians; Department of Evangelism, which aims to add a million communicants to the church in the future; the Bureau of Foreign Speaking Work which conducts English Speaking Conferences among foreigners in 533 centres and Foreign Speaking Conferences in 422 centres. Among the languages used are: Armenian, Chinese, Jewish, Japanese, Swedish, Slav, and a number of others.

Reports from conferences on ministerial support showed an increase in 1920 in the salaries of pastors and district superintendents. For the 15,791 pastoral charges, there was received \$21,346,011 for their support, or an average of \$1351.78 per pastor.

The General Conference of 1920 met in Des Moines, Iowa, on May 1, Bishop Berry presiding. Dr. Edmund M. Mills was elected secretary, and the roll call showed more than 800 delegates

present. The Conference assigned 38 bishops to residences, 21 in the United States, 2 in Latin America, 2 in Africa, 3 in Europe, and 10 in Asia. Japan and Korea were constituted an episcopal area.

The educational work is carried on by the Board of Education which stands in a supervisory relation to 42 universities and colleges, seven professional graduate schools, 34 secondary schools, and 18 institutions for negroes. Total endowment of these institutions in 1920 was about \$41,000,000, with a total income of about \$7,000,000. Among the universities the most important are: DePauw University, Indiana; Northwestern University, Illinois; University of South California; Ohio Wesleyan University; Boston University, and Wesleyan University. The board maintains a Student Loan Fund to help students complete their courses in various institutions. This fund did much work during 1920. The church also maintains 89 deaconess homes, 24 deaconess hospitals, and 10 deaconess training schools. Besides these are 51 regular hospitals, 39 children's welfare institutions, and 39 homes for the aged. All periodicals are published by the Methodist Book Concern, 150 Fifth Avenue, New York City. Branch offices are maintained in Boston, Pittsburgh, Detroit, Cincinnati, Chicago, Kansas City, and San Francisco.

METHODIST EPISCOPAL CHURCH.

SOUTH. Statistics for 1920 show for this denomination 2,172,088 members; traveling preachers numbered 7623; local preachers numbered 4801; Sunday school pupils numbered 1,608,670, with 142,390 officers and teachers; Epworth League membership was 119,331; church buildings numbered 17,061 at an estimated value of \$75,982,955; parsonages numbered 5580 with an estimated value of \$15,288,215. The above figures show a slight difference from those of 1919. Missions are maintained in Brazil, Central Mexico, China, Cuba, Korea, Mexican Border, and Pacific Mexico. The denomination is divided into 50 conferences and 350 districts for purposes of administration. The College of Bishops is composed of 19 ministers from all parts of the South and Southwest, comprising the executive body of the church. The *Methodist Review* and the *Christian Advocate* are the principal periodicals. Educational, missionary, and relief work is carried on by committees appointed by the College of Bishops.

METHODISTS, CANADIAN. This denomination is a union which took place in 1883 of the Methodist Episcopal Church, the Wesleyan Methodist Church, the Primitive Methodist Church, the Methodist New Connection Church, and the Bible Christian Church. The union took place because of the similar beliefs of the five separate churches, and much better work was found possible by coöperation. Besides the Dominion of Canada and Newfoundland there are churches in Bermuda that are affiliated with this denomination. Canada is divided into 12 conferences which are further subdivided into many districts for the purpose of administration and organization. The conferences are as follows: Toronto, London, Hamilton, Bay of Quinte, Montreal, Nova Scotia, New Brunswick, Prince Edward Island, Newfoundland, Manitoba, Saskatchewan, Alberta, and British Columbia.

Reports for 1920 show a total membership of 395,653, including probationers; 2227 regularly

ordained ministers; 380 ministers on probation, 3745 churches; Sunday schools numbered 3883 with 456,302 pupils and 41,508 officers and teachers. In the Young Peoples' Societies there were 2896 active organizations. The above figures show a slight increase over 1919. Educational work is carried on by a board of education, which has supervision over 17 colleges and universities, the most important of which are: Victorian University, in Toronto; Mt. Allison University in Sackville, N. B.; Wesleyan Theological College in Montreal, and Wesley College in Winnipeg. The *Christian Guardian* is the principal periodical published by the denomination.

METHODISTS, COLORED. The only available statistics for colored Methodists are those of 1919. At that time there were 267,361 members and probationers; ordained ministers numbered 3402; lay preachers numbered 2786; church buildings numbered 3485; Sunday schools numbered 4007 with 76,876 pupils and 7008 officers and teachers. Originally this denomination was a part of the Methodist Episcopal Church, South.

METHODISTS, WESLEYAN. This denomination is the principal Methodist branch in Great Britain and Ireland. Statistics for 1920 show 862,808 communicants for Great Britain. Other statistics are those of 1919, the latest available. In Great Britain there were: 485,533 members and probationers; 2594 ordained ministers; 18,618 lay preachers; 8528 churches; 7364 Sunday schools with 860,334 pupils and 125,663 officers and teachers. In Ireland there were 27,226 members and probationers; 258 ordained ministers; 622 lay preachers; 488 churches; 329 Sunday schools with 21,930 pupils and 2149 officers and teachers. Foreign missions had 204,719 members and probationers; 632 ordained ministers; 8107 lay preachers; 3707 churches; 2351 Sunday schools with 142,403 pupils and 9168 officers and teachers. The French Conference reported 1433 members, 31 ministers, and 62 churches. The South African Conference reported 143,897 members and probationers; 294 ordained ministers; 4627 lay preachers; 4280 churches; 904 Sunday schools with 42,582 pupils and 3106 officers and teachers. These latter figures show marked progress during the year.

PRIMITIVE METHODIST CHURCH. Statistics for 1920 show 206,038 communicants for Great Britain. There were in 1919 in this denomination 206,035 members and probationers; 1093 ordained ministers; 14,602 lay preachers; 4798 churches; 4019 Sunday schools with 416,937 pupils, and 56,124 officers and teachers.

UNITED METHODIST CHURCH. Statistics for 1920 show 182,344 communicants for Great Britain. There were in 1919 in this denomination 182,344 members and probationers; 734 ordained ministers; 5919 lay preachers; 3090 churches; 2239 Sunday schools with 271,245 pupils and 37,611 officers and teachers.

WESLEYAN REFORM UNION CHURCH. Statistics for 1920 show 8671 communicants for Great Britain. There were in 1919 in this denomination 8671 members and probationers; 26 ordained ministers; 423 lay preachers; 213 churches; 190 Sunday schools with 13,950 pupils and 2475 officers and teachers. The above figures show a marked loss over the corresponding figures for 1918.

INDEPENDENT METHODIST CHURCH. Statistics for 1920 show 9621 communicants for Great Britain. There were in 1919 in this denomina-

tion 9621 members and probationers; 378 ministers; 146 churches; 159 Sunday schools with 25,432 pupils and 2945 officers and teachers.

AUSTRALASIA METHODIST CHURCH. Statistics for 1920 show 179,215 communicants for Australasia. There were in 1919 in this denomination 179,215 members and probationers; 1102 ordained ministers; 9074 lay preachers; 4450 churches; 4000 Sunday schools with 210,000 pupils and 25,578 officers and teachers.

NEW ZEALAND METHODIST CHURCH. Statistics for 1920 show 25,180 communicants for New Zealand. There were in 1919 in this denomination 25,180 members and probationers; 181 ordained ministers; 925 lay preachers; 468 churches; 422 Sunday schools with 29,035 pupils and 3162 officers and teachers.

JAPAN METHODIST CHURCH. According to the latest available statistics (1918) there were in this denomination 15,364 members and probationers; 241 ministers; 245 churches; 340 Sunday schools with 28,438 pupils and teachers.

Methodism is also represented in the following countries, the figures being the latest available membership: Austria-Hungary, 955; Bulgaria, 601; Denmark, 4092; Finland, 1611; France, 507; Italy, 4132; North Germany, 14,760; Norway, 6132; Russia Mission, 452; South Germany, 14,005; Sweden, 16,454; Switzerland, 10,597.

World figures for Methodist communicants show that in America there are 8,358,230; in Great Britain and Australasia, 1,473,877; making a grand total of 9,832,107 as against 8,768,616 in 1910, an increase of over 1,000,000 during that nine years. An estimate of the Methodist population in the world shows in the Western Section, members, probationers, and adherents, 24,253,805; in the Eastern Section, 7,369,385, making a grand total for the world of 36,622,190 as against 32,728,547 in 1910, or an increase of 4,000,000 persons. See also **WESLEYAN METHODIST CONNECTION IN AMERICA.**

METRIC SYSTEM. The movement for the establishment of the International Metric System as the single system and standards for weights and measures in the United States continued during 1920. Over 100,000 petitions were sent to the United States government at Washington urging this step both by individuals and by organizations. A World Metric Standardization conference was held in San Francisco on May 17, 1920, after the Seventh National Foreign Trade Convention, which was attended by over 500 representatives of commerce, science, and various professions and industries. In March, 1920, the City Council of Chicago, Illinois, unanimously adopted a resolution urging that the United States and the British Empire make the Metric weights and measures the exclusively legal standard for the respective nations. In January, 1920, the second Pan American Financial Congress meeting at Washington, D. C., passed resolutions urging the adoption at the earliest possible moment of the Metric System by the United States. In December, 1920, bills were introduced in the Senate and House of Representatives respectively, by Senator Joseph S. Frelinghuysen and Representative Fred A. Britten, providing that 10 years after the passage of the act the weights and measures of the Metric System should be the single standard of weights and measures in the United States of America and the international stand-

ards should be the underlying and fundamental standards. The bills provided that from four years after the passage of the act no person should make any weight or measure or weighing or measuring device except according to the Metric System. The use of other weights and measures in trade or commerce would be illegal after 10 years and before that time all postage, excises, duties, and customs, must be charged and collected on a Metric basis. These bills naturally were not acted upon by the close of the year, but received the approval of those interested in metrological reforms along the lines of the Metric System.

Much interest was aroused among metrologists by the award of the Nobel Prize in Physics to Chas. Edward Guillaume (q.v.), director of the International Bureau of Weights and measures and one of the foremost metrologists of the world.

The American Metric Association held its annual meeting in New York and Chicago on December 27 and 30, to listen to numerous papers and reports on the progress of the use of the Metric System in the United States.

METROPOLITAN OPERA HOUSE. See MUSIC. *Opera.*

METTEY, ANDRE. French expert in pottery; regarded as one of the masters of the modern art of pottery, died at Asnières April 2. He was born in 1861. He came into public notice in 1911 with a series of remarkable works in varnished clay; in the following year he exhibited some excellent porcelains, and in 1913 some works decorated in an entirely new style, adding greatly to his reputation as a ceramist. He had made an especial research for many years for the purpose of discovering luminous red shades and was finally successful in 1919. His enamelled works in red and blue on a gold base were described as particularly effective. He was born at Laigues, and acquired his skill without any technical education, and simply by observation of the great works of the past.

MEXICO. A federal republic lying to the south of the United States and to the north of Central America. Capital, Mexico, situated in the Federal District.

AREA AND POPULATION. The country is divided for administrative purposes into 28 states, the Federal District, and two territories. Area, estimated at 767,198 square miles, or 25.25 per cent of the area of the United States; population according to the census of 1910, 15,115,612; estimated, 1912, 15,501,684. Chief cities with their populations in 1910: Mexico, 571,066; Guadalajara, 119,468; Puebla, 96,121; Monterey, 73,528; San Luis Potosi, 68,022; Merida, 62,447; and Leon, 57,722.

PRODUCTION. The country is well adapted to agriculture, having an abundance of fertile soil and, owing to the varying altitude, the products of temperate, tropical, and semi-tropical zones are often found within a comparatively small radius. The chief products have been corn, cotton, henequin, wheat, coffee, and beans, and there is also a considerable production of sugar, molasses, and spirits. Statistics published in 1920 showed that there were in the Mexican Republic 8,466,643 head of live stock, distributed as follows: Cattle, 2,162,984; horses, 929,385; mules, 354,351; asses, 287,989; sheep, 1,089,976; goats, 1,987,869; and hogs, 1,654,089.

Of late years attention has been especially directed to the oil resources which are very exten-

sive and which have been exploited by foreign capital. The change of government policy in respect to oil and other concessions to foreigners caused much complaint abroad, especially in the United States. (See preceding YEAR BOOK), and the difficulty continued during 1920. (See below). In respect to other mineral products, the United States Bureau of Domestic and Foreign Commerce supplied the following information based on official Mexican sources in 1920.

The following table gives the production of 1916, 1917, 1918, and 1919 (January to September), quantities being stated in kilos of 2.204 pounds each:

<i>Metals</i>	1918 <i>Kilos</i>	1919 <i>Kilos</i>
Gold	25,313	22,944
Silver	1,944,542	1,949,673
Copper	70,223,454	50,893,612
Lead	98,837,154	67,378,353
Zinc	20,698,995	8,665,413
Antimony	3,268,546	627,704
Tin	13,537	2,117
Tungsten	149,486	29,292
Molybdenum	27,371	2,856
Manganese	2,878,383	2,849,979
Mercury	163,598	113,865
Arsenic	1,881,011	2,188,333
Amorphous graphite	6,190,819	5,011,619

According to the *Pan-American Union* the silver output of Mexico in 1919 was estimated at 75,000,000 Troy ounces, or 6,000,000 ounces more than the combined production of the United States and Canada. Mexico occupied the first place in the silver production of the world.

The total output of petroleum in Mexico in 1919 was 92,402,055 barrels, or 27,797,433 barrels more than in 1918. The principal centres of production were, in barrels, as follows: Southern fields, 72,656,713; Panuco, 16,808,435; Topila, 1,348,769; and Ebano and other districts, 1,588,138. The exports during the year referred to totalled 80,701,780 barrels. The exports of asphalt during the period referred to amounted to 19,075 barrels, all of which went to the United States. The domestic consumption of petroleum in 1919 was 16,696,407 barrels, as compared with 14,000,000 barrels in 1918. Official figures in 1920 showed that Mexico had 1103 petroleum wells, many of which were not being worked. The daily potential production was estimated at 1,995,220 barrels, and the daily actual production at 220,825 barrels. New wells to the number of 123 were being drilled.

The United States Bureau of Foreign and Domestic Commerce in 1920 gave out the following data of general industrial conditions in 1919: Manufacturing was carried on in the following lines: Mining and smelting, cotton, clothing, pottery, breweries, foundries, rebozos, rugs, zarapes, hats, basketry, cigars and cigarettes, sugar, flour, bagging, twine, soap, leather, shoes, paper, iron and steel works, electric light and power. While no manufacturing is carried on on a large scale in Mexico, except mining and smelting, it is well distributed throughout the country and gives employment to many people. Primitive methods are followed in many of the industries, especially in the making of rugs, zarapes, rebozos, pottery, and basketry, which in general are carried on in the homes of the workmen. One manifestation of an awakened spirit in the peon class has been a steady exodus of laborers with their families to the United States during 1918 and 1919. This movement by March, 1920, had assumed such

importance as an economic problem that the government was concerning itself in ameliorating industrial conditions in favor of this class of people. The attention given to mining industry, following a policy of conservation in 1917 rather than one of extension, settled more definitely into regular production for profit in 1918, broadening out in 1919 into a policy looking also to future development. The rise in silver was a great stimulus to mining in the latter part of 1919. Actual production was hampered by the lack of transportation facilities, the difficulty in obtaining fuel being an especially serious problem. Commercial facilities offered by banks during the past four years were restricted throughout the country by governmental intervention. Makeshift expedients were resorted to for buying and selling domestic exchange, leading merchants generally taking the place of the usual bank correspondents in different commercial centres. During the latter part of 1919, the facilities of the *Comision Monetaria*, a governmental agency established in 1905 for handling public moneys, came into fairly general use for exchange purposes, as it had regular branches in the principal cities of Mexico. The salient factor of industrial progress in Mexico in 1919 was the sufficient restraint of banditry throughout the Republic to permit a general return to industry, except in limited areas. In no part of the country did the outlaws extend their operations, their depredations being limited to raids. Railway lines previously in regular operation have been maintained, subject to less and less interruption, and regular service has been resumed on lines where service had been suspended or subject to frequent interruption. Agricultural districts easily accessible to lines of communication have correspondingly been delivered from bandit interference, and people have returned to cultivation of the soil, except in remote districts.

COMMERCE. The imports of the country immediately responded to renewed purchasing power of Mexican money which manifested itself early in the year 1919. The release of commodities by the United States War Trade Board was followed by orders from Mexican merchants whose stocks had become depleted. At first orders were only to replenish goods sufficiently for immediate demands, falling prices being anticipated. The most significant imports demanded were plows and other agricultural implements. These were for immediate use and were ordered in large quantities, indicating a condition of comparative security in agricultural districts. Of other lines of merchandise imported, the most important were wearing apparel, foodstuffs, textiles, drugs and chemicals, mining supplies, hardware, electrical equipment, and household utensils. Practically all came from the United States. While buying was not heavy, it was fairly steady, increasing beyond the ability of American manufacturers to deliver and far beyond what the transportation facilities of the country could handle. The principal exports during the year were animal products (hides, skins, and bones), mineral products, petroleum, fibres, lumber, basketry, earthenware, and chicle. Practically all of the exports went to the United States. The most notable increases in exports were of cotton, coffee, broomroot, vanilla beans, chicle, fertilizer (bat guano), linseed-oil, bananas, twine, indigo, cigarettes, baskets, garlic, and pottery.

RAILWAYS. The principal railway systems were formed into one corporation in 1909 under the name of the National Railways of Mexico and after 1914 this corporation was taken over by the government which operated it along with nearly all the private lines under the name of the Constitutionalist's Railways of Mexico. The National Railways of Mexico owned 6818 miles of track and controlled besides about 1220 miles. On the National Railways of Mexico there was an appreciable amount of new construction during 1920; track was laid between Durango, Mexico, and the port of Mazatlan, a distance of 21.13 miles; and also between Cuatro Ciénegas and Sierra Mojada, state of Coahuila, a distance of 39.77 miles. In addition there was being built from Durango, state of Durango, to the port of Mazatlan, on the Pacific coast, 250 miles, with 87 miles from Durango completed; from Cuatro Ciénegas to Sierra Mojada, state of Coahuila, 99.42 miles, with track completed on about 76 miles; between Allende and Las Vacas, state of Coahuila, 75.80 miles; this would connect at Del Rio, Texas, with the Southern Pacific; from Empalme Purísima on the Durango-Mazatlan line to Las Animas, 31 miles, of which 19 miles had been completed. There was also building during the year a new station in Durango to cost \$250,000, of which by December the masonry and concrete work was completed. There was grade reduction under way from Saltillo to Carneros, 34 miles, while the new passenger station at Saltillo, was nearing completion.

PUBLIC DEBT. On June 30, 1920, the public debt of Mexico was 657,599,122 pesos distributed as follows: Public internal and foreign indebtedness and the interest on the debts of the states guaranteed by the Federal government, 545,009,457 pesos; interest on the gold bonds of the general mortgage of the National Railroads, 24,359,316 pesos; interest on the gold bonds of the *Caja de Prestamo* (Loan Bank) for irrigation and agricultural development up to May 31, 1920, 14,662,323 pesos; debts due the banks for the attachment of reserve coin, 53,701,851 pesos; obligation of the internal debt effective, 19,866,175 pesos.

GOVERNMENT. Under the constitution promulgated Feb. 5, 1917 (for the main provisions of which see 1917 and 1918 YEAR BOOKS), Mexico was proclaimed a federative republic. The legislative power is vested in a Congress of two houses, the House of Representatives and the Senate, members of both being elected by universal suffrage. The executive power is in a president elected by direct popular vote for four years. Under the President is a cabinet of seven secretaries of state, namely: Foreign Affairs; Interior, Finance and Public Credit; War and Marine; Communications; Public works; and industry and commerce. There are also three departments of state, namely, Judicial, Educational, and Public Health. At the beginning of 1920, the President was General Carranza, but in the spring of that year civil war broke out and he fled from the capital and was assassinated. In May Adolfo de la Huerta was elected provisional president, and in December after the general elections, General Obregón who had been elected was inaugurated president. See below, under *History*.

HISTORY

SONORA REVOLT. While the presidential campaign was going on in Mexico, Sonora, next to

Chihuahua the largest state in the republic, declared in April its secession, and its Legislature chose as the supreme authority of the new state, its governor, de la Huerta. Among the grievances were the alleged partiality of President Carranza in the electoral campaign, and a disagreement arising over the Southern Pacific Railroad of Mexico. A serious strike had been ordered on that road, in spite of an injunction of the Federal Court. The Federal government, April 6, threatened to take control of the road unless the matter was settled by April 9. The Government of Sonora seized the road and began its operation by employing the strikers, promising to grant their terms. The revolt spread in spite of President Carranza's measures to suppress it, and became general through the country before the end of April. On April 23d, the revolutionists proclaimed a new provisional government of Mexico under de la Huerta; and they demanded the repudiation of Carranza and the election of a provisional president. Generals Alvaro Obregon and Gonzales joined the revolutionary movement. Carranza now tried in vain to effect a compromise and on May 5th issued a manifesto likening the revolt to that of the former president, Huerta, and promising to make every effort for the protection of the state against the revolutionists. He said he would surrender office only when a successor had been legally chosen; and he called for loyal support and for additional troops. This was immediately followed, however, by the revolt of the Federal garrison at Vera Cruz. On May 7th Carranza secretly fled from the city of Mexico, escaping into the mountains of Jacapoxtla.

ASSASSINATION OF CARRANZA. It seems that he left the Federal district with three trains full of troops, but that the trains were halted a short distance southwest of San Marcos. There he attempted to resist the revolutionists who, however, outnumbered and surrounded his forces. After an obstinate resistance he succeeded on May 14th in breaking through the rebel lines and with about 150 soldiers turned north into the mountains apparently for the purpose of reaching the coast between Tampico and Vera Cruz. Soon afterwards he was met by a small body of troops under General Herrera. Carranza, at that time, had about 80 soldiers with him. General Herrera had surrendered to Carranza in March and the latter felt safe in entrusting himself to him, but on May 21st Herrera's men attacked the hut at the village of Tlascalantongo where Carranza was sleeping. Though some of the troops that accompanied him came to his assistance, it was too late; he had been killed. According to the accounts published at the time, the killing was entirely due to the treachery of General Herrera's forces. The version of General Herrera was entirely different. Appearing before a military court held at Mexico City, he declared that Carranza had committed suicide; but contradictions in his testimony were revealed and the prevailing belief during 1920 was as above indicated.

ELECTION OF PRESIDENT. On May 24th, when the body of the ex-President was buried, the Mexican Congress in extra session elected Adolfo de la Huerta, provisional president, by a vote of 224 to 30. The real power, however, remained in the hands of Gen. Alvaro Obregon, to whom meanwhile the other military leaders, with the exception of General Villa, had pledged their loyalty. Obregon became a candidate for presi-

dent and had practically no competitor. The elections appointed for July 4th were subsequently postponed to September. Meanwhile, Villa declared that he would oppose the new government.

THE OIL QUESTION. The oil difficulty centred around article 27 of the Mexican constitution adopted in 1917, which declares that the people in Mexico had a right to the soil and sub-soil resources and bestows on the government the power to regulate and safeguard these resources. According to the foreign oil companies, a policy of virtual confiscation has been carried on under cover of this clause; taxes of a prohibitory nature have been imposed, including a tax on potential production. In January, the American oil interests appealed to the United States government for protection, saying they were not permitted to drill new wells. In reply, the Mexican embassy declared that the capacity of the 310 oil producing wells in the country was 2,000,000 barrels a day, and that only 220,000 barrels were being extracted for exportation and home consumption, leaving a margin of 1,780,000 barrels a day, which could be drawn at will. The government denied that there was any shortage, except that for which the operators themselves were responsible. On January 17th President Carranza agreed to issue permits for drilling additional wells. Negotiations were undertaken in June with the new government. Representatives of the oil companies demanded the repeal of legislation in Article 27 and a return to the original regulations. Meanwhile the United States Senate sub-committee on foreign affairs had been concerned with the question and had taken a vast body of testimony. The chairman, Senator Fall, recommended the forcing of Mexico to change her constitution by the omission of Article 27, and to except Americans from the law forbidding foreigners to own Mexican land or sub-soil resources; also to permit Americans to serve as teachers or missionaries, etc. He proposed American intervention if Mexico refused to accede to these demands. There was much interest in the attitude of the president-elect, General Obregon. In an interview in the autumn before his inauguration, he gave it to be understood that he would not change the constitution at the demand of Americans and that Article 27 in regard to the ownership of Mexican resources by foreigners would remain, but he said a commission would be appointed to investigate the subject and that vested rights would be safeguarded. See the article MEXICO in preceding YEAR BOOKS.

PRESIDENT OBREGON. In the beginning of December, General Obregon was inaugurated as president. The ceremony was attended by several governors of American States and by many representative Americans living in Mexico. The new President was reputed to be generally popular. As a soldier of the revolution he won for himself a place among the most distinguished officers. He did not belong to the ruling class but was of humble origin, having worked his way up from the ranks of the people. With the business community he appeared to stand well; the comment upon him in the United States press was favorable; and it was believed that his government would soon be recognized by the government of this country.

From interviews with him before his inauguration, it appeared that his intention first was to

arrange for a settlement of the debt. The default of the government in the payment of interest on Mexican bonds held by foreigners was one of the reasons why the United States had postponed recognition of the new government. There was fear in the United States that the governments of Great Britain and France in which countries Mexican bonds were held might intervene. Another question was that of the railways. It was understood that the government would not return the national railways to private management, but would give stockholders a share in their control. As to the spread of Bolshevism, General Obregon said any attempts of foreign agitators in Mexico would be promptly suppressed. In the autumn he made a tour of the Mexican states and on October 6th visited Texas where he was received enthusiastically and where he made speeches in favor of the friendliest possible relations between the two governments.

RECOGNITION. In the latter part of the year the question whether the United States government should recognize the new Mexican government was before the public. On November 17th it was given out by the State Department that if Article 27 of the Mexican Constitution or the laws enacted under it were made retroactive, the American government must withhold recognition. This article pertained to the ownership of property in Mexico by foreigners. The State Department was actuated by the motive of protecting all legitimate interests of Americans in Mexico. At this time there was a great deal of industrial unrest in Mexico according to reports, especially in the neighborhood of Vera Cruz and Yucatan, where frequent strikes had occurred. A Mexican mission was sent to Washington in November for the purpose of suggesting the basis for an arrangement between the two countries and especially to procure the recognition by the United States of the Obregon régime, as the inauguration of General Obregon was approaching. The American Secretary of State on November 25th proposed to the Mexican representatives that a treaty should be formulated embodying the points agreed upon in the conferences between the United States government and the Mexican mission. The Secretary said that no doubt could be entertained of the high and enlightened purpose of the present Mexican government and favored the suggestions by the mission of joint arbitration of claims. Both parties agreed upon the principle that Article 27 of the Mexican constitution was not and should not be interpreted as retroactive.

DISORDERS. During the early part of the year there were acts of banditry including border raids and the capture of an American on a train which had been wrecked by the followers of Villa (March 4th). In the same month the Mexican Foreign Office declared that both Americans and Mexicans were involved in border raids. Meanwhile, testimony pertaining to Mexican outrages was being gathered in the United States by the Senate Foreign Relations sub-committee, under the chairmanship of Senator Fall of New Mexico. It was reported on November 18th that labor conditions in the State of Coahuila had made American residents unsafe and that American citizens and their families were leaving the city of Sabinas in large numbers and were returning to the United States. It was reported that the striking miners had seized the coal mines in that region including property of Americans. The

subject was giving the State Department much concern.

Much was said about the spread of Bolshevism throughout the country in 1920. A Communist Congress of the Mexican Proletariat was held in the city of Mexico, September 18, and its extremist members advocated violent measures. Red flags were displayed and violent speeches made in the course of a great workingmen's parade, September 26, in which three members of the Chamber of Deputies took part. Alleged Communists were said to have gained control of several towns in the state of Yucatan, where Soviet propaganda had been vigorously carried on. In general, however, more orderly conditions were reported than for many years past. The robbing of banks and passenger trains had been checked and while there were a few insurgent movements, they were on a small scale and presented no great danger. The revolutionary leader, Gen. Felix Diaz, surrendered to government troops at the beginning of October.

ECONOMIC SITUATION AT THE CLOSE OF THE YEAR. In the latter part of November and in December occasional reports came in of the closing of mines and smelters; the price of silver began to drop at an alarming rate; the cotton crop was less than normal, and part of it was sold at prices below cost of production. The prices obtained for sisal and other fibres and for hides were extremely low. Bank rates were raised, money became tight, and finally the Banking Company of Paris and Mexico went into the hands of receivers and the Mercantile Banking Corporation was obliged to close its doors. The ports were badly congested, the railways were hampered by lack of equipment, both suffering from the results of labor troubles. Unemployment began to appear and wages were lowered, but the cost of living, particularly rents, continued to increase. It was reported that a large number of silver, copper, lead, and iron mines had been compelled to close, throwing about 10,000 miners out of work. Government expenditures continued to exceed revenue. But in spite of these unfavorable features, there was much in the situation to inspire confidence. The attitude of the government was in favor of the establishment of sound conditions. A new banking law was promised, which was calculated to encourage investment in Mexico. The oil-fields were reported to be prosperous in spite of the port congestion. See **PETROLEUM**.

MIAMI CONSERVANCY DISTRICT AND FLOOD PROTECTION. See **FLOOD PROTECTION**.

MICHIE, J. COUTTS. See **PAINTING AND SCULPTURE**.

MICHIGAN. POPULATION. According to the preliminary report of the census of 1920, there were 3,668,412 residents in the State, Jan. 1, 1920, as compared with 2,810,173 in 1910.

AGRICULTURE. According to the census of 1920, the number of farms was 196,647, a falling off of 5.0 per cent since 1910. The following table is compiled from the estimates of the United States Department of Agriculture, covering years 1919 and 1920:

Crop	Year	Acreage	Produc. Bu.	Value
Corn	1920	1,625,000	65,000,000	\$53,800,000
	1919	1,625,000	65,000,000	89,700,000
Oats	1920	1,425,000	56,430,000	27,086,000
	1919	1,425,000	55,625,000	25,294,000

Crop	Year	Acreage	Produce, Bu.	Value
Rye	1920	660,000	9,702,000	12,618,000
	1919	900,000	13,500,000	17,280,000
Hay	1920	2,674,000	3,213,000	66,929,000
	1919	2,695,000	3,236,000	75,364,000
Potatoes	1920	340,000	85,700	82,844,000
	1919	310,000	27,900	37,665,000
Barley	1920	240,000	6,240,000	5,429,000
	1919	280,000	5,820,000	6,278,000
Wheat	1920	938,000	14,275,000	23,982,000
	1919	1,035,000	20,237,000	42,497,000

TRANSPORTATION. In 1920 the mileage of steam railroads in the State was 8898.47, and of electric railroads, 1558.74. The Michigan Public Utilities commission, created by act of the legislature of 1919, is vested with jurisdiction to fix rates and charges of all public utilities in the State, except passenger rates. Under the State constitution only the legislature can fix or alter passenger rates. But the commission cannot alter the rates of any public utility owned and operated by a city or village, nor can it alter the rates or charges fixed by any franchise granted by a city, village or township. However, any municipality, and any public utility operating within the limits of a municipality, whether such utility is operating under the terms of a franchise or otherwise, may join in submitting to the Commission any question involving the fixing or determination of rates, or the making of rules or conditions of service. In such cases the commission is empowered to fix such maximum and minimum rates and charges, and prescribe such rules and conditions of service, as shall be just and reasonable.

FINANCE. The total receipts of the State Treasury in 1920 were \$49,685,317, and the total disbursements \$49,515,776. Balance in State treasury, Dec. 31, 1920, \$3,069,973. Total State debt, \$10,500,000. The total amount of taxes levied in Michigan under the ad valorem general property tax for all purposes—State, county, school and municipal—was in 1919, \$110,776,000. For 1920 it was estimated as in excess of \$125,000,000. These amounts did not include taxes paid by public utility corporations into the primary school fund, or the automobile tax paid into the highway fund, or inheritance taxes, or mortgage taxes, the total of which for the year ending June 30, 1920, was \$14,771,746.

EDUCATION. The school population of the State was 937,330; the enrollment, 670,427; and the daily average attendance, 504,939. The number of teachers employed was 23,388 and the total amount of salaries paid, \$8,826,354. The total amount expended for educational purposes in the State was \$40,989,735, and the total disbursement for elementary and secondary education \$29,851,970.

CHARITIES AND CORRECTIONS. The State institutions with the number of inmates at the end of the fiscal year, June 30, 1920, was as follows:

INSTITUTIONS FOR THE INSANE	
Kalamazoo State Hospital.....	2,175
Pontiac State Hospital.....	1,493
Traverse City State Hospital.....	1,875
Newberry State Hospital.....	1,027
Ionia State Hospital.....	538

Total..... 7,107

PRISONS	
State Prison, Jackson.....	1,174
Michigan Reformatory, Ionia.....	608
Branch Prison, Marquette.....	375

Total..... 2,157

OTHER INSTITUTIONS

State Psychopathic Hospital.....	59
Michigan Home and Training School.....	1,633
Farm Colony for Epileptics.....	491
Industrial School for Boys.....	698
Industrial Home for Girls.....	288
State Public School.....	242
School for the Blind.....	158
Employment Institution for Blind.....	79
School for the Deaf.....	264
Soldiers' Home, Grand Rapids.....	563
State Sanatorium, Howell.....	186

ELECTIONS. The vote in the presidential election of November, 1920 was: Harding (Republican), 762,865; Cox (Democrat), 233,460; Debs (Socialist), 28,947; Farmer Labor, 10,372; Watkins (Prohibitionist), 9646; Socialist Labor, 2539; as compared with the following vote in 1916: Hughes (Republican), 337,952; Wilson (Democrat), 283,993; Benson (Socialist), 16,012; Hanly (Prohibitionist), 8085; Reimer (Socialist Labor), 831. The Republican candidate for governor was elected, receiving 762,865 votes. The thirteen members of Congress elected were all Republicans. The proposed amendment to the State constitution to abolish the parochial schools was defeated. The legislature elected in November was unanimously Republican in both branches, not a single Democrat, or candidate of any other party for the legislature, having been elected.

THE NEWBERRY CASE. On Jan. 27, 1920, the trial was begun in the United States District Court for the Western District of Michigan, sitting at Grand Rapids, Judge Clarence W. Sessions presiding, of Truman H. Newberry, United States Senator for Michigan, and 134 others on charges of violating nomination and election laws by the use of money in amounts beyond the limit fixed by the laws for the purpose of securing the nomination and election of Mr. Newberry to the Senate in 1918. The treasurer of the Newberry campaign committee in a sworn statement filed with the Secretary of the United States Senate as required by law, admitted that \$176,568 was used in the campaign to nominate Mr. Newberry. The Federal Grand Jury, at Grand Rapids, Nov. 29, 1919 indicted 135 including Senator Newberry. The trial—all being tried together—began at Grand Rapids, Jan. 27, 1920, before Judge Sessions with Frank C. Dailey of Indianapolis as chief government prosecutor. The jury was sworn, February 2. On March 2nd the government concluded its testimony, and on the same day the indictments against 23 of the respondents were dismissed on motion of the prosecution. On March 3rd Judge Sessions directed the jury to return a verdict of not guilty in the case of 15 others. The case against the rest of the defendants was submitted to the jury, March 19, and on the following day a verdict of guilty was returned against Senator Newberry and 16 others. Judge Sessions the same day pronounced the sentences. The 17 convicted and their sentences were: Roger M. Andrews, Menominee, publisher, eighteen months imprisonment; Elbert V. Chilson, Ann Arbor, manufacturer, one year and one day imprisonment; Frederick Cody, New York, insurance broker, two years imprisonment and \$10,000 fine; B. Frank Emery, Detroit, clerical worker, \$2000 fine; Richard H. Fletcher, Bay City, State Labor Commissioner, fifteen months imprisonment; Charles A. Floyd, Detroit, assistant campaign manager, two years imprisonment and \$5000 fine; Fred Henry, Flint deputy factory inspector, fifteen months imprisonment;

Hannibal A. Hopkins, St. Clair, publisher, one year and one day imprisonment; Paul H. King, Detroit, manager Newberry committee, two years imprisonment and \$10,000 fine; George S. Ladd, Sturbridge, Mass., good roads lecturer, \$1000 fine; James F. McGregor, Detroit, dealer in lodge regalia, fifteen months imprisonment; William J. Mickel, Oshkosh, Wis., Democratic politician, two years imprisonment; John S. Newberry, Detroit, capitalist, \$10,000 fine; Truman H. Newberry, Detroit, United States Senator, two years imprisonment and \$10,000 fine; Milton Oakman, Detroit, former clerk and sheriff, eighteen months imprisonment; Allan A. Templeton, Detroit, president Board of Commerce, eighteen months imprisonment; Harry O. Turner, Detroit, manufacturer's agent, \$2000 fine. All of the 17 convicted ones were released on bail in the sum of \$5000 each directly after sentence and an appeal was taken to the United States Supreme Court. The case had not been decided at the close of the year.

OFFICERS. Governor, Alexander J. Groesbeck; Lieutenant-Governor, Thomas Read; Secretary of State, Charles J. Deland; State Treasurer, Frank E. Gorman; Auditor-General, Oramel B. Fuller; Attorney-General, Merlin Wiley; State Highway Commissioner, Frank F. Rogers; Commissioner of Insurance, Frank F. Ellsworth; Commissioner of Banking, Frank W. Merrick; Commissioner of Labor; Food and Drug Commissioner, Fred L. Woodworth; Game Fish and Forest Fire Commissioner, John Baird; State Librarian, Mary C. Spencer.

JUDICIARY. Supreme Court: Chief justice Joseph H. Steere; Associate justices, John E. Bird, Nelson Sharpe, Joseph B. Moore, Howard Wiest, Grant Fellows, John W. Stone, George M. Clark.

MICHIGAN, UNIVERSITY OF. A non-sectarian, co-educational State institution of the higher learning at Ann Arbor, Mich., founded in 1837. There were about 10,700 students enrolled for the year, 1920. The faculty numbered 700, including about 80 additions. The income from all sources amounted to \$4,027,582.75. There were 420,000 volumes in the library, which were housed in the new library building, supposed to be the best equipped in the country. President, Marion LeRoy Burton, Ph.D., LL.D.

MICKLE, WILLIAM ENGLISH. A veteran Confederate soldier, died, February 18. He was born at Columbia, S. C., Oct. 31, 1846, and in 1864 enlisted in the infantry in the Army of Northern Virginia. He was severely wounded in the battle of Cedar Creek, Oct. 19, 1864, and retired for disability early in the following year. After the war he taught school in Mobile, Ala., and later went into business there. For many years he was a prominent official in charge of the fairs held throughout the State of Alabama and after Jan. 19, 1903, was adjutant-general of the United Confederate Volunteers.

MIDDLEBURY COLLEGE. A non-sectarian, co-educational institution of higher learning at Middlebury, Vt., founded in 1800. There were 318 students enrolled in the summer session and 447 in the regular fall session. The faculty numbered 43. The productive funds of the institution amounted to \$1,693,516 for endowment and the income for the year was \$151,412. The library contained about 50,000 volumes. President, John Martin Thomas, D.D., LL.D.

MILITARY ACADEMY, UNITED STATES. See UNITED STATES MILITARY ACADEMY.

MILITARY PROGRESS: I. UNITED STATES: A. THE ACT OF JUNE 4, 1920. The great military event of the year was the passage, June 4, 1920, of the act amending the so-called National Defense Act of June 3, 1916.

Broadly speaking, the act of June 4, 1920, represented in part at least the experience of the World War so far as our own military organization and policies are concerned. It marked the passage from the more or less parochial condition that had heretofore existed, to a national state in which our army is considered as a whole, in its relations on the one hand to the work it might be called to do, and on the other, to the people who were to furnish that army. We can not here in the limited space available, pretend to reproduce all of its provisions: we must content ourselves with those that are fundamental, and refer the reader to the full document * for details.

In respect of composition the regular army was defined anew, so as to include new creations, namely the air service, the finance department, the chemical warfare service (gas service), and it was declared that the "Organized peace establishment including the regular army, the national guard, and the organized reserves, shall include all of those divisions and other military organizations necessary to form the basis for a complete and immediate mobilization for the national defense in the event of a national emergency declared by Congress." It was further provided that the army shall at all times be organized so far as practicable into brigades, divisions, and army corps, and whenever the President may deem it expedient, into armies. This obviously was a statutory recognition of the necessity of adopting in time of peace, the form of organization that would have to be followed in time of war. The territorial subdivision was made to follow suit: where formerly we had departments, divisions, and the like, the act provided that for purposes of administration, training, and tactical control, the continental area of the United States should be divided on a basis of military population into *corps areas*. In other words, like France and Germany, we adopted the principles of *corps regions*. Only time and experience can show how this principle will work with us, and whether it will ever acquire the importance with us that it unquestionably had in the countries just named.

Each corps area was to have at least one division of the national guard or organized reserves, and such other troops as the President might direct, and the President was further authorized to group any and all corps areas into army areas or departments. Accordingly, by his direction the following corps areas were established for purposes of administration, training, and tactical control, to take effect Sept. 1, 1920.

a. First corps area, to embrace the States of Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, and Connecticut.

Headquarters at Boston, Mass.

b. Second corps area, to embrace the States of New York, New Jersey, and Delaware.

Headquarters at Governors Island, N. Y.

c. Third corps area, to embrace the States of

* The National Defense Act, approved June 3, 1916, as amended by the Act, approved June 4, 1920. Washington, Government Printing Office, 1920.

Pennsylvania, Maryland, Virginia, and the District of Columbia.

Headquarters at Fort McHenry, Md. (Temporarily at Baltimore, Md., until space is available at Fort McHenry, Md.)

d. Fourth corps area, to embrace the States of North Carolina, South Carolina, Georgia, Florida, Alabama, Tennessee, Mississippi, Arkansas, and Louisiana.

Headquarters at Fort McPherson, Ga. (Temporarily at Charleston, S. C., until space is available at Fort McPherson, Ga.)

e. Fifth corps area, to embrace the States of Ohio, West Virginia, Indiana, and Kentucky.

Headquarters at Fort Benjamin Harrison, Ind.

f. Sixth corps area, to embrace the States of Illinois, Michigan, and Wisconsin.

Headquarters at Fort Sheridan, Ill. (Temporarily at Chicago, Ill., until space is available at Fort Sheridan, Ill.)

g. Seventh corps area, to embrace the States of Missouri, Kansas, Iowa, Nebraska, Minnesota, North Dakota, and South Dakota.

Headquarters at Fort Crook, Neb.

h. Eighth corps area, to embrace the States of Texas, Oklahoma, Colorado, New Mexico, and Arizona.

Headquarters at Fort Sam Houston, San Antonio, Texas.

i. Ninth corps area, to embrace the States of Washington, Oregon, Idaho, Montana, Wyoming, Utah, Nevada, and California.

Headquarters at Presidio of San Francisco, Cal. (Temporarily at San Francisco, Cal., until space is available at Presidio of San Francisco, Cal.)

The powers held by, the duties required of, and the authority vested in commanders of territorial departments within the continental limits of the United States on Sept. 1, 1920, were thereafter to be held by, required of, and vested in corps area commanders.

Upon the establishment of these corps areas the six territorial departments formerly embracing the continental area of the United States were discontinued, and the following obtained:

a. The island of Porto Rico, with the islands and keys adjacent thereto, were, for administrative purposes, attached to the second corps area. The Territory of Alaska was attached to the ninth corps area for the same purposes.

b. For the purposes of administrative and tactical control in connection with the border patrol and field operations incident thereto, such part of the State of Arizona as lies west of the 114th meridian and south of the 33d parallel was attached to the ninth corps area.

For the purposes of inspection, or maneuvers, of plans for mobilization, war, demobilization, etc., the nine corps areas were, under their establishment, grouped into three army areas as indicated:

First army area.—First, second, and third corps areas.

Second army area.—Fourth, fifth, and sixth corps areas.

Third army area.—Seventh, eighth, and ninth corps areas.

(G. O. 50, W. D., Aug. 20, 1920.)

In the matter of personnel, the act provided for 21 major-generals and 46 brigadier-generals of the line, i.e. generals serving with troops as distinguished from generals holding an office (e.g. chief of engineers, chief of infantry) who were

to be known as general officers of the staff. And whereas ever since Mr. Root's stewardship, line and staff were interchangeable, i.e. the so-called staff corps were filled by officers from the line, to return to troops after a certain length of service in the corps, so by the act, some of these corps reverted to their ancient closed status: these were the signal and the quartermaster corps, the ordnance and the judge advocate general departments, and the chemical warfare service, in which all officers above the grade of captain are now to be permanently commissioned. A new grade, that of warrant officer, was created, intermediate between commissioned and non-commissioned ranks. Seven grades of enlisted men were established varying in base pay from the first at \$74 per month, to \$30 for the seventh.

GENERAL STAFF CORPS. An important portion of the act was devoted to the organization of the general staff corps. That corps was defined to consist of the chief of staff, of the War Department general staff, and of the general staff with troops. An "initial eligible list" was ordered to be prepared by a board of general officers, to contain the names of all officers of the regular army, national guard, and officers' reserve corps, drawn from two classes of officers defined in the act itself, who should be qualified by education, military experience, and character for general staff duty. This list appeared late in December: as was to be expected, its omissions caused comment.

The duties of the two subdivisions of the general staff corps were defined in the act. The War Department general staff was to "prepare plans for national defense and the use of the military forces for that purpose, both separately and in conjunction with the naval forces, and for the mobilization of the manhood of the nation and its material resources in an emergency, to investigate and report upon all questions affecting the efficiency of the army of the United States, and its state of preparation for military operations; and to render professional aid and assistance to the Secretary of War and the chief of staff." The general staff with troops has simpler work to do: they are to "render professional aid and assistance to the general officers over them; to act as their agents in harmonizing the plans and duties and operations of the various organizations and services under their jurisdiction, in preparing detailed instructions for the execution of the plans of the commanding generals, and in supervising the execution of such instructions." For certain purposes, affecting the national guard and the organized reserves, reserve officers shall be added to the general staff committees, and while so serving shall be considered to be additional members of the general staff.

ASSISTANT SECRETARY OF WAR. This official was charged with supervising the procurement of all military supplies and other business of the War Department pertaining thereto, and the "assurance of adequate provisions for the mobilization of material and industrial organizations essential to wartime needs."

ARMS OF THE SERVICE. The act set out the strength in officers and men of the infantry, cavalry, field artillery, and coast artillery, and contained the important direction that in each of these arms, the men might be organized into such units as the President might prescribe. It provided that all tank units should form a part of the infantry, and that hereafter original en-

listments in the regular army should be for a period of one or three years at the option of the soldier, and that reenlistment should be for a period of three years.

NEW CREATIONS. The act brought into existence certain units. Among these was the war council, consisting of the Secretary and Assistant Secretary of War, the general of the army, and the chief of staff. It was made the duty of this council to meet from time to time and consider policies touching the military and munitions problems of the War Department. Another new department is the finance department, charged with the disbursement of all the funds of the War Department. In the medical department, a new branch appeared, the medical administrative corps, and members of the army nurse corps were given relative military rank. The chemical warfare service was created, its personnel fixed, and its duties defined. These cover the entire field of gas, smoke, and incendiary operations both offensive and defensive; the training of the army in chemical warfare; and the organization, equipment, training, and operations of special gas troops. Similarly an air service was created, its personnel, and rates of pay established, but no definition of its duties was attempted. Among the most noteworthy of new creations was the provision for chiefs of infantry, cavalry, and field artillery respectively, with the rank of major general.

It was provided that after July 1, 1920, no appointments of officers of Philippine Scouts should be made except of citizens of the Philippine Islands. Promotion examinations, except in the medical, dental, and veterinary corps, were abolished, save that all officers must be examined physically.

PROMOTION LIST (SINGLE LIST). Of far reaching importance and significance to the army was the establishment of the "promotion list," known in the army as the "single list." Until the passage of the act, promotion in the army was by arm of service, with the inevitable result of inequalities of promotion as between contemporaries that unquestionably at times affected the spirit of the army. This defect was removed by placing all officers of the army, with certain natural exceptions such as chaplains and medical officers, on one list for promotion, the list to be so drawn that its first name should be that of the officer having the longest commissioned service, the second that of the officer having the next longest service, and so on. It is believed that the establishment of this list will in time cure one of the greatest causes of discontent in the service.

CLASSIFICATION OF OFFICERS. But provision was also made for the elimination from the service of unworthy or unfit officers. For many years, some officers had argued in favor of the principle of promotion by selection: whether reasonably or not, the service at large set its face against any such principle. Others argued that if the unfit could be got rid of, then the remainder would be all equal in respect of meriting promotion. It is clear that, apart from the mere matter of advancement, only competent officers should remain in the service, and means to secure that result were furnished by the act. Immediately on its passage, and in September of 1921, and every year thereafter, the President was ordered to convene a board of not fewer than five general officers who should arrange all officers in two classes, Class A, containing officers

who should be retained in the service, and Class B, officers who should not be retained in the service. But no officer should be definitely retained in Class B until given an opportunity to make a defense before a court of inquiry. But if he should be so retained, then a board of three officers was to decide whether such classification were due to his neglect, misconduct, or avoidable habits. If the finding were affirmative, the officer was to be discharged from the army; if negative, he should go on the retired list with pay at the rate of 2.5 per cent of his active pay multiplied by his completed years of commissioned service, unless his total commissioned service were less than 10 years, in which case he should be honorably discharged with one year's pay.

OFFICERS' RESERVE CORPS: TRAINING CAMPS. Provision was made for what will always be the greatest need of the United States in war, officers. Hence the organization of the officers' reserve corps, consisting of general officers, of sections corresponding to the various branches of the regular army, and of such other sections as the President might direct. Many sections of the act were devoted to this reserve. The most important was that providing for a reserve officers' training corps in civil institutions, by the establishment of senior divisions in universities and colleges giving degrees, and of junior divisions at all other public and private educational institutions. Each division was to contain units of the several arms, corps, and services in such number and strength as the President might direct. But no such units could be established until a regular officer had been detailed as professor of military science and tactics, and in general, until the authorities of the school or college had established a two-year elective or compulsory course of military training. The courses of the respective units of the R. O. T. C. were to be prescribed by the Secretary of War. Another provision for future officers was that creating upon military reservations or elsewhere, schools or camps for the military instruction and training, with a view to their appointment as reserve officers or non-commissioned officers, of such warrant officers, enlisted men and civilians as might be selected upon their own application. And finally we may record here the fact that an enlisted reserve corps was established.

NATIONAL GUARD: MILITIA. On the whole, the provisions of former laws relating to these two elements were left unchanged. A new section, however, fixed the qualifications for national guard officers; and the militia division of the War Department became the militia bureau of the same, with a chief to be drawn from the national guard, to hold office for four years, and to have the rank, pay, and allowances of a major-general. He was to be assisted by as many regular army officers and men as the President might deem necessary. The President might also assign, but only with their consent, not to exceed 500 officers of the national guard, who hold reserve commissions, to duty with the regular forces. Pay for officers and men of the national guard was established, and the President was authorized to draft into the military service of the United States any and all members of the national guard and of the national guard reserve. But this could be done only when Congress has authorized the use of the armed land forces of the United States for any purpose requiring the

use of troops in excess of those of the regular army.

To carry out the provisions of the law, certain executory orders were issued by the War Department. One of these has already been considered (G. O. 50, 1920) relating to corps areas. Others define in greater detail the duties of the Assistant Secretary of War (G. O. 48, Aug. 12, 1920), and of the War Department general staff (id.); prescribe the dissolution of the board of ordnance and fortification (G. O. 49, Aug. 14, 1920), and the rights and privileges of nurses (id.); and finally the duties and responsibilities of chiefs of the combatant arms (G. O. 59, Sept. 21, 1920). These orders should be carefully examined by those interested in the law, because they translate and interpret it.

The new law naturally gave rise to exposition and discussion. As explained by Maj.-Gen. W. G. Haan, United States army, Director of War Plans Division of the War Department General Staff, the act under question will result in the development of one effective well-balanced army, the army of the United States.

"In the future," [as contemplated by the Amended National Defense Act], "the army of the United States will be composed of three coordinate components, the regular army, the national guard, and the organized reserves. Each component will have a fixed mission and an equally important rôle.

"The regular army will garrison our overseas possessions, the coast fortresses and other stations necessary to be maintained in the United States; will provide personnel to assist in the training of the national guard and organized reserves; and will provide the personnel necessary for the administration of the army and the organization of an adequate and effective force which will be instantly available for emergencies within the United States or elsewhere, and which in peace time, will serve as a model for the organization, discipline, and training of the active and semi-active military forces of the nation.

"The national guard will provide in time of peace an adequate and effective force available in minor emergencies for employment by the States or the United States; and in time of war will provide an adequate, balanced, and effective component of the army for employment within the United States or elsewhere. It is the second line increment of the army in peace or war. Its ultimate strength will be approximately 435,000.

"The organized reserves will provide an organized and balanced force which may be expanded into an adequate war component of the army to meet any emergency requiring the use of troops in excess of those of the regular army and the national guard. The organized reserve is distinctly a war force. In time of peace it will be maintained at such strength as many be necessary to form a skeletonized organization, or cadre, capable in an emergency of broad expansion.

"Each unit of the organized reserve will be localized and will be officered by reserve officers residing in the neighborhood. The enlisted personnel will be assigned to units localized in the vicinity of their places of residence. Provisions will be made for transferring officers and enlisted men upon changes of residence to similar units located in their new places of residence. As the organized reserves are distinctly a war force and will attract a class of citizens who do not feel inclined or are unable to undertake the obliga-

tions assumed by members of the national guard, and as it will be maintained as a cadre or skeletonized force, there will be no competition between it and the national guard." (*National Service*, December, 1920, condensed from *Army and Navy Journal*, Sept. 11, 1920.)

"Two general plans," said Col. O. L. Spaulding, General Staff, in the *Field Artillery Journal*, May-June, 1920, "for the organization of the army under the Act of June 4, 1920, are under discussion. Both assume the infantry division as the fundamental mixed unit; the two types of organization may be referred to as the 'large division' and the 'small division' plans.

"By the large division is meant a division organization on the same general lines as the one we used in France, two infantry brigades of two regiments each, the infantry regiment of three 1000-rifle battalions, augmented by the incorporation of special armament, heavy artillery, machine guns, and trains enough to make it a complete self-sustaining unit. This unit has certain advantages and disadvantages. It is a very powerful fighting machine; and a single division staff handles all components, fighting and supply. Besides this, it has successfully met the test of war. It lends itself very well to two distinct methods of tactical handling, brigades in depth or brigades abreast.

"The suggestions for a change are on the ground that the division is too large and heavy, or on the ground that a three-unit organization is more convenient than a two-unit. The large division leaves no room for an organic army corps, since it is really a corps itself. Hence, any material reduction would destroy its great characteristics, as a complete and self sufficient body, and make it a less efficient army corps, without making it a light maneuvering division.

"The small division does not undertake to be a complete self-contained unit, but rather assumes an army corps as an organic unit, and depends upon the corps for support, reinforcement, and further supply.

"The form of small division which is now proposed uses the three-unit system of organization, and its framework is three infantry regiments of three 1000-rifle battalions. As to tactical handling, it might readily be formed with regiments abreast, or a more natural use would seem to be with two regiments in line and one in division reserve." (*National Service*, December, 1920.)

General March, Chief of Staff, in his report for 1920 found a flaw in the act of June 4, 1920, in that it did not provide for universal military training:

"The act provides for a regular army of approximately 280,000 men and 17,700 officers. It does not provide for universal military training nor for the application of the draft system in future emergencies. It may be stated without further qualifications that an adequate reserve of trained soldiers, available for use in an emergency is an essential prerequisite to any plan for national defense, and the creation and maintenance of such reserve without military training is impossible."

He anticipated but little trouble in obtaining the 280,000 men needed for the peace army, but expected some in getting the 17,717 officers required. He went on to say that a new and permanent policy whereby the War Department "definitely assumes the responsibility for the education and recreation of the enlisted person-

nel" has been promulgated as the result of war experiences and "the illiteracy so strikingly prevalent in the draft army." Functioning through three sections, education, camp activities, and moral training, the new service, General March said, has set up machinery to "train technicians and mechanics to meet the army's needs and to raise the soldier's general intelligence in order to increase his military efficiency and to fit the soldier for a definite occupation upon his return to civil life."

In his report, Mr. Secretary Baker made no comment on the omission of universal training from the law, but heartily approved of the relationship established between the regular army and the national guard. He disapproved of the optional one-year enlistment.

NATIONAL GUARD. The national guard provisions of the Act were criticized in some other quarters. Thus Mr. Howard Kingsbury in the October number of *National Service* said:

"Federal pay cannot lawfully be provided for or Federal control exercised over the militia not in Federal service. The militia cannot be brought into Federal service except for the purposes, and subject to the limitations, prescribed by the Constitution. 'The only power of the Federal government to maintain a Federal military establishment is in the power to raise and support armies. Congress therefore undertakes to do by the present act, as by the National Defense Act, under the guise of exercising its power to provide for organizing the militia, what it can constitutionally do only under its power to raise and support armies. That this constitutional error and statutory disingenuousness have been repeated does not prove, however, that they must be permanent. The present act should not be accepted as the last word in legislation on the subject.'"

And the state of the national guard is shown in the following table:

STATE OF THE NATIONAL GUARD OF THE UNITED STATES, OCTOBER, 1920

	Present strength Line officers	Enlisted men	Au- thorized strength	Present strength in per cent of authorized
1. Wyoming	27	543	560	97
2. Porto Rico	34	1,388	1,641	85
3. Utah	22	542	713	76
4. Rhode Island	37	821	1,086	76
5. Minnesota	166	3,620	5,196	70
6. Oklahoma	110	2,605	8,813	68

B. MISCELLANEOUS. We group here mostly for reference certain matters not susceptible of general classification: G. O. 4, War Department, Jan. 22, 1920, set out the policy of the army and navy relating to aircraft, and provided that all questions regarding the policy of the War and Navy departments with regard to the tactical and strategical functions of aircraft should be referred to the joint board (army and navy) for consideration and recommendation to the respective department secretaries. G. O. 18, War Department, March 25, 1920, gave a new designation of service schools. G. O. 25, War Department, April 30, 1920, announced the policy of the War Department in regard to the classification of graduates of the general service schools. It was still found necessary to maintain a large number of troops on our Mexican frontier.

II. FOREIGN COUNTRIES: 1. FRANCE. France still kept a large force under arms, and the three-year service law was still in force. Troops were stationed on the Rhine, and of course, but with reduced effectives, in home garrisons including the colonies. An army was stationed in Syria, another in the Balkans. The bulk of the forces however was kept in France and North Africa. The situation in respect of France may be summed up by saying that the existing situation was a hold-over from pre-war conditions. Changes were expected, and bills introduced in the Parliament to make these changes, but nothing was settled. More specifically, the question of the reorganization of the army, involving among other things a reduction of the length of military service came up, and various bills were submitted. The following points, it would seem, are accepted by all:

(a) Reduction of financial burden imposed upon the citizens of the country, with a maximum length of service of one year.

(b) Better utilization of the resources of the country with respect to a national war, if it should once more be forced upon the country.

(c) Above all, maintenance of the principle of universal service. Among other matters considered was the physical education of French youth, and the relative preparation for obligatory military service. Public opinion seems to favor a veritable nation in arms, in which it would be the business of the old army to train Frenchmen, whether young or middle-aged, for their military duty. It is clear that the country in respect of its army, was passing through a sort of psychological crisis. Reserve officers questioned a policy looking to the maintenance of a permanent army, when according to their belief, the war was won in greater part by their own efforts. The fallacy of this belief was evident, but the number under its influence, great.

In respect of the supreme command, the following reorganization was adopted:

The designated commander-in-chief takes in time of peace the title of vice-president of the supreme war council. In this council, of which the Minister of War is president, are included for deliberative purposes, the marshals of France, and not to exceed 10 generals of division, among whom is the chief of staff. This officer, besides superintending the staff of the army, directs all the departments charged with the organization or the training of the troops, mobilization, armament, defense of the national territory, and the supply of war material.

The whole subject of the national defense was thus placed in the hands of the designated commander-in-chief.

2. **GREAT BRITAIN.** Much was done toward the reestablishment of the army on a peace basis, and demobilization was substantially completed. Fully two thirds of the British army was employed outside of Great Britain and Ireland. The reorganization of the army was kept in hand, looking, on completion, to an establishment composed of the regular army proper, the special reserve, and the territorial army. The special reserve is intended as a substitute for certain special units existing before the war. It will be of value in expanding the regular army in time of war, by forming six divisions. The territorial army when fully organized will consist of 14 divisions (infantry) and one cavalry (yeomanry) division. It may not be sent out of the country save by special act of Parliament, and is intended to provide for home security, order, and military police generally after the regular forces shall have gone overseas. With the special reserve, already mentioned, it will furnish means for expanding the regular army in case of need. It may be remarked here that the royal garrison artillery (corresponding to our coast artillery corps) will in the reorganization be formed into heavy field artillery brigades. This accords with the experience of the World War, which broke down practically all distinctions heretofore existing in the various branches of this great arm of the service. Special attention was paid to aviation. (See **AÉRONAUTICS**.)

3. **ITALY.** The reorganization of the army was delayed by uncertainty in respect of the future military policy. It is a cardinal point with Italy to be supreme in the Adriatic, and this condition colored and will continue to color her military policy.

4. **GERMANY.** Germany continued to cause dissatisfaction by her chicanery, chiefly in respect of disbanding her troops in accordance with the terms of the treaty. She maintained civic guards in Bavaria and Eastern Prussia; she also had a large constabulary or security police, which she was unwilling to abolish. On the material side her record was better. She had surrendered 41,000 guns, 29,000 guns unmounted, 163,000 machine guns and barrels, 2,800,000 rifles, 16,000 airplanes, and 25,000 airplane motors.

5. **JAPAN.** According to press accounts, military activity increased in Japan during the year. This activity was manifested in a budget providing for expenditures greatly exceeding those of past years. The immediate reason for this increase may be found in any one of two or three situations. For example, relations continue strained over the question of Japanese immigration to the United States. This is mentioned here solely *pro forma*. Next, the Bolshevik situ-

ation in Siberia deeply interests the Island Empire, and lastly so does China.

MILLER, WARREN. Judge, died at Ripley W. Va., December 29. He was born in 1845 and held several important offices in West Virginia, where he was elected member of Congress in 1894, serving two terms. He was for some years judge of the Supreme Court of Appeals and he served as chairman of the debt committee of the State Senate.

MILLERAND, ALEXANDRE. Prime minister of France, elected president Sept. 22, 1920. He was born in Paris, Feb. 10, 1859, and educated in the *lycées*. He practised law but at an early age entered politics on the Socialist side, having defended Socialists with success in the course of contests in the courts. In 1885 he became a Deputy, and he entered the Waldeck-Rousseau ministry in 1889 as Minister of Commerce. This was an important incident in the history of French Socialism since it brought up definitely the issue of participation in the government. A strong element of the party opposed all participation by Socialists in a capitalist ministry and in the contest that followed Millerand's appointment this party prevailed, and he was expelled from the ranks although a considerable minority supported him. M. Guesde, leader of the orthodox majority, remarked on Millerand's acceptance, that while "Socialists formerly showed their devotion by dying at the barricades, now they are devoted up to the point of accepting a portfolio." In 1909 he was appointed to the first Briand ministry taking the portfolio of Public Works, Posts and Telegraphs; and he was active in carrying out the celebrated stroke of the government by which the great railway strike was brought to an end through the calling of the strikers into military service in October, 1910. In the Poincaré ministry in 1912 and 1913 he was Minister of War and aided in the election of his chief to the presidency. He again held this post when the "cabinet of national defense" was formed on Aug. 28, 1914, but resigned before the coalition ministry came into power in October, 1915. During all this period he steadily departed from the orthodox Socialist principles with which he began his career, and he became a strong Nationalist in politics, receiving latterly the support of even such conservative groups as were represented by Barrès and Léon Daudet. During the war he took a leading part in organizing the famous national *bloc* which stood behind Clemenceau in his fight against the disloyal elements in the country. Upon Clemenceau's retirement he became Prime Minister and Minister of Foreign Affairs (January, 1920). As Prime Minister he followed a policy which led finally to complete disagreement with Lloyd

MINERAL PRODUCTS OF THE UNITED STATES IN 1918 AND 1919

Product METALLIC	Quantity	Value	1918				1919 ^a			
			Quantity	Value	Quantity	Value	Quantity	Increase or decrease (approximate) Quantity	Value	Percentage of increase or decrease (approximate) Quantity
Aluminum	13,570	\$41,159,000
Antimonial lead
Antimony
Bauxite
Cadmium
Chromite
Copper, sales value
Ferroalloys
Gold
Iron:
Ore
Pig
Lead (refined), sales value
Manganese ore (35 per cent or more Mn)
Manganiferous ore (5 to 35 per cent Mn)
Nickel, value at New York City
Platinum and allied metals (value at New York City)
Quicksilver (value at San Francisco), flasks
Silver
Tin (metallic equivalent)
Titanium ore (rutile)
Tungsten ore (50 per cent concentrates)
Uranium and vanadium minerals
Zinc, sales value
Total value of metallic products (approximate)

^a Many of the figures for 1919 are estimated. This fact is indicated in the following detailed tables on the various mineral products.

^b Excluded from metallic totals, as the value of the antimony contained in antimonial lead is included in the antimonial-lead value and the remainder under last item ("unrefined").

^c Figures for 1919 not yet available. Estimate of value included in total value of metallic products.

^d Not included in total value.

Total value of metallic products.....	\$2,152,919,000	\$1,872,770,000	+	\$780,149,000	+ 36
Total value of non-metallic products (exclusive of mineral fuels).....	642,929,000	8,275,630,000	+	103,450,000	+ 3
Total value of mineral fuels.....	2,736,151,000	+
Total estimated value of "unspecified" (metallic and non-metallic) products.....	6,700,000	5,300,000	+	1,400,000	+ 21
Grand total approximate value of all mineral products.....	\$5,538,699,000	\$4,653,700,000	+	\$884,999,000	+ 16

a In addition to the arsenious oxide (white arsenic), metallic arsenic was produced in 1918 and 1919. The value of this metallic arsenic is included under last item ("unspecified").

b Value included under last item ("unspecified"). Survey not at liberty to publish figures.

c Not included in total value. Estimate of value included in total value of non-metallic products.

d Figures for 1919 not yet available.

e Figures for 1919 not yet available.

f Exclusive of considerable production for special uses, value for which is included under last item ("unspecified").

g Canvases discontinued after 1915. Value of iron ore sold for paint included under last item ("unspecified").

h Exclusive of sublimed lead in 1919, value for which is included in total value of non-metallic products.

i Figures for 1919 represent production: figures of sales (as for 1918) not yet available. Production decreased 23,904 short tons, or 44 per cent, in quantity, and \$13,628,228, or 63 per cent, in value in 1919, as compared with 1918.

j Includes products as follows: Antimony other than content of antimonial lead, metallic arsenic (also white arsenic in 1919), blismuth, cadmium sulphide, cherts, chert, cobalt concentrates, columbite (Ta₂O₅), diatomaceous earth for special uses, flint lining for tube mills, optical fluor spar, ilmenite, iron ore sold for paint, lithium minerals, magnesium, marks, molybdenum, monazite sand, pebbles for grinding, selenium, silica sand and sandstone (finely ground), slate granules, sodium salts (carbonate, bicarbonate, and sulphate) from natural sources, strontium ore, tellurium, and an estimate of the value of miscellaneous mineral products, statistics for which are not collected annually by the Survey.

George. In this he was entirely logical, for at the beginning he had laid it down as his programme that the treaty should be consistently executed and that there should be no compromise with the Bolsheviks. It had been a marked characteristic of his political career to accept no office without making it perfectly clear what principles would direct his policy, and then to proceed in exact accord with these principles. The policies of Lloyd George which took into consideration changing conditions and developed in accordance with them led inevitably to a break and at the close of Millerand's ministry the French foreign policy was so far removed from the British that there were frequent predictions of a rupture between the two Allies. In his meetings with the Allies at San Remo, Boulogne, Hythe, Spa, and Aix-les-Bains, he adhered consistently to his policy of uncompromising hostility toward Soviet Russia and the protection of Poland. By the recognition of the Anti-Bolshevik leader, General Wrangel, in South Russia, and the thick and thin support of Poland, French foreign policy broke definitely with the British. (See FRANCE; also WAR OF THE NATIONS.) In this Millerand seemed to have the support of the entire country or rather of all the more or less conservative elements who after the war controlled the government. He embodied the typical French point of view in the period following the war and was criticized for its limitations. Like other leading men in France conspicuous after the war he held strictly to a policy based on immediate national interest and scouted all tendencies toward idealism and toward the creation of a new Europe.

Upon the offer of the presidency he at first refused but was prevailed upon by his friends to accept when it became plain that M. Deschanel was physically unable to retain his office. The election was held Sept. 22, 1920. Out of 892 votes he obtained 695. Upon his election he declared that he considered it necessary that the constitution should be modified in certain respects but only when circumstances permitted and only when the execution of the peace treaty was complete. He thought that it was possible by a better interpretation or adaptation of the text of the constitution to empower the President of the Republic to intervene to advantage in the conduct of foreign policies. The choice of Millerand appeared to be popular for he was generally regarded as a safe and strong personality.

MILLIKEN, SETH MELLEN. Cotton manufacturer, died, March 5. He was born at Portland, Me., Jan. 7, 1836, and went into business in 1856. He was for many years the senior member of the firm of Deering Milliken and Company, and was interested in other manufacturing com-

panies in the New England and Southern States. He was a Republican presidential elector in 1892.

MINERALOGY. See DIAMONDS; and GEMS AND PRECIOUS STONES.

MINERAL RESOURCES. The following information was supplied by the United States Geological Survey in 1920: Statistics of mineral production in the United States for 1919 reflect the reaction from intensive production for war purposes and the unsettled state of industry in general. Production of special "war minerals" rapidly subsided, although not to its pre-war status. These minerals, however, even under the stimulation of war demand, had contributed only in very small part to the country's mineral production. The principal decline was due to diminished production of coal and the major metals. Petroleum increased about 6 per cent in quantity and 10 per cent in value, but structural materials, due for a rapid recovery from the low demand during the war, were retarded until late in summer, when their production increased very rapidly. The total value of all mineral products in 1919 was about \$4,653,700,000, 16 per cent less than in 1918. The value of metal products decreased 36 per cent, but it is estimated that the value of mineral fuels and other nonmetallic products decreased only 3 per cent. This small decrease for nonmetals was due to higher prices in 1919, and the table in succeeding pages will show much higher rates of decrease in quantity for many commodities. Figures of total mineral production will be found on pages 442-444.

Gold, bound by a fixed price while costs of mining continued to rise, declined greatly in output from dry or siliceous ores and from placers, and also as a by-product from ores of base metals whose prices decreased. These conditions continued during the first half of 1920, and in June, 1920, only 42 per cent of the gold mines of the country were active. Legislation for stimulating the gold-mining industry was proposed.

MINERAL PRODUCTION. See ALASKA.

MINIMUM WAGE. No new minimum wage laws were passed in the States or Territories of the United States in 1920 and at the close of the year the situation in this respect remained the same as noted in the preceding YEAR BOOK, that is, minimum wage laws existed in only fourteen States of continental United States, and in Porto Rico, and applied only to females and minors. For the main provisions of minimum wage legislation in the States, see YEAR BOOK for 1919. The accompanying table published by the United States Department of Labor shows the awards under the minimum wage laws of the respective States during the year 1920.

AWARDS ISSUED UNDER MINIMUM WAGE LAWS.

ARKANSAS			
Date of Award	Occupations or Industries	Classes of Employees	Amount of Wage
.....	Any manufacturing, mechanical, or mercantile establishment, laundry, express or transportation company.	Experienced females.....	\$1.25 per day.
		Inexperienced females.....	\$1 per day.
May 20, 1919...	Hotels and restaurants.....	Experienced females.....	\$1.25 per day.
		Inexperienced females.....	\$1 per day.
Sept. 1, 1920...	Mercantile establishments in Fort Smith.	Experienced females.....	\$13.25 per wk.
		Inexperienced females.....	\$11 per wk.

AWARDS ISSUED UNDER MINIMUM WAGE LAWS

CALIFORNIA

<i>Date of Award</i>	<i>Occupations or Industries</i>	<i>Classes of Employees</i>	<i>Amount of Wage</i>
June 26, 1920...	Fruit and vegetable canning..	Experienced women or minors.	\$16 per wk.; \$0.38½ per hr.
		Inexperienced women.....	\$12 per wk.; \$0.25 per hr.
		Inexperienced minors (females)	\$10.56 per wk.; \$0.22 per hr.

		Inexperienced	\$12 per wk.
	Mercantile	Women and minors:	
		Experienced	\$17.50 per wk.
		Inexperienced	\$12 per wk.
	Manufacturing (candy or biscuit making, printing or job-press feeding).	Women and minors:	
		Experienced	\$16.50 per wk.
		Inexperienced	\$12 per wk.
	All other manufacturing....	Women and minors:	
		Experienced	\$16.50 per wk.
	Student nurses.....	Women:	
		First year.....	\$4 per mo.
		Second year.....	\$6 per mo.
		Third year.....	\$8 per mo.
	Office occupation.....	Women and minors:	
		Experienced	\$20 per wk.
		Inexperienced	\$14 per wk.

TEXAS

Date of Award	Occupations or Industries	Classes of Employees	Amount of Wage
Nov. 20, 1920...	Telephone or telegraph office, mercantile establishment, laundry or factory.	Females or minors: Experienced	\$12 per wk.; \$0.25 per hr. for all hours in excess of 48 per week.
		Inexperienced	\$0.15 per hr.

WASHINGTON

June 2, 1920...	Public housekeeping.....	Any female over 18 years of age.	\$18 per wk.; \$3 per day; \$0.87½ per hour.
-----------------	--------------------------	----------------------------------	---

MINNESOTA. POPULATION. According to the preliminary report of the census of 1920, there were 2,387,125 residents in the State, Jan. 1, 1920, as compared with 2,075,708 in 1910.

AGRICULTURE. According to the census of 1920, the number of farms was 178,588, an increase of 14.4 per cent since 1910. The following table is compiled from the estimate of the United States Department of Agriculture, covering the years 1919 and 1920:

Crop	Year	Acreage	Produc. Bu.	Value
Corn	1920	3,150,000	118,125,000	\$80,244,000
	1919	2,900,000	116,000,000	139,200,000
Oats	1920	3,378,000	126,488,000	45,536,000
	1919	3,275,000	91,700,000	56,860,000
Barley	1920	1,000,000	25,000,000	15,500,000
	1919	910,000	18,200,000	21,112,000
Wheat	1920	3,001,000	29,116,000	37,851,000
	1919	3,865,000	36,315,000	90,788,000
Flaxseed ...	1920	320,000	3,040,000	5,568,000
	1919	272,000	2,312,000	10,288,000
Rye	1920	480,000	8,160,000	9,955,000
	1919	525,000	7,875,000	10,238,000
Hay	1920	3,683,000	5,762,000	67,212,000
	1919	3,680,000	6,253,000	88,461,000
Potatoes ...	1920	295,000	28,025,000	22,420,000
	1919	310,000	82,760,000	41,264,000

* Tons.

FINANCE. Figures for receipts and expenditures during 1920 were not available. The report of the Public Examiner showed the State's assets, June 30, 1920, at \$64,537,569, declaring, however, that "no accounting records are kept which will disclose the true status of the State's financial condition." The principal sources of the State's income in the fiscal year 1920 and their respective percentages of the total income were as

and property, 7; development and conservation of natural resources, 4; pensions and relief, 4; reduction of indebtedness, 4.

TRANSPORTATION. Total mileage of main lines of railways operating in the State Jan. 1, 1920, 9045.46, a decrease of 33.83 miles during the year. The mileage of terminal and switching roads was 185.20.

EDUCATION. For the year ending July 31, 1920 the number of pupils enrolled in high schools was 49,060; average attendance, 41,043; the number enrolled in graded schools, 182,439; average attendance, 164,553; number of teachers in public schools, 19,575; average monthly salary of teachers in high and graded school districts, \$152 for men and \$95.40 for women; in rural and semi-graded school districts, \$89.60 for men and \$74.62 for women. In respect to teachers' efficiency the State department of education reported for the two-year period ending, July 31, 1920 as follows:

There is increasing efficiency of the teaching force, 87 per cent of whom are normal graduates with college training with 85 per cent of this number holding college degrees. Significant features of the enrollment, too, have been girls of greater maturity, a greater per cent of high school graduates and an increased number of country-bred girls. The average age of the graduates for the biennium has been eighteen and one-third and eighteen and three-fourths respectively. A gain of nearly one-half year is indicated during this period. Thirty-four and nine-tenths of the 1919-20 enrollment as compared with thirty-one and eight-tenths for the previous year were high school graduates.

CHARITIES AND CORRECTIONS. The institutions under the State Board of Control with their situation and population in 1920 are as follows:

Institution	Situation	Population June 30, 1920
Anoka State Asylum.....	Anoka	860
Hastings State Asylum.....	Hastings	894
Willmar State Asylum*.....	Willmar	268-2
Fergus Falls State Hospital.....	Fergus Falls	1,496
Rochester State Hospital.....	Rochester	1,276
St. Peter State Hospital.....	St. Peter	1,296
School for Feeble-Minded	Faribault	1,742
School for the Blind	Faribault	106
School for the Deaf	Faribault	254
State Public School	Owatonna	311
State Training School for Boys.....	Red Wing	285
Home School for Girls.....	Sauk Centre	328
State Reformatory for Women (New).....	Shakopee	20
State Reformatory	St. Cloud	413
State Prison	Stillwater	849
Sanatorium for Consumptives.....	State Sanatorium	218
Hospital for Crippled Children.....	St. Paul	126
Total		10,738

* 2 Inebriates.

from State institutions, 22; interest, 5; loans redeemed, 5; income from State lands, 5; fines, fees, and penalties, 4.5. The chief items of expenditures for that year with respective percentages of total were: Education and recreation, 33.5 per cent; charities and correction, 25; loans, 9; highways, 7.5; protection of persons follows: General taxes, 55 per cent; income

ELECTIONS. The vote in the presidential election of 1920 was: Harding (Republican), 519,421; Cox (Democrat), 142,994; Debs (Socialist), 56,106; Prohibitionist, 11,489; Socialist Labor, 5828; as compared with the following vote in the presidential election of 1916, Hughes (Republican) 179,544; Wilson (Democrat), 179,152; Benson (Socialist), 20,117; Prohibitionist, 7793.

The vote for governor was: Preuss (Republican), 415,805; Shipstead (Independent), 281,402; Hodgson (Democrat), 81,293. The following proposals submitted to popular vote received majorities: Authorization of a trunk highway system; taxation of motor vehicles; subjecting to assessment realty used for railway purposes.

OFFICERS. Governor, J. A. O. Preuss; Lieutenant Governor, Louis L. Collins; Secretary of State, Mike Holm; Auditor, Ray P. Chase; Treasurer, Henry Rines; Attorney-General, Clifford L. Hilton; Commissioner of Education, J. M. McConnell; Superintendent of Banks, F. E. Pearson; Commissioner of Insurance, Gustav Lindquist; Commissioner of Agriculture, N. J. Holmberg.

MINNESOTA, UNIVERSITY OF. A non-sectarian, State institution, at Minneapolis, Minn., founded in 1868. For the summer session of 1920, there were 2025 students enrolled and for the regular fall session 7437. The faculty numbered about 1050, including 250 new teachers. The permanent university fund from sales of land, timber, mineral leases, and royalties on ore amounted to \$1,978,191 and the interest on the fund came to \$79,672.61. Interest on the Swamp Land Fund amounted to \$51,119.65. There were 350,000 volumes in the library. President, Lotus Delta Coffman.

MISSISSIPPI. POPULATION. According to the preliminary report of the census of 1920, there were 1,790,618 residents in the State, Jan. 1, 1920, as compared with 1,797,114 in 1910.

AGRICULTURE. According to the census of 1920, the number of farms was 272,437, a falling off of 0.7 per cent since 1910. The following table is compiled from the estimate of the United States Department of Agriculture, covering the years 1919 and 1920:

Crop	Year	Acreage	Produc. Bu.	Value
Corn	1920	3,980,000	63,680,000	64,954,000
	1919	3,980,000	59,700,000	95,520,000
Oats	1920	236,000	4,012,000	3,490,000
	1919	278,000	4,448,000	4,670,000
Hay	1920	467,000	779,000	13,504,000
	1919	454,000	717,000	14,747,000
Potatoes ...	1920	16,000	1,892,000	2,784,000
	1919	18,000	1,530,000	3,520,000
St. Potatoes.	1920	103,000	11,330,000	11,896,000
	1919	98,000	10,290,000	11,525,000
Cowpeas ...	1920	300,000	2,400,000	5,088,000
	1919	40,000	160,000	400,000
Sorg'm Syrup	1920	72,000	6,480,000	5,832,000
	1919	60,000	5,100,000	4,845,000
Cotton	1920	3,024,000	885,000	67,702,000
	1919	2,848,000	961,000	180,166,000

* Tons. * Gallons.

FINANCE. Cash on hand, Oct. 1, 1918, \$1,705,402; receipts during the year ending, Oct. 1, 1919, \$7,235,340; expenditures, \$5,837,692; cash on hand, Oct. 1, 1919, \$1,397,647.

ELECTIONS. The vote in the presidential election of 1920 was: Cox (Democrat), 69,277; Harding (Republican), 11,576; Debs (Socialist), 1639; as compared with the following vote in the presidential election of 1916: Wilson (Democrat), 80,422; Hughes (Republican), 4253; Benson (Socialist), 1484. Women did not vote owing to the four months' clause in the primary law, which, according to the decision of the Attorney-General debarred them from voting. Governor Lee M. Russell (Democrat) was elected without opposition.

MISSISSIPPI, UNIVERSITY OF. A non-sectarian co-educational State institution of the higher learning at University, Miss., founded in

1848. There were 605 students enrolled for the regular fall session of 1920, and 147 in the summer session. There were 37 members in the faculty. The biennial State appropriation amounted to \$150,000 for expenses, etc. The library contained 31,000 volumes. Chancellor, Joseph Neely Powers, LL.D.

MISSISSIPPI RIVER. See FLOOD PROTECTION.

MISSOURI. POPULATION. According to the preliminary report of the census, of 1920, there were 3,404,055 residents in the State, Jan. 1, 1920, as compared with 3,293,335 in 1910.

AGRICULTURE. According to the census of 1920, the number of farms was 263,124, a falling off of 5.1 per cent since 1910. The following table is compiled from the estimate of the United States Department of Agriculture, covering the years 1919 and 1920:

Crop	Year	Acreage	Produc. Bu.	Value
Corn	1920	6,215,000	198,880,000	\$127,283,000
	1919	5,650,000	152,550,000	210,519,000
Oats	1920	1,775,000	54,138,000	26,528,000
	1919	1,675,000	45,225,000	32,110,000
Wheat ...	1920	2,617,000	32,721,000	52,854,000
	1919	4,445,000	59,833,000	125,051,000

* Pounds. * Bales. * Tons. * Gallons.

FINANCE. Balance, Jan. 1, 1919, \$3,922,716; receipts during 1919 and 1920, \$46,907,846; disbursements during 1919 and 1920, \$38,407,289; balance Dec. 31, 1920, \$12,423,273. Total State debt at end of the year 1920, \$4,398,839. It consisted of one 6 per cent school fund certificate of indebtedness of \$2,909,000; six 5 per cent school fund certificates of indebtedness amounting to \$250,000; one 6 per cent seminary fund certificate of indebtedness for \$122,000, and twenty-one 5 per cent seminary fund certificates of indebtedness amounting to \$1,117,839.42.

EDUCATION. The total enumeration in 1920 was 905,911; enrollment, 672,483; average daily attendance, 531,221. Teachers number 21,126 of whom 17,701 were female. The average monthly salary of teachers in districts not maintaining a high school was \$89 for men, and \$65 for women. In respect to salary the superintendent made the following recommendation: "In view of the fact that teachers must spend much time and money in preparation there should be a minimum wage law enacted establishing a scale of salaries based on training, experience and efficiency. No teacher in the State should receive less than \$100 per month. The Legislature should pass a teachers' minimum wage law guaranteeing to every teacher a living wage."

ELECTIONS. The vote in the presidential election of 1920 was: Harding (Republican), 727,162; Cox (Democrat), 574,799; Debs (Socialist), 20,224; Watkins (Prohibitionist), 5142; Christensen (Farmer-Labor), 3291; Cox (Socialist Labor), 2164; as compared with the following vote in the presidential election of 1916: Wilson (Democrat), 398,032; Hughes (Republican), 369,339; Benson (Socialist), 14,612; Hanly (Prohibitionist), 3884. The vote for governor was:

Hyde (Republican), 722,024; Atkinson (Democrat, 580,626; Aldrich (Socialist), 19,489; Middlecuff (Socialist Labor), 1620; Faris (Prohibitionist), 3974; Hickman (Farmer-Labor), 3003; and for United States Senator: Spencer (Republican), 711,161; Long (Democrat), 589,498; Hodges (Socialist), 20,002; Mallette (Farmer-Labor), 9158; Tinnell (Socialist Labor), 1675. A referendum on the enforcement of prohibition throughout the State resulted in an affirmative vote.

OFFICERS. Governor, Arthur M. Hyde; Lieutenant-Governor, Hiram Lloyd; Secretary of State, Charles U. Becker; Auditor, George E. Hackmann; Treasurer, L. D. Thompson; Attorney-General, Jesse W. Barrett; Superintendent of Public Schools, Samuel A. Baker.

JUDICIARY. Supreme Court: Conway Elder, James T. Blair, Archelaus M. Woodson, Waller W. Graves, Edward Higbee, David E. Blair, Robert F. Walker.

MISSOURI, UNIVERSITY OF. A non-sectarian, co-educational institution of the higher education at Columbia, Mo., founded in 1840. The enrollment for the spring-summer session of 1920 was 873 men and 711 women; for the regular fall term of 1920, 2262 men and 998 women. The teaching staff had 300 members. The annual income amounted approximately to \$1,333,333. There were 240,000 volumes in the library. A gift of a new building for the School of Journalism was made by Mr. Ward A. Neff of Chicago. President, A. Ross Hill.

MOLDAVIA. The northern division of Roumania. Area, before the war, 14,759 square miles; population (1913), 2,145,465. Chief towns with their populations before the war: Jassy, 76,120; Galatz, 73,512; Botushani, 32,874; Barlad, 25,367; and Focsani, 25,287.

MONACO. A principality on the Mediterranean, surrounded by the French department of the Alpes Maritimes, except on the coast; celebrated for the gambling resort, Monte Carlo. Area, 8 square miles; population (1913), 22,956. The chief towns are La Condamine, 11,082; Monte Carlo, 9027; and Monaco, 2247. It is under a prince who was an absolute ruler till Jan. 7, 1911, when a constitution was proclaimed providing for a national council, elected by universal suffrage. The executive power is in the prince, assisted by a council of state. The Prince in 1920 was Albert, born Nov. 13, 1848.

MONEY. The accompanying table shows coin and paper circulation of the United States for the fiscal years 1913 to 1920, inclusive (see also **FINANCIAL REVIEW; GOLD; and SILVER**):

Year ending June 30	Coin, including bullion in Treasury	United States notes and bank notes	Total money	Coin, bullion, and paper money in Treasury, as assets	Circulation	Population	Circulation per capita
1913.....	2,611,571,094	1,108,498,922	3,720,070,016	356,381,567	3,363,788,449	97,837,000	34.56
1914.....	2,638,496,956	1,099,791,915	3,738,288,871	336,273,444	3,402,015,427	99,027,000	34.35
1915.....	2,739,241,077	1,250,215,109	3,989,456,186	420,236,612	3,569,219,574	100,725,000	35.44
1916.....	3,206,867,812	1,276,024,126	4,482,891,938	458,761,371	4,024,130,567	102,431,000	39.29

MONGOLIA. A large and ill-defined territory dependent on China, situated to the west of Manchuria. Area, about 1,367,600 square miles; population about 2,600,000. By the convention of Nov. 3, 1912, Russia recognized Mongolia's

right of self-government and undertook to guarantee the country from colonization by the Chinese. Its status was virtually that of a Russian protectorate. On Nov. 5, 1913, Russia recognized Outer Mongolia as under Chinese protection. After the overthrow of the Czar and the establishment of the Soviet government in Russia the arrangement with Russia was ineffective and on Nov. 22, 1919, China so declared, and agreed with the Mongolian government to the annexation of Mongolia to the Chinese Republic.

MONTANA. POPULATION. According to the preliminary report of the census of 1920, there were 548,889 residents in the State Jan. 1, 1920, as compared with 376,053 in 1910.

AGRICULTURE. According to the census of 1920, the number of farms was 57,441, an increase of 119.1 per cent since 1910. The following table is compiled from the estimates of the United States Department of Agriculture covering the years 1919 and 1920:

Crop	Year	Acreage	Prod., Bu.	Value
Corn	1920	179,000	3,580,000	\$2,864,000
	1919	128,000	1,728,000	2,851,000
Oats	1920	600,000	16,000,000	8,568,000
	1919	650,000	6,110,000	5,560,000
Wheat	1920	1,750,000	19,850,000	25,408,000
	1919	2,250,000	10,650,000	25,028,000
Hay	1920	1,342,000	1,991,000	4,275,000
	1919	1,202,000	910,000	3,555,000

* Tons.

MINERAL PRODUCTION. The value of the gold, silver, copper, lead, and zinc mined in Montana in 1920, according to the estimates of the United States Geological Survey, Department of the Interior, was about \$64,685,000, an increase of about \$2,648,000 as compared with the value in 1919. The output of zinc increased materially over that in 1919, and the output of copper increased slightly, but the output of gold, silver, and lead decreased. The value of the output of gold fell from \$2,229,588 in 1919 to about \$1,742,000 in 1920, a decrease of nearly 22 per cent. The production of gold from siliceous and iron ores was greatly reduced, and the output from dredges was somewhat less. The output of the copper mines, which produce most of the gold, did not reach the normal, though it was greater than that of 1919. The mine output of silver decreased from 12,541,181 ounces in 1919 to about 12,427,000 ounces in 1920, and the value of the output decreased from \$14,046,123 to about \$13,551,000. Montana remained the leading silver producer of the United States, though Utah was a close second. In 1920, as in past years, most of this silver came from copper ores, but a

large part of it was obtained by smelting residues from zinc ores. The output of copper increased from 169,981,288 pounds in 1919 to about 176,600,000 pounds in 1920, which represents an increase of nearly 4 per cent in quantity but a de-

crease of \$1,377,000 in value. The mine production of lead decreased from 34,437,764 pounds in 1919 to about 32,144,000 pounds in 1920, but the value of the output increased from \$1,825,201 to about \$2,623,000, as the average price of lead was higher. The output of recoverable zinc in Montana increased from 168,763,823 pounds in 1919 to about 203,953,000 pounds in 1920, which was close to the record of 1918. The value of the output increased from \$12,319,759 to about \$16,520,000.

MANUFACTURES. The preliminary figures of the United States Bureau of the Census showed a consistent increase at the census of 1919, as compared with that for 1914. In the order of their importance from a percentage standpoint, the increases for the several items ranked as follows: Cost of materials, 161.8 per cent; value of products, 131.7 per cent; value added by manufacture, 94.2 per cent; wages, 90.4 per cent; primary horsepower, 84.4 per cent; capital, 73.5 per cent; salaries, 70.6 per cent; proprietors and firm members, 44.2 per cent; number of establishments, 37.8 per cent; salaried employees, 27.6 per cent; and wage earners, 25.3 per cent. The capital invested, as reported in 1919, showed a gain of \$58,253,000, or 73.5 per cent, over that in 1914. The average capital per establishment was approximately \$106,000 in 1919 and \$84,000 in 1914. The cost of materials used in 1919 showed an increase over that for 1914 of \$75,646,000 or 161.8 per cent. The average cost of materials per establishment in 1919 was approximately \$95,000, and in 1914 \$50,000. The value of products in 1919 showed an increase over that in 1914 of \$111,178,000, or 131.7 per cent. The average per establishment in 1919 was approximately \$151,000 and in 1914 \$90,000. The value added by manufacture in 1919 showed an increase over that in 1914 of \$35,532,000 or 94.2 per cent. The value added by manufacture in 1919 formed 37.4 per cent of the total value of products and in 1914 44.6 per cent. In 1919, as compared with 1914, the number of salaried employees showed an increase of 505, or 27.6 per cent, while the average number of wage earners increased 3462, or 25.3 per cent. A comparative summary for the State for 1914 and 1919 follows:

	Census—		Per cent. of increase, 1914-1919
	1919	1914	
Number of establishments.....	1,294	939	37.8
Persons engaged in manufactures.....	20,698	16,363	26.5
Proprietors and firm members.....	1,200	882	44.2
Salaried employees.....	2,332	1,827	27.6
Wage earners (average number).....	17,166	13,704	25.3
Primary horsepower.....	169,056	91,671	84.4
Capital.....	\$187,499,000	\$79,246,000	73.5
Services.....	29,493,000	15,780,000	86.9
Salaries.....	4,741,000	2,779,000	70.6
Wages.....	24,752,000	13,001,000	90.4
Materials.....	122,390,000	46,744,000	161.8
Value of products.....	195,624,000	84,446,000	131.7
Value added by manufacture (value of products less cost of materials).....	78,284,000	37,702,000	94.2

EDUCATION. The total common school population of Montana in 1920 was 161,626; enrollment 126,238; average daily attendance 90,566; total number of teachers 7215; average salary of men teachers \$137 a month, of women \$111 (exclusive of superintendents and principals). Total expenditures for school purposes 1920, \$12,700,000. Upon the admission of the State to the union the common schools had a land grant totaling 5,223,920 acres of which under the law none

could be sold for less than \$10 an acre. Down to 1920, 977,134 acres had been sold yielding to the permanent school fund the sum of \$17,518,965. The results of an investigation under the Russell Sage Foundation published in 1920 showed that Montana stood first among all the States in the Union in the following respects: Percentage of school population attending school daily; in average number of days attended by each child of school age; in average expenditure per child; in the expenditure per pupil for purposes other than for teachers' salaries.

FINANCE. Receipts of Montana in 1919 were \$9,808,856 and disbursements \$10,314,886; in 1920 receipts were \$11,463,648 and disbursements \$12,264,544.

OFFICERS. Governor, Joseph M. Dixon; Lieutenant-Governor, Nelson Story; Attorney-General, W. D. Rankin; Secretary of State, C. T. Stewart; Treasurer, J. W. Walker; Auditor, G. P. Porter.

JUDICIARY. Supreme Court: Chief justice Theodore Brant; associate justices, W. L. Holloway, A. J. Galen, F. B. Reynolds, C. N. Cooper.

MONTANA, UNIVERSITY OF. A non-sectarian, co-educational State institution of the higher learning at Missoula, Mont., founded in 1895. In the summer session there were 83 men and 296 women enrolled, and for the regular fall session there were 474 men and 448 women. There were 67 members of the faculty. The productive funds or income amounted to \$320,000. There were 50,000 volumes in the library. At the general election of Nov. 2, 1920, an initiative measure providing for a general tax of 1½ mills for the maintenance of the higher educational institutions in Montana was approved; also a measure providing for the issue of bonds for \$3,750,000 for construction and equipment of buildings. The State University was to share in the benefits of these measures. President, Edward O. Sisson, Ph.D.

MONTENEGRO. A Balkan state, bounded by Serbia on the east, Albania on the south, Dalmatia on the west, and the Herzegovina on the west and north; an independent constitutional monarchy until the occupation by the Germans and Austrians at the close of 1915; after Dec. 1, 1918, a part of the newly formed Jugo-Slav state

known as Jugo-Slavia and consisting of Serbians, Croats, and Slovenes. Area, before the war, 5603 square miles; population, Jan. 1, 1917, 436,789. Capital, Cetinje, with an estimated population of 5500. Other towns with estimated populations are: Podgoritz, 14,000; Ipek or Petz, 14,000; Dulcigno, 5000; Djakova or Djakovitz, 23,000; Plevlje, 7000; Bielo Polje, 6300. Agriculture is largely pursued, but the methods are primitive. The chief crops are corn, oats,

tobacco, potatoes, barley, and buckwheat. See JUGO-SLAVIA.

The ultimate status of Montenegro had not been determined in 1920. The government on September 27th sent out a report which had been made by a committee of investigation, setting forth the bad conditions of the country under Serbian occupation. This recommended the rejection of the vote of the National Assembly which had been taken in Serbia to mean the annexation of Montenegro. At the close of the year Montenegro was still demanding her independence and territorial expansion by the inclusion of the Herzegovina and a portion of the coast. Urging the immense sacrifices she had made for the Allies during the war, she demanded that the restoration of her nationality should be separated entirely from the general problem of the Adriatic.

MONTREAL, QUE. See CITY PLANNING; MUNICIPAL GOVERNMENT.

MONTSERRAT. A presidency of the Leeward Islands (q.v.).

MOORE, TEMPLE. British architect, died in London, in July. He was born in 1856 and after studying architecture, rose rapidly in his profession and became one of the leading architects of the country. His works which were mainly modeled on the English Gothic of the fourteenth century were widely scattered throughout England. By many he was regarded as the foremost church architect of his time. His buildings include the church of All Saints at Basingstoke and the chapel and buildings of Pusey House, Oxford. In later years he attempted an older style of church architecture dating from the thirteenth century.

MORANT, Sir ROBERT LAURIE. British official, died in London, March 13. At the time of his death he was the chief permanent secretary to the ministry of health. He was born April 7, 1863, and educated at Winchester and Oxford. He was the organizer of public education in Siam where he was tutor to the Royal Family; and he issued a number of educational works in the Siamese language. In 1895 he was Assistant Director of Special Inquiries and Reports in the British educational department, and under his direction various reports on education in England, France, Switzerland, and other countries were issued. He was active in the preparation of the Education Bill of 1903. During the controversy over the National Insurance Act, he was appointed to the chairmanship of the Insurance Commission, a position demanding great tact and ability. His skill in administering the act was highly applauded.

MORAVIA. Before the downfall of the Austro-Hungarian Monarchy, a crownland of Austria; bounded by Russia, Austria, Silesia, and Hungary; included toward the end of 1918 in the new state of Czecho-Slovakia (q.v.). Area, before the war, 8584 square miles; population estimated in 1913 at 2,666,613. According to the census of 1910, 1,868,971, or 71.75 per cent spoke Bohemian. Capital, Brunn, with a population in 1910 of 126,737.

MORAVIANS. This denomination, of which there are three branches, was founded in Bohemia in 1457 and began work in this country in Georgia in 1735 as a missionary enterprise. The three branches at present are, Moravian Church (Unita Fratrum), Bohemian and Moravian Brethren (Evangelical Union), and Independent Moravian Churches of which there are

three. The largest of these branches is the Unitas Fratrum, or Moravian Church, which had in 1920, 22,209 communicants, 1550 non-communicants, with 155 ministers and about 140 churches. This shows a slight increase over 1919. Sunday school pupils numbered 17,172, a marked increase over 1919. Missionary work is carried on in 18 fields, where to January, 1920, there were 104,962 converts. The American, British, and European branches of the church join in the support of this work. There are seven educational institutions, the principal one being the Moravian College and Theological Seminary at Bethlehem, Pa.

The Evangelical Union of Bohemian and Moravian Brethren had in 1920 about 1000 communicants with 21 churches and four ordained ministers. Independent Moravian Churches had about 400 communicants in the three churches.

MORDECAI, ALFRED. Army officer, died, January 20. He was born at Philadelphia, Pa., Jan. 20, 1840; graduated at the Military Academy in 1861 and served throughout the Civil War, rising to the rank of captain, June 1, 1863. After engaging in the operations against Charleston, S. C., he was made Chief of Ordnance of the army of the James and later of the army of Tennessee and the army of the Cumberland. On September 6, 1863, he was brevetted major for gallant and meritorious service and on March 13, 1865, he was brevetted lieutenant-colonel for distinguished service in the field and for his work in the Ordnance Department during the war. After the war he taught ordnance and gunnery in the United States Military Academy and was later in command of several arsenals. On Jan. 20, 1904, he was retired after over 40 years of service.

MOREHOUSE, JAMES T. Physician, died at West Orange, N. J., December 20. He was born at Newark, N. J., in 1863, and graduated at the College of Pharmacy in New York and from the New York University. He was engaged for 30 years in X-ray experiments and practice and was one of the pioneers in that field. His death was caused by burns received in the course of his numerous experiments.

MOREIRA, DELPHIM. Vice-president of Brazil, died at Rio de Janeiro, July 2. From Nov. 15, 1918, until July 19, 1919, he was acting-president of the republic on account of the illness of the president-elect. He was born at Christiana, Brazil, Nov. 7, 1868; studied law and entered upon a political career, at an early age, being elected deputy of the legislature of the state of Minas in 1894. He was afterwards appointed to an office in the state administration and was state senator in 1907 and 1908. In 1914 he was elected governor of the state of Minas. During his early career, he had specialized in the subjects of economics and education. He was elected vice-president for the term 1918-22, and immediately upon inauguration, became acting-president. He was regarded as one of the ablest and most progressive of the Brazilian statesmen.

MOROCCO. The largest of the Barbary states, a sultanate in Africa, mainly under French protection, situated in the northwestern part of Africa, between 27° and 36° north latitude and 1° and 11° 40' west longitude. It comprises the kingdom of Fez and Morocco, north of the Atlas mountains, and the territories of Sûs, Brâ, Wadi Taflet, Tuat, and others to the

south, which are subdivided into 33 districts each under a "kaid." The chiefs of the semi-independent tribes scarcely admit the rule of the sultan. The total area is about 231,500 square miles of which Spain claims about 10,000 square miles in the north zone and 960 square miles in the region of Ifni on the west coast. The total population has been roughly estimated at 6,000,000, of whom 5,400,000 are in the French zone and the remainder in the Spanish zone and Tangier. One of the chief seaports is Tangier, with a population roughly estimated at 60,000. Under the Franco-Spanish convention at Madrid signed Nov. 27, 1912, Tangier and its district comprising 140 square miles was separated from the Spanish zone and was placed under a special administration. See below under *History*.

FRENCH MOROCCO. The chief towns in French Morocco with their populations are as follows: Rabat, the capital, 37,548; Casablanca, 86,000; of whom 41,500 were Europeans; Marakesh, 119,447 (1447 Europeans); Fez, 105,855 (855 Europeans); Meknes, 36,765 (1265 Europeans). There is little immigration except to the towns especially the seaports. Agriculture is in a somewhat primitive state, though the soil is capable of extensive cultivation. Among the chief products are: live stock, especially hogs, eggs, fruits, vegetables, hides, and skins. Fishing is a thriving industry as sardines and tunny fish are plentiful. There are rich mineral deposits of iron, copper, lead, antimony, silver, sulphur, gold, and phosphates. Recently immense deposits of high-grade phosphate rock were discovered and the following information in regard to it was supplied by the United States Geological Survey for 1920. In times of peace Morocco has in a single year sent abroad, mostly to Europe, 1,250,000 long tons or more of high-grade phosphate rock, or more than 40 per cent of its total annual output. The exports decreased during the war until, in 1918, they amounted to only 143,000 tons, or 6 per cent of the domestic output. They increased to 379,000 tons in 1919, but these reports of newly discovered large deposits in Morocco, which, like those in Algeria and Tunis, are near to the large fertilizer market in southern Europe, may mean that the American exporter of phosphate rock will have formidable competition in that region. The principal deposits in Morocco are about 80 miles southeast of Casablanca and consist of three beds or series of beds of phosphatic sand in a formation that is 50 to 200 feet thick. The uppermost phosphatic bed contains 67 per cent of tricalcium phosphate, the middle bed 30 per cent, and the lower beds 53 per cent, and the commercial average for the group is about 59 per cent. Water and hydro-electric power for the exploiting of the deposits can be obtained from a river near by. In order to market the rock, however, a railroad would have to be built from the deposits to Casablanca, the nearest port. Another deposit, which consists of soft phosphatic material carrying 72 to 75 per cent of tricalcium phosphate, lies 40 miles northeast of the principal one. Still another deposit lies a short distance southeast of Rabat, a coast town. This deposit consists of sandy clay 16 feet thick containing nearly 47 per cent of tricalcium phosphate. All these deposits are reported to be large and rich, but no data available show their extent or value. Their development will doubtless be retarded by the necessity of making large

investments for railroad and other construction and by the consideration that the shortage of phosphate in Europe has been due to difficulties in the Mediterranean shipping service rather than to lack of developed deposits of phosphate rock in northern Africa. Only those newly discovered deposits that are very rich and easily accessible, if there are such, can contribute soon and effectively to the world's trade in phosphate rock.

No later figures for commerce, finance, etc., were available than those given in the preceding *YEAR BOOK*. The railways comprised the military railway recently completed from Casablanca to Fez, 211 miles long; a line from Casablanca to Marakesh, 134 miles, etc. Total length about 604 miles. During the year announcement was made of an agreement between the Moroccan protectorate and a group made up of the Paris-Lyons-Mediterranean and the Paris-Orleans railways, the *Compagnie Generale of Morocco* and the *Compagnie Marocaine* for the construction of a 1.44 meter (4 feet 8½ inches) gage railway in Morocco at a cost of approximately 970,000,000 francs.

The sultan in 1920 was Mulia Yusef. He was proclaimed Aug. 18, 1912. His power was formerly absolute, but since the establishment of the French protectorate he is obliged to follow the advice of the French resident-general in all matters. The French resident-general in 1920 was General Lyautey, re-appointed April 7, 1917.

SPANISH MOROCCO. The chief cities in the Spanish zone are Tetuan, 18,066 (3650 Europeans); Larache, 16,283 (3765 Europeans); Alcazar, 11,942 (1828 Europeans); Arzila, 2857 (1000 Europeans). The Spanish zone, which extends from the Algerian border to the sea and westward to Alcazar and thence to the Atlantic is under a Spanish high commissioner and a Kalifa chosen by the Sultan from candidates presented by the Spanish government. The Spanish high commissioner in 1920 was Gen. Damaso Berenguer.

HISTORY. Both in French and Spanish Morocco there were difficulties with the tribesmen in the course of the year. In French Morocco two columns of troops on September 18 made a campaign into the mountains to the south and east of Wazzan. They encountered some resistance along their march, but immediately upon arrival in the hostile country the chiefs and all their tribes surrendered. It was reported that within a week normal conditions were restored. The loss to the French was one officer killed, two officers wounded and 12 casualties among the men. The prompt success was attributed to the new policy that seemed to have been undertaken of making a very large show of force. This plan was followed also by the Spanish commander. In the autumn there were difficulties in Spanish Morocco with the Riff tribes. The Spanish forces surrounded the mountain region occupied by the rebels and waited for them to surrender. The surrender occurred on October 1.

There was much concern expressed in the French newspapers during the year over Spain's activity at Tangier and what was called an anti-French campaign on the part of the Spanish papers. In Spain there had been for a long time frequent mention of a Spanish protectorate. According to the French, it was the French protectorate which had maintained Tangier during the war and which would have to supply the

necessary funds for restoring the finances of the city. The Spanish zone does not include the city which has been under a special regime since 1912. The French had organized at Tangier, many of the important institutions of education and public charity. They had, in fact, created the economic life of Tangier and nearly all the industrial and commercial houses, building enterprises, fisheries, mills, printing houses, etc., were French. As to commerce, France had 50 per cent of the general commerce as compared with 20 per cent for England and 16 per cent for Spain, and the French possessed about 80 per cent of the real estate, together with all the lots near the beach. The value of French capital at Tangier was placed at 150,000,000 francs. Most of the banks were French and the state bank under international control had a French president and for the most part a French personnel. Real estate transactions could not be concluded without the consent of French agents. In the harbor the French merchant marine was predominant and France led in the total tonnage, in the average value of merchandise per ton, and in the value of imports. Moreover, the French colony was the most active, including engineers, doctors, lawyers, merchants, etc., and French was the current language of commerce. That Tangier's sympathies were largely French appeared from the heavy subscriptions to the war loss. Toward the end of the year commercial and industrial bodies at Marseilles appealed to the president to put an end to the uncertain state of things resulting from the pretensions of Spain. A French journal presenting the arguments concluded with the statement that Tangier is the outlet of Fez-Meknes and of the French Gharb and that it would be absurd, since Spain controlled Ceuta, and England, Gibraltar, if France were not represented on the shores of the Strait.

MOBBISON, GEORGE ERNEST. British journalist, died, May 30. From 1895 to 1912 he was the *Times* correspondent at Peking and from that time on was political adviser to the President of the Chinese Republic. He was born in Victoria, Australia, Feb. 4, 1862, and was educated at the universities of Melbourne and Edinburgh. In his early career he was well known as a traveler and explorer. He crossed the continent of Australia on foot from the Gulf of Carpentaria to Melbourne, 1882-03, and traveled from Shanghai to Rangoon by land in 1894. While writing for the *Times* he journeyed from Bangkok in Siam to Yunnan in China and around Tonking. During the siege of the Legations in China he was in the city of Peking and he was present when the Japanese troops entered Port Arthur in triumph. He represented the *Times* at the Portsmouth Peace Conference in 1905. It was said of him that he had traveled in every province of China with the exception of Tibet. Aside from his voluminous newspaper work, he published *An Australian in China*.

MORTON, LEVI PARSONS. Former Vice-President of the United States in the Harrison administration, died at Rhinebeck, N. Y., May 16, 1920. He was born at Shoreham, Vermont, and educated at the academy there; then went into business (1843) in Hanover, N. H. He removed to Boston in 1850 and entered the banking business in which he advanced rapidly and in 1863 he founded the banking house of Levi P. Morton and Company, which was subsequently

changed to Morton, Bliss and Company, and became one of the successful banking establishments of the country. In 1875 he embarked in a wider field of finance and founded a New York syndicate. Soon afterwards he became active in politics. He was elected to Congress as a Representative in 1878; was appointed minister to France in 1882; and ran as Vice-President with Harrison in the campaign of 1888. In 1895-6 he was governor of New York. In his administration the local trustee system of school government was abolished. After retiring from public life he resumed the banking business and became interested in insurance companies. He was known throughout his career as a generous giver to works of public welfare.

MOSES, ALFRED JOSEPH. Mineralogist, died in New York City, February 27. He was born at Brooklyn, N. Y., April 25, 1859, graduated at the Columbia School of Mines in 1882; became an assistant in mineralogy there in the same year and was professor of mineralogy after 1890. He wrote: *Mineralogy; Crystallography and Blowpipe Analysis* (1895); *Characters of Crystals* (1898); and contributed to the leading learned periodicals within his sphere of interest. His work was highly esteemed in all branches of his profession. The text-book on mineralogy was a standard manual in the majority of the universities in which the study was pursued, and he was among the first to recognize the primary importance of physical crystallography. In publishing the results of his research he showed scrupulous care in the matter of verification and a high regard for lucid and compact expression.

MOSLER, HENRY. Artist, died, April 21. He was born in New York City, June 6, 1841, and in his youth became a draughtsman for a Cincinnati weekly. During the Civil War he was art correspondent for *Harper's Weekly* with the Western Army and was appointed to the staff of Gen. R. W. Johnson. He afterwards studied in Germany and France. He received honorable mention at the Salon in 1879 and the French government in that year purchased for the Musée de Luxembourg, his painting, "Le Retour." He was the recipient of many honors and prizes, including the Salon Gold Medal of 1888, and he was an officer of the Legion of Honor and the Academy of France.

MOSS, FRANK. Lawyer, died, June 5. He was born at Cold Spring, N. Y., March 16, 1860, and studied at the College of the City of New York: He figured in many well-known cases and was president of the Board of Police in New York City, 1897. He served as associate counsel to the Lexow Investigating Committee, and was leading counsel on the Mazet Investigating Committee. From 1909 to 1914 he was senior assistant district attorney. In addition to other offices, he held the professorship of medical jurisprudence at the New York College and Hospital for Women, and was president of the New York Ophthalmic Hospital. He wrote the history of New York under the title of, *The American Metropolis* (1897) and *America's Misson* (1918).

MOTT, GARRET SCHENK. Inventor, died at White Plains, N. Y., December 4. He was one

of the early inventors in the field of telegraphy. He was born in 1845; and served in a New Jersey regiment in the Civil War. Among his inventions was that of the three systems of duplex telegraphy purchased by the Western Union and the Southern Telegraph companies.

MOUNT HOLYOKE COLLEGE. An institution of the higher learning for women at South Hadley, Mass., founded in 1837. There were 787 students enrolled in the fall session of 1920. The faculty numbered 95, including 12 new members. The productive funds amounted to \$1,701,409.69 and the income was \$72,786.44. There were 73,638 volumes and pamphlets in the library. An additional endowment fund of \$3,000,000 was being collected. President, Mary Emma Woolley. L.H.D., LL.D.

MOVING PICTURES. To the average observer of moving picture theatres, there was little change to note as regards the popularity of this form of amusement as compared with the previous year. The marked decline in business and industrial activity that began to be noticeable during the autumn of the year, however, showed plainly that the moving picture industry was affected by the same general causes that were in evidence in all lines of business. There was an enormous amount of new film produced during 1920. Activity in those centres where the largest studios were located was very intense in the earlier months of the year and there were at that time probably more persons employed in the industry than at any other period in its history.

From the standpoint of technical detail little change was noticed. The weekly reviews depicting news topics were presented to the public in a surprisingly short time after the events themselves had occurred and covered every phase of activity such as are published in the daily press. While some slight progress was observed in the production of color films the result still left something to be desired from the standpoint of artistic effect. It was difficult always to secure such perfect registry of the three primary colors used as to avoid the annoying fringe of color forming the out-lines of the objects on the screen. It was reported that several inventors had almost perfected a mechanism for combining a talking machine with the projection lantern. The same difficulty, however, that had confronted previous attempts in this direction, namely, that of securing perfect synchronism between the film mechanism and the talking machine was still un-surmounted. Some critics have held that the result produced by such a combination, even if mechanically perfect, would not be a satisfying one because a person watching the development of a story on the screen, aided by well written captions supplies for himself an imaginary conversation and supplementary action which fills out the screen picture. If every action on the screen were accompanied in exact unison by words given out by a machine the art would be reduced to a more mechanical level; so it is generally believed the story would lose much of its appeal to the average spectator.

The slowing up of business referred to above showed its effect on the moving picture industry by a great reduction of operations at the producing centres. It was reported that at one very large studio where 30 different companies had been employed for some time before, at the end of the year there were only eight companies working. Attendance at theatres began to fall

off, except in the large cities were premières and special features were regularly presented. The news came from California that more than 50,000 actors were laid off during December owing to the slowing up of operations. In this connection, too, it was stated on good authority that the over production of films had been carried to such a point that there were stored away a quantity valued at \$25,000,000.

One fact was quite noticeable during the past year, and that was the increasing discrimination shown by the average audience in its judgment of the plays presented. Formerly it seemed as if the craze for this form of amusement by the public impelled the managers to present almost any kind of scenario; often mere trash, from a literary and dramatic point of view. During the past year, however, there was a notably different reception accorded by the public to the really strong plays of good dramatic quality. The opinions of the press critics were much more than formerly, indications of favorable or distasteful impressions of the public taste.

The question of censorship was again a live one during the year, but it could hardly be said that any particular progress was noted except in certain instances where self-constituted bodies undertook to pass on the suitability of pictures for public exhibition. Many state legislatures discussed bills offered for censorship and at Washington there was the usual unsuccessful endeavor to enact a national or federal measure for censoring moving pictures. In New York City an organization was perfected many of the directors of which were women, to encourage the production of films particularly adapted to the entertainment and instruction of children. It was said that this committee had made many valuable suggestions to the producers, which, it was hoped, would soon bear fruit in a number of bright, clean, entertaining photoplays. It would be difficult and hardly fair to pick out from the really successful dramas those that were considered to achieve the greatest popularity. Judged by the length of run in New York City, however, four plays stood out as worthy of being considered "big successes." Those were: "Humoresque," "Over the Hill," "Way Down East," and "Passion." It was reliably reported that the American rights to "Passion," a German production, were purchased for the sum of \$40,000. The *New York Times* announced that at the close of the year, the American producers valued these rights at \$500,000. "Passion" was presented at the Capitol Theatre, New York City, and during the first week of its run drew 106,000 spectators. During this same week the gross receipts of the theatre were estimated to have been at the rate of \$10,000 a day. Thus in spite of the business depression referred to before, it was quite evident that the close of the year was witnessing a satisfying test of the strength and drawing power of photo-plays in general, and certain ones in particular.

MOZAMBIQUE. See PORTUGUESE EAST AFRICA.

MUDGE, HENRY U. Railway president, died, January 30. He was born at Minden, Michigan, June 9, 1856, and went into railway work in Kansas, August, 1872. He rose through the various grades of the service and became general manager of the Atchison, Topeka and Santa Fe Railway. From 1909 to 1915 he was president and chief executive officer of the C. R. I.

and P. railway. In 1915 he was made president of the Denver and Rio Grande Railway and of the Rio Grande Southern Railway.

MUNICIPAL GOVERNMENT. Continued growth of the city-manager plan was the outstanding feature of the year. The plan went into effect in some 40 or more cities and was adopted in five to 10, effective in 1921. The total number of cities having managers, according to records kept by the City Manager's Association, is 204 in the United States and four in Canada. (See large table, pp. 456-459). Only 13 states do not appear in the list. Michigan leads with 27 cities and Texas and California follow with 17 each. The South Atlantic, Southwestern, and North Central groups of states are close together with 45, 44, and 43 cities in the list and the New England group is at the foot with only seven. Akron, Ohio, is the largest and McCracken, Kan., the smallest city having a full-time paid city manager, the respective populations being 208,435 and 371. In salaries, Norfolk, Va., leads with \$16,000 a year, paid to C. E. Ashburner, the earliest city manager, who began service at Staunton, Va., in 1908, and served also at Springfield, Ohio, a number of years before going to Portsmouth. Six other cities pay \$10,000 a year or more. Discrepancies in number between the list here given and some others published is due to the fact that other lists are confined to commission-manager cities. The number of plain commission-plan cities added to the list in 1920, as reported by both the National Municipal League and the American City Bureau, was but five: Fresno, Cal.; Aurora, Ill.; Henderson, Ky.; Onaway, Mich.; Brenham, Tex. The total number of plain commission and commission-manager cities in the United States is probably well towards if not over 600. A considerable number of the plain commission-plan cities listed in the tables published in earlier YEAR BOOKS are now in the commission-manager class.

The voters of *Boston, Mass.*, at the November election, disapproved a legislative amendment to their city charter changing the city council from nine members elected at large to 15 members chosen by districts.

At *Philadelphia* the small single bodied council of 21, that took office January 1 in place of the bicameral body with a total of 145 members, appears to have justified the change, although 14 of the 21 members were in the old councils and there has been much criticism of the new body. Commenting on the new council in the *National Municipal Review*, November, 1920, F. P. Gruenberg, director Philadelphia Bureau of Municipal Research says: "The new council is a great improvement. Not only is it simpler and more business-like in theory, but it actually functions better in practice . . . the attendance record is now virtually perfect . . . the important committees are almost always up to date in their work . . . [council] meetings are less perfunctory and there is real deliberation and often genuine debate, neither of which was so much as attempted in the old unwieldy body, (but) there is still a tendency to follow the 'bell-wether' on roll call."

A proposed county council-manager plan for *Baltimore County, Md.* (See *National Municipal Review*, Aug., 1920) was defeated at the November election. It provided for a council of 15 members and a manager chosen by the council, the latter with less power to appoint and remove

executive officers than is usual under the city manager's plan.

An attempt at *Ashtabula, Ohio*, to abolish both the city-manager plan and the election of the city commissioners by proportional representation was defeated at the general elections in November.

Chicago voted at the November elections to increase the number of city wards from 35 to 50 but to reduce ward representation on the city council from two to one, thus cutting the council membership from 70 to 50.

Home rule charter making powers for *Kansas City, Mo.*, were secured by an amendment to the constitution of Missouri adopted in November. At *Minneapolis, Minn.*, acting under existing authority, the voters adopted a codified city charter including all legislative amendments to the old charter to date, but no changes except the very important new provision that will enable the city to alter its charter at will hereafter, without going to the legislature.

Sacramento, Cal., voted on November 30 to change from the commission to the commission-manager plan and to elect the nine councilmen by proportional representation. The vote was 7962 to 1587, but of 30,469 registered voters only 9549 expressed their choice. The change in plan is subject to legislative approval, which in California follows as a matter of course. The new plan will go into full effect on June 30, 1921. The city manager will be appointed by the commission and will in turn appoint all other city executives except the city attorney, treasurer, clerk, and the police judge. The city engineer will exercise many of the functions of previous commissioners of streets and of public works. The boards of Parks and Playgrounds will be succeeded by superintendents of Parks and of Playgrounds. The Board of Education will be appointed by the City Council and will have as its executive officer a superintendent of schools.

Montreal, Canada, continued during the year to be governed in fact by the Administrative Commission, created by the Provincial Government, though the old mayor and council were still nominally in office. Meanwhile a charter commission created by the provincial government has been framing a new charter. The commission has approved the principles of complete municipal home rule for Montreal, with a city council of nine members, elected for four years by proportional representation from the city as a single election district; a mayor having few or no functions except those of city dignitary; and a general manager. The manager would be appointed by the city council, "solely on the basis of his executive and administrative capacities," and would appoint all heads of departments except the city clerk, attorney, and auditor, but the council could reject the appointments by a majority of all its members. Proportional representation at Montreal would be watched with interest on account of the conflicting religious and social conditions existing there, some three-fourths of the population being French Catholics and the remainder Irish Catholics, English Protestants, and a large number of Jews. (See also CITY PLANNING).

PROPORTIONAL REPRESENTATION, or the choice of members of city councils so as to give representation by parties or groups instead of by geographical districts, held its own during the year in the three American cities that had previ-

ously adopted it,—Boulder, Colo.; Ashtabula, Ohio; and Kalamazoo, Mich.—and there were one or two additions to the list. In Canada, the system is in use at Winnipeg, Man.; Calgary, Alt.; Vancouver, and Victoria, B. C., but it is reported that New Westminster, B. C., has abandoned it.

Much work on standardizing municipal salaries was done by Engineering Council, New York City, and by the American Association of Engineers, Chicago. The latter organization has created a committee to study various broad questions of civic administration.

CITY MANAGER MUNICIPALITIES. Corrected to Dec. 31, 1920. Compiled by H. G. Otis, Secretary City Managers' Association. The 1920 census figures have been used when available. The column headed "Plan C" indicates that the position of manager has been created by adoption of a charter, a charter amendment, or optional state law by popular vote; "C" implies that such charter has been seriously modified; "O" indicates that the position of manager has been created by local ordinance only. The column headed "No. of Managers," indicates the number of managers which a city has successively employed. The column headed "Cities Served," following the names of the managers, indicates the number of cities each man has served as manager.

MUNICIPAL LEAGUE, NATIONAL. See NATIONAL MUNICIPAL LEAGUE.

MUNICIPAL OWNERSHIP. As has been the case for years past, there was during the year a slow but steady advance in municipal ownership. In the *water-works* field *San Francisco* continued construction of the Hetch Hetchy dam and an aqueduct that will provide a large new water supply and also a large amount of hydro-electric power. The California State Railroad Commission placed a valuation of \$37,000,000 on the works of the Spring Valley Water Company that now supply San Francisco with water, and it was expected that early in 1921 there would be a popular vote on buying the works at the price named. At San Francisco also the voters at the November election gave a large majority in favor of a charter amendment authorizing negotiations for the purchase of the United Railroad and the addition of the property to the existing municipal street railways. The amendment provides that if the purchase is made the price must be paid from earnings and it also provides that the purchase agreement must be approved by popular vote. *Detroit* early in the year voted a bond issue of \$15,000,000 for the construction of a municipal electric railway system to consist of 101 miles of track, power houses and equipment. Construction was started, but litigation to prevent carrying out the scheme was threatened by the local street railway company. The voters of *Madison, Wis.*, early in the year voted against buying the local street railway system. At *Cleveland, Ohio*, a \$15,000,000 bond issue for a proposed street car subway system in the centre of the city was defeated due at least in part to the general feeling that it would not provide real rapid transit. *New York City* began the operation of some of the electric railways on Staten Island, Borough of Richmond, owing to the fact that the street railway companies had shut down the lines because of alleged inability to continue operation on a five-cent fare. The *gas works* of *Omaha, Neb.*, came in the possession of the Omaha Metropolitan Water District on July 1. Late in the year it was announced that *Redlands, Cal.*, had taken over the gas works from a private company, thus becoming the first city in the State to operate gas works. Bonds to the amount of \$150,000 were authorized in the autumn by the voters of *Jamestown, N. Y.*, for a central and municipal milk supply system, to consist of a milk bottling, pasteurizing, and distributing plant under the direction of four commissioners to be appointed by the mayor. This project has been promoted for several years past by Samuel A. Carlson, mayor of Jamestown. The proposal was previously defeated by a large majority. At the close of the year Mr. Carlson reported that

steps had been taken to establish a plan as soon as the bonds were sold. The plan is to pasteurize all but Grade A milk—i.e., all but milk from tuberculin-tested herds.

MUNRO, ROBERT. British anthropologist, died, July 18. He was born at Rosshire, July 21, 1835, and educated at the University of Edinburgh. He then practiced medicine until 1886, when he devoted his time to archaeology and anthropology; was president of the anthropological section of the British Association, 1893; and was lecturer on archaeology and anthropology at the universities of Glasgow and Edinburgh. He was a member of the leading scientific bodies of the world in this field. His publications were very numerous, including the following: *Ancient Scottish Lake-Dwellings* (1882); *The Lake-Dwellings of Europe* (1890, French ed. 1908); *Rambles and Studies in Bosnia, Herzegovina and Dalmatia* (1895, 2nd ed. 1900); *Prehistoric Problems* (1897); *Pre-civilization* (1899); *Man as Artist and Sportsman in the Palæolithic Period* (1904); *Archæology and False Antiquities* (1905); *Munro Lectures* (Palæolithic Man, and Terremare, 1912); *Pre-historic Britain* (1914); *Darwinism and Human Civilization*, with special reference to the origin of German military culture (1917).

MURPHY, FRANKLIN. Former governor of New Jersey, died, February 24. He was born at Jersey City, N. J., Jan. 3, 1846; educated in the schools of Newark and served as a private in the New Jersey Volunteers during the Civil War. After the war he established in 1865 the Murphy Varnish Company, and became its president. He took an active part in politics after 1880 and was a member of the Newark Common Council and of the New Jersey Assembly and was chairman of the Republican State Committee after 1892. In 1902–05, he was governor of New Jersey. In the campaign of 1908 he received 77 votes for the vice-presidential nomination at the National Convention at Chicago. After 1900 he was a member of the Republican National Committee.

MURPHY, WILLIAM MARTIN. Irish railway manager and organizer, died, June 26. He was born, Dec. 29, 1844, and in 1885–92 carried out important railway, electric railway, and lighting enterprises in Great Britain as well as railway construction in the Gold Coast Colony. He was chairman of the Dublin United Tramways Company; founded in 1905 the *Irish Independent*; and was president of the Dublin Chamber of Commerce, 1912–13. In 1913 he was prominent in the opposition to the strikes of the syndicalists in Dublin.

MURRAY, ARTHUR MORDAUNT. British officer and military writer, died May 23. He was born, Jan. 20, 1852; educated at Woolwich and

entered the Royal Artillery in 1873. He served in India, Egypt, and South Africa. He was sent on a mission to Japan in 1906. In 1892 he received a medal for an essay on "Fire Discipline." He wrote, *Imperial Outposts* (1907), and the *Fortnightly History of the War* (1914-16).

MUSEUMS. See PAINTING AND SCULPTURE.

MUSIC. In the YEAR BOOK for 1918 mention was made of the origin of community singing as a direct result of the war. In the two years that have elapsed since then the movement thus inaugurated has spread throughout the length and breadth of the country. Many ex-soldiers, after return to civil life, communicated the enthusiasm aroused in them by the "camp-songs" to their fellow-workers, with the result that in an incredibly short time employees of the larger companies in many industrial centres banded together for the cultivation of singing. Even before the war the employees of the Knox factory in Philadelphia had won considerable local reputation for the excellence of their chorus, which at that time was a unique organization. To-day innumerable factories, department stores, banks, insurance companies, and other institutions have followed the example of the Knox people. The Bethlehem Steel Workers, besides having their own chorus, have succeeded in recruiting from among their own number a full symphony orchestra of almost 100 players, while other corporations can boast of orchestras on a smaller scale, or of brass-bands. The employees of the Federal Reserve Bank in New York gave a remarkable operatic performance, *The Bohemian Girl*, at the Lexington Opera House, without the assistance of a single outsider even in the principal rôles (June). In Washington the movement culminated in the establishment of a Community Opera, which began its career with a highly creditable production of *Aida* (December 14), the entire orchestra, chorus, and ballet, and most of the principals, being residents of the capital. A special post of Civic Organist was also created, to which Edith B. Athey, a music-teacher of the public schools, was appointed. Furthermore, Congress donated a site to the George Washington Memorial Association for the erection of a National Victory Memorial Building to cost \$10,000,000, containing, besides numerous smaller halls for various purposes, a large auditorium with a seating capacity of 7000, suitable for music-festivals on a large scale. Baltimore created a special Department of Municipal Music. In some of the larger cities a number of the local community choruses joined forces and inaugurated Community Festivals, with masses aggregating more than 1000 singers, attended by audiences numbered by tens of thousands. This general interest in music on the part of the masses gave a tremendous impetus to the "Globe Free Concerts" in New York and vicinity, which were begun five years ago, on a very modest scale, by the New York *Globe*, under the general management of Charles D. Isaacson. On April 20, 5000 persons heard the one-thousandth concert of the series at the Metropolitan Opera House. By the end of the year the number of concerts had reached 1124, at which 1700 artists had appeared before 2,150,000 listeners. At the suggestion of the City Chamberlain, whose plan was approved by the mayor, the City of New York took active steps toward the establishment of a fully equipped Municipal Conservatory. At the third annual meeting (New York,

November 18) the Musical Alliance of the United States launched a movement for the establishment of a Ministry of Fine Arts and a National Conservatory of Music. Of special interest was the celebration of "Music Week" in New York (February 1-7).

GENERAL NEWS. Orchestral, choral, and chamber-music organizations, churches, hotels, theatres, moving-picture houses, and individual artists, all combined to bring music in some form home to everybody. At the Grand Central Palace an exhibition of musical instruments was held, with lectures and recitals. In all the public schools special programmes were rendered. As a result of the interest aroused, many neighboring towns followed the example of the metropolis, the National Association of Music Merchants pledged the sum of \$250,000 toward the establishment of a National Conservatory of Music. The State of New York created a new position, Specialist in Music, in the State Educational Department at Albany. Russel Carter, superintendent of music in the public schools of Amsterdam, N. Y., was appointed as first incumbent. A few months later Hollis E. Dann, professor of music at Cornell University, was called to fill a similar position created by the State of Pennsylvania at Harrisburg. The difficulty of securing competent players of woodwind for the large orchestras induced Frederick Stock, conductor of the Chicago Symphony Orchestra, to offer two scholarships for three years for the study of the oboe under Alfred Barthel, first oboist of the orchestra. For the same reason Eric De Lamarter, assistant-conductor, established three scholarships for the study of the bassoon under Walter Guetter, first bassoonist. The Cleveland Museum of Art received \$250,000, by an anonymous donor, for the purpose of establishing a permanent department of music, the need of which was demonstrated by the courses given during the last two years by T. W. Surette and D. N. Tweedy. The old Academy of Music, in Philadelphia, was acquired by a syndicate, remodelled, and its seating capacity increased to accommodate over 3000 persons. It is to be used for the concerts of the Philadelphia Symphony Orchestra and the performances given by the Metropolitan Opera Company of New York. The one hundred and fiftieth anniversary of the birth of Beethoven was universally observed by organizations and individual artists with the performance of special programmes devoted to the works of the master. At the end of the first year of its existence the Beethoven Association of New York had netted \$6000 from its concerts. It was decided to devote this sum to the publication of the English translation (made by H. E. Krehbiel) of Thayer's standard biography of Beethoven. For the second time in the history of the French Academy the Grand Prix de Rome was awarded to a woman, Marguerite Canal, for her cantata *Don Juan*. Early in the year Lilli Lehmann donated to the Staatsbibliothek in Berlin all letters written to her by Richard Wagner; a few months later she added all letters from other celebrities received during her entire artistic career.

ARTISTS. INSTRUMENTALISTS. Before the war Berlin was the Mecca of all young aspirants for fame. No American artist thought of appearing in his native country before having won the approval of the Berlin critics. The unprecedented number of débuts in New York, both by

native and foreign artists, more than doubled the record of the preceding year. Among the new pianists the Peruvian Carlos Valderrama (début New York, January 21), attracted attention by his recitals of genuine Inca music, collected and arranged by himself. His programmes always consisted of two parts, the first devoted to primitive melodies conceived in the pentatonic scale, the second presenting compositions of the colonial period, when Italian influences made themselves felt. A young Hungarian, Ervin Nyredghazi, made a profound impression at his début (New York, October 18), which was deepened by his subsequent appearances. His technic and tonal gradations were nothing less than superlative. Katharine Bacon, a young Englishwoman (début, New York, November 19), gave every promise of taking a place in the front rank of pianists. The variety of her programme disclosed an extensive repertoire truly surprising in one so young. Alfredo Oswald, a Brazilian composer, proved himself a pianist of fine insight and highly poetic conception (New York, November 27). Among the host of newcomers who proved to be serious artists, but whose performances did not disclose any outstanding merits, were: Alexander Sklarevsky (March 18), Alfred Mirovitch (October 20), Boris Paranov (October 27), Jacques Colas (November 10), Pepito Echániz (November 11), Jacques Pintel (November 3), Guido Agosti (December 27). The enthusiasm which Sergei Rachmaninov aroused on his first American tour continued unabated. At the concert of the New York Symphony Society of February 17, under Walter Damrosch, Alfred Cortot played three concertos by Beethoven (C, op. 15; Bb, op. 19; C m., op. 37). The list of eminent pianists heard during the year includes: Joseph Hofmann, Harold Bauer, Leopold Godowsky, John Powell, Mischa Levitzki, Ossip Gabrilovitch, Rudolf Ganz, Josef Lévinne, Robert Schmitz, Ernest Hutcheson, Oliver Denton, Maurice Dumesnil, Benno Moisevitch, Olga Samarov, Fannie Zeisler, Katharine Goodson, Guiomar Novaes, Rosita Renard, Madeleine Brard. Worthy of special mention is the recital for two pianos given in New York on December 9, by the sisters Rose and Otilie Sutro, when they introduced to this country a Norse Suite, written for them by the late Max Bruch, one of the composer's last works, full of genuine inspiration and rugged energy. Very successful recitals for two pianos were given also by two Boston artists, Guy Maier and Lee Pattison. Regarding the visit of the eminent English modernist Cyril Scott, interest was centered upon the composer rather than the pianist. He made his début on November 9, playing his own concerto for piano and orchestra at a concert given in New York by the Philadelphia Symphony Orchestra. On November 20, he offered a programme of his compositions for piano and songs, the latter interpreted by Eva Gauthier. As a pianist he is amply equipped to convey his intentions. The large and demonstrative audiences that greeted him were evidently in sympathy with his modernistic tendencies. The first violinistic début of importance was that of Helen Teschner-Tas (New York, January 22), who showed herself a profoundly emotional player, possessed of a wonderfully large and sympathetic tone and almost flawless technic. Abraham Haitovitch (New York, March 6), a blind Russian violinist, was an artist of sterling achievement to be

judged only by the highest standards, without any apology for his affliction. The much heralded Russian prodigy Sascha Culbertson (New York, March 8), who during the war created a sensation in England, failed to meet expectations. His tone was rather small, and, while his playing of such music as *Vieuxtemps* was really brilliant, his conception of Bach and Beethoven was quite immature. Mischa Violin (New York, October 3), revealed himself as a very fine artist, a master of the intimate style. The art of the Hungarian Duci Kerekjarto (New York, November 2), combined a large, vibrant tone, a stupendous technic and a fiery temperament verging on the volcanic. The Spanish artist Juan Manén, who for some years past has been regarded in Europe as the legitimate successor of Sarasate, proved at his début (New York, November 16), that this high estimate is justified. Unusual enthusiasm was evoked by the young Bohemian Vasa Prihoda (Elmira, N. Y., November 18; New York City, November 22), who revealed qualities that place him by the side of Elman or Zimbalist. Daisy Kennedy, the wife of Benno Moisevitch, made a very favorable impression at her début (New York, November 29), through her incisive vigor, fine penetration and breadth of style. Other newcomers, whose art does not call for special comment, were: Gabriel Engel (January 24), Rudolf Bocheo (October 2), Mishel Pistro (October 3), André Polah (October 23), Marie Morrell (October 14), Josef Fuchs (November 12), Josef Stopak (October 16), Piastro Borissov (November 1), Marta de la Torre (November 29). After an absence of seven years Jan Kubelik had just begun another triumphant tour of the States, when illness interrupted his plans. Among the famous violinists heard during the year were: Ysaye, Kreisler, Thibaud, Heifetz, Elman, Spalding, Eddy Brown, Isolde Menges. Oscar Nicastro, from Uruguay, was the only violoncellist of importance (New York, March 8). He has a beautiful tone and very facile technic. Lovers of the cello had rather a lean year, even if such masters were heard as: Pablo Casals, Michael Penha, Bruno Steindel, Vladimir Dubinsky, Maurice Dambois, Max Gegna, and May Mukle. Concerts of an unusual character were the recitals of two masters of the double-bass, Antonio Torello (New York, October 28), and Leon Ziporkin (New York, December 2).

VOCALISTS. Seldom have the vocal offerings of any season fallen to such a low level as those of the past year. Not only did the programmes show little variety, but the compositions themselves, as a rule, were of slight musical value. An interesting recital of melodies of various Indian tribes was given by Watahwaso, a princess of the Penobscot tribe, in New York (April 7). The re-appearance (April 22), after an absence of several years, of the famous Dutch contralto, Tillie Koenen, disappointed her numerous admirers. Her voice had lost neither its power nor charm, but when she sang a group of German *Lieder* in English translations, she was evidently hampered by the unaccustomed language. Tom Burke, an Irish tenor, who was the sensation of the London operatic season of 1919, created no unusual excitement (début Saranac Lake, N. Y., September 24). Among the well-known favorites who appeared in concert were: John MacCormack, Louis Graveure, George Hamlin, Reinald Werrenrath, José Mardones, Alessandro Bonci, Titta Ruffo, Giovanni Martinelli, Ernest-

tine Schumann-Heink, Olive Fremstad, Frieda Hempel, Margaret Matzenauer, Frances Alda, Emma Destinnova, Yvonne Gall, Yvette Guilbert, Amelita Galli-Curci, Cyrene Van Gordon, Luisa Tetrassini, Maggie Teyte, Nina Tarasova, Eva Gauthier, Rosa Ponselle.

ORCHESTRAS. Economic conditions were responsible for numerous changes in the personnel of the large symphony orchestras. The high cost of everything caused a general demand for increased salaries, which most organizations were not able to grant. The result was that a few amply subventioned orchestras, by offering more attractive contracts, secured some of the finest artists of the less fortunate societies. Because of these conditions the New Orleans Symphony Orchestra was disbanded in January. The famous Boston Symphony Orchestra, whose efficiency had already been seriously impaired through the vicissitudes of the preceding year (see YEAR BOOK, 1919), was completely demoralized and brought to the verge of dissolution. Inability on the part of the directors to accede to the demands of the players created general dissatisfaction, and a majority of the members joined the Musical Union. Disagreement between the conductor, Pierre Monteux, and concert-master, Frederick Fradkin, led to open rebellion. Thirty-two members, who sided with the latter, struck and were dismissed (March 10). With its personnel thus reduced to 67 players, an engagement for a tour of the South could be filled only by a complete change of the original programmes. The dismissed performers, together with other musicians from the Union, formed the American Federation Symphony Orchestra with Emil Mollenhauer as conductor. After two concerts, attended by small audiences, this attempt to displace the older orchestra was abandoned. In the autumn the Boston Symphony Orchestra, under Pierre Monteux, entered upon its fortieth season with its full complement of players (100), headed by a new concert-master, Richard Burgin, a young British violinist, who made a very successful début as soloist with the orchestra in Brahms' concerto (December 17.) The New Symphony Orchestra (Artur Bodanzky) of New York was completely reorganized, and its name changed to The National Symphony Orchestra. Of the 100 players only 38 were retained, the newcomers having been recruited from the ranks of the foremost American orchestras. The original number of 30 concerts was doubled, a series of Sunday night concerts was added, and visits to other cities were inaugurated. During July and August the orchestra gave a very successful series of open-air concerts at the Stadium of the College of the City of New York, under Walter Rothwell, as guest-conductor. Under its regular conductor, Walter Damrosch, the New York Symphony Orchestra made a tour of France, Italy, Belgium, and England (May and June). It was the first time that an American orchestra visited Europe, and its reception by the public and critics left nothing to be desired. While in Italy, Mr. Damrosch was made a Knight of the Order of the Crown. In the fall a series of historical concerts, showing the development of the symphony, was given. By the middle of December, Beethoven was reached, and at the same time the 150th anniversary of the master's birth was celebrated by the performance of a unique programme consisting of three symphonies (Nos. 1, 5, 7). At the invitation of Mr. Dam-

rosch, Albert Coates, conductor of the London Symphony Orchestra, directed the concert of December 30, which was devoted exclusively to works by British composers. On this occasion the young Englishman revealed himself as a symphonic conductor of the first rank. The publication of E. W. Bok's autobiography first revealed the fact that the eminent publisher was the unknown donor of the \$250,000 which maintained the Philadelphia Symphony Orchestra during the years of the war. Hans Kindler, for many years first cellist of this organization, resigned and was succeeded by Michael Penha. On February 16th Mr. Stokowski presented a programme as unusual as it was interesting, when Bauer, Gabrilovitch, and Samarov performed Bach's concerto in C for 3 pianos and orchestra, while the two first mentioned artists rendered also Mozart's concerto in Eb for two pianos and orchestra. The twentieth anniversary of the first concert (November 20) was observed by a repetition of the identical programme conducted by Fritz Scheel at the initial concert.—The Cleveland Symphony Orchestra (Nikolai Sokolov) increased its personnel from 75 to 90 performers and the number of concerts from 50 to 80.—At the opening concert of its career (April 25) the Nashville Symphony Orchestra of 60 players, under F. Arthur Henkel, made such a decided impression that prominent citizens subscribed a guarantee fund sufficient to allow the immediate engagement of 15 additional performers. Another accession to the ranks of orchestral societies is the Toledo Symphony Orchestra (50 performers, Lewis H. Clement conductor), which ventured upon its career on October 20th.—An event of the first magnitude was the appearance of Arturo Toscanini with his new orchestra of La Scala in Milan, every member of which was selected and drilled by himself. At the opening concert (New York, December 28th) enthusiasm ran riot, although the orchestra was not as well balanced or finely attuned as when he led the Wagner performances at the Metropolitan some years ago. But then he had an orchestra which he had drilled for years, whereas the new Scala orchestra was organized only a few months ago.

CHAMBER-MUSIC. A very deep impression was made by the superlative playing of the London String Quartet (J. Levey, 1st vl.; T. W. Petre, 2d vl.; H. W. Warner, vla.; C. W. Evans, vcl.), which made its American début at the Berkshire Festival, September 24th. Later in the year these artists gave in New York a Beethoven cycle, performing all the string-quartets in chronological order. When the Flonzaleys introduced to New York a new Concertino by Stravinsky (November 23d), the work was received with loud hisses. Even advanced modernists shook their heads. The important event in the field of chamber-music was the third annual Berkshire Festival, held at Pittsfield, Mass. (September 23d-25th). The \$1000 Coolidge Prize was won by Francesco Malipiero with a string-quartet in one movement, entitled *Rispetti e Strambotti*. It was performed by the Berkshire String Quartet, but made no impression. The critics unanimously repudiated it as too futuristic. Vastly more interesting was the American début of the London String-Quartet, on the second day, when they gave a masterly rendition of Beethoven's Quartet in E m., op. 59, No. 2. Frank Bridge's Quartet in E m. had a splendid opening movement; the rest was decidedly uninspired. The novelty of

the programme was H. W. Warner's *Phantasy* for string-quartet, based on a Berkshire folk-song, a delightful work in its unaffected freshness. Efreim Zimbalist and John Powell contributed a piano and violin recital, playing a sonata of Beethoven (op. 96) and Brahms (op. 108) and Powell's own sonata in A♭. A wonderful performance of Brahms' Variations on a Theme of Haydn, for two pianos, was given by Guy Maier and Lee Pattison. The Salzedo Harp Ensemble (seven harps) and the Trio de Lutèce collaborated in a programme of music specially arranged for harps. The festival closed with Enesco's fine string-octet in C, performed by the London and Berkshire Quartets. Genuine regret was caused by Mrs. Coolidge's official announcement of the dissolution of the Berkshire Quartet, which made its last appearance at this festival. No reason was given. But Mrs. Coolidge expressly stated that the festival itself would be continued.

FESTIVALS. A monster festival, such as New York had not witnessed since the days of Theodore Thomas and Leopold Damrosch, almost 40 years ago, was arranged and conducted by Walter Damrosch at the 71st Regiment Armory (April 6th-11th). The chorus consisted of the New York Oratorio Society, augmented by the People's Choral Union and several smaller singing-societies from Brooklyn and near-by Jersey towns. The orchestra was that of the New York Symphony Society. Six concerts were given: 1. Mendelssohn's *Elijah*; 2. Rachmaninov programme, with the assistance of the composer; 3. Kelley's *Pilgrim's Progress* (first time in New York); 4. Bach-Beethoven-Brahms programme, the Bach selections rendered by the famous Bach Choir of Bethlehem; 5. Berlioz' *Damnation de Faust*; 6. Miscellaneous programme. Although this festival came near the end of an overcrowded musical season, there was not a vacant seat in the huge building at any concert, and the receptive faculty of the audience seemed unusually keen. The grandiose effects obtainable only from immense masses evidently impressed the surfeited New Yorkers with the force of novelty.—In the nature of a festival was the unique celebration in New York of the centennial of the birth of Jenny Lind (October 6th). Not only was the programme of her initial concert in America (Sept. 11, 1850) repeated literally, but all participants, including the members of the orchestra, appeared in the dress of the period. Frieda Hempel impersonated Jenny Lind, Arthur Middleton, Signor Belletti, and Ole Windingstad, Sir Julius Benedict. Mrs. J. W. Tobin loaned for the occasion the identical spinet used at the concert in 1850. A similar celebration, with Mabel Garrison as Jenny Lind, was held at Worcester on October 31st.—At the 24th biennial Cincinnati Festival, under Eugène Ysaÿe (May 4th-8th), the chief interest was centered upon Berlioz' unknown opera, *Les Troyens à Carthage*, which was given in concert form. It met a cool reception. Other large works produced were Verdi's *Requiem* and Saint-Saëns' *Le Déluge*. The attendance at the festival was unusually small. The 15th annual Bethlehem Bach Festival, under Frederick J. Wolle, took place on May 28th and 29th. In former years the first day was devoted entirely to vocal church cantatas. This year Mr. Wolle varied the purely vocal character of the programme by the introduction of two fine instrumental works, a Suite

and a Concerto, an innovation that met with general approval. The second day, as usual, was given to a magnificent production of the B minor Mass. At California Red Wood Park, under the auspices of the Sempervirens Forest Play Association, the second forest festival took place on July 3d. Eight thousand spectators witnessed a revised and improved version of the preceding year's play, *The Soul of Sequoia*, book by Don W. Richards, music by Howard H. Hanson, who conducted. The annual festival of the Bohemian Club at Bohemian Grove, Cal., began on July 10th with the dedication by Samuel D. Mayer of the new organ built in the open forest. Other recitals were given by Humphrey Stewart, Edwin Lemare, Wallace Sabin, Uda Waldrop, and Benjamin Moore. The festival concluded on July 24th with the presentation of the grove play, *Ilya Muromets*, book by C. C. Dobie, music by Ulderico Marcelli. The 24th annual Maine Festival (Bangor and Portland, September 30th-October 2d), under the direction of William R. Chapman, was made an occasion for the celebration of the centenary of the State's admission to the Union. The programmes, composed largely of works by American musicians, were rendered by native artists. The 62d Worcester Festival (October 6th-8th) marked the initial appearance of its new conductor, Nelson P. Coffin, who proved an excellent and inspiring leader. In memory of Horatio Parker, many of whose works had their first performance at these festivals, the opening concert was devoted to this composer's *Hora Novissima*.—For Berkshire Festival, see *Chamber-music*.

NOVELTIES. The Philadelphia Symphony Orchestra introduced the following new works: Sergei Rachmaninov, *The Bells*, symphonic poem with chorus, after Poe (February 6th), a grandiose, inspired work. Pietro A. Yon, *Concerto Gregoriano* for organ and orchestra, the composer at the organ (March 24th), a severe, even austere work, masterly in thematic treatment, and very effective. John A. Carpenter, *A New World Symphony: A Pilgrim Vision* (November 26th), written specially for the tercentenary of the Landing of the Pilgrims, as dull and devoid of inspiration as most works written to order. Emmanuel Moor, *Concerto for String-Quartet and orchestra* (at New York, December 28th), an original, substantial work.—From the Chicago Symphony Orchestra were heard Leo Sowerby's *Concerto for piano and orchestra*, in F (February 27th), the first two movements of which were surprisingly barren of ideas, whereas the last two exhibited good thematic material and development. Eric De Lamarter, *Concerto for organ and orchestra* (March 26th), very impressive. Victor de Sabata, *Juventus*, a symphonic poem (October 30th), brilliant and exuberant, but rather prolix. Alfredo Casella, *Italia*, Rhapsody for orchestra (October 22d), a very modernistic and inappropriate treatment of seven Neapolitan folk-songs. The Boston Symphony Orchestra contributed Claude Debussy's *Petite Suite*, originally for piano 4 hands, orchestrated by H. Büsser (March 26th), a work of exquisite charm and delicacy. Guy Ropartz, *Divertissement for Orchestra* (October 29th), scarcely interesting. Edward B. Hill, *Poem for Orchestra*, after *The Fall of the House of Usher* (October 30th), extremely impressionistic, even futuristic. Samuel Gardner, Violin-concerto in E minor (at Providence, December 14th), not remarkable, but

effective for the solo instrument. Arnold Bax, *In the Faery Hills*, symphonic poem (December 17th), hardly more than a kaleidoscopic succession of strange orchestral effects. The National Symphony Orchestra gave Francesco Malipiero's *Impressione dal Vero*, 2d series (October 31st), disjointed and meaningless, with occasional reminiscences of Wagner, Debussy, and Puccini. Ernest Bloch, *Suite for Viola and Orchestra* (November 5th), orchestral arrangement by the composer of the original suite for viola and piano, thoroughly original, but difficult to appreciate at first hearing. The New York Symphony Orchestra brought out only one new work in larger form, Vaughan Williams' *London Symphony* (December 30th, conducted by Albert Coates), which can only be characterized as ugly, discordant, and banal. The most important novelty offered by the New York Philharmonic Society was Hugo Alfvén's *Symphony in D minor* (November 26th), a masterpiece of fluent contrapuntal writing, withal very pleasing. The St. Louis Symphony Orchestra presented Emerson Withorne's symphonic sketch *Adventures of a Samurai* (March 20th), well written, but not particularly interesting. The Cleveland Symphony Orchestra contributed Vincent d'Indy's *Le Quête de Dieu*, symphonic interlude from the opera *La Légende de St. Christophe* (October 21st), an imposing, virile piece.

OPERA. At the Metropolitan Opera House in New York 172 performances were given from a repertory of 36 works by 25 composers. According to nationality these were divided as follows: Italian, 20 works by 10 composers totaled 94 performances; French, 7 works by 7 composers totaled 38 performances; German, 5 works by 4 composers totaled 24 performances; Russian, 3 works by 3 composers totaled 12 performances; American, 1 work by 1 composer totaled 4 performances. Puccini, represented by 7 works, had 25 performances; second stood Leoncavallo, with 2 works and 17 performances; while 4 works of Verdi achieved only 16 performances. Fourth honors were divided equally between Donizetti and Wagner, each represented by 2 works and 11 performances. The opera given most frequently was Leoncavallo's *Zaza* (10 times). Next came Wolff's *Oiseau Bleu* and Wagner's *Parsifal* (each 8 times). The first novelty was Leoncavallo's *Zaza* (January 16th), with Farrar, Crimi, Amato, and Kathleen Howard in the principal rôles, under the direction of Moranzoni. Musically the work is very weak, seldom rising above the commonplace, full of reminiscences, especially from Pagliacci. Nevertheless, it was a great personal triumph for Farrar, whose wonderful acting held the audience spellbound. The critics agreed that *Zaza* was her greatest rôle. On January 31st occurred the world-première of Henry Hadley's *Cleopatra's Night*, with Alda, Harrold, and Gordon, conducted by Papi. In spite of rich orchestral color, the music was monotonous in mood and rhythm, while the themes themselves were lacking in power of characterization. Throughout the score the influence of Wagner and Strauss was too much in evidence. Although Tchaikovsky's *Eugene Onegin* was given twice in its entirety in concert-form by the New York Symphony Orchestra (Feb. 1 and 16, 1908), the first scenic representation on March 24th must be regarded as the real American première. On that occasion it was sung in Italian by Muzio, Martinelli, Perini, and

Didur, under the direction of Bodanzky. The actual stage performance only confirmed the impression made in the concert hall, that the music is entirely devoid of dramatic intensity and characterization. Pick-Mangiagalli's ballet *Il Carillon Magico*, with Galli, Rudolph, and Bonfiglio, under Papi, was the last novelty (December 2d). The music was light, graceful, and interesting. A noteworthy revival was that of Boito's *Mefistofele*, splendidly sung by Alda, Easton, Gigli, and Didur, under Moranzoni (November 26th). Less obvious were the reasons for reviving Verdi's *Don Carlos*, not heard in New York since 1874. With Ponselle, Matzenauer, and Martinelli, conducted by Papi, the opera was presented on December 23d. The most important event of the year was the performance of *Parsifal* on February 19th, when an overcrowded house gave unmistakable evidence of delight at the restoration to the repertory of the works of the greatest of dramatic composers. In many respects this representation differed from all previous ones. First of all, it was sung in an English translation made specially by H. E. Krehbiel, which is entirely inadequate. The rôle of Kundry is not well suited to Matzenauer's particular quality of voice. Harrold (*Parsifal*), Rothier (Gurnemanz), and Didur (Klingsor) were decidedly ill at ease in their first attempt in a new and unfamiliar style. Whitehill (*Amfortas*) was hampered by the strange words which he had to substitute for the familiar German. The evident strain under which the singers labored reacted unfavorably upon Bodanzky, who failed to obtain from the orchestra the fine dynamics and elastic tempi which generally characterize his readings. Furthermore, several cuts were introduced, and the long intermission after the first act was discarded. Much adverse comment was caused by J. Urban's new stage-setting as too impressionistic and directly in opposition to Wagner's express directions. The Transformation Panorama in the first and third acts was omitted altogether. The next Wagnerian drama restored was *Tristan and Isolde*, also in English (November 20th). The artists were Sembach, Matzenauer, Gordon, Whitehill, and Blass, the conductor Bodanzky. Enthusiasm ran riot, although the performance did not rise to the level of the performances in German. The reasons for the shortcomings were the same as in the case of *Parsifal*. The new singers, without exception, proved very valuable additions to the company. Carolina Lazzari, familiar to New Yorkers from the visits of the Chicago Opera Company, made her Metropolitan début as Amneris (*Aida*, December 25th). Entirely new names were those of Beniamino Gigli (*Faust* in *Mefistofele*, November 26th), Giuseppe Danise (*Amonasro* in *Aida*, November 17th), Mario Chamlee (*Cavaradosi* in *Tosca*, November 22d), Anna Roselle (Musetta in *La Bohème*, December 4th), Francesca Peralta (Elena in *Mefistofele* (December 25th).

The Chicago Opera Company tried the experiment of a dual directorship, the duties of the late Cleofonte Campanini being divided between Herbert M. Johnson as executive head and Gino Marinuzzi as artistic director. By the end of the year this division of responsibility had caused serious complications, so that the directors began to consider the appointment of a single director general. The first novelty produced was De Koven's *Rip Van Winkle* (January 2d), with

Baklanov, Herbert, and Dufranne, directed by Smallens. The music was rather light in character, but very melodious and pleasing. Ravel's *l'Heure Espagnole* (January 5th), with Gall and Maguenat, under Hasselmans, proved a distinct disappointment. Whirrings of clocks and all possible noises of a clockmaker's shop are reproduced so persistently and realistically that the effect is ludicrous and irritating. Messager's *Madame Chrysanthème* (January 19th), with Miura, Fontaine, and Dufranne, under the direction of Hasselmans, made but a slight impression. The music is unaffected, often quite characteristic, but the story is lacking in action and human interest. Erlanger's *Aphrodite*, produced during the company's visit to New York (February 27th), proved one of the most complete fiascos in the operatic annals of America. The plot is unintelligible, the music hopelessly dull. Even such artists as Garden and Johnson, Hasselmans conducting, failed to elicit a sign of approval from the apathetic audience. A work of very different calibre was Marinuzzi's *Jaquerie* (November 17th), under the direction of the composer, with Gall, Johnson, and Galeffi in the principal rôles. Here a revolting theme—the unsavory *Jus primæ noctis*—is treated with considerable power, especially in the second and third acts. Besides, the tense action is heightened by gorgeous stage effects. The music fairly throbs with passion and works up to several superb climaxes. Another failure was Leoncavallo's posthumous *Edipo Rè* (December 13th), with Ruffo and Francis, Marinuzzi in the conductor's chair. A horrible subject is treated in too realistic a manner with music and unrelieved gloom. Scenes of wild enthusiasm were enacted on December 24th, when, with Raisa, Johnson, Van Gordon, and Kreidler, under the direction of Marinuzzi, *Lohengrin* (in English) marked the restoration of the Wagner dramas to the repertory. The performance was characterized by the same defects as noted in the Metropolitan revivals of *Parsifal* and *Tristan*. Two new conductors, both authoritative and capable, made their debuts: Pietro Cimmini with *I Gioielli della Madonna* (November 18th) and Henri Morin with *Le Chemineau* (November 23d). At his debut in the title rôle of Verdi's *Otello* (December 29th), an American tenor, Charles Marshall, fairly hypnotized the audience by the marvelous quality and power of his voice, as well as by his extraordinary histrionic ability. Two other new artists made a favorable impression: Olga Carrara, as Glorianda in *Jaquerie* (November 17th), and Carmen Pascova, as Carmela in *I Gioielli della Madonna* (November 18th). The company's third season in New York (January 26th–February 28th) was in all respects as successful as the earlier visits. Unusual enthusiasm was aroused by the appearances of Titta Ruffo, whose rare art had not been fully appreciated by New York, where he had been heard in 1912 in concert and a single stage performance of *Hamlet*. Of the works produced the following were new to the metropolis: Messager's *Madame Chrysanthème* and Ravel's *l'Heure Espagnole* (both on January 28th), De Koven's *Rip Van Winkle* (January 30th), Borowski's *Boudoir* (February 16th), Carpenter's *The Birthday of the Infanta* (February 23d), and Erlanger's *Aphrodite* (February 27th; at the same time the American première; see above).

BIBLIOGRAPHY, REFERENCE. Grove's Dictionary

of *Musio and Musicians, American Supplement*, edited by W. S. Pratt and C. N. Boyd (New York), contains, besides the usual information regarding individuals and institutions, a valuable history of music in America with full chronological reference lists.—BIOGRAPHY. J. N. Forkel, *Johann Sebastian Bach* (London), new translation by Terry Sanford, far superior to the older translation by Wesley (1828); Sanford has added numerous notes and very valuable appendices. David Bispham, *A Quaker Singer's Recollections* (New York), an interesting series of personal and professional reminiscences. George Lowe, *Josef Holbrook and His Work* (London), a careful and reliable study, strictly impartial. Harold V. Milligan, *Stephen C. Foster. A Biography of America's Folk-Song Composer* (New York), very valuable, as author had access to original sources. James G. Huneker, *Steeple-Jack* (2 vols., New York), an autobiography with interesting sidelights on eminent contemporaries.—ESSAYS, CRITICISM. Harriet Brower, *Vocal Mastery* (New York), a series of interviews with eminent singers expressing themselves on various phases and problems of their art. James G. Huneker, *Bedouins* (New York), essays in a rather exaggerated and grotesque style. Paul Rosenfeld, *Musical Portraits* (New York), a study of 20 modern composers attempting to show how far the moderns have surpassed Wagner. Walter R. Spalding, *Music: An Art and a Language* (Boston), a valuable contribution to the appreciation of the art.—HISTORY. Albert Lavignac, *Encyclopédie de la Musique et Dictionnaire du Conservatoire* (Paris), vol. 4 of Part I, containing the history of music in Spain and Portugal.—TECHNIC and THEORY. Eleanor McLellan, *Voice Education* (New York), eminently practical, concerned mainly with the correction of defects. Everett E. Truette, *Organ Registration* (Boston), a very full treatise on the distinctive quality of tone of the various stops, with numerous practical illustrations.

NAPIER, TREVELYAN D. W. British admiral, died, July 30. He was born, April 19, 1867, and entered the royal navy in 1880. After serving in the Egyptian war he became lieutenant and in 1899 commander. He was in command of the *Crescent*, 1904–07, and of the second light cruiser squadron in 1913. He served throughout the late war and was mentioned in dispatches for service in the battle of Jutland.

NASMYTH, GEORGE (WILLIAM). Sociologist, died, September 20. His life was largely devoted to the promotion of international understanding and peace. He was born at Cleveland, Ohio, July 19, 1882; graduated at Cornell University in 1906; and studied at the German universities and at Harvard. After visiting the universities of the European nations in the interests of the International Student Movement, he became an instructor of physics at Cornell, 1906, holding that chair until 1910. From 1911 to 1913 he was president of Corda Fratres, the International Federation of Students. From 1917 to 1919, he was head of the administrative division of the United States Fuel Administration. In 1919 he was a press representative at the Paris Peace conference and also delegate at the inter-

national meeting of the world alliance for promoting international friendship through the churches at The Hague. He wrote *Social Progress and the Darwinian Theory* (1916).

NATAL. An original province of the Union of South Africa. See SOUTH AFRICA, UNION OF.

NATIONAL BANKS. According to the United States Comptroller of the Currency the number of national banks in operation reached its highest point during the fiscal year ending June 30, 1920. On Oct. 31, 1919, the number of national banks in operation or authorized was 8157. From Mar. 14, 1900 to October, 1920, 2828 State banks, trust companies, and private banks, with capital of \$183,554,800 were converted into, or reorganized as national banks, and the movement toward nationalization was proceeding steadily. During the year ending Oct. 31, 1920, the 361 new national banks chartered were distributed through 40 different States and the District of Columbia. The 14 States in which the largest number of national banks were chartered are Minnesota, 32; California, 30; New York, 26; Texas, 22; Oklahoma, 21; Kansas, 19; Illinois, 17; Pennsylvania and Ohio, 14 each; New Jersey, Virginia, and Colorado, 13 each; Washington, 12; Idaho, 11.

In the number of depositors or deposit accounts in national banks all previous records were exceeded, official reports showing that on June 30, 1920, there were 20,520,177 deposit accounts in all national banks. This was an increase of 2,279,877 over June 30, 1919. There was approximately one depositor in the national banks for every five of our population.

In the matter of immunity from failure, the showing for the twelve months was the best in about 40 years, with the sole exception of the fiscal year of 1919. The total capital of the five small national banks which failed during the year was \$225,000, or seventeen one-thousandths of 1 per cent of the total capital of all national banks. This percentage is about 16 times better than the average for the entire period of 57 years, from the inauguration of the national banking system to the present. The earnings of the national banks, both gross and net, surpassed all previous years. The net earnings for the twelve months ending June 30, 1920, amounted to \$282,083,000, an increase of \$41,717,000 over the year preceding; and the increase which took place in the *net earnings* of the national banks in the past seven years exceeded by \$18,000,000 the total increase in earnings shown for the 43-year period from 1870 to 1913.

During the fiscal year 1920, the resources of the national banks reached the highest point in their history, being reported on Jan. 1, 1920, at \$22,711,375,000. This was an increase, as compared with the report for Jan. 1, 1919, of \$2,669,151,000. In the six months following Jan. 1, 1920, the resources of national banks declined to \$22,196,737,000, at which figure they stood on June 30, 1920. In the 7-year period from June, 1913, to June, 1920, the resources of national banks increased \$11,159,817,000, which is more than the total increase which took place in the entire 50 years from the inauguration of the national banking system in 1863 to the year 1913.

On June 30, 1920, national banks had invested in loans and discounts \$13,627,897,000 and in United States government securities and other bonds and securities \$4,186,465,000, the total

of such investments being \$17,814,362,000, representing 76.09 per cent of their aggregate assets, which amounted (including rediscounts) to \$23,411,253,000 on the date named. Liabilities included the following items: Capital stock, \$1,224,166,000; surplus fund, \$986,384,000; undivided profits, \$459,139,000; demand deposits, \$10,219,824,000; time deposits, \$3,485,501,000.

NATIONAL CIVIC FEDERATION. This society is for the promotion of better civic conditions throughout the country. It operates chiefly through its organ, the *National Civic Federation Review*, which during 1919 and 1920 was conducting a strong campaign against Bolshevism, under the direction of Ralph M. Easley, its editor. In April it published a "Declaration Against Recognition of Soviet Russia" to which there were about 400 signers, among whom were many prominent names. The 20th annual meeting of the Federation was held at the Hotel Astor, New York, on January 29th and 30th. Among the subjects under discussion were "Increased Production Through Industrial Training," "Arbitration, Conciliation, and Collective Bargaining," "Compulsory Sickness Insurance," "Workmen's Compensation—Occupational Disease," "The Revolutionary Forces in Our Midst," "The Demand for Amnesty for Pacifists, Conscientious Objectors, and Anarchists." All these subjects were discussed by a number of persons. Miss Maude Wetmore, chairman, presented the report of the Women's Department to the Federation. She reviewed the work done by the department during the war, which was extensive, and then urged attention upon the teachers in the school in whose hands the training of each new generation rests, to the matter of keeping Bolshevism out of the country.

Much attention has been given by the Federation to the labor situation in England, and various studies of labor conditions in that country have been made by members of the Federation. In 1917 delegates sent over by Premier Lloyd George toured this country to inspect conditions over here under the auspices of the Federation. Special attention was given to the report of the Committee on a Constructive Plan of Social Insurance, of which Dr. Alvah H. Doty was chairman. The report showed that universal workman's health insurance is established in not fewer than 10 of the leading Continental countries of Europe; that compulsory insurance would reduce the public expense of poor relief; and that prevention is primarily the purpose of insurance and certainly its result. Officers of the Federation in 1920 were: President, Judge Alton B. Parker; vice-president, Samuel Gompers; treasurer, Morgan J. O'Brien; and chairman executive council, Ralph M. Easley. Headquarters are maintained in the Metropolitan Tower, New York City.

NATIONAL GUARD. See MILITARY PROGRESS.

NATIONAL MUNICIPAL LEAGUE. An organization founded in 1894 for the study of municipal problems, and the dissemination of information on the subject. During the past few years the scope of the League's activities has broadened to include county, and State government. The 26th annual meeting was held in

Indianapolis, Nov. 17th to 19th, 1920, at which time the progress report of the committee on State government, covering essential features of a model State constitution, was submitted. The report as approved provides for a single chamber Legislature elected by proportional representation, and a governor with power of veto and of appointment and removal of all executive heads without the approval of the legislature. A legislative council consisting of members elected by the legislature is provided. This will be a sort of standing committee of the legislature to sit from time to time throughout the year and conduct investigations and conduct legislation for introduction. It is also designed to serve as a connecting link between the executive and the legislature, to increase the harmony between them. It is the most radical feature of the model constitution. The constitution throughout adheres to simple direct statements and excludes matters of legislative detail. Other features of the annual meeting were sessions on service at cost for street railways, the housing crisis, and the city manager plan of government. The banquet session was devoted to the subject "The Fate of the Direct Primary." Mr. Hughes' Presidential address bearing this title.

The *National Municipal Review*, now published monthly, issued a number of supplements which constitute important studies on various problems. Among these may be mentioned the ones on Centralized Purchasing in State Government, Zoning, Presidential Primary, Employment Standardization in Public Service, the Law of the City Plan, Administrative Reorganization in Illinois, and Service at Cost for Street Railways.

Committees are actively at work on a model election law, a model municipal bond act, a model pension law, city-county consolidation, and State government. During the year Mr. H. W. Dodds succeeded Mr. Clinton Rogers Woodruff as secretary of the League. Mr. Woodruff retired after 25 years of service. The following officers for 1920 were reelected: President, Charles E. Hughes; treasurer, Frank A. Vanderlip; honorary secretary, Clinton Rogers Woodruff.

NATIONAL PARKS. See PARKS, NATIONAL.

NATIONAL SAFETY COUNCIL. The ninth annual Safety Congress was held in Milwaukee, September 27th to October 1st of this year, President Richards presiding. This organization, the leading one of its kind, has made great progress during the year in the prevention of accidents in industries, in the streets, and in the homes. There were 3100 registered delegates and at least an equal number of unregistered visitors at the Congress, making it the most successful in the history of the society. During the year 10 new local councils with paid secretaries have been organized, making a total of 16, besides which there are 21 local councils without paid officers. During the year, the *National Safety News*, expanded from a one sheet bulletin to a 12 page magazine, was most useful in spreading safety propaganda throughout the country. Great strides were made in public safety through the development of vigilance committees, chauffeurs' schools, local safety drives, and safety education in public schools. Founded in 1913 with 40 members, it now includes in its membership more than 15,000 factories, railroads, insurance companies, technical schools, governmental agencies, etc., employing an aggregate

of more than 6,000,000 workers. Officers for 1920-21 are: President, C. P. Tolman; general manager, C. W. Price; secretary and chief engineer, S. J. Williams; and treasurer and business manager, W. H. Frater. Headquarters are at 168 N. Michigan Avenue, Chicago.

NAVAL ACADEMY, UNITED STATES.

See UNITED STATES NAVAL ACADEMY.

NAVAL PROGRESS. The naval situation differs but little from that of last year. Only the United States and Japan have laid down new capital ships (i.e. ships of the highest fighting qualities—battleships and battle cruisers). Other naval powers, oppressed by the burden of great war debts, hampered by the general disturbance to industry and trade engendered by the war, and feeling that their naval forces will suffice for present purposes, are exercising the greatest practical economy in administering naval affairs. Great Britain is discarding all old and inefficient vessels, laying down no new ones, and completing only such craft as were so far advanced and of such desirable type as to render this step economical and advisable. France has a feeble programme of construction consisting of a few light cruisers, destroyers, and submarines. Italy is following the example of Great Britain but has not yet gone so far in disposing of her old and inefficient ships. Austro-Hungary has disappeared as a political entity and as a naval power; and only one of the states carved from her territory has any seacoast. Russia is sunk so deeply in a chaos of oppression, murder, starvation, and terror as to make the remains of her once great navy a feeble but ghastly jest. The condition of the German navy as regards organization, morale, and material is not much better than the Russian and she is forbidden to strengthen it until the terms of the Versailles treaty are fully complied with. The Turkish navy has wholly disappeared without hope of resurrection. Spain is building feebly and has developed a new programme of construction but there is some doubt of its being carried out. None of the lesser powers are seriously considering the construction of important vessels, though Chile is receiving some of the warships commandeered by Great Britain at the outbreak of the war.

Nearly all the merchant vessels used as auxiliaries during the war have now been returned to their original owners or sold. Many old cruisers have been transformed into merchantmen before or after sale to private parties. In France the armored cruiser *Dupuy de Lôme* has thus been altered, while in Italy the dreadnought battleship *Caracciola*, only partly completed, will be finished as a merchantman, and the *Leonardo da Vinci*, which has been refloated after being sunk, is to be turned into a mercantile oil tanker.

While the naval powers are, with the exceptions noted, refraining from much new construction because of their high taxes and unfavorable industrial conditions, the lessons of the war are being studied and the most desirable changes and improvements in naval policy as concerns organization, equipment, and operation considered. It is hoped by such study and consideration that, when easier financial conditions permit further naval development, it will proceed along lines which are adequate and desirable from the military standpoint as well as economically correct.

The question of the most efficacious types of war vessels is being again argued. The points at issue as regards vessels are chiefly the old ones of size, speed, armament, and protection—the latter exhibiting more points of novelty as the development of the submarine and aircraft during the war directly affects protection while it affects the others only through its bearing upon general naval policy.

The submarine danger in its effect upon design was considerably discounted in prewar design by the very general increase in internal armor below the waterline and in careful subsurface subdivision. The most noteworthy protective device which is being fitted to large war vessels because of war experience is the "bulge" developed by the British. This is an extension of the cellulose belt idea of former days combined with cellular subdivision. In the earlier ships it was applied to the already completed hull and thus formed an actual bulge which materially decreased the vessel's speed. In the new ships, the lines are faired so as to give an underwater body suitable for high speed. Of course the hull space available for ship purposes is necessarily narrowed.

The effect of aircraft upon design is chiefly through its action upon naval strategy and tactics; but bombing planes and airships fitted with non-inflammable gas can effectively attack ships from above, while torpedo planes may prove more dangerous than surface or submarine torpedo boats.

The disappearance of the Austro-Hungarian navy, the reduction of Germany and Russia to secondary rank, and the rise of Japan cause the relative standing of the principal navies of the world to be as follows: 1, Great Britain; 2, United States; 3, Japan; 4, France; 5, Italy.

The table on opposite page is derived from *Sea Power* and includes all vessels built and building for the principal navies but does not include those authorized or proposed but not actually commenced before March 1, 1920.

The following brief notes give a general idea of the present condition of the navies of the world as regards new construction, policy, and recent or proposed activities.

ARGENTINE NAVY. No definite plans have been made for the increase or improvement of the navy but the government has asked the Argentine Congress for an appropriation of \$80,000,000 for increasing the power of the navy and developing the merchant marine.

AUSTRALIAN NAVY. This is independent of the British navy but is designed to coöperate with it in case of war. The cost is wholly borne by the Australian Commonwealth. The naval ensign, recently adopted, consists of a rectangular flag, the upper half red and the lower half blue, with a horizontal gold anchor at the centre. The present naval force consists of 1 battle cruiser of 18,800 tons, 3 fast light cruisers of 5400 tons, 2 old protected cruisers, 12 destroyers, and several auxiliaries. Admiral Lord Jellicoe who was recently sent on a naval mission to Australia has recommended the establishment of an Australian naval unit composed of 8 modern battle cruisers, 12 light cruisers, 24 destroyers, 12 submarines and supply ships; the programme to be completed in 1923 at a cost of £5,000,000 annually. The carrying out of the programme is highly improbable at this time.

BELGIAN NAVY. Before the war the Belgian naval force consisted of coast guard and trans-

port vessels only. It is now proposed to build several submarines. Belgian engineers have been sent to Italy to take a course in submarine construction.

BRAZILIAN NAVY. The effective force of the navy consists of 2 dreadnought battleships of 20,000 tons (each carrying 12 12-inch guns), 2 fast light cruisers of 3150 tons and 27 knots speed, and 10 destroyers of 650 tons and 28 knots. It was proposed to build 2 light cruisers but owing to the great cost this plan has been given up and the present programme consists of 2 light cruisers of 4000 to 5000 tons, 5 destroyers of 1100 to 1200 tons; 3 submarines of 800 tons, and 6 of 250 tons.

CANADIAN NAVY. This force in time of war forms part of the fleet of the British Empire. In times of peace it is supported by Canada but is partly officered by the British navy. The Canadian naval college is at Halifax.

CHILEAN NAVY. In 1914 there were under construction in England for the Chilean navy 2 28,000 ton battleships designed to carry 10 14-inch guns each. At the outbreak of war these vessels were taken over by Great Britain. One (the *Almirante Latorre*) was nearly completed and in a short time joined the Grand Fleet under the name of the *Canada*. The other (the *Almirante Cochrane*) was not nearly so far advanced and was completed as the *Eagle*, aeroplane carrier. Some months since, the *Latorre* began refitting in order to proceed to Chile. The *Eagle* may be reconstructed as originally designed but this is doubtful. Final arrangements between the British and Chilean governments have not yet been completed. It is stated that Great Britain will sell to Chile two light cruisers (*Dartmouth* and *Southampton*—5400 tons, 26 knots, 8 6-inch guns) and 4 gunboats, and will return in good order the flotilla leaders which she commanded at the same time she took over the *Latorre*.

FRENCH NAVY. For 40 years France has been seeking a cheap substitute for the battleship. First the torpedo boat, then the *guerre de course* and then the submarine. Now she favors the submarine as the prime weapon against warships and merchantmen—only the legitimate humane use against the latter—also the seaplane, torpedoplane, and airship. In other words she accepts a defensive policy for the future. This is unquestionably a matter of financial inability. Before the war the French felt that they could not support a great army and a great navy and they chose the former as the prime necessity. With the ever present threat of German aggression she chose rightly and rounded out her line of defense by alliance with Great Britain. In her present outlook she sees no probable foe among the great naval powers and is proceeding to cut expenses to the uttermost consistent with safety and efficiency. None of the proposed battleships of the *Turville* class will be proceeded with. Four of the *Normandy* class of 24,800 tons will be completed; the other, the *Bearn*, will be broken up or turned into a merchant ship or auxiliary. To correct defects in the fleet as it stands to-day the Landry programme calls for an expenditure of 645,200,000 francs and the construction of 6 light cruisers of high speed (45,000,000 each), 12 flotilla leaders of 1800 to 2000 tons (20,000,000 each), and 12 submarines of 500 to 1200 tons. France had no modern light cruisers and no flotilla leaders; the submarines are

provided for to prevent a check in submarine development.

GERMAN NAVY. The naval force left to Germany is negligible in power. It consists of the pre-dreadnought battleships *Deutschland* (lchd. 1904), *Hannover* (1905), *Schlesien* (1906), *Schleswig-Holstein* (1906)—all of 13,000 tons, 4 11-inch guns; *Lothringen* (1904), *Braunschweig* (1902), *Elsass* (1903), *Hessen* (1903)—all of 13,000 tons and 4 11-inch guns. The light cruisers retained are the *Berlin* and *Hamburg* (1903—3200 tons, 23 knots, 10 4.1-inch guns), *Arcona* (1902—2700 tons, 21 knots, 10 4.1-inch guns), *Amazone*, *Medusa*, and *Thetis* (1900—2650 tons, 22 knots, 10 4.1-inch guns). There are 12 destroyers of about 600 tons and 10 years old. Not one of the foregoing vessels would be retained in a modern navy as a part of the fighting force. Five modern fast light cruisers were to be retained under the provisions of the Versailles treaty but after the sinking of the ships at Scapa Flow these were required to be given up together with floating docks, floating cranes, tugs, and barges equivalent to a displacement of 400,000 tons. However, the number and power of the ships retained in the German navy are not of the least importance. Discipline, obedience, and patriotism have disappeared and the result is a "pseudo-navy run upon trade-union lines and administered by soviets." The demoralization of the naval service is so complete that there is little probability of the formation of an efficient navy for many years to come. The German admiral, Hollweg, regards any attempt to reorganize the old naval forces as impossible. The officers are all right but the men are hopelessly filled with soviet and revolutionary doctrines which would make a well organized and disciplined navy absolutely impossible. Since both Kiel and Wilhelmshaven are hotbeds of sovietism, anarchism, and extremely radical socialistic doctrines, the admiral believes it will be necessary to discard both as naval bases as well as to disband every part of the existing naval forces and start in new localities with new men. Before the war, German naval officers held themselves on a very high plane indeed. It was often said that the wardrobe of a German warship was more exclusive than the court of Austria. This *de haut en bas* attitude maintained toward the enlisted force worked fairly well as long as Germany succeeded in her aims; but as soon as defeat became of more than average occurrence, discipline began to waver: the battle of Jutland and the horrors of the submarine service were the final disrupting forces.

GREAT BRITAIN'S NAVY. The British Admiralty is making an extremely earnest effort to re-attain prewar expenditures and is going about the work in a very thorough way characteristic of the nation. The total of the naval estimates for 1920-21 is £96,490,181 and may be divided as follows:

(a) Non-recurrent war liabilities or terminal charges	£19,077,000
(b) Recurrent expenditure due to war conditions, e.g. increases in prices and in rates of wages, pensions, etc., and separation allowance	40,023,200
(c) Normal expenditure on the basis of pre-war rates and prices	37,489,981

The gross estimates for 1914-15 were £53,573,261. Deduct from this the amount allotted to new construction (£18,373,000) and we have £35,200,261. Compare this with subdivision (c) of the present estimates and we find it is £2,290,-

000 greater, due mainly to the following causes: the grant of clothing allowances to men of the fleet; provision of larger hospital ships; the extension of scientific research and of technical training; reduction in working hours of industrial staff; increase in non-effective charges. A careful examination of the foregoing shows that the admiralty has achieved its aim (to reduce expenditures to prewar conditions) as nearly as is compatible with present prices of material and labor and the rates of pay in service. In order to keep down the amount allotted for pay nearly to the former figures, the personnel is reduced to 127,500 which is 23,500 less than in 1914.

In order to keep expenditures to the figures of the estimates it has been necessary to adopt every available economy. The most obvious means of saving money was the immediate sale or preparing for sale of all war vessels of a type not desirable to maintain or repair. The next step was to place out of commission all vessels not necessary for the revised peace establishment. Up to May 1, 1920, exclusive of auxiliary craft derived from the merchant service and of old naval craft which had been condemned but rearmed during the war, the following vessels were placed out of commission: 14 battleships, 2 battle cruisers, 16 protected cruisers, 33 light cruisers, 17 monitors, 76 sloops, 68 mine sweepers, 47 patrol boats, 10 flotilla leaders, 220 destroyers, 40 torpedo boats, 55 submarines. Four of the dreadnought battleships which were placed out of commission were subsequently reported in Parliament by the First Lord of the Admiralty as not required for the post-war fleet; the same report was made concerning the two battle cruisers. The battleships in question are the original *Dreadnought* (17,900 tons, launched 1906), *Superb* and *Belierophon* (18,600 tons, launched 1906-07), *Agincourt* (ex-*Birinji Osman*—ex-*Rio de Janeiro*—launched, 1913; taken over at the outbreak of war). The battle cruisers are the *Inflexible* and *Indomitable* (17,250 tons, launched 1907). All armored cruisers, protected cruisers, and small destroyers are condemned for fleet service and will be sold or otherwise disposed of. The new battle cruiser *Hood* was completed during 1920. No other battleship or battle cruiser is building. Three classes of light cruisers are in hand—the *Dragon* class of 4720 tons, the *Enterprise* class of 7500 tons, and the *Raleigh* class of 9750 tons.

It is reported that the Haulbowline dockyard at Queenstown is to be abandoned and that the Pembroke yard in Wales is to be leased to be Vickers Company for a long term of years. Of the other yards, three are to help the merchant marine—for a time at least.

The Admiralty pronounces very definitely on the subject of capital ships, the First Lord stating that in the opinion of the Board the lessons of the war plainly point to the battleship as the proper type of the maximum fighting unit. Its details will doubtless change to meet existing conditions but it will still remain paramount, no matter how greatly improved are the means for aerial and submarine navigation. The First Lord's memorandum also refers to a permanent bureau of scientific research, to the education and training of officers and men, to the naval staff, the naval air service, the promotion of enlisted men to commissioned rank, and to the formation of a new naval reserve.

The department of scientific research and experiment has a director in charge and is placed

under the Controller of the Navy. The director is a scientist of adequate capacity to act as adviser to the Controller and to the navy in general on all matters connected with the application of new advancements in scientific knowledge to the requirements of naval engineering, explosives, chemistry, signalling, mining, etc. The number of assistants of the director and other facilities enable original research work to be undertaken and also permit the department to keep in touch with new work in other scientific establishments.

In technical training of officers and men there will be much more attention paid to mining than before the war, the submarine instruction will be considerably extended, and a new school for anti-submarine work is being established.

The education of officers is being considerably changed. Both line and engineer officers start as cadets. The common entry cadets are taken at 13½ to 14 years, special entry at about 17. The establishment at Osborne is closed and all cadets are now sent to Dartmouth where they remain 3 years and 8 months; then 8 months on a training battleship. They are now sent as midshipmen on ships of the regular service for 2 years and 6 months; then, upon passing they become sublieutenants for one year before promotion to the grade of lieutenant. Midshipmen of one year's service may volunteer for specialization in engineering—as may sublieutenants. After serving a certain time (during which they may return to the line) the engineer officers become permanently of that branch. The exact period of time has not yet been settled. To make the promotion in the two branches fairly equitable, certain high ranks, responsibilities, and duties are provided for officers of the engineer branch, both afloat and ashore. Special arrangements are made for promoting enlisted men to commissioned rank at 17½ to 18½ years, 21 years, or at a somewhat later period, provided they can pass certain examinations and boards of selection.

One of the most important features of the First Lord's memorandum is the planning of the new naval staff. Forty officers will receive instruction per year and for this purpose a Naval Staff College has been established at Greenwich. The naval staff is under the Chief of the Naval Staff. His subordinates are: The Deputy Chief of the Naval Staff who is responsible for operations, policy, intelligence, and training; and the Assistant Chief of the Naval Staff who is responsible from the staff side for the development and use of material including types of vessels, weapons, and tactics. A War College for the instruction of senior officers, in policy, strategy, tactics, etc., will also be maintained at Greenwich.

A separate naval air service will not be maintained but the Naval Staff and Air Staff will be kept in touch as to requirements and the naval branch of the air forces will be wholly under naval command when operating for the navy afloat or ashore.

The formation of a naval reserve on new lines had not proceeded far enough for the First Lord to make a definite statement concerning it. The plans were still under consideration by a naval board.

ITALIAN NAVY. The Italian navy, like those of the other European powers, is being forced to practice the most rigid economy. No new con-

struction is now contemplated though a few destroyers, submarines, and small gunboats are in hand. All old and ineffective ships are being sold except where they can be made use of as auxiliaries or harbor craft. This reduction in *material* is being accompanied by an equally drastic cut in *personnel*. The numbers in each grade of the line (executive) and engineer corps are as follows:

Line Grade	No.	Engineer Corps Grade	No.
Admiral	1	Lieutenant-general ...	0
Vice-admiral	9	Major-general (chief) ..	1
Rear-admiral	20	Major-general	2
Commodore	9	Brigadier-general ...	1
Captain	65	Colonel	9
Commander	114	Lieutenant-colonel ...	20
Lt.-commander	180	Major	48
Lieutenant	425	Captain	146
Sub-Lt. and midship- man	275	1st and 2d lieutenants	179

JAPANESE NAVY. Japan is the only naval power outside of the United States which is greatly strengthening its naval forces. These two are the only great powers whose shores are washed by the Pacific and each undoubtedly feels it necessary to maintain a navy sufficiently strong to protect its own interests. Before the war each navy bore about the same relative position towards the other that it does now; and neither was adding to its forces except in a moderate way. The possibilities opened up by the war awakened the United States government with a severe jolt and it did not rest until it put out the greatest building programme ever approved by a government at one time. The finances of Japan being greatly improved by her position in the war, she was able to follow the United States in the hasty increase of naval force.

Four battleships of 31,200 tons were completed during or since the war. Two others (*Negato* and *Mutsu* of 33,800 tons, 23.5 knots, 8 16-inch guns) have been launched while two more of the *Negato* class have been commenced. In the intensive 8 to 8 building programme of Baron Kato, eight superdreadnought battleships and eight superdreadnought battle cruisers were to be built. The battleships are already mentioned. Of the battle cruisers, four were completed during the war. These are of 27,500 tons, 28 knots, and carry 8 14-inch guns. The new battle cruisers are of 40,000 tons, 30 knots speed, and carry 10 16-inch guns. Two were commenced in 1919, two in 1920. The names are the *Akagi*, *Amagi*, *Takao*, and *Atago*. Four similar vessels are projected, to be completed in 1927 or 1929. The Japanese grand programme also calls for 4 more battleships, 8 light cruisers of 6000 tons, 24 light cruisers of 5000 tons, 32 destroyers of 1300 tons, 32 destroyers of 850 tons, 24 submarines of 1300 tons, 40 submarines of 800 tons, 12 special duty ships of about 12,000 tons. The entire programme is to be completed by 1927.

JUGO-SLAVIAN NAVY. The Jugo-Slavian state has established a navy department. In January, 1920, the government dispatched to the Allies and especially to Italy, a note making claim to a portion of the former Austrian navy. The vessels cited are the 4 cruisers of the *Spaun* type, 19 destroyers of the *Duklja*, *Tatra*, and *Hussar* types, 52 torpedo boats, and all the submarines and hydroplanes remaining at the former Austrian bases. Claim was also made to 18 auxiliary and school ships, 6 Danube monitors, 2 river

tugs, and a vast amount of mines, torpedoes, machinery, and stores at Pola, Fiume, and elsewhere.

NETHERLANDS NAVY. No new construction was undertaken in 1920 on account of a sharp difference of opinion in Parliament as to the plans for naval expenditure. Even the work on the two cruisers building for colonial service since 1916 was stopped.

NEW ZEALAND NAVY. Like many other British colonies, New Zealand is arranging for a naval force of her own. The old protected cruiser *Diamond* of 3000 tons has been commissioned in England and sent out to New Zealand to serve as a school ship.

NORWEGIAN NAVY. No new construction is planned. The naval estimates for 1920 were 15,828,000 crowns. The sum of 750,000 crowns is allotted to new construction already in hand, and 250,000 to naval aviation. Norway lost the greater part of her merchant marine during the war by the ruthless submarine campaign and naval construction will probably give way to merchant ship building for some time to come.

POLISH NAVY. Poland intends to have a small naval force but so far nothing definite has been decided as to the matter.

PORTUGUESE NAVY. The only change in the Portuguese navy consists in the acquirement of 6 gunboats (called sloops by the English) which were purchased of the British naval authorities.

ROUMANIAN NAVY. In 1913, the Roumanian government ordered 4 destroyers of 1450 tons and 35 knots speed of Pattinson, Naples. These were not ready for delivery before Italy entered the war, so they were commandeered and completed for her use. Two of them have recently been turned over to the Roumanian government. Four small river gunboats have been purchased in France for use on the Danube.

RUSSIAN NAVY. The wholly disorganized Russian navy is slowly disappearing. Some few vessels have been kept out of Bolshevik hands and are in various foreign ports. About half of the important ships have been destroyed and nearly all the others are useless from lack of care. Such control as is given the scattered remains of the fleet can make no important use of vessels whose crews are without honor, knowledge, patriotism, or discipline; the vessels themselves are out of repair and lack every sort of supplies and equipment; and the directing forces have no continuity of purpose to maintain themselves in power. Unless the Bolsheviks are overthrown, the material of the fleet will be wholly destroyed or dissipated in another year or two. The personnel of the navy disappeared in the first burst of revolution. The discipline of the Russian service was of a brutal type; the officers were overbearing, harsh, and generally incompetent as compared to the officers of the other great naval powers; the men were extremely ignorant and stupidly subservient. The service was honeycombed with fraud, dishonesty, and lack of patriotism and (especially) of *esprit de corps*. Here was an ideal field for Bolshevik propaganda; and it swept away the whole organization in a moment.

SPANISH NAVY. The publication of a new building programme for the Spanish navy is not of infrequent occurrence; but many programmes are turned down later and others are not usually carried out in all respects. The construction now in hand is made up of the fag ends of the

programmes of 1908, 1914, and 1915. The present budget (1920-21) allots 34,000,000 pesetas (1 peseta at par = 19.3 cents) for new construction. One battleship and three destroyers of the 1908 programme are completing. A light cruiser of the 1914 programme was launched in April, 1920. The programme of 1915 was quite extensive as follows: four light cruisers of 4650 tons and 29 knots, six destroyers of 1125 tons and 34 knots, 28 submarines, and three gunboats. There are building in Spain, two of the cruisers, three of the destroyers, six of the submarines, and three gunboats. Four of the submarines are completed. One of these, the largest, named the *Isaac Peral* (742 tons submerged, 488 on the surface) was built in the United States by the Electric Boat Company.

SWEDISH NAVY. No new vessels were proposed or placed under construction in 1920. The allotments for the development of naval bases which were derived from previous appropriations were drastically cut and the work is being prosecuted more slowly.

TURKISH NAVY. By the terms of the peace treaty the Turkish navy is eliminated. Turkey no longer has a seacoast under her own unrestricted control.

UNITED STATES NAVY. The Naval Act of 1921-22, carries a total appropriation of \$433,279,574, which is about 140,000,000 less than the estimates. No new construction is authorized but the carrying out of the 1916 programme is fully provided for. As may be seen in the table opposite, there were building for the navy on Nov. 1, 1920, 6 battleships of 43,200 tons, 4 battleships of 32,600 tons, 1 battleship of 32,300 tons, 6 battle cruisers of 43,500 tons, 10 scout cruisers of 7500 tons, 10 miscellaneous auxiliary vessels, 45 destroyers of 1215 tons, 47 submarines, 2 sea-going tugs. The Navy Department, in pursuance of a recommendation of the General Board of the Navy, had recommended the authorization of 2 battleships, 1 battle cruiser, 10 scout cruisers, 5 flotilla leaders, 6 submarines, 2 airplane carriers, 1 destroyer tender, 1 submarine tender, and \$27,000,000 for aircraft construction, including experimental development. It has been stated that the battleships and battle cruiser will be new types and carry 18-inch guns. The others were vessels intended to fill deficiencies in the fleet. The scout cruisers were to have been of 10,000 tons and to have a speed of 32 knots; the flotilla leaders, 2200 tons, 37 knots; the airplane carriers, 35,000 tons, 32 knots. The foregoing was refused by Congress, but may be granted next year.

After July 1, 1920, the allowance of regular and temporary officers of the navy was 8044 for 137,485 enlisted men. At this time wages and employment in civil life were at the extreme peak. The result was a vast deficiency in enlistments. The total strength of enlisted personnel on April 1 was 105,400—a shortage of 32,000, or 30 per cent. Since July 1, wages have been tending downwards, and the number of men out of employment has greatly increased; owing to these facts, the number of applications for enlistment is steadily growing and if the present business conditions persist there is likely to be plenty of applicants for enlistment in the near future. The organization of the new naval reserve will undoubtedly differ from the existing arrangements which are partly due to temporary legislation and presidential orders and partly

to legislation outdating our entry into the war. Much attention will doubtless be paid to the question of the Reserve in the immediate future. With such a war to draw lessons from it seems reasonable to think that plans for a satisfactory Reserve can be drawn if a "satisfactory Reserve" is practicable.

The most serious defect of the navy is its backwardness in aviation. While Congress refused to grant the full sum asked for, considerable improvement can be made with the means available. As the torpedo plane is approaching a satisfactory stage of development, as bombing planes without any one on board have been steered and operated by radio, and as very great improvements are being made in the design of planes and of airships, keeping up with the times is necessary even if expensive.

VESSELS BUILDING FOR UNITED STATES
NAVY: PER CENT COMPLETED
NOV. 1, 1920

Type and name	Displacement (tons)	Per cent compl.
Battleships:		
California	32,300	94.5
Colorado	32,600	61.3
Maryland	32,600	84.0
Washington	32,600	52.7
West Virginia	32,600	85.5
South Dakota	43,200	16.2
Indiana	43,200	12.8
Montana	43,200	13.2
North Carolina	43,200	17.4
Iowa	43,200	9.4
Massachusetts	43,200	...
Battle cruisers:		
Lexington	43,500	8.2
Constellation	43,500	2.2
Saratoga	43,500	5.8
Ranger	43,500	8.0
Constitution	43,500	1.2
United States	43,500	1.2
Scout cruisers:		
Omaha	7,500	78.1
Milwaukee	7,500	8.0
Cincinnati	7,500	45.8
Raleigh	7,500	23.0
Detroit	7,500	21.4
Richmond	7,500	55.0
Concord	7,500	54.0
Trenton	7,500	32.0
Marblehead	7,500	81.0
Memphis	7,500	24.0
Miscellaneous:		
Pecos (fuel ship)	14,800	42.5
Gunboat No. 22	1,575	37.1
Relief (hospital ship)	9,800	99.0
Nitro (ammunition ship)	10,600	99.4
Medusa (repair ship)	10,000	42.7
Dobbin (destroyer tender)	10,600	36.5
Whitney (do)	10,600	5.0
Holland (submarine tender)	!	7.5
Wright (aircraft tender)	!	65.0

There were in addition to these vessels, under various stages of construction, 45 destroyers, 47 submarines, and 2 sea-going tugs.

Also, authorized, but not yet under construction or contract, 1 transport, 12 destroyers, and 7 submarines.

NAVIES. See NAVAL PROGRESS.

NAVY. See NAVAL PROGRESS.

NEBRASKA. POPULATION. According to the preliminary report of the census of 1920, there were 1,296,372 residents in the State, Jan. 1, 1920, as compared with 1,192,214 in 1910.

AGRICULTURE. According to the census of 1920, the number of farms was 126,309, a falling off of 2.8 per cent since 1910. The following table is compiled from the estimates of the United States Department of Agriculture covering 1919 and 1920:

Crop	Year	Acreage	Produce, Bu.	Value
Corn	1920	7,560,000	255,528,000	\$104,766,000
	1919	7,030,000	184,186,000	224,707,000
Oats	1920	2,400,000	83,040,000	80,725,000
	1919	2,133,000	69,962,000	45,475,000
Barley	1920	256,000	7,424,000	3,712,000
	1919	217,000	5,577,000	5,577,000
Wheat	1920	3,593,000	60,480,000	79,229,000
	1919	4,884,000	60,675,000	122,564,000
Rye	1920	264,000	3,722,000	8,834,000
	1919	408,000	6,650,000	7,648,000
Hay	1920	3,934,000	6,570,000	62,908,000
	1919	4,540,000	7,125,000	109,924,000
Potatoes ..	1920	85,000	8,415,000	10,028,000
	1921	104,000	5,720,000	10,868,000

* Tons.

MANUFACTURES. Preliminary figures published by the United States Bureau of the Census showed a consistent increase at the census of 1919, as compared with that for 1914. In the order of their importance from a percentage standpoint, the increases for the several items ranked as follows: Cost of materials, 175.3 per cent; wages, 172.7 per cent; value of products, 168.4 per cent; value added by manufacture, 142.9 per cent; salaries, 121.2 per cent; capital, 102.7 per cent; salaried employees, 58.6 per cent; wage earners, 45.2 per cent; primary horsepower, 39.5 per cent; proprietors and firm members, 18 per cent; and number of establishments, 15.7 per cent. The capital invested, as reported in 1919, showed a gain of \$124,249,000, or 102.7 per cent, over that in 1914. The average capital per establishment was approximately \$85,000 in 1919 and \$49,000 in 1914. The cost of materials used in 1919 showed an increase over that for 1914 of \$305,235,000 or 175.3 per cent. The average cost of materials per establishment in 1919 was approximately \$166,000, and in 1914 \$70,000. The value of products in 1919 showed an increase over that in 1914 of \$373,116,000, or 168.4 per cent. The average per establishment in 1919 was approximately \$206,000 and in 1914 \$89,000. The value added by manufacture in 1919 showed an increase over that in 1914 of \$67,881,000, or 142.9 per cent. The value added by manufacture in 1919 formed 19.4 per cent of the total value of products and in 1914, 21.4 per cent. In 1919, as compared with 1914, the number of salaried employees showed an increase of 3,560, or 58.6 per cent, while the average number of wage earners increased 11,377, or 45.2 per cent. A comparative summary for the State for 1914 and 1919 follows:

	1919	Census— 1914	Per cent. of increase, 1914-1919
Number of establishments	2,884	2,492	15.7
Persons engaged in manufactures	49,076	33,695	45.6
Proprietors and firm members	2,916	2,472	18.0
Salaried employees	9,639	6,079	58.6
Wage earners (average number)	36,521	25,144	45.2
Primary horsepower	125,814	90,192	39.5
Capital	\$245,257,000	\$121,008,000	102.7
Services	61,813,000	24,011,000	157.4
Salaries	15,746,000	7,118,000	121.2

	Census—		Per cent. of increase, 1914-1919
	1919	1914	
Wages	46,087,000	18,893,000	172.7
Materials	479,849,000	174,114,000	175.3
Value of products	594,732,000	221,616,000	168.4
Value added by manufacture (value of products less cost of materials)	115,883,000	47,502,000	142.9

CONSTITUTIONAL CONVENTION. The Nebraska constitutional convention was in session at Lincoln from Dec. 2, 1919 for seventy-four days and adopted forty-one amendments which were to be voted upon at a special election, September 21. The main features of these amendments were as follows: Authorization of the legislature to allow verdicts in civil cases to be rendered by five-sixths of the jury; authorization of the legislature to regulate the rights of aliens in respect to property; requirement that the English language be the medium of teaching in all common schools; reduction of the number of petitioners required for the initiative and referendum; creation of new executive offices only by a two-third vote of both houses of the legislature; appointment of heads of executive departments by the governor with the consent of a majority of both houses; a complete itemized budget of the administration to be presented by the governor which could be increased only by a three-fifths vote of the legislature; concurrence of five out of seven judges of the supreme court required for declaring a law passed by the legislature to be unconstitutional; no appropriations to be made to educational institutions not owned and controlled exclusively by the State.

ELECTIONS. The vote in the presidential election of 1920 was: Harding (Republican), 247,498; Cox (Democrat), 119,608; Debs (Socialist), 9600; Watkins (Prohibitionist), 5947; as compared with the following vote in the presidential election of 1916: Wilson (Democrat), 158,827; Hughes (Republican), 117,771; Socialist, 7141; Prohibitionist, 2952. The vote for governor was: McKelvie (Republican), 153,763; Morehead (Democrat), 130,433.

NEBRASKA, UNIVERSITY OF. A co-educational State institution of the higher learning at Lincoln, Nebraska, founded in 1869. The enrollment for the fall of 1920 was 4453. There were 1096 students enrolled in the summer school. The faculty had 275 members with five additions for the year. There were 147,500 volumes in the library and 900 periodicals. The productive funds amounted to \$896,989 and the total income came to \$2,446,710. The following buildings were completed, erected or purchased during the 25th biennium, which closed November 30. On the City Campus: Social Sciences Hall (\$300,000); Teachers College building (\$170,000); Ellen Smith Hall (\$23,000); Chancellor's residence (\$5900); Student houses or dormitories (7) (\$26,350). Farm Campus: Agricultural Engineering building (\$195,000); and Animal Pathology and Hygiene building (\$133,000). Medical College Campus at Omaha: New Laboratory building (\$176,000); Nurses' Home (\$12,000); and Steam plant (\$77,900). Irrigation School Campus: Irrigation School building (\$15,000). Chancellor, Samuel Avery.

NECROLOGY. The following list contains the names of notable persons who died in 1920. Articles will be found in the YEAR BOOK in their proper alphabetical order on those whose names are mentioned below without other text.

Abney, Sir William de Wiveleslie.
Adair, Charles Henry. Died March 9. He was born July 2, 1851, entered the royal navy in 1864 and had risen to the rank of captain in 1893; served at Suakim in 1884 and won the Egyptian medal and star; and was retired with the rank of admiral in 1913.
Adam, Paul.
Adams, Jewett, W. Former governor of Nevada, died at Berkeley, Cal., June 18.
Adams, William Forbes.
Adcock, Sir Hugh. British diplomat, died April 13. He was born in London in 1847; practiced medicine, 1872-88, after which he was chief physician to the Persian prince Mouzaffer-ed-Din, who came to the throne in 1897.
Abearn, John F.
Albrecht, Duke Johann. Former duke of Mecklenburg, died at Mecklenburg February 15. He was born in 1857.
Aldridge, Rev. John Mullings. British ecclesiastic, died March 18; educated at Trinity College, Dublin, and ordained in 1870; held various charges in Ireland and was dean of Clonfert from 1907 to the time of his death.
Alexander, Charles McCallon.
Alexander, (King of Greece).
Alfonso, Prince. Duke of Oporto, died February 21. He was born in 1865.
Allen, Frederick Sturges.
Amette, Leon Adolphe.
Anderson, Sir Francis James. British brigadier-general, died March 6. He was educated at Woolwich and served as engineer in the Straits Settlements and also as assistant at the war office. In 1917 he was appointed chairman of the Army Sanitary Committee and attache to the General Staff.
Andrews, William Loring.
Argles, George Marsham. British clergyman, died February 22. He was born in 1841, educated at Oxford, and became canon of York in 1888.
Armagh, John Baptist Crozier.
Atkinson, Wilmer.
Ayala, General R. Venezuelan official, died in New York City, August 30. He was born in 1847 and was at one time vice-president of Venezuela.
Ayscough, Thomas. British clergyman, died April 18. He was born September 11, 1830, educated at Rugby and Cambridge and was vicar of Tenbury, 1860-92, and rector of Cradley, 1892 to 1917. At the time of his death he was prebendary of Hereford.
Babbie, Sir William.
Bacon, Alexander Samuel.
Baffiere, Jean. French sculptor, died April 19. He was born in 1851.
Bailey, Clarence Mitchell.
Baker, Horace.
Baker, James.
Baker, John Guilbert.
Bankhead, John Hollis.
Barber, Ohio, Columbus.
Barclay, James. Canadian clergyman, died May 18. He was born at Paisley, England, June 19, 1844, and educated at Glasgow University. From 1883 to 1910 he was minister of St. Paul's Church at Montreal, Quebec.
Barrows, H. P. Agricultural educator, died at San Francisco, Cal., May 3. He was professor of agricultural education at the Oregon Agricultural College and State superintendent of agricultural education. Shortly before his death he resigned in order to become an agent for agricultural education under the government.
Barry, Ralph Brereton. British jurist, died March 10. He was born June 7, 1856 and was called to the Irish bar in 1880. He became professor of law in Queens College, Cork, 1884. At the time of his death he was county court judge of the counties of Kildare, Carlow, Wicklow and Wexford.
Batholomew, John George.
Bartlett, Homer Newton.
Barton, Sir Edmund. Former prime minister of Australia, died at Sydney, New South Wales, January 4. He was born in New South Wales, January 18, 1849. He was prime minister in the first cabinet under the Commonwealth Government.
Battershall, Walton Wesley.
Baxter, Wynne. British official, died at the end of September. For thirty-three years he was coroner for

East London and the Tower of London. He was born in Lewes in 1844 and as coroner held the inquest in a number of celebrated cases, including those of the victims of Jack the Ripper, and of various Russian anarchists.

Beard, Adelia Belle.
Beavan, Thomas Daniel.
Beccarini, O. Italian botanist, died October 25. He was the director of the botanic gardens in Florence, Italy.

Benedict, Elias Cornelius.
Benson, Sir Ralph Sillery.
Bertolini, P. Italian statesman, died at Rome November 28.

Beasborough, Edward Ponsody, Earl of. British peer, died at Birmingham, England, December 1. He was born March 1, 1851 and was secretary to the Speaker of the House of Commons, 1884-95 and secretary to the Caledonian Canal Commissioners, 1886-99.

Besse, Dom.
Biberstein, Baron von. Former German foreign minister, death at Freiburg reported November 14.

Binns, Percy. South African official, died January 8. He practiced law for many years in Natal and served as resident chief magistrate at Durban.

Bird, Charles.
Bissell, George Edward.
Bissolati, Signor.
Blair, Henry William.
Blanc, Edmond.

Blashfield, Albert Dodd. Illustrator, died at Brooklyn, N. Y., February 8. He was born in New York City in 1860. During many years he was known as an illustrator for the periodicals.

Bliss, Howard Sweetser.
Bloodgood, Robert. See Painting and Sculpture.
Rodio, Luigi. Italian economist and statistician, died at Rome, November 2. He was born at Milan in 1840: was professor of political economy at Leghorn and Milan and professor of commercial geography at the Venice Commercial School; an associate of M. Levasseur in studies relating to population and area of countries; president of the International Statistical Institute after 1909; and chairman of the Commission on Statistics which sat in Paris in October, 1920, to advise a policy in the League of Nations. He was the author of important statistical works.

Bogart, John C.
Bogert, James John.
Boggio, Emile. See Painting and Sculpture.
Bonney, Archbishop. French prelate, died in Paris April 20. He was born in 1836 and was Archbishop of Aix.

Bottinger, H. von. Chemist, died June 22. He was born in 1849.

Bouchier, Thomas David.
Boury, Eugene Aurbourg de
Rowden, Henry George.
Brad, Cyrus Townsend.
Bradley, Thomas W.
Braganza, Dom Luiz de, Prince. Grandson of the Emperor Dom Pedro II of Brazil, died at Cannes. He was the son of the Count d'Eu and the Princess Isabelle of Brazil and was a writer of some note.

Brandt, H. C. G.
Brashear, John Alfred.
Breck, George William.
Breckenridge, Madeline McDowell.
Brex, Twells.

Bright, James Franck.
Briosi, G. Italian botanist, died May 4, 1920. He was well-known for his work in plant pathology.

Brittain, Carlo Bonaparte.
Brockway, Zebulon Reed.
Brodhead, J. Davis.

Brooker, Clarence Ehnie. Chemist, died May 9. He had been recently engaged in important chemical experiments with hydrogen chloride in collaboration with Dr. W. D. Harkins at the University of Chicago and had been appointed to the Swift fellowship in chemistry at that institution.

Broughton, Rhoda.
Brousseau, Louis Maurice.
Brown, Frank.
Browne, Charles Francis.
Browning, William J.

Bruce, Andrew McRae. British-Indian soldier, died April 6. He was born January 5, 1842 and joined the Indian army in 1860. He served in a large number of campaigns and frontier expeditions, being often mentioned in despatches and winning several medals and other honors.

Bruch, Max.
Brumidi, Lawrence. See Painting and Sculpture.
Brush, Daniel Harmon.
Buckley, James Monroe.
Bullen, Arthur Henry.

Burch, Charles Sumner.
Burdett, Sir Henry.
Burdick, Francis Marion.
Burne-Jones, Lady Georgiana. The wife of Burne-Jones, the painter, died in London, February 2. She was the daughter of a Wesleyan minister, the Rev. G. B. Macdonald. After her husband's death she lived at Rottingdean, where she wrote the memoirs of Burne-Jones published in 1904.

Burrows, Royal Montagu.
Bury, William.
Butchli, Otto. German zoologist, died in February. He was born in 1848 and was distinguished for his contributions to zoology, especially in the department of cytology. He was a professor at the university at Heidelberg.

Buttz, Henry Anson.
Byran, Oliver Doud.
Callaghan, Sir George Astley.
Campbell, A. H. Philanthropist, died in New York City, October 4. He was the founder and superintendent of the Home for Incurables at Brooklyn, N. Y. He was born in 1836.

Canfield, H. M. Archaeologist, died at Southbury, Conn., January 6. He was born in 1841.
Case, Olifford Philip.
Casey, Mrs. M. C. M. Registrar-general of the Daughters of the Revolution, died in New York City July 22. She was born in 1837.

Cassidy, Joseph.
Castle, Egerton.
Castro, Vincent. Bishop of Santander, Spain, died September 20. He was born in 1841.

Cavia, Mariano de. See Spanish Literature.

NEEDHAM, JOSEPH. British physician, died, August 2. He was born in London, 1853; educated privately; and pursued medical studies at the London Medical College and at the University of Aberdeen, gaining honors in several branches of medicine and surgery. He was assistant professor of anatomy in the University of Aberdeen and demonstrator of histology in the London Hospital Medical College. He contributed extensively to the medical and scientific press.

NEGRI SEMBLIAN. A federation of nine divisions composing a state in the Federated Malay States. (q.v.).

NELSON, W. H. DE B. See PAINTING AND SCULPTURE.

NETHERLANDS, THE, or HOLLAND. A kingdom of Central Europe on the North Sea, lying in latitude 50° 46' and 53° 34' north, and longitude, 3° 22' and 7° east, and consisting of 11 provinces. Capital, The Hague.

AREA, POPULATION, ETC. Total area, exclusive of water, 12,582 square miles; population, Dec.

31, 1914, 6,778,699, of whom 3,371,919 were males and 3,406,780 were females. The area and population by provinces and density per square mile were given as follows by the *Statesman's Year Book* for 1920:

Provinces	Area: English sq. miles (1909)	Population	
		Dec. 31, 1918	Per sq. mile 1918
North Brabant	1,920	721,570	378
Guelders	1,939	727,165	375
South Holland	1,181	1,648,570	1,458
North Holland	1,066	1,278,382	1,199
Zealand	707	247,844	351
Utrecht	525	331,313	631
Friesland	1,243	384,779	310
Overijssel	1,295	482,751	384
Groningen	881	559,950	409
Drenthe	1,028	208,672	198
Limburg	847	442,783	523
Total	12,582	6,778,699	589

Total area, including interior waters, gulfs, and bays, was given in 1909 at 15,760 square miles. Emigration which has been for the most part to North America was 1170 in 1918. The population of the 10 largest cities on Dec. 31, 1918, was as follows:

Amsterdam	644,070	Haarlem	75,280
Koiterdam	501,281	Arnhem	70,543
The Hague	352,079	Leyden	61,113
Utrecht	186,805	Nimeguen	66,439
Groningen	875,940	Tilburg	60,226

On Dec. 31, 1918, 59.06 per cent of the population was given as rural, that is to say, as living in towns of 20,000 inhabitants or less. Government educational statistics for 1917-18 were as follows: Universities (public), 4632 students; elementary schools (public), 620,338 pupils; elementary schools (private), 443,258; infant schools (public), 36,265; infant schools (private), 113,384.

PRODUCTION. In 1919 the total cultivable area and forest was 2,461,112 hectares; under wheat, 141,340 acres with a production of 774,918 quarters; rye, 502,767 acres and 1,296,293 quarters; barley, 57,784 acres and 311,833 quarters; oats, 380,270 acres and 2,388,823 quarters. (See AGRICULTURE; and AGRICULTURAL EXPERIMENT STATIONS). The live stock according to the census of March 5, 1919, were: Cattle, 1,969,609; pigs, 449,829; sheep, 437,075; horses, 36,201. The following information pertaining to the year 1919 was supplied by the United States Bureau of Foreign and Domestic Commerce in 1920: The output of beet sugar in 1919 was estimated at not more than 175,000 tons compared with 199,000 tons in 1918 and 259,550 tons in the season of 1916-17, owing to the lack of coal necessary for the operation of the beet-sugar factories at full capacity. In order to supply the country with sugar, the government made purchases abroad, particularly in Java, which account for the sharp advance in imports from a value of \$160,400 in 1917 and \$2800 in 1918, to \$8,639,200 in 1919. However, more sugar was exported than was imported. The great development of the oleomargine industry in the Netherlands led to heavy imports of animal fats as well as of vegetable oils and oil-bearing nuts and seeds. Shipments of cotton into the Netherlands in 1919 marked the establishment of what is hoped to be a permanent European cotton market which will compete with

other European markets. The imports, mostly of American staple, in 1919 indicated a large increase over previous years. The iron and steel trade increased as a result of the removal of war restrictions and because of the lively competition of German and Belgian producers on the one hand—from which Dutch importers in normal times secure most of their supplies of this sort—and British and American iron and steel producers on the other. Few of the minor industries started during the war had a good year. The larger industries did much better. Shipbuilding, which had assumed considerable proportions before the war and advanced immensely during the war, continued with unabated vigor. The production of coal during the year was only fairly satisfactory, remaining practically the same as that of 1918. The total output of all Dutch mines was placed at 3,400,000 tons, as compared with 3,399,000 in 1918, 2,995,000 in 1917, 2,563,000 in 1916, 2,250,000 in 1915, and considerably less than 2,000,000 tons in previous years. The chief mines are those of the government in Limburg, where the output reached a total of 1,476,000 tons in 1919. There was also an output of 1,800,000 tons of lignite as compared with 1,425,617 tons in 1918. This lignite is of poor quality. The deposits were not worked previous to 1917 and in that year the output was of little moment. The diamond industry had a year of varied experience commencing with high prices and a strong demand for gems and winding up the year with lower prices, which caused losses to dealers and manufacturers. Considerable advance was made in the automobile industry while the manufacture of bicycles, one of great importance in the Netherlands, had a good year as the result of improved conditions as to imported materials. The manufacture of cigars and tobacco was hampered somewhat by the high price of tobacco leaf and high wages and the difficulty of exporting goods in anything like the usual volume. Great variations in values of both tobacco and its products abroad also worked to the disadvantage of the industry. Clothing manufacturers likewise had to contend with similar difficulties. Returns of the fisheries of 1919 were not available, but in 1918 the vessels engaged numbered 6172 and the crews about 17,832.

COMMERCE. According to the American consular reports, the year 1919 was the greatest year in the history of Dutch foreign trade. The total foreign trade amounted to the equivalent of \$2,014,833,200, of which the imports were valued at \$1,321,821,200 and the exports at \$693,012,000. The figures given compare with imports in 1918 valued at \$244,964,000 and exports at \$166,953,800, or a total turnover value of \$411,917,800. In 1917 the imports were valued at \$432,787,200 and the exports at \$334,988,800, or a total turnover of \$767,776,000. The changes in the country's trade during and after the war are indicated by the comparison of such figures. The trade of the Netherlands before the war reached something like \$1,125,000,000, and in the last year of the war, although the country was neutral, trade returns fell to less than a third of that amount despite increased values. There were several explanations offered for the increase in 1919. In anticipation of the opening of trade with Germany large quantities of goods were sent from all over the world to the Netherlands during the year to be near Germany when the expected removal of restrictions took place.

Much of the increase in exports was due to the shipment of Dutch manufactures whose free movement had been difficult or impossible during the war and much of it was due to increased values for manufactured goods. The average value of a ton of imports into the Netherlands during 1919 was \$108, and the average value of a ton of exports was \$240. In other words, the Netherlands imported raw materials and exported highly valuable finished products. The low and fluctuating value of the mark rendered it practically impossible for credit to be established over a long enough period to get many lines of goods from abroad to the German buyer. The result was that goods were brought to the Netherlands on a Dutch credit and sold to German importers on a more or less cash basis.

The declared exports from all the Netherlands to the United States during 1919 showed a greater increase than exports to any other country. Trade with the United States was more directly affected by war conditions than with other nations since it represented a longer sea haul. With the removal of restrictions and with the availability of tonnage which followed the armistice, there was a large movement of Dutch produce which had accumulated for American owners during many months. The declared exports from the whole of the country to the United States in 1918 and 1919 were as follows:

Total	\$8,165,224	\$86,264,263

Preliminary figures for 1920 indicated that the imports during the year amounted to 3,333,000,000 guilders. Computed at the average exchange rate for the year, this would amount to exactly a billion of dollars. The export trade during 1920 amounted to 1,702,000,000 guilders,

and computed at the average exchange for the year would be equivalent to \$567,000,000. Gold and silver are not included in the above statistics. The declared exportation at Amsterdam during 1920 amounted to 78,888,249 guilders; at Rotterdam, 18,024,189; at the Hague and others, 2,189,963, or a total consignment to the United States of 99,866,099 guilders.

SHIPPING. The record of entries and clearances of shipping in Dutch ports for the seven years, 1913-19, illustrates graphically the general shipping situation of the country. Returns for 1919, despite the great increase over the previous year, were only a little more than half those of 1914, and considerably less than half for 1913. The record for the seven years was as follows:

Years	No. of ships	Net tonnage
1913	16,996	18,197,783
1914	12,154	13,540,051
1915	6,351	6,621,478
1916	5,114	4,681,117
1917	2,184	1,858,951
1918	1,779	1,668,093
1919	7,082	7,097,716

The following table shows the shipbuilding tonnage in comparison with other leading European countries:

Countries	June 30, 1920		Sept. 30, 1920	
	No. of stra.	Gross tons	No. of stra.	Gross tons
Holland	152	898,465	163	422,635
Italy (including Trieste)	117	340,138	113	352,377
France	88	268,819	80	290,136
Japan	56	254,260	72	262,407
British Dominions	91	255,724	68	198,719

FINANCE. The budget estimates for 1920 were as follows: Revenue, 409,818,856 guilders; expenditures, 572,257,978 guilders. The chief sources of revenue were: excise duties and direct taxes, including the tax on incomes, trades, professions, etc., and the chief items of expenditure were: payments on the public debt and appropriations to the Departments of Labor, Public Instruction, Agriculture, and Public Works. The national debt for 1920 was given at 2,132,889,000 guilders, bearing an annual interest of 101,030,343 guilders.

GOVERNMENT. Executive power is vested in the sovereign (Wilhelmina Helena Pauline Maria, born Aug. 31, 1880); and legislative power in the sovereign and parliament or States-General, which consists of two chambers, the upper chamber having 50 members elected by the states and the second or lower chamber having 100 deputies elected directly. The second chamber was elected in 1918 and comprised the following representatives distributed by parties: Catholics, 30; Socialists, 22; Anti-Revolutionists, 13; Protestant party, 7; Liberal Union, 6; Democrats, 5; Old Liberals, 4; others, 13. The ministry at the beginning of 1920 was constituted as follows: Prime Minister and Minister of the Interior, Dr. Ch. J. M. Ruys de Beerenbrouck; Foreign Affairs, van Karnebeek; Finance, de Vries; Justice, Heemskerk; Colonies, de Graaf; War, General Pop; Public Works, König; Agriculture, Commerce, and Industry, van Yesselstein; Marine, General Pop; Labor, Aalberse; Instruction, Science and Arts, de Visser.

HISTORY. The departments of marine and war were combined in one, March 29, as the department of national defense, and Gen. W. F. Pop

was appointed minister. A serious dock strike from February 24 to April 28 brought shipping practically to a standstill. The new working week law provided that the week should consist of 45 hours, dividing the work for factories, workshops, and offices into 5 days of 8 hours and 1 day of 5 hours, each; that dock labor should be determined according to the needs of the season and the nature of the work; that a special rule should apply to farm labor which should be for 8 hours a day in winter, 10 in summer, and 12 in the harvest season; that Sunday labor should be allowed only on permission by the government; and that children under the age of 13 should not be employed.

Measures under consideration by the States-General, which opened September 21, included partial revision of the constitution, a new educational law, laws pertaining to accidents to agricultural workmen, the better regulation of industry, the extension of the sanitary service, etc. Increased taxation was unavoidable and a plan was under consideration in the autumn. The new taxation bore heavily upon the income of the former German emperor, to whom a delay was granted. During 1920, the emperor continued to reside at Amerongen. The former emperor on September 23, presented to the municipality of Amerongen, a hospital which he had built and equipped under the supervision of the Knights of St. John.

The question of resuming relations with the Vatican was under discussion in the latter part of the year and on December 23, after a heated debate, a measure was passed for the purpose. Relations with the Vatican had ceased after 1907. There was a difficulty with Jugo-Slavia, toward the close of the year, resulting in the breaking off of relations with that country on account of the arrest in 1914 of the Dutch consul at Belgrade as an Austrian subject without warning to the Dutch government. The question of trade with Russia was much agitated during the year. At the close of the year it was understood that the foreign office would not restrict business transactions between the merchants of the two countries, but would not assume any responsibility for them. There was some friction with Belgium toward the close of the year on account of the Dutch government's refusal to extradite the former librarian of Ghent University, who had taken part in the Flemish separatist movement under the Germans.

Legislation adopted for the increase of the revenue taxes on spirits and a measure of that nature went into effect January 1. This increased the tax on spirits by 150 per cent, and that on beer by 100 per cent. It was believed by the temperance advocates that the measure would result in placing the liquor beyond the reach of the poorer classes. (See NAVAL PROGRESS).

NETTO, JOSEPH SEBASTIAN. See ROMAN CATHOLICS.

NEVADA. POPULATION. According to the preliminary report of the census of 1920, there were 77,407 residents in the State, Jan. 1, 1920, as compared with 81,875 in 1910.

AGRICULTURE. According to the census of 1920, the number of farms was 3,164, an increase of 17.7 per cent since 1910. The following table is compiled from the estimates of the United States Department of Agriculture covering 1910 and 1920:

Crop	Year	Acreage	Produce Bu.	Value
Barley	1920	8,000	304,000	\$502,000
	1919	8,000	280,000	420,000
Wheat	1920	18,000	420,000	756,000
	1919	24,000	550,000	1,177,000
Hay	1920	345,000	651,000	9,226,000
	1919	345,000	577,000	11,135,000
Potatoes	1920	6,000	1,032,000	1,610,000
	1919	6,000	900,000	1,350,000

* Tons.

MINERAL PRODUCTION. The value of the gold, silver, copper, lead, and zinc mined in Nevada in 1920 was about \$23,960,000, according to preliminary figures of the United States Geological Survey, an increase of about \$527,000 over the

\$99,000, and in 1914 \$52,000. The value of products in 1919 showed an increase over that in 1914 of \$6,791,000, or 42.2 per cent. The average per establishment in 1919 was approximately \$138,000 and in 1914 \$89,000. The value added by manufacture in 1919 showed a decrease from that in 1914 of \$383,000, or 5.7 per cent. The value added by manufacture in 1919 formed 27.9 per cent of the total value of products and in 1914, 42.1 per cent. In 1919, as compared with 1914, the number of salaried employees showed an increase of 32, or 1.5 per cent, while the average number of wage earners decreased 536, or 14.7 per cent. A comparative summary for 1914 and 1919 follows:

	Census—		Per cent. of increase, ¹ 1914-1919
	1919	1914	
Number of establishments	166	180	— 7.8
Persons engaged in manufactures	3,566	4,118	—13.8
Proprietors and firm members	186	179	—24.0
Salaried employees	311	279	11.5
Wage earners (average number)	3,119	3,655	—14.7
Primary horsepower	13,874	18,748	—26.0
Capital	\$16,835,000	\$18,591,000	23.9
Services	4,906,000	4,049,000	21.2
Salaries	588,000	471,000	24.8
Wages	4,318,000	3,578,000	20.7
Materials	16,491,000	9,317,000	77.0
Value of products	22,874,000	16,083,000	42.2
Value added by manufacture (value of products less cost of materials)	6,383,000	6,766,000	— 5.7

¹ A minus sign (—) denotes decrease.

output in 1919. A large decrease in the quantity of gold was balanced by increases in other metals, but the output of copper, lead, and zinc was still far below that of 1918. The gold output of Nevada decreased from \$4,541,502 in 1919 to about \$3,579,000 in 1920, a decrease of more than 21 per cent.

The mine production of silver increased in quantity from 6,863,580 ounces in 1919 to about 7,786,000 ounces in 1920 and in value from \$7,687,210 to about \$8,480,000. The large mines of the Tonopah district produced about 4,970,000 ounces of silver in 1920, against 3,568,875 ounces in 1919 and 5,929,920 ounces in 1918. The mine output of copper increased in quantity from 52,331,175 pounds in 1919 to about 55,790,000 pounds in 1920, but decreased in value from \$9,733,599 to about \$9,551,000. The output was less than half that of 1918. The mine output of lead increased in quantity from 15,349,370 pounds in 1919 to about 19,510,000 pounds in 1920 and in value from \$813,517 to about \$1,592,000. The mine output of recoverable zinc increased slightly in quantity from \$9,004,698 pounds in 1919 to about 9,100,000 pounds in 1920 and in value from \$657,343 to about \$737,000. In 1920, as in past years, most of the output was made in the Yellowpine district, in Clark County.

MANUFACTURES. Preliminary results of the census of manufactures in the State for the year 1919 showed certain increases over 1914, but the totals for the State were seriously affected by the decrease in the smelting and refining of copper in 1919 as compared with 1914. The capital invested, as reported in 1919, showed a gain of \$3,244,000, or 23.9 per cent, over that in 1914. The average capital per establishment was approximately \$101,000 in 1919 and \$76,000 in 1914. The cost of materials used in 1919 showed an increase over that for 1914 of \$7,174,000 or 77 per cent. The average cost of materials per establishment in 1919 was approximately

FINANCE. According to the annual report of the State Treasury, the balance in the treasury on Jan. 1, 1920 was \$814,737, and on Dec. 31, 1920, it was \$925,945. The total receipts for the year amounted to \$4,339,452; while the disbursements for the year amounted to \$4,228,243. Of the receipts \$835,500 were from the sale of bonds, while by far the largest single item of expenditure was that for the State highway fund (\$1,687,741).

ELECTIONS. The vote in the presidential election of 1920 was: Harding (Republican), 15,479; Cox (Democrat), 9851; as compared with the following vote in 1916: Wilson (Democrat), 17,778; Hughes (Republican), 12,131; Benson (Socialist), 3065. The vote for United States Senator was: Oddie (Republican), 11,550; Henderson (Democrat), 10,402; Anne Martin (Independent), 4981.

NEVADA, UNIVERSITY OF. A co-educational, State institution of higher education at Reno, Nevada, founded in 1874. In the fall of 1920 the enrolled students numbered 465, while there were 112 students enrolled in the summer school. The faculty numbered about 59. The library contained about 34,000 bound volumes and several thousand pamphlets. The education building was completed and organized in 1920. President, Walter E. Clarke, Ph.D., LL.D.

NEWARK, N. J. See GARBAGE, and WATER WORKS.

NEW BRUNSWICK. One of the Maritime Provinces of Canada, east of the State of Maine and south of the Province of Quebec. Capital, Fredericton. Area, 27,985 square miles; population (1911), 351,889; showing a density per square mile of 12.61. Largest city, St. John; population (1911), 42,511. The capital, Fredericton, had a population (1911) of 7208. Spring wheat in 1919 yielded 748,000 bushels; oats, 9,852,000 bushels; barley, 269,000 bushels; potatoes, 13,489,000 bushels; cattle in 1919 numbered 365,000. It is under a lieutenant-governor.

nor appointed by the governor-general of Canada and a legislative assembly of 48 members elected. February 17, and comprising at the beginning of 1920, 27 Liberals and 21 Conservatives. Lieutenant-governor at the beginning of 1920, W. Pugsley; Prime Minister, W. E. Foster. (See CANADA).

NEW CALEDONIA. A French colony in Melanesia, consisting of the island of New Caledonia and the following dependencies: Isle of Pines; Wallis Archipelago; Loyalty Islands; Huon Islands; and Futuna and Alaf. New Caledonia has a length of over 248 miles and an average breadth of 31 miles. Area, 7650 square miles; population (1911), 50,608, of whom 5671 were of convict origin. Capital, Nouméa, with a population of about 10,000. Imports (1918), £870,000; exports, £1,046,800. The chief imports were: coal, wine, flour, and rice; and the chief exports, coffee, copra, rubber, guano, and minerals. It is under a governor aided by a privy council and an elective council-general.

NEWFOUNDLAND. An island colony of Great Britain in the northeastern part of the Gulf of St. Lawrence. Area, 42,734 square miles; population (1911), 242,619; estimated Jan. 1, 1919, 254,587. Dependent on it is Labrador (see below). Capital, St. John's, with a population (1918) of 34,045. Other towns with their populations (1911) are: Harbour Grace, 4279; Bonavista, 3911; Carbonear, 3540. There is a considerable production of agricultural crops and live stock, but the chief occupation is fishing, and next to that is the paper and pulp industry. In 1918, 940 men and 56 Newfoundland sailing vessels were engaged in the bank cod fishery, a considerable falling off from the previous year and the catch in 1918 was valued at \$1,362,200. In the shore cod fishery, 15,120 small boats of various kinds were employed and 39,680 men. The output was valued at \$15,563,843. In 1919 the number of seals caught was 81,293, valued at \$278,000, a large falling off from the previous year, and in the season of March-April, 1920, the catch was the smallest on record. The growth of the pulp and paper industry may be seen from the following table covering the years 1913-14 to 1919-20:

Year	Pulp Tons	Pulp Value	Paper Tons	Paper Value
1913-14	51,605	372,678	40,077	1,795,488
1914-15	48,451	379,220	40,556	1,817,193
1915-16	22,892	197,608	62,527	2,801,769
1916-17	27,413	351,072	33,389	1,510,440
1917-18	11,494	111,358	34,060	2,302,243
1918-19	11,151	475,178	21,819	1,545,344
1919-20	19,864	334,276	80,719	4,725,660

Rich iron deposits have recently been found, and copper ore, and pyrites are profitably worked. Coal, silver, and lead also exist.

During the year announcement was made that a concession had been granted by the government for a development project which involved the construction of a through line from St. John's to Ship's Cove or St. Alban's on the south coast with a junction on the main line at Bishops' Falls or Grand Falls. The organization of a company to carry out this work was in progress and, should sufficient financial support be forthcoming, it was thought that the scheme will involve no cost to the government. The plan proposed a line of steamers from St. Alban's to North Sydney on Cape Breton Island in place of the service from Port aux Basques, which

would reduce the time between Canada and the United States by 12 hours. The proposed scheme also included the Botwood railway which would connect the north and south coasts of the island and remove the inconvenience under which Newfoundland suffered of having winter ports on the two extreme ends of the island. By the new route the most difficult portion of the main line would be avoided and the rail haul reduced by about 200 miles. It was anticipated that the new branch line could be operated electrically from water power available near the southern terminus.

The executive power is in a governor aided by an executive council and the legislative power in a legislative council of 24 members, and a legislative assembly. The legislative assembly after the general election of November, 1919, had 23 government supporters and 19 members of the oppositions. Governor and commander-in-chief at the beginning of 1920, Sir C. A. Harris; Prime Minister, R. A. Squires.

Included in the administration of Newfoundland is that portion of the peninsula of Labrador, which lies between the Hudson Strait and Blanc Sabline with a coastline of about 600 miles; area, about 120,000 square miles and population in 1918, 4073.

The following account of conditions in 1920 appeared in the press at the close of the year: The support of the Squires' ministry which assumed office after the election of November, 1919, rested largely on the Fishermen's Protective Union, headed by Mr. W. F. Coaker, its president. This organization, created and built up by him, had become one of the largest industrial as well as political factors in the island. He held strong views on the subject of government control of the fish trade with the object of increasing the price obtainable by the people for their products, and the new ministry proceeded to utilize the machinery created for war time purposes to put this policy into effect. Regulations were promulgated by the government, promptly on taking office, preventing the export of fish unless owners would undertake not to sell it at prices lower than those fixed by the government. This policy naturally evoked a storm of hostile criticism, both from political opponents and from elements among the business community, who objected to interference with the ordinary methods of trade. However, the government persisted and at the ensuing session of the legislature carried through a series of measures prescribing the methods of (a) curing fish; (b) grading or culling the same; (c) the class of vessels to carry the fish to market; (d) standardizing the fish to be conveyed thereto and most important of all (e) enabling the government to regulate the sailing time of vessels so that markets might not be overstocked and to fix minimum prices for the sales of the various qualities in the different markets to which the fish ordinarily went. This policy was bitterly challenged and it may be said that for the whole of the 12 months there was turmoil and dissension in the fishing centres of the island and on "Change" at St. John's in regard to said policy. The opponents of it said it had not helped in any manner or fashion toward increasing the price of the fishing products, and they pointed to figures showing the decline in prices in 1920, compared with the two previous years. Advocates of the policy, on the other hand, claimed that but for the regulations being enforced conditions would be much worse."

There has been for many years a dispute with Canada over the boundary of Labrador and in December a commission was appointed to define the boundary line. When the Labrador coast was restored to Newfoundland in 1809 the boundary was left indefinite. In 1824 the British government defined the Labrador coast as lying eastward of a line running north and south from the Sablon Bay, as far as the Anticosti and other adjacent islands, but the line was not marked out. The commission of December, 1920 was appointed to provide for the survey of the line. The importance of the matter had greatly increased in view of the recent discovery that the interior of Labrador was not only very rich in game resources but in forests and other commercial possibilities.

NEW GUINEA. An island of the East Indies, next in size to Australia and Greenland. Area, about 310,000 square miles; population, estimated roughly at a little under 1,000,000. It is divided under Australian, Dutch, and British control, the former German dominion having ceased during the war. It is distributed as follows: Western part to 141° east, included in the Dutch East Indies; northeastern part comprising the former German colony of Kaiser Wilhelmsland, assigned to Australia; southeastern part included in the British colony of Papua. (See DUTCH EAST INDIES; GERMAN NEW GUINEA; and PAPUA.)

Portions of the country were entirely unknown until the explorations of Captain H. Detzner during the war, of which an account was given in 1920. It seemed that in the spring of 1914 he had undertaken a journey for scientific purposes into a region never before visited by a white man,—namely, the section between the British and German possessions. After four months he reached 144° of east longitude and made a number of observations and reckonings. He reached the watershed where he discovered a horde of natives living in a comparatively high degree of civilization, whom he called the "Papuan of the Cliffs." It was an Alpine region with a height above sea level of between eight and 10 thousand feet where he gathered typical specimens of alpine flora. He found the natives living in clans in the valleys. He regained the coast after the war had broken out and there found that the country was in the hands of the Australians. Thereupon, he returned with some native soldiers into the extreme part of the northwest and attempted thence to cross into the Dutch dominions. In his journey in that part of the country he again made observations and collected specimens. He passed four years in wandering and, falling ill, narrowly escaped death. He was finally able to return to Germany at the end of 1918 by way of Australia and Capetown.

NEW HAMPSHIRE. POPULATION. According to the preliminary report of the census of 1920, there were 443,083 residents in the State, Jan. 1, 1920, as compared with 430,572 in 1910.

AGRICULTURE. According to the census of 1920, the number of farms was 20,523, a falling off of 24.1 per cent since 1910. The following table is compiled from the estimates of the United States Department of Agriculture, covering the years 1919 and 1920:

Crop	Year	Acreage	Produc. Bu.	Value
Corn	1920	9,000	405,000	\$587,000
	1919	11,000	512,000	870,000

Crop	Year	Average	Produc. Bu.	Value
Hay	1920	* 470,000	560,000	18,900,000
	1919	* 455,000	588,000	14,088,000
Potatoes	1920	15,000	1,950,000	2,022,000
	1919	14,000	1,470,000	2,572,000

* Tons.

FINANCE. Balance on hand Sept. 1, 1919, \$180,924.26; receipts Sept. 1, 1919 to Aug. 31, 1920, \$7,452,632.54; disbursements during year ending Aug. 31, 1920, \$7,446,823.25; balance on hand Sept. 1, 1920, \$186,733.55.

EDUCATION. During the year ending Aug. 31, 1920, the public school houses numbered 1181; pupils, registered, 74,311; average daily attendance, 53,245. The number of different teaching positions was 2648 of which 2433 were held by women and 215 by men. The average yearly salary of elementary teachers was \$596 for women and \$864 for men. Of these 54 had received no higher education than that afforded by the elementary schools; 680 no higher than a high school education; 1220 were graduates of a normal or training school; and the rest had received higher training including 346 who had graduated from colleges. During the past two years teachers' salaries had been raised but these gains had not kept pace with the general increase in the cost of living or paralleled increases in other occupations.

CHARITIES AND CORRECTIONS. The State charitable and correctional institutions with their situations are: Soldiers' Home, Tilton; Sanatorium, Benton; School for Feeble-Minded (363 inmates), Laconia; Hospital, Concord; Prison, Concord; Industrial School (403 pupils), Manchester. There is also a State workshop for the blind at West Manchester. The total number of inmates of almshouses, Aug 31, 1920, was 852. The jail population in 1920, was 319. In respect to jails the annual report of the State Board of Charities and Corrections declared:

There is nothing to be said in favor of the jail system as exemplified in New Hampshire jails. Whether or not these places of confinement are in fairly good condition, the fact remains that in all ten jails of the state idleness prevails, reading matter is scarce or entirely wanting, and conditions are most favorable for the making of criminals of first offenders, and for confirming older ones in the error of their ways."

In respect to child welfare, it said:

"Activities along the line of providing for neglected children and of securing medical and surgical aid when needed are in evidence, not alone through the efforts of charitable organizations, but through the school nurse, the district nurse, the Red Cross, and through special work for children in hospitals throughout the state, in the way of attention to adenoids, tonsils, orthopedic work, etc. A children's clinic in connection with the Memorial Hospital in Concord, N. H., has proved a valuable asset as a means of alleviating the ills to which children are subject."

TRANSPORTATION. The railway mileage of the State in 1920 as given by the New Hampshire Public Service Commission was 1272.27.

ELECTIONS. The vote in the presidential election of 1920 was: Harding (Republican), 94,947; Cox (Democrat), 62,562; Debs (Socialist), 1235; as compared with the following vote in the presidential election of 1916: Wilson (Democrat), 43,781; Hughes (Republican), 43,725; Benson (Socialist), 1318. The vote for governor was: Brown (Republican), 93,021; Tilton (Democrat), 62,080; Butler (Socialist), 1080; and for United States Senator: Moses (Republican), 89,937; Stevens (Democrat), 64,925; Wilkins (Socialist), 1004.

NEW HAMPSHIRE STATE COLLEGE.

A co-educational State institution of the higher learning at Durham, N. H., founded in 1866. There were 849 students enrolled for the fall session in 1920. The faculty numbered 92, including 18 new teachers. The productive funds consisted of the annual income from \$800,000, the bequest of Thompson, which amounted to \$32,000 and in addition the following: Thompson lands (campus); Land Grant Act moneys; funds under the Morrill Bill; Biennial appropriations from the State Congress; Smith-Lever Acts funds; and Smith-Hughes fund. The library contained 40,000 volumes and 160 periodicals in the reading room. A women's dormitory was finished in time for occupancy in October. President, Ralph Dorn Hetzel, A.B., LL.B., LL.D.

NEW HEBRIDES. A group of Melanesian islands under the joint administration of France and Great Britain in accordance with the Anglo-French convention of October, 1906. Area, 5100 square miles; population about 70,000. The seat of government is Vila on the island of Efata. The natives are uncivilized, but there have been several French Catholic mission schools and many Presbyterian mission schools established among them. Large areas of land have been acquired by settlers, but much of the territory is uncleared. Trade has been chiefly with Sydney and New Caledonia. On February 15, the French colonists formed a committee of defense in the French interest. The question had been pending for several years and pertained to the rival interests of the French, on the one hand, and the English or the Anglo-Australians on the other hand. In 1872 the French and British governments agreed to respect the independence of the islands. Ten years later a mixed naval commission was charged with the duty of maintaining order there. In 1906 the present system which makes of the islands a condominium or joint possession of the two countries was established. According to various reports this system worked badly and a commission was appointed in June, 1914, but the war interrupted its work and the matter was still unsettled in 1920. Both French and English publicists were demanding a solution as part of the general rearrangement upon the return of peace. The French claimed that their colony was the best of all their Pacific possessions and that its superiority to the British was undeniable. In 1918 there were 664 French to 262 Anglo-Australians and the French owned at that time over four times as much land in the islands as the English. Moreover, the greater part of the Anglo-Australian inhabitants were not colonists, but missionaries. A recent estimate showed the French at 400 and the English at 300. From the point of view of the English, the question was exclusively an Australian one, but as the result of the war the Australian prime minister, Mr. Hughes, implied that the question had ceased to be important to the Australians. Among the proposals made upon the subject was that the New Hebrides should be given to France and France in turn enter into an economic and perhaps naval accord with Australia.

NEW JERSEY. POPULATION. According to the preliminary report of the census of 1920, there were 3,155,900 residents in the State, Jan. 1, 1920, as compared with 2,537,167 in 1910.

AGRICULTURE. According to the census of 1920, the number of farms was 29,672, falling off of 11.4 per cent since 1910. The following

table is compiled from the estimates of the United States Department of Agriculture, covering the years 1919 and 1920:

Crop	Year	Acres	Produce	Bu.	Value
Corn	1920	260,000	11,440,000		\$9,724,000
	1919	260,000	10,400,000		15,912,000
Oats	1920	85,000	2,720,000		2,040,000
	1919	88,000	2,640,000		2,112,000
Wheat	1920	95,000	1,520,000		3,116,000
	1919	109,000	1,962,000		4,316,000
Rye	1920	66,000	1,155,000		1,964,000
	1919	80,000	1,280,000		2,048,000
Hay	1920	370,000	598,000		15,770,000
	1919	360,000	528,000		14,928,000
Potatoes	1920	95,000	14,820,000		18,525,000
	1919	92,000	8,832,000		14,926,000
Sw't Potatoes	1920	14,000	2,002,000		3,103,000
	1919	14,000	1,750,000		3,850,000
Cranberries	1920	9,800	122,000		1,281,000
	1919	10,200	156,000		1,248,000

• Tons. / Barrels.

LEGISLATION. A bill permitting the manufacture and sale in New Jersey of liquors containing 3.5 per cent alcohol was signed by the governor, March 2. On May 11, the legislature carried over the governor's veto, a measure authorizing a bond issue of \$28,000,000 for New Jersey's share in the building of the Delaware River bridge between Camden and Philadelphia, and the Hudson River vehicular tunnel between Jersey City and New York, subject to ratification by referendum. Among other measures may be mentioned: Authorization of issuance of corporate shares of stock without nominal or par value, the enabling of corporations to change existing capital stock into stock without par value, and in general the repeal of the 1913 amendments to the corporation law which were designed to supervise more strictly the companies taking out charters in the State; provision for retirement on half pay of judges of supreme court and court of chancery after fourteen years if seventy years of age; provision for retirement and pensions of policemen and firemen; prevention of fraud in sale of securities; making it a misdemeanor to refuse to rent house or apartment to family with children under fourteen; making "hostility" (as defined) to Federal or State government a high misdemeanor; payment of a bonus to veterans of late war or dependents, provision being made by an issue \$12,000,000 bonds; authorization of county park boards to permit Sunday baseball and other games if no admission fee is charged; prohibition of school authorities from inquiring into religious faith of teachers seeking appointment.

OFFICERS. Governor, Edward I. Edwards; Secretary of State, Thomas F. Martin; Attorney-General, Thomas F. McCran; Treasurer, William T. Read; Comptroller, Newton A. K. Bugbee; Purchasing Agent, Edward E. Grosscup; Adjutant-General, Frederick Gilkyson; Commissioner of Banking and Insurance, Frank H. Smith; Commissioner of Department of Public Reports, William A. Sweeney.

JUDICIARY. Supreme Court: Chief Justice, William S. Gummere; Justices, Thomas W. Trenchard, Charles W. Parker, James J. Bergen, James F. Minturn, Charles C. Black, Francis J. Swayze, Samuel Kalisch, Frank S. Katzenbach, Jr.

NEW JERUSALEM, CHURCH OF THE. This denomination is also known as the New Church, and was founded in 1787 in London. Its teachings are based on the Sacred Scriptures and writings of Emanuel Swedenborg, who was born in Sweden in 1688, and died in 1772. In 1792 the

first local organization was established in the United States, and in 1817 the first session of the General Convention was held. Missionary work is conducted in Germany, France, Switzerland, Italy, Austria, Denmark, Sweden, and Czechoslovakia. A theological seminary is maintained at Cambridge, Mass. Statistics for 1920 showed that there are in this denomination, 101 societies, and 6582 members. The church property was valued at approximately \$1,750,000. In 1891 a portion of this organization split off under the name of the General Church. This branch differs from the old body mainly in its attitude toward the writings of Swedenborg, which it regards as being "divinely inspired and thus the very Word of the Lord revealed at His second coming." In 1916 (the latest available statistics) there were 15 churches, 733 members, and church property valued at \$55,032. *The New Church Messenger*, is the official organ of the General Convention, and is published at 134 Bowdoin St., Boston, Mass., where national headquarters of the denomination are also maintained.

NEWLAND, H. OSMAN. British sociologist, died, June 27. He was one of the pioneers in the teaching of sociology in England, compiling the first course in that study pursued in Great Britain. He lectured extensively on sociology and English literature, and assisted in founding the Sociological Society. Among his other achievements was the introduction of the study of citizenship in the schools. He wrote, *Short History of Citizenship; The Model Citizen; Sierra Leone; Origin and System of Empire*, etc.

NEW MEXICO. POPULATION. According to the preliminary report of the census of 1920, there were 360,350 residents in the State, Jan. 1, 1920, as compared with 327,301 in 1910.

AGRICULTURE. According to the census of 1920, the number of farms was 29,841, a falling off of 16.4 per cent since 1910. The following table is compiled from the estimates of the United States Department of Agriculture, covering the years 1919 and 1920:

Crop	Year	Acreage	Produc. Bu.	Value
Corn	1920	270,000	7,155,000	\$7,870,000
	1919	243,000	7,290,000	11,008,000
Oats	1920	67,000	2,278,000	1,822,000
	1919	61,000	2,196,000	2,086,000
Wheat	1920	330,000	6,375,000	8,925,000
	1919	251,000	5,344,000	10,688,000
Hay	1920	270,000	618,000	10,418,000
	1919	252,000	638,000	11,623,000
Beans	1920	121,000	811,000	2,465,000
	1919	123,000	922,000	3,411,000
Potatoes	1920	5,000	475,000	998,000
	1919	6,000	270,000	513,000
Grain S'rg'ms	1920	240,000	6,480,000	6,415,000
	1919	243,000	7,290,000	9,477,000

MINERAL PRODUCTION. The output of the metal mines of New Mexico for 11 months of 1920 and the estimated output for December, as reported by the United States Geological Survey, amounted to \$476,000 in gold, 762,000 ounces of silver, 2,600,000 pounds of lead, 54,000,000 pounds of copper, and 11,840,000 pounds of zinc. These preliminary figures represented a decrease from 1919 of \$175,000 for gold, 60,000 ounces of silver, and 340,000 pounds of lead, but an increase of 3,000,000 pounds of copper and 3,840,000 pounds of zinc.

ELECTIONS. The vote in the presidential election of 1920 was: Harding (Republican), 57,634; Cox (Democrat), 46,668; Farmer-Labor, 1097; as compared with the following vote in the presidential election of 1916: Wilson (Democrat), 33,527; Hughes (Republican), 31,152; Socialist, 1999. The vote for governor was: Mecham (Republican), 54,161; Hancock (Democrat), 50,535. See ANTHROPOLOGY, and EDUCATION IN THE UNITED STATES.

MANUFACTURES. Preliminary figures of the census of manufactures for the year 1919, applying to establishments conducted under the factory system showed a consistent increase over the year 1914. In the order of their importance from a percentage standpoint, the increases for the several items ranked as follows: Wages, 147 per cent; value added by manufacture, 107.1 per cent; value of products, 91.6 per cent; salaries, 77.8 per cent; cost of materials, 74.4 per cent; capital, 69.5 per cent; wage earners, 51.9 per cent; primary horsepower, 38.4 per cent; salaried employees, 16.8 per cent; number of establishments, 5.2 per cent; and proprietors and firm members, 3.4 per cent. The capital invested, as reported in 1919, showed a gain of \$6,242,000, or 69.5 per cent, over that in 1914. The average capital per establishment was approximately \$39,000 in 1919 and \$24,000 in 1914. The cost of materials used in 1919 showed an increase over that for 1914 of \$3,298,000 or 74.4 per cent. The average cost of materials per establishment in 1919 was approximately \$20,000, and in 1914 \$12,000. The value of products in 1919 showed an increase over that in 1914 of \$8,537,000, or 91.6 per cent. The average per establishment in 1919 was approximately \$46,000 and in 1914 \$25,000. The value added by manufacture in 1919 showed an increase over that in 1914 of \$5,239,000, or 107.1 per cent. The value added by manufacture in 1919 formed 56.7 per cent of the total value of products and in 1914 52.5 per cent. In 1919, as compared with 1914, the number of salaried employees shows an increase of 83, or 16.8 per cent, while the average number of wage earners increased 1960, or 51.9 per cent. A comparative summary for the State for 1914 and 1919 follows:

	Census—		Per cent. of increase, 1914-1919
	1919	1914	
Number of establishments	387	368	5.2
Persons engaged in manufactures	6,648	4,594	44.7
Proprietors and firm members	336	325	3.4
Salaried employees	576	493	16.8
Wage earners (average number)	5,736	3,776	51.9
Primary horsepower	17,260	12,468	38.4
Capital	\$15,226,000	\$8,984,000	69.5
Services	7,686,000	3,273,000	134.8
Salaries	1,026,000	577,000	77.8
Wages	6,660,000	2,696,000	147.0
Materials	7,728,000	4,430,000	74.4
Value of products	17,857,000	9,320,000	91.6
Value added by manufacture (value of products less cost of materials)	10,129,000	4,890,000	107.1

NEW SOUTH WALES. A state of the Commonwealth of Australia; situated in the southeastern part of the continent and bounded by Queensland on the north, Victoria on the south, South Australia on the west, and the Pacific Ocean on the east. Capital, Sydney, the second largest city in the southern hemisphere, being next to Buenos Aires. Area, of New South Wales, 310,372 square miles, including the Federal territory; population estimated June 30, 1919, 1,960,597, of whom 983,127 were males and 977,470 were females. Forest land covers about one-fourth of the area. Education, which is under State control is compulsory between the ages of seven and 14. In 1916 there were 3424 public schools with 289,655 pupils enrolled and 9022 teachers; private schools 698 with 73,560 pupils and 3806 teachers. Besides that there were 438 Roman Catholic denominational schools with 2281 teachers and 59,136 pupils. The State religion was abolished in 1862, but the Church of England predominates. In 1920 there were about 630 miles of government railway under construction according to the report of the railway commissioners of New South Wales, Australia, for the year ending with June, 1920. This mileage was included in 16 lines of 20 to 95 miles each, and in several instances construction work had been interrupted for two years or more on account of the war. Even in 1920 shortage of explosives, cement, ties, and other materials was delaying progress considerably. Preparatory work was under way for the electrification of the suburban lines near Sydney. Double tracking and four tracking of portions of the main lines was also in progress. Executive power is in a governor assisted by a cabinet. Governor at the beginning of 1920, Sir Walter Edward Davidson; Prime Minister, W. A. Holman. See AUSTRALIA.

NEW SYMPHONY ORCHESTRA. See MUSIC, *Orchestras*.

NEW YORK. POPULATION. According to the preliminary report of the census of 1920, there were 10,384,829 residents in the State, Jan. 1, 1920, as compared with 9,113,614 in 1910.

AGRICULTURE. According to the census of 1920, the number of farms was 193,060, a falling off of 10.5 per cent since 1910. The following table is compiled from the estimates of the United States Department of Agriculture, covering the years 1919 and 1920:

Crop	Year	Acreage	Produc. Bu.	Value
Corn	1920	795,000	82,595,000	\$87,810,000
	1919	820,000	85,260,000	58,532,000
Buckwheat	1920	221,000	4,420,000	6,188,000
	1919	233,000	5,126,000	7,433,000
Oats	1920	1,150,000	44,275,000	29,664,000
	1919	1,120,000	28,560,000	23,705,000
Barley	1920	120,000	8,480,000	3,445,000
	1919	128,000	2,816,000	3,830,000
Wheat	1920	500,000	10,998,000	19,247,000
	1919	524,000	11,178,000	24,082,000
Rye	1920	107,000	1,872,000	2,958,000
	1919	120,000	1,932,000	2,898,000
Hay	1920	4,441,000	5,547,000	130,545,000
	1919	4,441,000	6,648,000	135,974,000
Beans	1920	90,000	1,260,000	4,410,000
	1919	90,000	1,305,000	6,894,000
Potatoes	1920	370,000	46,250,000	54,575,000
	1919	363,000	39,567,000	57,372,000
Hops	1920	2,200	2,288,000	1,378,000
	1919	2,300	1,587,000	1,159,000

^a Pounds. ^c Tons.

FINANCE. According to the comptroller's report at the close of the year 1920 the net State debt had been reduced \$5,094,982.03 owing to

the fact that no long term bonds had been sold and to the normal increase in the sinking funds for the redemption of the debt. The total revenue receipts available for general budget purposes were \$115,591,606.99, an increase over the previous year of \$35,757,973.14, or nearly 45 per cent. The total expenditures for general budget purposes were \$94,024,215.47 for the year, an increase of \$15,682,902.46, or 20 per cent. The general revenue receipts exceeded the expenditures for general budget purposes by \$21,567,391.52. The valuation of real and personal property as fixed by the State tax commission subject to taxation for State purposes amounted to \$12,989,433,733, an increase over the preceding year of \$231,411,779. The general budget for the current year (1920-1921) as approved by the legislature and the governor amounted to 145,219,906.60 of which \$141,885,474.39 was appropriated at the ordinary session and \$3,334,432.21 at the extraordinary session during September, 1920; and, as the estimated revenues for the year were not expected to be sufficient to meet the entire amount appropriated, it was contemplated that the balance of the budget requirements would have to be financed from the surplus treasury funds.

TRANSPORTATION. The total railway mileage of the State in 1919 was about 8500. In the counties of the Bronx, New York, Kings, Queens, and Richmond the Public Service Commission reported, Dec. 31, 1920, the number of transportation companies at 73, divided as follows: Street and electric railroad companies, 58; steam railroads, 11; baggage transfer companies, 2; stage-coach companies, 2. The street and electric railroad companies operated about 1900 miles of single track railroad, including subway, elevated and surface railroads. In the operation they used about 13,000 passenger cars. For the fiscal year ending June 30, 1920, they carried 2,364,775,067 passengers, an increase of 284,830,770 passengers, or 13.69 per cent over the previous year. Their total operating revenue for the year was \$127,880,161, an increase of more than \$17,000,000 over the previous year. Their operating and maintenance expenses were \$96,059,605, which was an increase of nearly \$22,000,000 over the previous year. The combined net corporate income for all companies showed a deficit of \$10,735,399, as against a deficit for the previous year of \$8,556,408. The increase in the deficit in the face of a large increase in operating revenue was ascribed to a greater proportionate increase in operating expenses, including large advances in the wages of employees.

In the other counties of the State there were 224 railway corporations, of which 132 were team and 92 street railways.

CHARITIES AND CORRECTIONS. The following is a list of the various State charitable and reformatory institutions with their respective populations, as of June 30, 1919, with the exception of the reformatories at Elmira and Napanoch for which the figures are for June 30, 1918:

Western House of Refuge for Women, at Albion, 184; School for the Blind, Batavia, 152; Soldiers' and Sailors' Home, Bath, 1002; Reformatory, Elmira, 726; Eastern New York Reformatory, Napanoch, 206; Training School for Girls, Hudson, 375; Custodial Asylum for Feeble-Minded Women, Newark, 988; House of Refuge, Randall's Island, 675; Custodial Asylum, Rome, 1939; Agricultural and Industrial School, Indus-

try, 715; Institution for Feeble-Minded Children, Syracuse, 638; Thomas Indian School, Iroquois, 118; Craig Colony for Epileptics, Sonyea, 1348; Woman's Relief Corps Home, Oxford, 163; Hospital for Care of Crippled and Deformed Children, West Haverstraw, 174; Hospital for Treatment of Incipient Pulmonary Tuberculosis, Raybrook, 284; Letchworth Village, Thiells, 360; Reformatory for Women, Bedford Hills, 371.

At the close of the fiscal year, June 30, 1920, there were under supervision of the State Board of Charities 248 hospitals and 215 dispensaries, a total of 463 institutions. As compared with the previous year this number represents an increase of seven hospitals and a decrease of three dispensaries. In the institutions for mental defectives and epileptics the admissions and discharges during the fiscal year and the population, June 30, 1920, were as follows: Admissions, 1773; discharges, 1465; population, June 30, 7626. The children cared for in institutions or maintained at public expense in family homes June 30, 1920, were distributed as follows:

salaries of the teachers in the public schools was passed, carrying an appropriation of \$20,500,000. Among other measures passed may be mentioned: Regulation of boxing matches and creating of State boxing commission; provision for consumers' coöperatives; provision of teachers' retirement fund; bonus to military and naval veterans of the late war, the bond issue not to exceed \$45,000,000 was authorized. Among the measures that failed to pass were: Bills for placing industrial illness under the workmen's compensation law, for a minimum-wage commission, for the application of the eight hour day to all women and minors, and other measures of social welfare. The housing situation became so acute that in April the Legislature by almost unanimous vote passed the "rent laws," the most important of which provided in chapter 136, section 1 that: "Unjust, unreasonable and oppressive agreements for the payment of rent having been and being now exacted by landlords from tenants under stress of prevailing conditions whereby the freedom of contract has been

* No report received of New York State School for the Blind, Batavia.

A bill passed in 1920 created a commission to examine laws relating to child welfare, investigate their effect and propose remedial legislation in relation thereto.

LEGISLATION. During the first part of the year interest centered in the proceedings against the Socialists in the New York legislature. Immediately after the session was opened, the five Socialist members were ordered before the bar of the Assembly (January 7) and charged with belonging to a party disloyal to the government and being elected on a platform hostile to the interest of the State and of the country. A resolution referring the question of their exclusion to a judiciary committee, to be appointed by the speaker, was passed without debate. The committee decided at the end of March, in favor of expulsion and it was then too late to hold an election to fill the vacancies. The report of the committee was approved in the case of three of the Socialists by a vote of 116 to 28 and in the case of the other two by a vote of 104 to 40. The State Reconstruction Commissions' proposals for an executive budget, for the lengthening of the governor's term, and for the reconstruction of scattered administrative boards were rejected, but other amendments tending to the same end in the matter of the administrative departments were approved. An amendment for a legislative budget was approved. The bill defining intoxicating liquors as those which contain 2.75 per cent alcohol was passed. The three sedition bills introduced by the Lusk committee were vetoed by the governor and so were bills making Socialists ineligible for political office, and for making members of other parties ineligible, if the courts decided that the government was endangered by their principles. A bill providing for a considerable increase in the

impaired and congested housing conditions resulting therefrom have seriously affected and endangered the public welfare, health and morals in certain cities of the State, and a public emergency existing in the judgment of the legislature by reason thereof, it shall be a defense to an action for rent accruing under an agreement for premises in a city of the first class or in a city in a county adjoining a city of the first class occupied for dwelling purposes, other than a room or rooms in a hotel, lodging house or rooming house, that such rent is unjust and unreasonable and that the agreement under which the same is sought to be recovered is oppressive." The law declared that an increase of rent by more than 25 per cent over the year before was presumptively unreasonable. According to the report of the legislative committee on housing, the 1920 rent laws were generally successful in preventing evictions, but partially failed to stop exorbitant increases of rent.

ELECTION. The vote in the presidential election of 1920 was: Harding (Republican), 1,868,240; Cox (Democrat), 781,485; Debs (Socialist), 203,400; Watkins (Prohibitionist), 23,612; Christensen (Farmer-Labor), 18,787; Cox (Socialist Labor), 4358; as compared with the following vote in the presidential election of 1916: Hughes (Republican), 869,066; Wilson (Democrat), 759,426; Benson (Socialist), 45,944; Hanly (Prohibitionist), 19,031; Hughes (Amer.), 10,172; Reimer (Socialist Labor), 2666. The vote for governor was: Miller (Republican), 1,335,617; Smith (Democrat), 1,261,729; Cannon (Socialist), 171,907; Malone (Farmer-Labor), 49,953; Thompson (Prohibitionist), 16,978; Quinn (Socialist Labor), 4641; and the vote for United States Senator: James W. Wadsworth, Jr. (Republican), 1,431,347;

Harry C. Walker (Democrat), 885,061; Ella A. Boole (Prohibitionist), 159,477; Jacob Panken (Socialist), 151,247; Rose Schneiderman (Farmer-Labor), 15,086; Harry Carlson (Socialist Labor), 6522.

The referendum proposal in respect to the soldiers' bonus was passed by a large majority. This called for the authorization of bonds to the amount of \$45,000,000, redeemable in twenty-five yearly installments, for the payment of bonuses to soldiers and sailors of the late war; each bonus not to exceed \$250; \$10 to be given for each month of service if length of service exceeds two months. There was also a favorable vote on each of the following amendments to the State constitution: State authorized to issue bonds in anticipation of revenues; contracting of certain debts prohibited till authorized at a general election; provision for sinking fund on debts already incurred; popular vote of approval required of debts incurred for highway building.

OFFICERS. Governor, Nathan L. Miller, Rep.; Lieutenant-Governor, Jeremiah Wood, Rep.; Secretary of State, John J. Lyons, Rep.; Comptroller, James A. Wendell, Rep.; Treasurer, N. M. Marshall, Rep.; Attorney-General, Charles D. Newton, Rep.; Engineer and Surveyor, Frank M. Williams; Commissioner of Education; Superintendent of Insurance, Jesse S. Phillips, Rep.; Adjutant-General, Colonel J. Lester Kinkaid.

JUDICIARY. Court of Appeals: Chief Judge, Frank H. Hiscock; Associate Judges, E. A. Chase, Frederick Collins, J. W. Hogan, B. N. Cardozo, C. W. Pound, C. B. McLaughlin, F. E. Crane, W. S. Andrews. See **EDUCATION IN THE UNITED STATES.**

NEW YORK BARGE CANAL. See **CANALS.**

NEW YORK CITY. See **CITY PLANNING; MUNICIPAL OWNERSHIP; RAPID TRANSIT; ROADS AND PAVEMENTS.**

NEW YORK SYMPHONY ORCHESTRA. See **MUSIC, Orchestras and Novelties.**

NEW YORK UNIVERSITY. A non-sectarian State institution of the higher learning in New York City; founded in 1830. Including the summer school, there were 10,522 students enrolled for 1920. There were 541 members in the faculty. The funds for the year amounted to \$2,139,069.91. The library contained 153,766 volumes. The 90 Trinity Place building which was purchased for the Wall St. Division in December, 1919, was ready for occupancy and the Graduate School of Business Administration was created. The engineering building at University Heights was partly completed. The most recent gift was that of Jacob H. Schiff's bequest of \$50,000 to the School of Commerce. President, Elmer Ellsworth Brown, Ph.D., LL.D.

NEW ZEALAND, DOMINION OF. A self-governing British dependency in the south Pacific, comprising three larger islands and several smaller ones. Capital, Wellington.

AREA AND POPULATION. The length of the group of islands is 1000 miles and the greatest breadth, 180 miles. It includes the two large islands known respectively as North and South islands and the smaller Stewart island along with a number of still smaller ones, including the Cook islands, annexed in 1901 and various small islands in the Pacific Ocean. Area of North Island, 44,130 square miles; South Island, 58,120; Stewart, 662; total, 103,581. Other esti-

mates place it higher, 104,751 square miles. It has a coastline of 4330 miles. Total population, at the census of October 15, 1916, 1,099,449. An estimate of 1920 placed it at slightly under 1,200,000. The largest cities with their population on Oct. 15, 1916, are: Auckland, 133,712 (estimated in 1920 at 135,000); Wellington, 95,235; Christchurch, 92,733; Dunedin, 68,716. In 1918 the immigrants numbered 11,906 and the emigrants, 11,606. The deaths in that year numbered 16,364 (above the average on account of the influenza epidemic); births, 25,860; and marriages, 6227.

EDUCATION. Illiteracy is rare. In 1916, 95 per cent of the population over five years of age, were reported at the census as able to read and write. At the end of 1917 the public primary schools numbered 2368 with 5766 teachers and 190,354 pupils enrolled, and there were 34 secondary schools with 349 teachers and 7590 pupils. There were also 60 district high schools and eight technical high schools. The university is simply an examining body, but there are four affiliated colleges as follows: The Otago University at Dunedin; Canterbury College at Christchurch; Auckland University at Auckland, and Victoria University at Wellington. The graduates admitted for examination to the university of New Zealand in 1918 numbered 2317. The following information in respect to production, commerce, finance, etc., was supplied by the United States Bureau of Foreign and Domestic Commerce in 1920:

PRODUCTION. The season of 1919 was far below normal so far as agricultural interests were concerned. The exceptionally severe winter and the late spring, followed by a very severe drought, seriously affected the crops, especially wheat and oats. The acreage was greatly decreased, and the estimated yield of wheat is only 4,100,000 bushels, compared with the actual yield of 6,567,629 bushels for the season 1918-19. The estimated yield of oats was 5,575,000 bushels, compared with the actual yield of 6,884,609 bushels for the previous season. (See **AGRICULTURE.**) Nor was the year a very profitable one for the fruit growers. The season was late and the yield below normal. The quality was below the average for most kinds of fruit, especially for stone fruit. The fruit industry of the dominion is on the increase, and is quite well scattered over the country. The principal centres are at Auckland, Nelson, and Otago, where there is a majority of the 13,865 acres of the non-bearing fruit trees, and 12,689 acres of the bearing fruit trees of the country. According to figures given out by the Director of Horticulture, there were more than \$40,000,000 invested in orchards, orchard plants, and fruit canneries. At the close of the year 1919 there were 363,188 horses in the Dominion compared with 378,050 the year before; 3,350,274 cattle, compared with 2,869,467 at the end of 1918; 25,828,554 sheep, compared with 26,538,302 at the end of the previous year, and 235,347 pigs, compared with 258,694 at the end of 1918. Notwithstanding the loss in the number of sheep, horses, and pigs in the country, there was a large gain in the number of cattle, and with the increased value of all kinds of stock, the stock raisers were in a much better position than at the beginning of the year. The New Zealand wool clip for 1919-20 was somewhat short of the average clip of the dominion, but the quality was considered above an average. The returns

for the 1918-19 season showed a gain over 1917-18. During the 1918-19 season, the weight per bale was slightly less than an average with a small increase in the average price. At the average price, the total value of the clip would be \$63,483,443, compared with \$57,701,005 for the 1917-18 clip. During the 1918-19 season, the New Zealand woolen mills took 18,821 bales, compared with 20,692 bales during the 1917-18 season. The total quantity of wool acquired in the dominion for the British government from the commencement of the government wool commandeering, Dec. 21, 1916, to Dec. 31, 1919, amounted to 1,925,367 bales, for which the British government paid \$220,722,424. Of this quantity, France took 49,207 bales, the United States 44,373, and Canada 21,738.

The farmers' coöperative associations in New Zealand have steadily developed until they are now important factors in the business life of the dominion, and are very rapidly gaining in strength. These associations have taken up different lines of development and trade and formed plans for building and operating their own flour mills, establishing hydroelectric plants for the benefit of members of the association, as well as using their influence for better roads throughout the dominion. They are also interested in fertilizer and cement plants, and, in the aggregate, control a large portion of the business of the country.

Soldiers bought 217,484 acres of land in 1919, compared with 86,720 acres during 1918, while other interests purchased 963,439 acres, compared with 755,025 acres for 1918. During the preceding five years, 5,008,225 acres were taken over for cultivation. Discharged soldiers pur-

animals would have been more marked had it not been that numbers were trapped for export and canning purposes, as well as for the sale of the skins, which became quite an important item in the exports of the country. The exports of rabbit skins during 1919 amounted to 2,437,693 pounds, valued at \$3,734,289, compared with 1,359,290 pounds, valued at \$1,458,806 for 1918. Very high prices ruled for rabbit skins in New Zealand during the closing weeks of 1919. Enormous numbers of rabbits were destroyed by trapping, but the greater number by poisoned phosphorized pollard or oats and the use of strychnine, distributed along the rabbit runs. Wire netting was used as a protection in other cases, and according to an amendment to the Rabbit Pest act it became compulsory for adjoining property owners to join in the payment of dividing-line fences.

COMMERCE. The foreign trade of the dominion more than doubled after 1913. American interests fared exceptionally well in the general increases. New Zealand's foreign trade for 1919 amounted to \$408,873,304, of which \$149,290,584 was for imports and \$259,582,720 for exports, compared with a total foreign trade of \$256,500,761 for 1918, and \$255,573,064 for 1917. The balance of trade in favor of New Zealand was \$110,292,136, compared with \$20,631,785 for 1918, \$51,965,858 for 1917, and \$33,810,758 for 1916, making a total foreign trade balance for the four years of \$216,700,537, or nearly \$200 per capita, for a country with a population of less than 1,200,000. The following table gives the foreign commerce of New Zealand by countries, including specie save when otherwise indicated, for 1914, 1916, 1918, and 1919:

Countries	1914	1916	1918*	1919*
IMPORTS FROM				
United Kingdom	\$58,829,606	\$67,495,703	\$43,690,100	\$57,616,587

* 1918 figures include specie exported other than gold specie.

* 1919 figures include gold bullion and specie for the last six months only.

chased 76,702 acres in December, 1919. The New Zealand government was assisting discharged soldiers as far as possible to go on the land, and meeting with very good results.

The increase of the rabbit pest in New Zealand during the war period is accounted for principally by the scarcity of labor. The increase of these

COMMUNICATIONS. Railways open for traffic according to the latest statistics available in 1920 had a mileage of 3012, of which the State owned 2983. The oversea shipping in 1919 showed a tonnage of 1,480,883 entered and 1,505,256 cleared, and the coastwise shipping, 7,366,129 entered and 7,357,874 cleared.

There was but little increase in railway building in 1919 on account of the shortage of labor. Only 13 miles of new railway opened for public use during the year 1919. Notwithstanding this fact, considerable work was done on new lines and railway tunnels, that will open up many miles of railway as soon as they are completed. There is a strong demand in New Zealand for a great increase in railroad development, which will doubtless result in extensive construction as soon as sufficient labor can be secured. At the end of 1919 all workmen that could be spared from other government work and could be secured from other sources were put to work on the railroad extensions then under construction, and there was still a demand for 2000 or 3000 more men. At the close of 1919 there were in operation in New Zealand 2996 miles of government railway, over which 11,725,645 passengers and 5,613,739 tons of freight were carried, yielding a revenue of \$24,277,177, with an expenditure of \$14,787,079, compared with 2983 miles at the close of 1918, over which 11,730,643 passengers and 5,742,968 tons of freight were carried, giving a revenue of \$22,812,692, with an expenditure of \$16,647,839 for the year. During the first six months of 1919, the railroad traffic was greatly handicapped for lack of crews to man the trains. It was near the close of the year before the government was able to reestablish the full train service. The holiday travel, beginning the latter part of December, was far in excess of any other similar period. Parliament enacted a law authorizing the organization of companies for the construction of private railway lines as feeders to the government main lines. After this enactment, several companies were formed for the purpose of constructing such lines. One line was to be constructed from Awamutu to Putaruru on the main trunk line, between Auckland and Wellington, a distance of about 30 miles, and another was to be constructed in the Waikato Valley to assist in the development of that extensive dairying and agricultural district. These companies were to be authorized by the New Zealand government to raise loans to cover the cost of construction with the understanding that the roads could be taken over by the government at a later date, should that plan seem advisable. It was expected that these private railways would greatly assist in the development of certain sections of the dominion.

FINANCE. Figures made public by the New Zealand Ministry of Finance showed, for the fiscal year ended March 31, 1920, an excess of revenue over expenditure of £2,299,415 (at normal exchange the pound sterling is equivalent to \$4.8665), contrasted with a surplus of £3,678,773, in 1918-19, and £5,085,933, in 1917-18. The totals for these three years were:

	1917-18	1918-19	1919-20
Revenue	£20,206,222	£22,352,372	£26,081,340
Expenditure	15,120,289	18,673,599	23,781,925
Excess revenue	£5,085,933	£3,678,773	£2,299,415

There was no decline in revenue during the period under review, the diminishing balance being due wholly to the greater proportionate increase in expenditures. The various items of revenue for the past three years are thus given in the *New Zealand Trade Review and Price Current*:

Revenues	1917-18	1918-19	1919-20
Customs	£3,864,308	£3,830,681	£4,830,324
Stamp and death duties	1,892,014	2,124,772	3,344,933
Postal and telegraph	1,836,256	1,964,812	2,096,756
Land tax	1,365,708	1,512,693	1,557,993
Income tax	5,619,561	6,219,336	6,869,765
Beer duty	237,075	273,334	355,403
Railways	4,668,223	4,975,445	5,766,015
Registration, etc., fees	101,249	111,993	175,755
Marine	38,053	35,151	42,646
Miscellaneous	718,437	946,669	1,204,865
Territorial	205,643	202,734	215,757
Nat'l endowment	100,493	108,824	112,884
Other receipts	39,202	45,928	8,334
Total	£20,206,222	£22,352,372	£26,081,340

New Zealand's revenue in 1919-20 was £3,728,968 more than in 1918-19 and £5,875,118 more than in 1917-18. As the foregoing figures show, all the principal classes shared in the increase though the bulk of it was in customs, stamps, and railways. Expenditures in 1919-20 exceeded those for 1918-19 under all the principal headings save one—land and survey. The aggregate for 1919-20 was £5,108,326 more than in the preceding twelvemonth and £8,661,636 more than in 1917-18. The chief items of outlay during these three years were:

Expenditure	1917-18	1918-19	1919-20
Interest and sinking fund	£4,430,779	£6,086,769	£7,249,426
Other permanent charges	2,238,031	3,132,081	4,140,035
Railways	3,067,658	3,415,595	4,305,965
Post and telegraph	1,487,145	1,699,701	1,941,493
Education	1,511,256	1,602,995	2,031,824
Justice	485,428	549,794	587,989

GOVERNMENT. Executive power is in the governor-general, and legislative power in the governor-general and a general assembly of two chambers, namely, a legislative council and a house of representatives. A recent bill changed the legislative council from an appointive to an elective body. The house of representatives consisting of 80 members is elected by popular vote for three years. The distribution of seats by parties after the general election of 1919 was: Reform party, 48; Liberals, 18; Labor party, 10; Independents, 4; government seats 50 and the opposition, 30. Governor-general and commander-in-chief, Admiral Jellicoe (Viscount Scapa); Prime Minister, W. F. Massey. (See **AQUEDUCTS; NAVAL PROGRESS**).

NIAGARA FALLS, N. Y. See **CITY PLANNING**.

NICARAGUA. The largest of the six Central American republics. Capital, Managua.

AREA AND POPULATION. The estimated area is 49,552 square miles, but it is generally placed at the lower figure of 49,200. The population, which is largely mestizo and Indian was estimated Dec. 31, 1911, at 746,000 as against 689,891, Dec. 31, 1913, which would place it fourth among the Central American states in respect to population. Fully three-fourths of the people live in the

western half of the country. The chief towns with their estimated population are Leon, formerly the capital, 73,520; Managua, the capital, 41,538 (another estimate 48,367); and Granada, 20,133 (another estimate 25,000).

EDUCATION. Education is free and compulsory. There are three universities, namely, Managua (the Central University), Leon (the Western and Northern University), and Granada (the Western and Northern University). No later figures for schools were available than those given in preceding YEAR BOOKS which showed about 356 elementary schools and about 10 secondary schools. The state supports also a number of normal schools. There is an industrial, commercial, and scientific museum at Managua.

PRODUCTION AND COMMERCE. Agricultural resources are remarkably rich, but largely undeveloped. Wide stretches of arid land still remain uncultivated and there are large tracts of virgin forests abounding in mahogany and other cabinet woods, and dyewoods. The chief occupations are the cultivation of coffee and the raising of cattle. Cacao, sugar cane, bananas, corn, rice, tobacco, and rubber are also produced. The cultivation of sugar is encouraged by the government and offers other advantages, especially easy means of transport. Good grades of coffee are produced and the industry was stimulated in 1920 by the resumption of shipments to France through a treaty allowing the entry of coffee under reduced rates. Before the war France had been the best market. The mining of gold which is carried on by British and Americans is also of some importance.

In 1919 the foreign trade was the largest in respect to both exports and imports in the history of the country; the value of the imports exceeded that of 1918 by 33 per cent and of the exports by 60 per cent. This was due chiefly to the large crop of coffee and its high price. The other chief products exported were gold, mahogany, bananas, sugar, and hides. An increase of imports naturally followed the increase of exports but was also caused by the necessity of replenishing stocks depleted by the years of war. There was an increase of all manufactured articles with the exception of those in iron, steel, and leather. The proportion of imports from the United States which supplied 84 per cent of the total was larger than in any previous year. In 1914 only 62 per cent had come from the United States. The following information in regard to commerce and finance was supplied by the United States Bureau of Foreign and Domestic Commerce: The value of the imports into Nicaragua, by countries of origin, for the year 1919 and a comparison with 1913 and 1918 are given in the following table:

Countries of origin	1913	1918	1919
Great Britain	\$1,150,611	\$596,809	\$689,721
France	400,776	154,324	146,330
Italy	144,361	16,680	38,838
Spain	55,883	7,989	33,190
Germany	619,212	827	24
Other European countries ..	36,149	7,134	9,212
United States	3,244,008	4,630,057	6,687,712
Panama	138,559	147,613

Salvador	13,203	35,704	32,992
Mexico	30,471
West Indies	8,413	8,516
Chile	139,789

Countries of origin	1913	1918	1919
Other American countries ...	28,471	112,764	3,771
China	67,932	3	3,572
Japan	5,227	3	512
India	23,250
Total	\$5,770,006	\$5,929,803	\$7,912,653

The United States lost its overwhelming position as the principal consumer of Nicaraguan products in 1919, principally owing to the resumption of the coffee trade with France. In 1914 the United States consumed 49 per cent of the Nicaraguan products and France 23 per cent, and in previous years an average of about 40 per cent went to the United States. In 1918 the United States took 83 per cent and France nothing, whereas in 1919 the figures reverted more closely to pre-war proportions, the United States taking 62 per cent and France 28 per cent. Although the United States still held double the proportion it held before the war, it must be noted that Great Britain used to take an average of 13 per cent, as against 4 per cent in 1919, and Germany used to take about 20 per cent.

The value of the exports shipped to the various countries participating in this trade in 1913, 1918, and 1919 was as follows:

Countries of destination	1913	1918	1919
France	\$1,763,186	\$3,531,163
Great Britain	998,564	\$2,000	437,513
Italy	98,169	2,400	990
Spain	2,759	40,637	6,103
Germany	1,887,698
Other European countries ..	118,451	16,425
United States	2,722,385	6,412,921	7,663,827
Guatemala	17,386	36,653	12,101
Honduras	45,436	4,195	67,365

Mexico	965,977	277,197
Other American countries ...	25,176	40,724	13,226
China	1,245
Total	\$7,712,047	\$7,754,941	\$12,409,473

RAILWAYS. An important new railway projected for Nicaragua on which construction was about to be started in 1920 was planned to run from Chinandega to Plaza Grande, Peninsula of Cosiguina, in the Gulf of Fonseca, a distance of some 30 miles. A branch line 20 miles in length was to be constructed from it, at a point beyond El Tempisque to the Honduras frontier in the Department of Choluteca.

This new line was to be part of the system known as the "International Railways of Central America" and connect later with the section to be constructed by Honduras in the departments of Valle and Choluteca, between the Salvadorean and Nicaraguan frontiers, or the Pan-American Railway. This proposed railway to Plaza Grande and its branches it was expected would considerably facilitate intercourse between the three republics bordering on the Gulf of Fonseca and be an important element in the Pan-American Railway eventually to be built.

FINANCE. According to British sources, the revenue in 1918-19 was £598,547; and the expenditure, £424,167; total debt Jan. 1, 1919, £1,174,956. The following information in regard to

the financial situation at the beginning of 1920 was supplied by the United States Bureau of Foreign and Domestic Commerce: The financial plan of 1917 provided for a budget of expenditures and for financing the deferred interest and deferred sinking fund obligations of which payment had been postponed on account of war conditions. The control of expenditure by a budget was so successful that for the first time in many years there was a surplus at the close of each year. In 1920 the finances were reported to be in such condition that the debt (between \$8,000,000 and \$9,000,000) could readily be amortized and the interest regularly paid. In view of the improved credit of the government a new loan was authorized for a railway to the Atlantic Coast and the purchase of the majority stock of the Pacific Railway, and a mission having been sent to New York in September, 1920, the loan was effected with a group of New York bankers before the end of the year.

GOVERNMENT. The constitution as modified came into effect in 1913. The executive power is in a president who acts through a council of responsible ministers and legislative power is in a congress of two houses: a Senate of 13 Senators, elected for six years, and a House of Deputies of 40 members elected for four years. President, in 1920, Gen. Emiliano Chamorro, reelected October 3, and inaugurated December 31. See GUATEMALA.

NICASTRO, OSCAR. See *MUSIC, Artists, Instrumentalists.*

NICKEL. In 1920 the world's production of nickel, 85 per cent of which is derived from the Sudbury district of Ontario, Canada, and most of the remainder from New Caledonia, was on a reduced basis following the great output for the war. In 1918 the ore raised at Sudbury amounted to 1,643,040 tons and in this the nickel was estimated at 45,886 tons and the copper at 23,843 tons. In 1919 the ore produced fell off from this maximum to 614,955 tons and in 1920 the various plants sought to work on a pre-war basis and the ore raised amounted to about 1,100,000 tons of which 1,000,000 tons were smelted into matte representing about 28,000 tons of nickel and 14,500 tons of copper. The New Caledonia deposits idle during the war were again operated in 1920, while in the Province of Manitoba at the Bear and Oiseau runs deposits of ore of the Sudbury type were located during the year.

In the production of nickel from the Ontario ores the International Nickel Co. of Canada, Ltd., and the Mond Nickel Co., Ltd., for many years were the sole occupants of the field. During the year the new smelter of the British American Nickel Corporation, Ltd., at Nickelton, Ontario, referred to in the *YEAR BOOK* for 1919, came into production, to handle the ore from the old Murray mine, which was found to contain large reserves of ore. In addition to the smelting works at the mine, it had erected a refinery at Deschenes, Quebec, where a sufficient supply of electric power was available. This made two nickel-refining plants in Canada. See *METALLURGY.*

NIGERIA, COLONY AND PROTECTORATE OF. A British possession in West Africa consisting of various areas which were formerly under separate administration and had been combined into the two protectorates of Northern and Southern Nigeria, which in turn united on Jan. 1, 1914, into the colony and protectorate of Nigeria. The seat of government is Lagos. After Jan. 1, 1914,

the boundaries of the colony were defined anew and the protectorate was divided into the northern and southern provinces. Total area about 332,000 square miles (northern province, 256,000 square miles; southern province, 76,000 square miles); colony about 1400 square miles. Total population about 16,750,000. In the northern provinces the government schools in Nigeria numbered 15 and there were besides 107 unassisted private schools, the average attendance of both being about 3335. The number of Mohammedan schools was over 26,000 with over 220,000 pupils. In the southern provinces in 1918 the government schools numbered 44 with 4791 pupils; the assisted schools numbered 189 with 26,300 and unassisted 1422 with about 51,000. The chief products are palm oil and palm kernels, and various fats, meal, soap, etc., obtained from the raw products of the oil palm. There is a considerable production of hides and skins. Tobacco is also grown. Rich deposits of tin ore have been discovered and iron ore and tin are worked. In 1919 the first year after the cessation of hostilities, trade was carried on under difficulties. Nevertheless, the oversea trade was more than 40 per cent greater than in 1918. The 1919 figures were as follows: Exports, \$71,657,908; imports, \$58,507,256. The principal imports in respect to value were cotton piece goods; cooper's stores; salt; bags and sacks; and tobacco. The chief exports in respect to value were: Palm kernels and palm oil; tin ore; and cocoa-beans. In 1919 the United Kingdom and its possessions contributed 86.61 per cent of the imports and received 85.26 per cent of the exports. The percentages for the United States were respectively 12.59 and 11.52. The revenue for 1918 was £8,470,593; expenditure £3,459,774. The shipping entered and cleared in 1917 had a tonnage of 805,981 of which 777,248 was British, a considerable falling off from the preceding year. In 1918 there were 1110 miles of railway open for traffic. Both the colony and the protectorate have been under an executive council since Jan. 1, 1914. In addition to this, there is an advisory and deliberative body called the Nigerian Council, composed of the governor and members of the executive council and others. Governor at the beginning of 1920, Sir Hugh Clifford.

NOBEL PRIZE. Some of the prizes in 1920 were for the previous year, the award having been delayed. Prizes for 1919 awarded in 1920 were: Medicine, Dr. Jules Bordet, of Brussels, a pupil of Pasteur and celebrated as an expert in toxicology; Chemistry, Professor Asihon of the University of Helsingfors, Finland, who had made important inventions in artificial rubber; Literature, Karl Spitteler, essay writer of Lucerne, Switzerland; Peace, Léon Bourgeois, President of the French Association for the League of Nations. The prizes of 1920 awarded before the close of the year were: Medicine, Professor August Krogh, celebrated oceanographer of Copenhagen, Denmark; Theodore Knut Hamsun, novelist of Norway; Physics, Charles Edward Guillaume, head of the International Bureau of Weights and Measures, expert in alloys and discoverer of nickel-steel compound; Peace, Woodrow Wilson. The Peace prize which like the others amounted to about \$40,000, is awarded by a committee of five elected by the lower house of the Swedish parliament. Mr. Wilson was the

third American to receive this price, the others being Theodore Roosevelt (1906), and Elihu Root (1912). The Peace prizes were bestowed on M. Bourgeois and the representative of President Wilson at a meeting of the Storthing at Christiania, December 10.

NOBLE, HARRIET I. American gynecologist, died at Brooklyn, N. Y., Oct. 10, 1920. She was born at Davenport, Iowa, in 1859, and graduated at the Woman's Medical College in Philadelphia, where she became head demonstrator of anatomy and curator of the college museum. Previous to her death she had been a specialist in gynecological department of the post-graduate hospital.

NON-PARTISAN LEAGUE. See **NORTH DAKOTA.**

NORRIS, TRUE LIVINGSTON. Editor, died, December 4. He was born at Manchester, N. H., May 4, 1848; served in the Civil War as a private in the Massachusetts Volunteers; was admitted to the bar in 1868, and practiced at Boston, Washington, and Concord, N. H. He then went into newspaper work and was first on the staff of the *New York Herald*, 1883-5; then on the *Boston Globe*, 1885-8, of which after 1888 he was the editor. After 1893 he was the proprietor of the *Portsmouth (N. H.) Times* and the *States and the Union*. He was delegate to the Democratic National Conventions of 1900 and 1904.

NORTH CAROLINA. POPULATION. According to the preliminary report of the census of 1920, there were 2,559,123 residents in the State, Jan. 1, 1920, as compared with 2,206,287 in 1910.

AGRICULTURE. According to the census of 1920, the number of farms was 269,740, an increase of 6.3 per cent since 1910. The following table is compiled from the estimates of the United States Department of Agriculture, covering the years, 1919 and 1920:

Crop	Year	Acreage	Produc. Bu.	Value
Corn	1920	2,784,000	64,032,000	\$72,356,000
	1919	2,800,000	53,200,000	98,420,000

CHARITIES AND CORRECTIONS. The State charitable institutions with situation, and number of inmates in 1920 are: Central Hospital for the Insane, Raleigh, 1416 (number of patients treated, 1919-20); State Hospital, Morgantown, 1330; State Hospital, Goldsboro, 1000; Sanatorium for the Treatment of Tuberculosis, Sanatorium, 130; Orthopaedic Hospital, Gastonia; Oxford Orphan Asylum, Oxford, 376 (1918); Orphanage for the Colored Race, Oxford, 185; Soldiers' Home,

Raleigh, 150; Confederate Women's Home, Fayetteville. The State prison is at Raleigh; number of inmates, 825.

ELECTIONS. The vote in the presidential election of 1920 was: Cox (Democrat), 305,447; Harding (Republican), 232,848; as compared with the following vote in the presidential election of 1916: Wilson (Democrat), 168,383; Hughes (Republican), 120,890. The vote for governor was: Cameron Morrison (Democrat), 308,151; John J. Parker (Republican), 230,175; and for United States Senator: Lee S. Overman (Democrat), 310,504; A. E. Holton (Republican), 229,343.

OFFICERS. Governor, Cameron Morrison; Lieutenant-Governor, W. B. Cooper; Secretary of State, J. Bryan Grimes; Auditor, Baxter Durham; Treasurer, Benjamin R. Lacy; Superintendent of Public Instruction, E. C. Brooks; Attorney-General, James D. Manning.

JUDICIARY. Supreme Court: Chief Justice, Walter Clark; Associate Justices, Platt D. Walker, William A. Hoke, William R. Allen, W. P. Stacy. See **EDUCATION IN THE UNITED STATES.**

NORTH CAROLINA. UNIVERSITY OF. A non-sectarian, co-educational institution at Chapel Hill, N. C., founded in 1795. The students for the summer session of 1920 numbered 1146, and for the regular fall session, 1470. There were 106 members on the teaching staff, including 9 additions. The income for the year was \$715,878. There were 93,914 volumes in the library. There were various gifts of unusual sort given for the establishment of loan funds for the assistance of needy students. A collection of 1300 volumes from the shelves of the late Dr. K. P. Battle was the gift of the heirs to the university. Through the generosity of the General Educational Board \$40,000 was appropriated for the purpose of increasing the salaries of members of the teaching force. The new Steele Dormitory was nearing completion. Phillips Hall was completed and was occupied by the department of Physics, Engineering and Mathematics. President, Harry Woodburn Chase, Ph.D., LL.D.

NORTH DAKOTA. POPULATION. According to the preliminary report of the census of 1920, there were 645,680 residents in the State, Jan. 1, 1920, as compared with 577,056 in 1910.

AGRICULTURE. According to the census of 1920, the number of farms was 77,693, an increase of 4.5 per cent since 1910. The following table is compiled from the estimates of the United States Department of Agriculture, covering the years, 1919 and 1920:

Crop	Year	Acreage	Produc. Bu.	Value
Corn	1920	711,000	17,064,000	\$12,286,000

MANUFACTURES. A preliminary statement of the general results of the census of manufactures for the State of North Dakota issued by the

Bureau of the Census, showed a consistent increase at the census of 1919, as compared with that for 1914. In the order of their importance from a percentage standpoint, the increases for the several items ranked as follows: Cost of materials, 207.2 per cent; value of products, 171.3 per cent; wages, 123.6 per cent; value added by manufacture, 93.4 per cent; capital, 72.7 per cent; salaries, 61.9 per cent; wage earners, 36.5 per cent; proprietors and firm members, 28.4 per cent; number of establishments, 27.9 per cent; salaried employees, 20.8 per cent; and primary horsepower, 18.1 per cent. The capital invested, as reported in 1919, showed a gain of \$10,337,000, or 72.7 per cent, over that in 1914. The average capital per establishment was approximately \$27,000 in 1919 and \$20,000 in 1914. The cost of materials used in 1919 showed an increase over that for 1914 of \$30,006,000 or 207.2 per cent. The average cost of materials per establishment in 1919 was approximately \$50,000, and in 1914 \$21,000. The value of products in 1919 showed an increase over that in 1914 of 36,227,000, or 171.3 per cent. The average per establishment in 1919 was approximately \$64,000 and in 1914 \$30,000. The value added by manufacture in 1919 shows an increase over that in 1914 of \$6,221,000, or 93.4 per cent. The value added by manufacture in 1919 formed 22.5 per cent of the total value of products and in 1914 31.5 per cent. In 1919, as compared with 1914, the number of salaried employees showed an increase of 156, or 20.8 per cent, while the average number of wage earners increased 1197, or 36.5 per cent. A comparative summary for the State for 1914 and 1919 follows:

	Census—		Per cent. of increase, 1914-1919
	1919	1914	
Number of establishments.....	894	699	27.9
Persons engaged in manufactures.....	6,151	4,627	32.9
Proprietors and firm members.....	774	603	28.4
Salaried employees.....	905	749	20.8
Wage earners (average number).....	4,472	3,275	36.5
Primary horsepower.....	17,791	15,062	18.1
Capital.....	\$24,550,000	\$14,213,000	72.7
Services.....	6,885,000	3,302,000	107.0
Salaries.....	1,484,000	886,000	61.9
Wages.....	5,401,000	2,416,000	123.6
Materials.....	44,490,000	14,484,000	207.2
Value of products.....	57,374,000	21,147,000	171.3
Value added by manufacture (value of products less cost of materials).....	12,884,000	6,668,000	93.4

EDUCATION. According to the school census of 1920, there were 203,857 persons of school age (6 to 20, inclusive) residing in the State of North Dakota in June, 1920. The number of different persons employed as teachers in the schools in 1920 was 8219. The average monthly salary of all teachers was a little over \$95.

TRANSPORTATION. Total mileage of steam railway in the State in 1920, including secondary main line and side-tracks, was 6396.6, of which 2359.83 were under the Great Northern, 1926.82 under the Northern Pacific, and 1486.86 under the Minneapolis, St. Paul and Sault Ste. Marie railway companies.

CHARITIES AND CORRECTIONS. The State institutions in 1920 were as follows: State Training School, Mandan; State Penitentiary, Bismarck; Hospital for Insane, Jamestown; School for Deaf, Devils Lake; Institution for Feeble-Minded, Grafton; School for Blind, Bathgate; Tuberculosis Sanatorium, Dunseith; Florence Crittendon Home, Fargo; Soldiers Home, Lisbon.

ELECTION. The vote in the presidential election of 1920 was: Harding (Republican), 160,072; Cox (Democrat), 37,422; Debs (Socialist), 8283; as compared with the following vote in the presidential election of 1916: Wilson (Democrat), 55,206; Hughes (Republican), 53,471; Benson (Socialist), 5716. The vote for governor was: Lynn J. Frazier (Republican, Non-Partisan), 116,934; J. F. T. O'Connor (Democrat, Independent), 112,292; and for United States Senator: Dr. E. F. Ladd (Republican, Non-Partisan), 130,098; H. H. Perry (Democrat, Independent), 87,006.

POLITICS AND GOVERNMENT. In 1918, various features of the industrial programme of the Non-Partisan League had been embodied in the laws. These included among other things the construction of a large elevator and flour mill at Grand Forks, and the deposit of public funds in the bank of North Dakota which was to serve as the financial organ of the new industrial programme. At the close of the year 1920, however, the financial system was seriously embarrassed. The election in the autumn had for one of its issues the doing away with the compulsory deposit of public funds in the bank. The people voted in large majority in favor of this. The leaders of the League had planned to make the bank the source of credit for the new plans and at one time over \$30,000,000 was under the control of the bank. As a result of the decision at the November election, this sum had been reduced to about \$10,000,000. Withdrawal of funds was checked to some extent by the action of the Industrial Commission which passed resolutions prohibiting counties, towns, etc., from

withdrawing funds in order to place them in private banks. Nevertheless, the situation was embarrassing and the members of the League were planning to introduce a measure in the next legislature that would make the bank the depository of all public funds despite the decision in the November election. On account of the difficulty with the bank, the Industrial Commission was obliged to discontinue the work on the building programme. The programme had called for the financing of industries by the issue of bonds, amounting to \$17,000,000. Down to 1920, the Industrial Commission had been able to dispose of only a very small fraction of this amount.

OFFICERS. Governor, Lynn J. Frazier; Lieutenant-Governor, Howard R. Wood; Secretary of State, Thomas Hall; State Auditor, D. C. Poindexter; State Treasurer, John Steen; Attorney-General, Wm. Lemke; Commissioner of Insurance, S. A. Olsness; Commissioner of Agriculture and Labor, John N. Hagen; Superintendent of Public Instruction, Minnie J. Nielson.

JUDICIARY. Supreme Court Justices: Luther E. Birdzell, J. E. Robinson, R. H. Grace, Harry A. Bronson, A. M. Christianson.

NORTH DAKOTA, UNIVERSITY OF. A co-educational State institution of higher education at University Station, Grand Forks, N. D., founded in 1883. The enrollment for the summer session was 163; that of the fall, 1152. There were 102 members in the faculty. The Federal Land Endowment Funds of \$1,500,000 yielded an income of \$65,000. In addition to the endowment income, there was an annual income of: Student fees, \$42,800; dormitories, \$10,000; State appropriations, \$241,400; miscellaneous, \$5200. There were 58,000 volumes in the general university library. President, Thomas Franklin Kane, Ph.D., LL.D.

NORTHERN TERRITORY. A territory of the Australian Commonwealth, situated in the central and northern part of the continent; formerly part of the States of South Australia which transferred it to the Commonwealth, Jan. 1, 1911. Area, 523,620 square miles; population, exclusive of aborigines, estimated June 30, 1919, 4921, the aborigines being placed at over 20,000. Capital, Darwin with a population in 1911 of 958. See AUSTRALIA.

NORTHWESTERN COLLEGE. A co-educational institution of the higher learning at Naperville, Ill., founded in 1861. There were 199 women and 291 men enrolled for the fall session. The faculty numbered 35 with six additions during the year. Productive funds of the institution amounted to \$291,000 and the income for the year was \$63,466. The library contained 15,000 volumes. The campaign for \$750,000 was completed successfully; \$500,000 for endowment and the balance was to be used for a women's dormitory to be erected in the near future. President, E. E. Rall, Ph.D.

NORTHWESTERN UNIVERSITY. A co-educational institution of the higher learning at Evanston, Chicago, Ill.; founded in 1851. At the summer school there were 652 men and 214 women enrolled, while the fall session enrollment was 4540 men and 1863 women. There were 401 members in the faculty. The productive endowment was approximately \$5,600,000 and the total income from all sources was \$3,250,000. The university library contained 123,662 volumes and 93,720 pamphlets. The Gary Law Library of the Law School contained 50,000 volumes, and in addition to these main libraries, other schools had small technical libraries which contained 20,000 volumes. The outstanding feature of the year was the purchase of a new campus site in the city of Chicago where it was proposed to erect new buildings to house the Schools of Law, Dentistry, Medicine, and Commerce, which are now somewhat scattered in the city. In connection with the University, the Joseph Medill School of Journalism has been established. President, Walter Dill Scott, Ph.D., who was called to the presidency of the university Oct. 1, 1920, to fill the vacancy created by the resignation of Lynn Harold Hough, D.D., Th.D.

NORTHWEST PROVINCES. The Prairie Provinces of Canada. See CANADA.

NORTHWEST TERRITORIES. That part of western Canada which is bounded on the west by Yukon Territory and separated by the 60th parallel from British Columbia and the Prairie Provinces on the south; comprising the districts formerly known as the Northwest Territory, Kee-

watin, and Rupert's Land. Area, estimated at 1,242,224 square miles, including 34,298 water area; population (1911), 18,481. It is under the administration of the officers of the Royal Northwest Mounted Police, directed by a commissioner whose headquarters are at Ottawa. Commissioner at the beginning of 1920, Lieutenant-colonel F. White.

NORTON, GEORGE W. Newspaper writer, died, October 22. He was born at Strong, Me., Aug. 25, 1855, and graduated at the State Normal School. He taught school for some years and then became a reporter for the Portland *Evening Express*, of which he became editor in 1872. He was a delegate to the Republican National Convention in 1900.

NORWAY. A constitutional monarchy in northwestern Europe; formerly united with Sweden, but separated June 7, 1905; forming the western and northern part of the Scandinavian peninsula, with an extreme length of 1110 miles and an extreme width of 250 miles. Of the total area, 75 per cent is estimated as unproductive, 21.5 per cent under forest and 3.5 per cent under cultivation. Area estimated at 125,001 square miles; population, Dec. 1, 1910, 2,391,782; estimated, Jan. 1, 1918, 2,632,010. Capital, Christiania, with an estimated population on Jan. 1, 1918, of 259,445. The movement of population in 1918 was as follows: Births (exclusive of still born), 63,910; deaths (exclusive of still born), 43,104. The emigration in 1918 amounted to 1226, of whom 1179 went to the United States. The national church is Lutheran, which is endowed by the State and in 1910 there were only 62,553 dissenters, including 10,986 Methodists, 7659 Baptists, and 2046 Roman Catholics. Education is compulsory between the ages of 6½ and 14. The number of public elementary schools in 1916 was 6130 in the country with 289,050 pupils and 3345 schools in the towns with 98,876 pupils. The university in Christiania had an attendance in 1916 of 1500 students. Forests and fisheries are the chief national sources of wealth. No later figures for their output were available than those given in the preceding YEAR BOOK. Pyrite is the chief mineral product; others are silver, copper ore, iron ore, feldspar, and nickel. Total value of mineral products in 1917, 42,824,000 kroner. Mining establishments, Jan. 1, 1918, numbered about 106, employing 8518 workers. Though the country is rich in water power, manufactures are retarded by the lack of coal, being wholly dependent on importation. The chief manufactures are electrochemical products. According to figures published at the beginning of 1918, there were 6935 manufacturing establishments employing a total of 161,278 persons. See AGRICULTURE.

COMMERCE. In 1917 the leading countries in respect to the value of imports into Norway were, in the order of their importance: America, Great Britain and Ireland, Sweden, Germany, and Denmark. Chief among the countries of destination for exports were: Great Britain and Ireland, Germany, France, and Sweden. The total value of the imports in 1917 was 1,661,307,700 kroner; of the exports, 791,372,200 kroner. The chief classes of imports in their order of value were: Vessels, carriages, machinery, etc.; minerals, unwrought; breadstuffs; and textiles. Leading articles of export were: Animal produce; timber and wooden articles; and minerals, manufactured. The export trade fell off consid-

erably in 1918-19, but began to recuperate in 1920, exports during the first half of that year having more than doubled as compared with the first half of 1919. At the same time imports were reported as diminishing in proportion. The government was resorting to various means for developing the export trade.

COMMUNICATIONS. The State railways, Jan. 1, 1920, had a mileage of 1719; private lines, 290; total, 2009. The registered merchant vessels, Jan. 1, 1919, numbered 3474 with a net tonnage of 1,223,900. The following table shows the number and tonnage of vessels which arrived at and departed from Norwegian ports during the years 1914-1919:

Years	Incoming		Outgoing	
	Number	Tons	Number	Tons
1914	10,103	5,700,000	10,134	5,600,000
1915	10,804	5,800,000	10,943	5,500,000
1916	9,435	4,700,000	9,388	4,700,000
1917	4,576	2,400,000	4,573	2,500,000
1918	4,070	1,900,000	4,075	2,000,000
1919	6,104	3,100,000	6,041	3,000,000

FINANCE. The Norwegian budget estimate for the financial year was as follows (crown=\$0.268):

Revenue		Crowns
Direct taxes		365,400,000
Indirect taxes		118,700,000
Other revenue		187,200,000
Loans		60,200,000
Total		726,500,000
Expenditure		Crowns
Recurring expenses		361,400,000
Non-recurring expenses		334,100,000
Debt service		81,000,000
Total		726,500,000

This showed a deficit of 60,200,000 crowns to be met by borrowing. The pre-war debt of Norway was 360,100,000 crowns. The debt at the beginning of 1920 was 1,016,900,000 crowns, of which 687,000,000 crowns was internal and 329,900,000 crowns was external. The per capita debt at the beginning of 1920 was 391.11 crowns. At par of exchange this was \$104.82, against \$69.20 for Sweden, \$73.17 for Denmark, and \$235.34 for the United States.

On Dec. 15, 1920, the Norwegian Storting (parliament) approved the government budget for the period 1920-21, which closes June 30, 1921. The budget showed a total expenditure of 772,889,000 crowns (\$207,134,252 normal exchange). The ordinary expenditures amount to 511,600,000 crowns (\$137,103,800), and the extraordinary expenditures to 261,289,000 crowns (\$70,025,452).

GOVERNMENT AND HISTORY. Executive power is in a king (Haakon VIII., born Aug. 31, 1872), who acts through a council of state. Legislative power is in the Storting or parliament elected by universal suffrage without distinction of sex. Distribution of members by party groups at the beginning of 1920: Liberals, 52; Conservatives, 39; Moderate Liberals, 10; Socialists, 18; Agricultural party, 3; Democrats, 3; Independent, 1. Ministry in 1920: Prime Minister and Minister of Justice, Otto B. Halvorsen; Foreign Affairs, C. F. Michelet; Finance, E. Hagerup Bull; Public Works, C. Middelthun; Agriculture, G. A. Jahren; Social Questions, O. Klingenberg; Provisions, J. H. Rve Holmboe; Commerce, G. Meyer Brunn; Defense, C. W.

Wefring; Public Worship, N. Ridderwald Jensen.

In the autumn the Russian delegate, M. Litvinov arrived in Norway about the same time as the Norwegian delegates returned from the Moscow Congress. A campaign in favor of Bolshevism was at that time going on in the country. M. Litvinov proposed a commercial treaty between the two governments, September 18, but it was not accepted. The Norwegian government made a proposal which merely looked to the resumption of trade to a limited extent, offering to receive a certain amount of mail and code telegraph matter in return for trade relations to a certain degree, but refusing free transit through the country and demanding guarantees against Bolshevik propaganda. There had meanwhile developed in Norway a movement for giving labor a share in industrial management and it had taken form in a system of industrial works councils. A commission had been appointed with the approval of parliament to draft a measure for workmen's participation in the management of industries, and the commission proposed a law which provided for a shop council in every business and industrial establishment having a certain number of employees; the council to consist of not more than three representatives of the employers and from three to nine representatives of the clerical and office force, the exact number in each case to be fixed by a district council which was in turn to be subject to a national council having jurisdiction over all.

The Communists of northern Norway, were found to be in regular relations with the Soviet government in the latter months of the year, and were believed to be supported by Soviet money. A serious railway strike began on all the State lines, December 1. It was opposed by the bourgeois element and the conservative Socialists, which believed the real object of the strike was the seizure of political control. The Norwegian Community Aid, an association organized to prevent strikes, was active in combating the attempt of the Communists to turn it into a general strike by the aid of money received from Moscow. Through the efforts of the Community Aid strike breakers were gathered in sufficient numbers to run the plants. By December 15, the attempt to make it a general strike was abandoned. See POLAR RESEARCH; SPITZBERGEN; and NAVAL PROGRESS.

NORWEGIAN LITERATURE. See SCANDINAVIAN LITERATURE.

NOTRE DAME. A Roman Catholic institution of higher learning at Notre Dame, Ind., founded in 1842. The enrollment for the summer school was 470 and for the regular fall session, 1147. There were 70 members in the faculty. There were 103,000 volumes in the library. President, Rev. Jas. A. Burns, C.S.C., Ph.D.

NOVA SCOTIA. One of the Maritime Provinces of Canada. Capital, Halifax, the chief naval station of Canada. Area, 21,068 square miles, of which 360 are under water; population in 1911, 492,338; population of Halifax in 1911, 46,619; of the next largest city, Sydney, 17,723. Movement of population, 1917-17: Births, 12,421; deaths, 9125; marriages, 3611. The chief occupation is agriculture. Area under field crops in 1919, 992,000, valued at \$51,034,000. There is a profitable fruit industry, apples being the most important crop; and po-

tatoes of a superior quality are raised. In 1919 there were 406,000 cattle in the province. Estimated forest area, 12,000 square miles. Railway mileage (1918), 1480. Along with Newfoundland the fisheries are the most important in Canada, engaging annually from 30,000 to 40,000 men. The value of the 1919 catch was \$14,351,000. Executive power is in a lieutenant-governor, appointed for five years by the Governor-General of Canada, and acting through a council or responsible ministry; and legislative power in an assembly of two houses, namely, the Legislative Council of 21 members appointed by the Crown for life and the House of Assembly of 43 members chosen by popular vote for five years. Lieutenant-governor in 1920, J. McCallum Grant; prime minister, George H. Murray.

NUTRITION, HUMAN. See **FOOD AND NUTRITION.**

NYASSALAND, or NYASALAND PROTECTORATE. A British protectorate, formerly known as British Central Africa, situated on the southern and western shores of Lake Nyassa and extending towards the Zambezi River. Area, 39,573 square miles; population (1918), 1,217,107 natives, 724 Europeans, and 407 Asiatics. The seat of government is Zomba; chief settlement, Blantyre. The schools in 1917-18 numbered 2038 with 120,254 pupils, education being in the hands of 11 Christian missions. Coffee is largely produced in the Shiré province and tobacco is grown for export. Latterly a development of cotton-growing has been indicated. Imports (1918-19), £648,979; exports, £504,739; revenue, £187,645; expenditure, £150,198. In January it was learned that financial arrangements had been completed in London for the early construction of the railway from Beira in Mozambique across the Zambezi River to Fort Johnston in British Nyassaland, which was guaranteed by the government. The new plan was of special importance to the colony as it would enable new settlers, many of whom were ex-service men, to reach Nyassaland by way of the Portuguese port. Its effect on the Portuguese colony of Mozambique was expected to be equally beneficial. Governor at the beginning of 1920, Sir George Smith.

NYREDGHAZI, ERVIN. See **MUSIC, Artists, Instrumentalists.**

OAKLEY, P. DAVIS. Ex-Congressman, died at New Haven, Conn., November 18. He was born at East Millstone, N. J., Feb. 25, 1860; was educated in the public schools; went into business at Hartford, Conn.; and held in succession several city offices. He was member of Congress, 1915-17. In politics he was a Republican and he was well-known as an after-dinner speaker.

OATS. As for most other crops, statistics regarding the world's production of oats in 1920 were incomplete. It was reported that estimates covering 12 countries, normally producing about 40 per cent of the total oat crop of the world, show a yield of about 2,019,615,000 bushels, as compared with 1,821,743,000 bushels in 1919. Estimates made public by the International Institute of Agriculture, Rome, placed the 1920 production of Bulgaria, Spain, Finland, France, Wales, Italy, Netherlands, Sweden, Switzerland, Japan, Algeria, and Tunis at 605,182,000 bushels or nearly 20 per cent above the crop of 1919 and 6 per cent above the 5-year average of 1914-1918. The crop of Germany was reported at 237,600,000 bushels or 9,600,000 bushels under

the yield of the year before. The Canadian crop was estimated at 543,058,000 bushels as compared with 394,387,000 bushels the preceding year and considerably above the average yield. Before the war the United States and Russia were the leading oats producing countries, but statistics for Russia have not been available since 1914.

The production of the United States in 1920 as estimated by the Department of Agriculture was 1,524,055,000 bushels or 292,301,000 bushels above the yield of the preceding year. The area in 1920 was 43,323,000 acres and the average rate per acre 35.2 bushels. In 1919 the production was 1,231,754,000 bushels, the area 41,835,000 acres, and the average acre yield 29.4 bushels, while the average for the five years 1914-1918 was a yield of 1,414,558,000 bushels, an area of 41,773,000 acres, and a production of 33.9 bushels per acre. The crop of 1920 was not only satisfactory in quantity produced, but it also was of high quality. The estimated average weight per measured bushel was 33.1 pounds or 1.1 pounds over the standard weight. The leading oats-producing states in 1919 were: Iowa, Illinois, Texas, Minnesota, and Wisconsin, which yielded nearly one-half of the total production for that year.

The average farm value of oats on Dec. 1, 1920, was only 47.2 cents per bushel, while the corresponding value in 1919 was 71.5 cents and the average for the 5-year period 1914-1918, 54.7 cents. The total value of the 1920 crop on this basis was \$719,782,000, or \$160,514,000 under the total value of the 1919 crop and \$53,550,000 under the average total value for the years 1914-1918, inclusive. On June 10, 1920, No. 2 White oats sold on the Chicago market for \$1.29 per bushel, the highest price on record, while towards the close of the year the price was down practically to a pre-war basis. The price of oats during the period of rising prices of grains as a result of war conditions increased proportionately only a little more than half as much as the price of other cereals. Practically one-half of the total crop of the United States is marketed by farmers during the four months July to October. The period of harvesting oats in this country begins in Texas in May and ends in the northern tier of States in September.

OBERLIN COLLEGE. A non-sectarian, co-educational institution of the higher learning at Oberlin, Ohio, founded in 1833. For the fall session of 1920 there were 1708 students enrolled. In the summer session there were 162 students. The faculty numbered 176, including 28 new members. The assets amounted to \$10,027,000 and the productive endowment to \$6,900,000. The income for the year amounted to \$682,000. There were 204,500 bound volumes and 199,700 unbound volumes in the library. President, Henry Churchill King.

OBLIGADO, RAFAEL. See **SPANISH LITERATURE.**

O'DONOVAN, WILLIAM RUDOLF. Sculptor, died, April 20. He was born in Preston County, Va., March 28, 1844, and served in the Confederate army during the Civil War. After the war he devoted himself to sculpture in New York City, where he had a studio, and executed many portrait busts, and bas-reliefs of well-known persons, including: Edmund Clarence Stedman, Walt Whitman, Gen. Joseph Wheeler, Madame Blavatsky, Generals Daniel E. Sickles and James Grant Wilson; also statues of Washington for

Venezuela and for the monument commemorating the peace at Newburgh, N. Y., and various equestrian statues of Lincoln, Grant, and others. His works were well known and very widely distributed. He was one of the founders of the Tile Club.

OHIO. POPULATION. According to the preliminary report of the census of 1920, there were 5,759,394 residents in the State, Jan. 1, 1920, as compared with 4,767,121 in 1910.

AGRICULTURE. According to the census of 1920, the number of farms was 256,699, a falling off of 5.6 per cent since 1910. The following table is compiled from the estimates of the United States Department of Agriculture, covering the years 1919 and 1920.

Crop	Year	Acreage	Produc. Bu.	Value
Corn	1920	8,735,000	162,099,000	110,227,000
	1919	3,668,000	161,892,000	195,284,000
Oats	1920	1,614,000	71,339,000	35,670,000
	1919	1,523,000	51,020,000	36,730,000
Barley	1920	102,000	2,825,000	2,316,000
	1919	120,000	8,024,000	3,780,000
Wheat	1920	2,259,000	28,698,000	47,852,000
	1919	2,848,000	53,932,000	114,386,000
Clover Seed	1920	150,000	195,000	2,398,000
	1919	180,000	130,000	3,666,000
Rye	1920	80,000	1,152,000	1,555,000
	1919	108,000	1,804,000	2,616,000
Tobacco	1920	63,000	60,480,000	7,862,000
	1919	76,000	65,360,000	22,026,000
Hay	1920	3,152,000	4,255,000	82,959,000
	1919	3,082,000	4,253,000	92,698,000
Potatoes	1920	115,000	11,500,000	15,525,000
	1919	125,000	7,825,000	14,640,000
S'rg'm Sirup	1920	5,900	537,000	816,000
	1919	5,400	454,000	681,000
* Pounds. * Tons. * Gallons.				

FINANCE. The balance on hand, July 1, 1918, was \$2,337,851; receipts during fiscal year \$21,166,909; expenditures during fiscal year \$17,470,178; cash on hand July 1, 1919, \$2,398,631.

EDUCATION. The population under 21 years of age in 1919 was 1,415,463, of whom 723,709 were girls and 691,754 boys; schools numbered 11,295; enrollment, 959,943.

CHARITIES AND CORRECTIONS. In 1920 the State Board of Charities reported the aggregate cost and the number of persons cared for during the year ending July 1, 1919 by the political subdivisions as follows:

Agency	Total cost	Persons Cared for
County and city infirmaries...	\$1,904,909.68	14,024
Public children's homes.....	821,864.79	6,146
Blind relief	412,685.41	4,262
Mothers' pensions	605,124.44	5,500
Outside relief by counties.....	196,750.65	4,266
Outside relief by townships and counties	259,950.25	20,824
County jails	333,338.35	39,091
Total	\$4,534,623.57	94,113
First preceding year.....	\$4,218,211.99	97,201
Second preceding year.....	3,748,165.89	88,488
Third preceding year.....	3,562,264.69	106,324
Fourth preceding year.....	2,944,866.60	87,871

LEGISLATION. The legislature, which had convend on Jan. 6, 1919, reassembled in December, and continued during the early part of 1920.

The work accomplished by it included the following features: Reorganization of the State's health service; increase from two to three cents a mile of the legal rate of fare on steam and interurban railways; provision for the punishment of a class of offenses known as criminal

syndicalism; prohibition of the displaying of the red flag in parades; passage of a new State highway act; prohibition of the teaching of German in the elementary grades of public and parochial schools.

ELECTIONS. The vote in the presidential election of 1920 was: Harding (Republican), 1,182,022; Cox (Democrat), 780,037; Debs (Socialist), 57,147; as compared with the following vote in the presidential election of 1916: Wilson (Democrat), 604,361; Hughes (Republican), 514,858; Benson (Socialist), 38,092; Hanly (Prohibitionist), 8080. The vote for governor was: Davis (Republican), 1,039,835; Donahey (Democrat), 918,962; Hamilton (Socialist), 42,889; and for United States Senator: Willis (Republican), 1,134,953; Julian (Democrat), 782,650.

OHIO STATE UNIVERSITY. A State institution of the higher learning at Columbus, Ohio; founded in 1870. The enrollment for the summer session of 1920 was 1409 and that of the regular fall session, 7156, allowing for duplications. The faculty including some additions numbered 569. The funds were: \$62,750 from endowment and \$2,459,887.04 from other sources. The library contained 213,784 volumes. President, William Oxley Thompson, D.D., LL.D.

OHIO NORTHERN UNIVERSITY. An institution of the higher learning at Ada, Ohio, founded in 1871. Enrollment for the summer session of 1920 was 587; that for the regular fall session was 794. There were 35 members in the faculty. The productive funds for the year amounted to \$200,000 and the income for the year, \$92,000. The library contained 12,000 volumes. The university received a new athletic field. President, Albert Edwin Smith, D.D., Ph.D.

OHIO UNIVERSITY. A co-educational State institution of the higher learning at Athens, Ohio; founded in 1804. The enrollment for the fall of 1920 was 1071 and for the summer session (first half) 2163. In the extension department, there were 713 students enrolled. The faculty numbered 101. The receipts of the year amounted to \$387,244. In the library there were 52,000 volumes. Acting-president, E. W. Chubb.

OHIO WESLEYAN UNIVERSITY. A co-educational institution of the higher learning at Delaware, Ohio; founded in 1844. There were 1456 students enrolled in the fall session. The faculty numbered 98 with six new members added. The productive funds were estimated at \$1,600,000. There were 90,000 volumes in the library. A department of Business Administration was added. President, John Washington Hoffman, M.A., D.D., LL.D.

OHL, JOSIAH KINGSLEY. Journalist, died, June 27. He was born at Brownsville, Pa., in 1863; educated at Kenyon College; and from 1887 to 1896 was on the staff of the *Atlantic Constitution*. He was afterwards Washington correspondent for that and other papers and from 1886 to 1906 was attached to the Washington bureau of the *New York Herald*. From that time to 1913 he was correspondent for the *Herald* in the Far East. After serving on the editorial staff till 1918, he became editor-in-chief and managing editor of that paper.

OIL. See **PETROLEUM**.

OIL ENGINES. See **INTERNAL COMBUSTION ENGINES**.

OKLAHOMA. POPULATION. According to the preliminary report of the census of the 1920,

there were 2,028,283 residents in the State, Jan. 1, 1920, as compared with 1,657,155 in 1910.

AGRICULTURE. According to the census of 1920, the number of farms was 191,731, an increase of 0.8 per cent since 1910. The following table is compiled from the estimates of the United States Department of Agriculture, covering the years, 1919 and 1920:

Crop	Year	Acreage	Produc. Bu.	Value
Corn	1920	3,190,000	89,320,000	48,233,000
	1919	2,900,000	69,600,000	88,392,000
Oats	1920	1,500,000	48,000,000	21,120,000
	1919	1,425,000	47,025,000	32,918,000
Barley	1920	180,000	3,120,000	2,246,000
	1919	65,000	1,950,000	2,379,000

	1919	1,440,000	38,120,000	49,680,000

* Tons, * Bales.

EDUCATION. School population at the close of 1920, 697,286; enrollment, 589,282; number of teachers, 15,389; salaries of teachers, from \$50 to \$250 a month. The average annual salary of teachers in 1919 was \$689.

TRANSPORTATION. The railway mileage of the State at the close of 1920 was 8739.6.

ELECTION. The vote in the presidential election of 1920 was: Harding (Republican), 243,415; Cox (Democrat), 215,521; Debs (Socialist), 25,638; as compared with the following vote in the presidential election of 1916: Wilson (Democrat), 148,115; Hughes (Republican), 98,299; Benson (Socialist), 45,212. The vote for United States Senator was: Harreld (Republican), 247,824; Ferris (Democrat) 217,677.

OKLAHOMA, UNIVERSITY OF. A co-educational State institution of the higher education at Norman, Okla., founded in 1890. The enrollment for 1920 was 2713 for the regular fall session and for the summer session, 1307. The faculty numbered 173. The funds derived from taxation and appropriation by State Legislature amounted to \$805,000. There were 30,000 volumes in the library. There were several new buildings: Auditorium and Fine Arts Building, Library, Geology, Hospital and Armory. President, Stratton D. Brooks, LL.D.

OLD AGE PENSIONS. UNITED STATES. A measure for the retirement of employees in the classified civil service passed the Senate, April 3, and the House, April 30, and was approved by the President, May 22. It provided for compulsory retirement at the age of 70 and if at least fifteen years service had been rendered, such employees would be eligible for retirement on an annuity. For mechanics and city and rural letter carriers the age would be 65 years, and for railway mail clerks, 62 years. Retirement benefits were divided into two classes, namely, for total disability resulting from disease or injury not caused by intemperance, vicious habits or wilful misconduct of an employee, and permanent retirement for age in service. The benefits of the bill would extend to employees in the

classified civil service, employees of the Superintendent of Capitol Buildings and Grounds and of the Library of Congress, superintendents of United States national cemeteries, and employees of the Botanical Gardens and might, upon executive order of the President, be extended to include any group of civil service employees not classified at the time it became effective. The President would also be authorized to exclude from the benefits of the bill any employee or group of employees in the classified civil service whose tenure of office is of uncertain duration or intermittent. Postmasters and employees of the Lighthouse Service would not receive the benefits of the bill. In computing time for purposes of retirement, service in the army, the navy and marine corps or Coast Guard might be included. The following classification and rates were established: Class A, to include employees having a service record of 30 years or more. Such employees would receive as retirement pension an amount equal to 60 per cent of their basic salary for the ten years next preceding retirement, with a maximum of \$720 per annum; Class B, to include employees with a service record of 27 to 30 years and a retirement allowance of 54 per cent of basic pay or not more than \$648 per annum; Class C, employees with a service record of 24 to 27 years and a retirement allowance of 48 per cent or not more than \$576 per annum; Class D, employees with a service record of 21 to 24 years and a retirement allowance of 42 per cent, or not more than \$504 per annum; Class E, employees with a service record of 18 to 21 years and a retirement allowance of 36 per cent or not more than \$432 per annum; and Class F, employees with a service record of 15 to 18 years and a retirement allowance of 30 per cent or not more than \$360 per annum. The minimum allowances provided for the several classes are: Class A, \$360; Class B, \$324; Class C, \$288; Class D, \$252; Class E, \$216; and Class F, \$180.

Beginning with the first day of the third month following the enactment of the bill and monthly thereafter there would be made effective a plan of compulsory contribution to the pension fund on the part of employees. From the salaries of such persons there would be deducted a sum equal to two and one-half per cent of their basic compensation. The amount thus deducted would be carried to a special fund to be known as "The Civil Service Retirement and Disability Fund" in connection with which individual accounts would be carried with every employee prospective beneficiary. These accounts would bear interest at 4 per cent per annum compounded annually.

OLMSTEAD, JOHN CHARLES. Landscape architect, died, February 24. He was born in Geneva, Switzerland, Sept. 14, 1852, and studied at Yale University. Having studied landscape architecture under Frederick Law Olmstead, he became his partner and designed parks in Boston, Chicago, Louisville, Seattle, and numerous other cities and towns, as well as grounds of universities, State capitals, and many other public institutions. He was one of the most prominent of the landscape architects of his time.

OLYMPIC GAMES. The Olympic Games which were held at Antwerp, Belgium, during the spring and summer of 1920 resulted in a complete triumph for athletes of the United States. In the track and field events Uncle Sam's boys

scored more than double the number of points collected by their closest competitor, Finland. In swimming it was practically a clean sweep for the United States both in men's and women's competitions. Shooting told the same story, while in rowing the crew of the United States Naval Academy humbled the best oarsmen England could produce.

The track and field events, which are always regarded as the chief feature of Olympic Games, were held in August, the point scoring being in accordance with the rules of the International Amateur Federation which allow 7 points for first place, 5 for second, 4 for third, 3 for fourth, 2 for fifth, and 1 for sixth.

The final standing of the various countries represented was as follows:

United States, 212 points; Finland, 105; Sweden 95; England, 92; France, 35; Italy, 28; South Africa, 24; Canada, 10; Norway 10; Denmark, 9; Esthonia, 8; New Zealand, 5; Belgium, 5; Australia, 5; Czecho-Slovakia, 3; Holland, 2; Luxembourg, 1.

Five new world's records and three new Olympic records were made as follows:

400-meter hurdles, Loomis, U. S., 54 seconds (world); pole vault, Foss, U. S., 13 feet 5 $\frac{1}{2}$ inches (world); 400-meter relay, U. S. team, 42 $\frac{1}{2}$ seconds (world); javelin throw, Myrra, Finland, 215 feet 9 $\frac{1}{4}$ inches (world); 110-meter high hurdles, Thomson, Canada, 14 $\frac{1}{2}$ seconds (world); throwing 56-pound weight, McDonald, U. S., 36 feet, 11 $\frac{1}{2}$ inches (Olympic); running high jump, Landon, U. S., 6 feet, 4 $\frac{1}{2}$ inches (Olympic); Marathon, Kolehmainen, Finland, 2 hours, 32 minutes, 35 $\frac{1}{2}$ seconds (Olympic).

A summary of the results of the track and field competitions follows:

100-meter run, won by Paddock, U. S.; Kirksey, U. S., second; Edward, England, third; Scholz, U. S., fourth; Alikahn, France, fifth; Murchison, U. S., sixth. Time, 10 $\frac{1}{2}$ seconds.

200-meter run, won by Woodring, U. S.; Paddock, U. S., second; Edward, England, third; Murchison, U. S., fourth; Davidson, New Zealand, fifth; Oosterlaap, South Africa, sixth. Time, 22 seconds.

400-meter run, won by Rudd, South Africa; Butler, England, second; Engdahl, Sweden, third; Shea, U. S., fourth; Ainsworth, England, fifth; Däfel, South Africa, sixth. Time 49 $\frac{3}{4}$ seconds.

800-meter run, won by Hill, England; Eby, U. S., second; Rudd, South Africa, third; Mountain, England, fourth; Scott, U. S., fifth; Sprott, U. S., sixth. Time, 1 minute, 53 $\frac{3}{4}$ seconds.

1500-meter run, won by Hill, England; Baker, England, second; Shields, U. S., third; Vohralik, Czecho-Slovakia, fourth; Lurdgren, Sweden, fifth; Andre, France, sixth. Time, 4 minutes, 1 $\frac{1}{2}$ seconds.

5000-meter run, won by Guillemot, France; Mirmi, Finland, second; Bachman, Sweden, third; Koskenimie, Finland, fourth; Blewit, England, fifth; Seagrove, England, sixth. Time, 14 minutes, 55 seconds.

10,000-meter run, won by Mirmi, Finland; Guillemot, France, second; Wilson, England, third; Maccerio, Italy, fourth; Manhes, France, fifth; Lumatainen, Finland, sixth. Time, 31 minutes, 45 $\frac{1}{2}$ seconds.

Marathon, won by Kolehmainen, Finland; Lossman, Esthonia, second; Arne, Italy, third; Broos, Belgium, fourth; Ternoskoki, Finland, fifth;

Sofus, Denmark, sixth. Time, 2 hours, 32 minutes, 35 $\frac{1}{2}$ seconds.

3000-meter steeplechase, won by Hodge, England; Flynn, U. S., second; Ambrosini, Italy, third; Mattson, Sweden, fourth; Devaney, U. S., fifth; Hulsenbach, U. S., sixth. Time 10 minutes, 2 $\frac{1}{2}$ seconds.

110-meter hurdles, won by Thomson, Canada; Barron, U. S., second; Murray, U. S., third; Wilson, New Zealand, fourth; Smith, U. S., fifth; Christiernssen, Sweden, sixth. Time, 14 $\frac{1}{2}$ seconds.

400-meter hurdles, won by Loomis, U. S.; Norton, U. S., second; Desch, U. S., third; Andre, France, fourth; Christiernssen, Sweden, fifth; Daggs, U. S., sixth. Time, 54 seconds.

3000-meter walk, won by Frigerio, Italy; Parker, Australia, second; Remer, U. S., third; McMaster, South Africa, fourth; Maroney, U. S., fifth; Dawson, England, sixth. Time, 13 minutes, 14 $\frac{1}{2}$ seconds.

10,000-meter walk, won by Frigerio, Italy; Pearman, U. S., second; Gunn, England, third; McMaster, South Africa, fourth; Hehir, England, fifth; Maroney, U. S., sixth. Time, 48 minutes, 6 $\frac{1}{2}$ seconds.

Running high jump, won by Landon, U. S.; Muller, U. S., second; Ekeland, Sweden, third; Whalen, U. S., fourth; Murphy, U. S., fifth; Baker, England, sixth. Height, 6 feet, 4 $\frac{1}{2}$ inches.

Running broad jump, won by Peterson, Sweden; Johnson, U. S., second; Abrahamson, Sweden, third; Templeton, U. S., fourth; Aastad, Norway, fifth; Frankason, Sweden, sixth. Distance, 23 feet, 6 inches.

Hop, skip and jump, won by Timlos, Finland; Jansson, Sweden, second; Aimlof, Sweden, third; Sahling, Sweden, fourth; Landers, U. S., fifth; Ahearn, U. S., sixth. Distance, 47 feet, 7 inches.

Pole vault, won by Foss, U. S.; Peterson, Denmark, second; Meyers, U. S., third; Knourk, U. S., fourth; Jorgensen, Denmark, fifth; Rydburg, Sweden, sixth. Height, 13 feet, 5 $\frac{1}{2}$ inches.

Javelin throw, won by Myrra, Finland; Peltonen, Finland, second; Johanson, Finland, third; Saaristi, Finland, fourth; Klumberg, Esthonia, fifth; Lindstrom, Sweden, sixth. Distance, 215 feet, 9 $\frac{1}{4}$ inches.

Discus throw, won by Niklander, Finland; Taipale, Finland, second; Pope, U. S., third; Dallhegen, Sweden, fourth; Bartlett, U. S., fifth; Erickson, Sweden, sixth. Distance, 146 feet, 7 $\frac{1}{2}$ inches.

Hammer throw, won by Ryan, U. S.; Lind, Sweden, second; Bennett, U. S., third; Svensson, Sweden, fourth; McGrath, U. S., fifth; Nicholson, England, sixth. Distance, 173 feet, 51 $\frac{1}{2}$ inches.

Shot put, won by Porolla, Finland; Niklander, Finland, second; Liversedge, U. S., third; McDonald, U. S., fourth; Nilsson, Sweden, fifth; Tammer, Esthonia, sixth. Distance, 48 feet, 9 inches.

Throwing 56-pound weight, won by McDonald, U. S.; Ryan, U. S., second; Lind, Sweden, third; McDermott, Canada, fourth; Svensson, Sweden, fifth; Peterson, Finland, sixth. Distance, 36 feet, 11 $\frac{1}{2}$ inches.

400-meter relay, won by U. S. team; France, second; Sweden, third; England, fourth; Denmark, fifth; Luxembourg, sixth. Time, 42 $\frac{1}{2}$ seconds.

1600-meter relay, won by England; South

Africa, second; France, third; U. S., fourth; Sweden, fifth; Belgium, sixth. Time, 3 minutes, 22½ seconds.

3000-meter team race, won by U. S.; England, second; Sweden, third; France, fourth; Italy, fifth; no sixth. Time, 8 minutes, 51½ seconds.

Cross country team race, won by Finland; England, second; Sweden, third; U. S., fourth; France, fifth; Belgium, sixth.

Individual cross country race, won by Mirmi, Finland; Bockman, Sweden, second; Lomatainen, Finland, third; Wilson, England, fourth; Horgarty, England, fifth; Conquisnier, Italy, sixth.

Pentathlon, won by Lethonen, Finland; Bradley, U. S., second; Legendre, U. S., third; Hamilton, U. S., fourth; Fortimen, Finland, fifth; Looland, Sweden, sixth.

Decathlon, won by Loveland, Norway; Hamilton, U. S., second; Ohlson, Sweden, third; Holmer, Sweden, fourth; Nilsson, Sweden, fifth; Wiekholm, Finland, sixth.

Tug-of-war, won by England; Holland, second; Belgium, third; U. S., fourth; Italy, fifth.

The United States owed its sweeping victory in the swimming events for men to the fine work of three Hawaiians, Duke Kahanamoku, Pua Kealoha, and Warren Kealoha. A summary of the results follows:

100-meters, won by Duke Kahanamoku, U. S.; Pua Kealoha, U. S., second; W. W. Harris, U. S., third; H. Herold, Australia, fourth. Time, 1 minute, 2 seconds. In the original final of this event which was ordered re-swum because of interference Kahanamoku covered the distance in the new world's record time of 1 minute, ¾ second.

400-meters, won by Norman Ross, U. S.; L. Langer, U. S., second; G. Vernot, Canada, third; G. Kahele, U. S., fourth. Time, 5 minutes, 26½ seconds.

1500-meters, won by Norman Ross, U. S.; G. Vernot, Canada, second; F. Beaurepaire, Australia, third; G. Kahele, U. S., fourth. Time, 22 minutes, 23¾ seconds.

800-meter relay, four men on team, each swimming 200 meters, won by U. S. (Perry, McGillivray, Pua Kealoha, Norman Ross, Duke Kahanamoku); Australia second; Great Britain third; Sweden fourth. Time, 10 minutes, 4¾ seconds (new world's record).

200 meters, breaststroke, won by Malmroth, Sweden; Henning, Sweden, second; Aaltoonen, Finland, third; Howell, U. S., fourth. Time, 3 minutes, 4 seconds.

400 meters, breaststroke, won by Malmroth, Sweden; Henning, Sweden, second; Aaltoonen, Finland, third; Howell, U. S., fourth. Time, 6 minutes, 31 seconds.

100 meters, backstroke, won by W. Kealoha, U. S.; Kegeris, U. S., second; Beitz, Belgium, third; McGillivray, U. S., fourth. Time, 1 minute, 15½ seconds. W. Kealoha, in one heat established a new world's record of 1 minute 14¾ seconds.

Plain high diving won by Wallman, Sweden; Skogland, Sweden, second; Jansson, Sweden, third; Adlerz, Sweden, fourth.

Springboard diving won by Kuehn, U. S.; Pinkston, U. S., second; Balbach, U. S., third.

High fancy diving won by Pinkston, U. S.; Adlerz, Sweden, second; Priest, U. S., third.

In the water polo tournament Great Britain won the final match from Belgium by a score of

3 to 2. Sweden finished third and the United States fourth.

The results of the women's swimming contests follow:

100 meters, won by Ethelda Bleibtrey, U. S.; Irene Guest, U. S., second; Frances Cowells-Schroth, U. S., third; E. Jeans, England, fourth. Time, 1 minute, 13¾ seconds.

300 meters, won by Ethelda Bleibtrey, U. S.; Margaret Woodbridge, U. S., second; Frances Cowells-Schroth, U. S., third; E. Jeans, England, fourth. Time, 4 minutes, 34 seconds (new world's record).

400 meters relay, four women, each swimming 100 meters, won by U. S. (Bleibtrey, Woodbridge, Cowells-Schroth, Guest); England, second; Sweden, third. Time, 5 minutes, 12¾ seconds.

Springboard diving won by Eileen Riggan, U. S.; Helen Wainwright, U. S., second; Thelma Payne, U. S., third; Aileen Allen, U. S., fourth.

The points scored by the various countries in the swimming competitions follow: United States, 53; Sweden, 21; Great Britain, 6; Belgium, Canada, Australia, and Denmark, 4 each.

The Grand Canal, near Brussels, was the scene of the Olympic rowing events, the results being as follows:

Eight-oared race won by U. S. Naval Academy; Leander, England, second.

Four-oared race won by Switzerland; United States second; Norway third.

Single sculls won by Kelly, U. S.; Beresford, England, second.

Double sculls without coxswain, won by U. S.; Italy second; France third.

The United States trap shooting team consisting of Jay Clark, Jr., Mark Arie, Horace R. Bonser, B. S. Donnelley, F. W. McNeir, Fred Plum, F. M. Troeh, and F. S. Wright won the Olympic team championship with a total score of 547 out of a possible 600. Other countries finished as follows: Belgium, 503; Sweden, 500; England, 488; Canada, 474. Holland, Norway, and France withdrew before the competitions ended.

Arie, U. S., captured the individual championship with a score of 95 out of a possible 100. The United States won the first five places in this event although only the first three counted.

In the rifle matches, both team and individual, the United States made practically a clean sweep of the first places and the same was true in the pistol and revolver contests.

Canada carried off the laurels in hockey with the United States ranking second. In the various matches the United States defeated Switzerland 22 to 0, and Czechoslovakia 16 to 0, but lost to Canada 0 to 2. Sweden and Norway carried off the honors in figure skating.

The United States was more concerned with the Davis Cup matches in 1920 than with the Olympic tennis competitions with the result that Uncle Sam was entirely unrepresented in these events which resulted as follows:

Men's singles, A. Raymond, South Africa, defeated I. Kumagae, Japan, 5-7, 6-4, 7-5, 6-4; men's doubles, Turnbull and Woosnam, England, defeated Kumagae and Kashio, Japan, 6-2, 5-7, 7-5, 7-5; women's singles, Mlle. Suzanne Lenglen, France, defeated Miss Holman, England, 6-3, 6-0; women's doubles, Mrs. McNair and Miss MacKane, England, defeated Mrs. Beamish and Miss Holman, England, 8-6, 6-4; mixed

doubles, Mlle. Lenglen and Max Decurgis, France, defeated Mr. Woosnam and Miss Holman, England, 6-4, 6-2.

OMAHA, NEB. See MUNICIPAL OWNERSHIP.

OMAN. An independent Mohammedan state in southern Arabia, guaranteed in its integrity by Great Britain and France. Area, estimated at 82,000 square miles; population at 500,000, chiefly Arabs. Capital, Muscat, with a population, including that of the adjacent town of Muttrah, of 24,000. The reigning Sultan in 1920 was Seyyid Taimur bin Feysil.

O'NEILL, JAMES. Actor, died, August 10. He was born in Ireland in 1847 and came to the United States in childhood. For many years he was the leading man in Baltimore, Cleveland, Chicago, and other stock companies. From 1877 to 1880 he was in San Francisco, where he appeared in the rôle of Christ in the *Passion Play*. He was especially celebrated as the central figure, Edmond Dantes, in *Monte Cristo*, in which he appeared for 15 years. During the latter part of his life he played the rôle of D'Artagnan in the *Three Musketeers*.

ONTARIO. Next to Quebec, the largest province of Canada, lying between Quebec on the east and Manitoba on the west. Capital, Toronto. Area, 407,262 square miles, of which 41,382 are under water. Population (1911) 2,523,274; Indian population (1911) 23,044. Population of province, estimated Jan. 21, 1919, 2,799,000. The population of Toronto was estimated in 1919 at 473,829—the largest city in Canada; population of Ottawa, the capital of the Dominion, in 1915, 102,000. Other large cities are Hamilton, 101,000, and London, 56,000. The executive power is in a lieutenant-governor, appointed for five years by the governor-general who acts through a responsible ministry or legislative council; and legislative power in a single chamber of 111 members, elected for four years. At the beginning of 1920, the Legislature was distributed among political groups as follows: United Farmers, 44; Liberals, 28; Conservatives, 25; Labor, 12; Independents, 2. At the beginning of 1920, the Lieutenant-governor was Lionel Clarke; Prime Minister, E. C. Drury. See CANADA.

OPERA. See MUSIC.

ORANGE FREE STATE. A province of the Union of South Africa. Capital, Bloemfontein. See SOUTH AFRICA, UNION OF.

ORCHESTRA. See MUSIC.

OREGON. POPULATION. According to the preliminary report of the census of 1920, there were 783,389 residents in the State, Jan. 1, 1920, as compared with 672,765 in 1910.

AGRICULTURE. According to the census of 1920, the number of farms was 50,188, an increase of 10.3 per cent since 1910. The following table is compiled from the estimates of the United States Department of Agriculture, covering the years, 1919 and 1920:

Crop	Year	Acreage	Produc. Bu.	Value
Corn	1920	46,000	1,436,000	\$1,854,000
	1919	45,000	1,170,000	1,814,000
Oats	1920	330,000	12,045,000	7,829,000
	1919	318,000	9,953,000	9,157,000
Barley	1920	80,000	2,576,000	2,576,000
	1919	71,000	1,640,000	2,460,000
Wheat	1920	1,107,000	22,900,000	29,770,000
	1919	1,115,000	20,808,000	44,113,000
Hay	1920	1,102,000	2,402,000	33,135,000
	1919	1,100,000	2,291,000	36,261,000

Crop	Year	Acreage	Produc. Bu.	Value
Potatoes	1920	43,000	5,590,000	6,472,000
	1919	45,000	4,230,000	6,845,000
Hops	1920	12,000	9,900,000	3,465,000
	1919	11,000	6,400,000	5,120,000

* Pounds. * Tons.

MINERAL PRODUCTION. A preliminary estimate of the production of metals at mines in Oregon in 1920, compiled by the United States Geological Survey, showed a small decrease in the output of gold and an increase in the output of silver and copper as compared with that in 1919. The estimated output of gold in 1920 was \$942,200, which compared with the output in 1919, was a decrease of only \$38,645. It was somewhat surprising that the State so nearly held its own in the production of gold, in view of the adverse conditions under which gold mining was carried on. Less than half as many mines were producing in 1919 as in 1918, and the number must have still further decreased in 1920. The output of silver in Oregon in 1920 was 199,940 ounces, as compared with 111,121 ounces in 1919, an increase for 1920 of 88,819 ounces. The output of copper in 1920 was 2,300,000 pounds, or about 85,000 pounds more than in 1919. High cost of wages and supplies and scarcity of miners, together with lack of water for mining and power, handicapped the mining industry. The average value of the ore per ton in gold and silver was greater than it was a few years before, and the average value per ton in all metals was also higher. Placer gold decreased in output owing to a decrease in the number of active hydraulic mines, lack of water, and smaller output by dredges. Among the deep mines some of those formerly very productive ceased operations. The most productive county in Oregon was Baker, and the next Grant. Baker County produced about 80 per cent of the metallic output of the State, almost all from the deep mines of the county.

CHARITIES AND CORRECTIONS. The State institutions of charity and correction with their population are as follows:

	Present Sept. 30 1920	Average daily population
Oregon State Hospital.....	1,748	1,786.15
Eastern Oregon State Hospital...	488	501.88
Oregon State Penitentiary.....	268	276.7
State Institution for Feeble-Minded	538	440
Oregon State Training School.....	141	140.5
Oregon State Tuberculosis Hospital	92	80.54
Oregon State School for the Blind..	35	41
Oregon State School for the Deaf..	82	100.07
Oregon State Industrial School for Girls	38	42
Oregon State Soldiers' Home.....	158	130
Total	3,583	3,488.84

All the above are at Salem with the exception of the Eastern Oregon State Hospital, and the Oregon State Soldiers' Home which are at Pendleton and Roseburg, respectively.

ELECTIONS. The vote in the presidential election of 1920 was: Harding (Republican), 143,592; Cox (Democrat), 80,019; Debs (Socialist), 9801; Watkins (Prohibitionist), 3595; Socialist Labor, 1515; as compared with the following vote in the presidential election of 1916: Hughes (Republican), 126,813; Wilson (Democrat), 120,087. The vote for United States Senator was: Stanfield (Republican), 116,696; Chamberlain (Democrat), 100,133; Slaughter

(Socialist), 6949; Hayes (Independent), 4456; Svenson (Independent-Labor), 1782. See EDUCATION IN THE UNITED STATES.

OREGON, UNIVERSITY OF. A co-educational State institution of the higher learning at Eugene, Oregon; founded in 1872. There were 518 students enrolled for the summer session. On the Eugene campus there were 904 men and 784 women enrolled for the regular fall session. In Portland, there were 132 men enrolled in the medical school. There were 123 members in the faculty, including 49 new members. In addition, there were 43 members on the staff of the School of Medicine in Portland. The library contained 100,000 volumes.

The School of Physical Education was organized which included the departments of Physical Education for women, Physical Education for men, Hygiene and Health Service. Dr. John F. Bovard, former head of the department of zoology, was made the dean of the School of Physical Education. After the death of Dr. Kenneth A. J. Mackenzie, the former dean of the Medical School in Portland, Dr. Richard B. Dillehunt was appointed dean. The new building of the School of Medicine was named Mackenzie Hall in honor of the former dean. Colin V. Dymont, former professor of journalism in the University and dean of the School of Journalism in the University of Washington, was appointed dean of the College of Literature, Science, and the Arts, succeeding Dr. John Straub, who remained as Dean of Men. Pre-technical courses were organized whereby the students will receive both the baccalaureate and technical degrees. A committee was appointed on Research. A scholarly series was published and a *Law School Journal*, edited by the staff of the School of Law, was initiated. Prof. William G. Hale, formerly dean of the University of Illinois, was made dean of the Law School, succeeding Dean Hope.

At a special election in May the people of the State voted a new millage tax for the additional support of higher educational institutions. From this tax .5143 mills on an assessed valuation of property in the State of approximately \$1,000,000,000 was appropriated to the University annually, which made a total millage for the University of .8143 mills. Income from fees and other sources made a total income for the University of \$900,000. New buildings: A Woman's Building, devoted largely to Physical Education for Women, was completed. This building cost, including its equipment, about \$300,000, of which \$100,000 was raised by public subscription. Other buildings under construction with approximate costs were as follows: Commerce Building to house School of Commerce, Department of Economics, and School of Sociology, \$100,000; Women's Dormitory, \$90,000; School of Education group, including School of Education, University Model High School, and the High School Gymnasium, \$125,000; School of Music, \$75,000; remodeling old buildings, \$25,000. President, Prince L. Campbell.

ORGANIC CHEMISTRY. See CHEMISTRY, GENERAL PROGRESS OF.

ORNITHOLOGY. See ZOOLOGY.

O'SHEA, LUCIUS TRANT. British chemist, died, April 18. He was professor of applied chemistry in the University of Sheffield, and professor emeritus of metallurgy at King's College, London. He was educated at Owens College, Manchester, and began to teach at Firth College, Sheffield, in 1880, in the department of chemistry.

In 1890 he began a course of lectures on mining chemistry. During the Boer War he commanded a detachment of Royal Engineer Volunteers and received a medal for his services. During the last 15 years of his life he devoted his time largely to the study of explosives and the coking of coal in retort ovens. His publications include: *Elementary Chemistry for Coal Mining Students*; *Retention of Lead by Filter Paper*; and *The Safety of High Explosives*.

OSWALD, ALFREDO. See MUSIC, Artists, Instrumentalists.

PAHANG. See FEDERATED MALAY STATES.

PAINE, JOHN HEBARD. New York newspaper man, died in New York City, October 2. He was born in Cleveland, Ohio, the son of the well-known railway builder and organizer, Charles Paine. In 1896 he joined the staff of the *Evening Sun* in New York. After serving successively on the staff of the *Evening Post* and other periodicals he joined that of the *New York Times* in 1906 and rose to the position of night city editor which he held at the time of his death.

PAINTING AND SCULPTURE. Depression was the key note in the art world during the year 1920, following the termination of the Great War, and the cessation of all artistic activities connected therewith. Dealers and buyers alike experienced this unavoidable reaction, and little was done in the way of spectacular buying or acquisition by private collectors or museums. Because of the unsettled conditions in transportation, paintings and other art objects purchased abroad, have not, generally speaking, been publicly made known. In the United States artists feel financially the need of concerted efforts to stimulate the appreciation of an intelligent and discerning public to the fact that the possession of a good painting, even though modest in size, is a real asset, both culturally and as an investment.

The necrology list of 1920 includes among American artists: Alexander T. Van Laer, well-known landscape painter and art lecturer; William T. Smedley, portrait painter and illustrator; William H. Lippincott, Lawrence Brumidi, and S. Montgomery Roosevelt, portrait painters; Henry Mosler, veteran genre and figure painter; and Robert Bloodgood, one of the oldest living landscape painters. Besides, Charles F. Browne, Charles Shackleton and Anthony Stuffers, landscape painters; Thomas Shields Clark, painter and sculptor; Mathias Sandor, landscape and miniature painter; George E. Bissell and William R. O'Donovan, sculptors. To these must be added the names of Samuel P. Avery, connoisseur and art dealer, well known for his beneficent gifts to Columbia University and the Brooklyn museum; Samuel Colman, artist, connoisseur, and collector; Francis Hatch Kimball, architect; W. H. deB. Nelson, art editor of the *International Studio*; and Samuel Hollyer, veteran line engraver. In Great Britain are noted the deaths of F. J. Williamson, sculptor to the late Queen Victoria, George Woolecroft Rhead, mural and figure painter; Hugh Thomson, illustrator; Andrew Carrick Gow, R. A., figure and historical painter; Briton Riviere, an animal painter of note. Also, Charles H. Mackie, R. S. A., and J. Coutts Michie, Scotch painters. Eminent figures included in the European list are Max Klinger (q.v.), famous German painter, sculptor, and lithographer; Anders Zorn (q.v.), foremost Swedish painter and etcher; Ferdinand Hodler eminent Swiss painter; and Ferdinand

Roybet, well-known French genre painter. Also, William F. G. Pape, German portrait and historical painters; Luc-Olivier Merson, French painter, Friedrich von Ganz, important German art collector; Paul Madeleine, French landscape painter; Francis Michel Tonnetti, Laurent Honore Marqueste, and Jean Baffiere, French sculptors. From Spain is noted Raimundo de Madrazo, portrait painter, and from Italy, Vittore Grubicy and Emile Boggio, painters.

PENNSYLVANIA ACADEMY. At the 115th annual exhibition of the Fine Arts Academy of Pennsylvania, the number of paintings was still further reduced from 400 last year to 360; together with 158 pieces of sculpture. But the smaller number of exhibits did not add to the quality of the exhibition. Few impressive canvases of large size were shown. Among notable figure subjects were "Day and her Sister Night," a two figure composition, careful in drawing and execution, by Philip Hale; "Nelly," an exceedingly fat woman of middle age, by Charles Hawthorne; "The Sisters," a beautiful, tender canvas by the late J. Alden Weir; a large "Family Group" in the characteristic manner of George deForest Brush; Karl Anderson's "Pegasus," a not altogether successful attempt to portray an imaginative subject; and a robust portrayal of an old sea captain by Randall Davey. The "Red Kimona" by Joseph Decamp was awarded the Walter Lippincott Prize. Childe Hassam received the Converse Gold Medal for an engaging "Interior." Some excellent landscapes of straightforward realistic presentation were noted; as "Village and Hills in a Mantle of Snow" by Gardner Symons; "Day Before Christmas" by E. W. Redfield; "Drying Sails" by Hayley Lever; and "Beyond" by Jonas Lie. More poetic in character was "The Lime Quarry" by Paul King. Daniel Garber, Charles Rosen, W. Elmer Schofield, Colin Campbell Cooper, and other equally well known painters were well and adequately represented. A fine strong canvas, "Ice Bound Falls" by Ernest Lawson, won the Temple Gold Medal, and the Sestan Medal went to Mr. Hugh Breckenridge's colorful "Edge of the Woods." A very charming still life, "At the Window," by Mildred Miller received the Mary Smith Prize. The portraits included those of Col. Richard H. Harte, an impressive affair, with emerald green lining to the academic robe, by Leopold Seyffert; "Portrait of a Russian Woman," by Eugene Speicher, awarded the Beck Gold Medal; Prof. J. Jastrow, a forceful presentment by Wayman Adams; and Wm. P. Gest by Wm. M. Paxton. Alice Kent Stoddard, Camelia Whitehurst, Walter MacEwen, Edward Tarbell, S. G. Phillips, Charles Hopkinson, and Adelaide Chase sent portraits of interest. The sculpture exhibit was unusually good, with representative pieces by Sigurd Neandross, (a bust of General Goethals); Laura Gardin Fraser, Dr. Tait McKenzie, Brenda Putnam, Miss Nancy Coonsman, and Malvina Hoffman, who sent a bust of Lieutenant-Colonel Varilla and "The Offering," a bronze group of two adolescent figures skillfully rendered, which received the Widener Gold Medal. Alfred Lenz's "Pavlova" gave the impression of a bird in flight.

NATIONAL ACADEMY, SPRING EXHIBITION. Under far different surroundings than was customary did the National Academy open its 95th annual exhibition this year. Owing to a fire in the Fine Arts building, which rendered it un-

tenable, visitors found themselves traveling many miles to the Brooklyn Institute Museum to view the largest and most representative gathering of paintings and sculpture that the National Academy ever hung. All acceptances were placed, making a total of 634 oils, 77 pieces of sculpture, and 203 black and whites, the latter exhibit being an interesting innovation. Of these 900 exhibits, 681 were by artists not members of the Academy, truly a surprising and bewildering array. Large, well-lit galleries, a uniformly harmonious background, crowded rooms, music, and tea, all contributed to give an unwonted gayety to the opening day. The prize winners were as follows: The first Altman prize to Capt. W. Elmer Schofield for a rushing river scene entitled "Rapids"; the second to "The Green River" by Robert Spencer; the Isaac M. Maynard prize for the best portrait in the exhibition, went to Henry R. Rittenberg for a careful and workmanlike presentation of the well-known painter, Elliott Daingerfield. The first, second, and third Hallgarten prizes were awarded to Armin Hansen's "Boy with Cod"; Kentaro Kato's portrait head of a young woman, and "Gossips" by John Costigan. "Mountain Courtship," a charming bit of genre by James R. Hopkinson, received the Thomas B. Clark Prize, and Anna Hyatt was awarded the Saltus medal of merit for small model of her Joan of Arc statue. Ernest Lawson and Jonas Lie sent typical examples, strong and colorful; while Carl Rungius, Chauncey Ryder, Gardner Symons, Kenneth Frazier, Gifford and Reynolds Beal were well represented. Eric Hudson, Paul King, and George Pearce Ennis sent canvases of especial merit. Daniel Garber, Howard Giles, Emil Carlson, Karl Anderson, E. W. Redfield, Ernest Albert, James Weiland, and Roy Brown are but a few of the successful exhibitors which space prevents recording. Between 30,000 and 40,000 visitors viewed the exhibition, a contrast to the sparse attendance in Manhattan. Unfortunately, the increased attendance did not result in increased sales.

ART INSTITUTE, CHICAGO. "The best exhibit ever presented at the Institute," was the passing verdict on its 33d annual Exhibition of American Art. Fewer paintings were hung, leaving room for more spacious grouping, and the small sculptural exhibit, instead of being in a room by itself, was decoratively arranged in the main galleries. Many rejections were of course necessary when the selection was narrowed down to 180 acceptances and 50 invited paintings. "Torn Lingerie" by Frederick Frieseke, carried off the Potter Palmer Gold Medal and \$1000 prize, the W. M. R. French Gold Medal, and also the Edward M. Butler medal for the most popular painting in the exhibition. A spirited and perhaps necessarily theatrical portrait of Otis Skinner in "The Honor of the Family" by George Luks, was awarded the Logan medal and prize of \$1500. Other prize winners were Louis Betts' dignified portrait of James B. Forgan, and "Midsummer," a rich, glowing landscape by Robert C. Chadayne. The Martin B. Cahn Prize for the best work by a Chicago artist went to Edgar A. Payne for a striking California landscape, "Rugged Slopes and Tamarack." "Down to the Sea," a desolate canvas with figures of fishermen and their wives, by Rockwell Kent, was among the Honorable Mentions. Noteworthy works by Walter Ufer, Ernest Blumenschein, Victor Hig-

gins, all with Indian subjects; Frederick Waugh, Charles Woodbury, with fine marines; Chauncey Ryder, Gardner Symons, Hayley Lever, Granville Smith, Frank V. Dudley, Howard Russell Butler, Frederick Clay Bartlett, and a host of other well known men contributed to the pleasing aspect of the ensemble. Portraits by Charles Hopkinson, Oliver D. Grover, Robert Henri, Leopold Seyffert, Giuseppi Trotta, Mary Prindeville, Margaret Richardson, and Abbot Thayer's "Young Woman in Olive Plush" should also be mentioned. The sculpture exhibit lost much of its individuality when serving as part of the general decorative scheme of the galleries, and most of the pieces were small in size and unexciting. Among those exhibiting were Albert Laessle, Leo Friedlander, and George Loeber.

CARNEGIE INSTITUTE EXHIBITION. After a lapse of five years caused by the war the annual international exhibitions at the Carnegie Institute, Pittsburgh, were resumed this year. Numerically the 19th exhibition was about the same as in former years, but with a larger proportion of foreign exhibits. With a total number of 303 paintings, there were 198 from America, 83 from England, 53 from France, and 167 from remaining European countries. The Honor Room was devoted to 22 works by the eminent French painter, Emile Rene Menard, most of which were large, richly colored canvases embodying classic legends and incidents. The first prize was awarded to Abbot Thayer's "Young Woman in Plush," a fine, full-length portrait study; an English painter, Algernon Talmage, carried off the second with his "By the Cornish Coast," a vivid, sparkling bit of out-door painting; and the third went to Walter Ufer's "Susanna and Her Sisters," three Indian maidens seated at a window amid modern accessories and flooded with sunlight.

Individual canvases such as Zuloaga's characteristic portrait of Mrs. Garret; M. A. J. Bauer, the Dutch painter's "Fakir at the Ganges"; those by Anders Zorn, foremost of Swedish painters; Lucien Simon's "Nausicaa at the Fountain"; and "Basque Gypsies at Supper" by Zubiere, formed vivid points of interest here and there in the spacious galleries. But probably the most striking paintings exhibited were by members of the British School, such as "A Man from Arran," a self portrait by Sir William Orpen; the same artist's full-length, brilliantly handsome, "Mrs. St. George"; and Charles Shannon's "Portrait of Lillah McCarthy, in the character of the Dumb Wife"; "The Walker Brothers" and "Spanish Dancer" by George Coates; "The Toper," a vivid presentment by Frank Brangwyn; Glyn Philpot's large, masterful canvas, "Meeting of Antony and Cleopatra after Actium," and others by Richard Jack, Alfred Minnings, Gerald Moira, E. A. Hornel, and Frederick A. Bosley—all displaying sound technique and individual interpretations.

Many of the paintings by members of the American School had been exhibited during the past four years at other public exhibitions. Among the well-known landscape painters were Charles H. Davis, with his prize winning "Sunny Hillside"; Gardner Symons, Elmer Schofield, Robert Spencer, E. F. Redfield; Willard Metcalf, Francis Murphy, Bruce Crane, Ben Foster, and others of the tonal group; Childe Hassam, with a well-worn subject, "New York Window"; Emil and John Carlsen; and many more, well and adequately represented. The Swedish group in-

cluded Carl Larsson, Julius Olsson, Fjeastad, Osslund, and Boberg. Other French contributors besides those already mentioned were Charles Cottet, Henri Marten, R. X. Privet, Maufra Jacques Blanchet, Amand Jean, Besnard, Le Sidanier, Dauchez, Renoir, and Degas. Characteristic American portraits were shown by George Bellows, Wayman Adams, Henry Rittenberg, Irving Wiles, Malcolm Purcell, Leopold Seyffert, Cecilia Beaux, and others.

SOCIETY OF INDEPENDENT ARTISTS. The fourth annual exhibition of this Society opened with more than 900 paintings in line, arranged alphabetically. According to rule there was an absence of prizes or jury. Many new names appeared, often with intelligent and conscientious work. Well-known artists, who composed the committee in charge, sent noteworthy examples. A fund was created from private generosity to facilitate the membership of deserving artists who were unable to pay the fee. Following, somewhat wearily if conscientiously, the long lines of paintings, double hung, through the various rooms of the Exhibition, the observer halted invariably before a small collection of water color paintings by American Indians from New Mexico and Arizona. On a white ground, in bright, fresh color, each artist had conveyed in a forceful manner, vivid impressions of what had most interested him. With single figures or groups, and no attempt at backgrounds as aids, they showed remarkable interpretative ability.

OTHER EXHIBITIONS. Art exhibitions increase in number and variety each year. Time was when the winter season was supposed to cover all exhibitions of note. Now, the various summer art colonies hold annual, important shows, well worth a journey to enjoy. Of such we mention those of Lynn, Mass., where a new gallery is being erected for this purpose; Newport, Mass., Duxbury, Mass., Provincetown, Mass., Woodstock, N. Y., where exponents of the modern movement and those of the more conservative schools, exhibit amicably under the same roof; Ogonquit, Me., where the ultra-modern foregather; and East Gloucester, Mass. Here is the beautiful little Gallery-on-the-Moors, erected by the generosity of Mr. G. R. Atwood and placed at the free disposal of visiting artists for an annual summer exhibition.

Exhibitions of note by American artists were those of the "New Society of Artists"; the "Allied Artists of America"; the "James Alden Weir Memorial Exhibition" at the Century Club, New York; the "Woman Painters and Sculptors." Besides, an Arthur B. Davies exhibition in the graphic arts; an intimate collection of paintings entitled "Duveneck and His Circle," on view in a New York gallery; and an interesting "Out-Door Sculpture Exhibition" in Rittenhouse Square, Philadelphia. The 50th anniversary of the Metropolitan Museum was celebrated by an exhibition of loans from private collections in the vicinity of New York, interspersed with its permanent collections. The loans were of the most varied nature, including ancient and classical art, arms and armor, musical instruments, Byzantine ivories, tapestries, furniture, sculpture, and especially paintings, both old and modern masters. Together with the museum collections they formed the most important exhibition of art ever held in America.

Exhibitions by European masters in New York included the largest exhibition of Renoir's works

ever held here, and similarly interesting exhibitions of paintings by Gauguin and van Gogh.

Others were by Dedas (charcoals and drawings); C. R. W. Nevinson and Ambrose McEvoy, English painters; Mary Cassatt, and Henri Matisse. An exhibition of paintings by members of the Jury of the French Salon, and another of "Modern French Art," the latter held at the Museum of French Art, complete the list. In Paris an important retrospective exhibition of Matisse awakened much discussion, and the Spanish exhibition of old and contemporary masters, held in London, was of first importance. The International Exhibitions at Venice were resumed.

The winter exhibition of the National Academy was not held this year, and the annual Architectural League exhibit was burned on the eve of opening, entailing much loss of valuable mural and other decorative objects belonging to prospective exhibitors.

MUSEUM ACCESSIONS. The most important accession made by the Metropolitan Museum during the year was the Wm. K. Vanderbilt bequest of 10 paintings including "Lady Guildford," said to be the finest Holbein in America, and the well-known "Noble Slav" by Rembrandt, and two pieces of French 18th century furniture. A large, impressive "Madonna and Child with Saints," by Girolamo dai Libri, in fine state of preservation, and "The Price Family" by Hogarth, were the most important purchases of single paintings. An interesting addition to the decorative arts wing was a complete paneling of a Louis XV room with mantel and mirrors, the gift of J. P. Morgan. The Chicago Art Institute acquired a portrait of Renoir by Albert André, and a complete set of prints, lithographs, and etchings by Odilon Redon. A portrait of Robert Barr by Whistler was purchased by the Detroit Museum and the Brooklyn Institute Museum added a Claude Monet and a portrait by Duvencek to its treasures. Two primitives, Venetian and Spanish, and a magnificent Winslow Homer "The Breaking Wave" were purchased by the Worcester Museum. The National Gallery, Washington, was enriched by the R. C. Johnson Collection of important old masters.

ITEMS OF INTEREST. A memorial relief tablet to J. P. Morgan, the work of Paul Manship, was unveiled at the Metropolitan Museum. At Huntington, Long Island, another museum, the gift of Mrs. August Heckscher, was added to the steadily increasing number in this country. Henry W. Kitson has designed a life-size monument, "The Pilgrim Maiden," to be erected by the National Society of New England Women at Plymouth. The monument for the Americans in the Battle of the Marne, to be erected in France, has been designed by Frederick MacMonnies. Many war memorials are being projected, and the coming year will see their consummation. The restoration by the Germans to Belgium of the missing parts of the famous Ghent altarpiece by the brothers van Eyck, was the cause of much rejoicing and formal celebration at Brussels.

SALES. Few outstanding sales of single canvases were reported during the year, although a number of important private collections were dispersed in France and Germany. In Paris the Collection of Prince Alexis Orloff, with fine examples of early Italian Art, was sold at auction, many examples being bought by American Agents. Other important sales in Paris were

the Willems Collection, and the Beurdeley Collection of old and especially modern paintings. Royal collections of famous porcelains, such as the Meissen ware, were sold at Dresden, and elsewhere in Germany. Reports of the negotiation for a large loan in Belgium on the superb Royal collection of tapestries in Vienna are current. The well-known "Portrait of Eleazar Swalmius" by Rembrandt was sold in Paris to a private collector; and at a Christie sale in London "The Two Philosophers" by the same master, was acquired by a Dutch dealer. In the United States, the McCormick Collection of 18th century English masters, and the Torentino sale of early Italian and French Renaissance paintings and objects of decorative art, were of interest. "The Breaking Wave" and "Surging Surf," two fine examples of Winslow Homer's virile art, were sold by a New York dealer to private collectors for record prices.

PALESTINE. See SYRIA.

PALLES, CHRISTOPHER. Lord Chief Baron of the Court Exchequer in Ireland, died in Dublin, February 14. He was born Dec. 25, 1831, and graduated at Dublin University in 1851. He was called to the bar and practiced in the Court of Chancery. In 1874, he was appointed Chief Baron of the Court of Exchequer and was the last to hold that office. He retired from the bench in 1916. He was prominent in educational affairs and was regarded as a high authority on the common law.

PALMER, A. MITCHELL. Attorney-General in the Wilson Administration and one of the candidates for the presidency in the campaign of 1920, was born at Mooshead, Pa., May 4, 1872, graduated with honors at Swarthmore College, 1891, and was admitted to the bar, 1893. He practiced law and became interested in important financial and commercial institutions at Stroudsburg, Pa., and was member of Congress from Pennsylvania from 1909 to 1915. In his State he made a record for himself by his fight against the former Democratic organization and by his success along with others in turning the Democratic party of the State toward reforms and toward the "dry" programme. In 1912 he was a supporter of Wilson and led the Wilson forces at the Baltimore Convention. He was appointed Judge of the United States Court of Claims in April, 1915, but resigned Sept. 1, 1915. On Oct. 22, 1917, he was appointed Alien Property Custodian under the Trading with the Enemy Act. He acted with great vigor in the interest of this country during the war in respect to the property of Germans and his efficiency in the conduct of the office led to his appointment as Attorney-General on Feb. 27, 1919. During the coal strike he used the injunction against the strikers, but soon afterwards produced a plan for the investigation of the management of mines in respect to the fairness of the profits. The fact that soon afterwards coal production was resumed at increased wages and without increased cost to consumer was laid to the credit of the Attorney-General by his supporters. He was also praised by them for execution of the measures against hoarding and profiteering. He was the most prominent representative in the United States of the policy of repression and deportation pursued during 1919 and 1920, against the radical elements in the country. He quickly became the centre of an enormous mass of controversial printed matter.

PANAMA. A state of Latin America situated between Colombia and Costa Rica; previous to Nov. 3, 1903, a department of Colombia. Capital, Panama.

The area of the eight provinces into which the country is divided is estimated at 33,776 square miles. Population, according to the census of 1920, 401,428. The number of inhabitants by provinces was as follows: Panama, 104,003; Cocle, 47,146; Herrera, 28,737; Los Santos, 34,944; Veraguas, 60,458; Chiriqui, 70,846; Bocas del Toro, 14,408; and Colon, 40,886. In 1911 the population of the republic was 300,564, so the increase in nine years was 100,864. These figures do not include the Canal Zone. Chief towns, Panama, with a population (1917) of 61,369, and Colon with 26,076. The prevailing religion is Catholicism. Education is compulsory between the ages of 7 and 15, and is supported by the state. A new university, the Institute Nacional, has been recently opened.

Gold is the standard of value, and the unit is the balboa, equivalent to the United States dollar. The two-year budget of 1920-21 was estimated as balancing at 7,220,474 balboas. The foreign debt at the beginning of the year according to British sources was £634,000, consisting of bonds issued in the United States for railway construction; and the internal debt, £888,000. In 1920 the department of hacienda and treasury issued a decree providing for the amortization of the internal debt. Presidential decrees of March 11 provided that the annual income from the canal, approximately \$60,000, and the revenue of the constitutional fund, approximately \$1,000,000, be devoted to the cancellation of the debt contracted with the government of the Canal Zone and with the Panama Railroad. This provision was to be effective for one year only.

HISTORY. The president-elect, Señor Belisario Porras (elected August 1st), after a visit to the United States, assumed office, October 1. The first vice-president was Señor Federico Boyd, who was elected September 28th. The new President, after assuming office, appointed his cabinet in which the portfolio of foreign affairs was held by Señor Fabio Arosemena. Plans for road-building in the autumn called for the spending of \$7,000,000 on the making of good roads under the direction of a commission of five members of whom the engineer member was an American. The training college of foreign trade for American exporters was to be opened in January, 1921, under the title of the Pan-American College of Commerce. At the close of the year the President declared that he saved from the grasp of the United States nearly the whole of the island of Tobago, which commands the Pacific entrance to the Panama Canal, but that to judge from the attitude of the American press it would be necessary to remain on the alert in respect to it.

PANAMA CANAL. In 1920 traffic through the Panama Canal continued to increase and for the calendar year, January to December, a high record was scored. Passages were made by 2814 commercial ships, as compared with 2478 during the fiscal year ending June 30, 1920, and 2134 during the calendar year 1919. This was a gain in number of ships of 13.56 per cent over the fiscal year 1920 and 31.87 per cent over the calendar year 1919. The net tonnage of the commercial vessels in the calendar year 1920 aggregated 10,378,265 tons as compared with 8,546,044 net tons in the fiscal year 1920 and 6,919,149 net

tons in the calendar year 1919, or gains of 21.44 per cent, over the fiscal year; and 50 per cent over the calendar year 1919 respectively. The tolls levied during 1920 aggregated \$10,295,329.96, as compared with \$8,513,933.15 in the fiscal year ended June 30, 1920, and \$6,992,218.39 in the calendar year 1919, or a gain of 20.92 per cent over the fiscal year 1920 and 47.24 per cent over the calendar year 1919. The cargo carried by commercial vessels aggregated 11,236,119 long tons in 1920, while that in the fiscal year 1920 was 9,374,499 tons, and in the calendar year 1919 it was 7,468,167 tons. The gain was 19.86 per cent over the fiscal year 1920, and 50.47 per cent over the calendar year 1919.

Considering now the official record of the Panama Canal as contained in the annual report of Brigadier-General Harding, United States army, governor of the Canal, for the fiscal year from July 1, 1919, to June 30, 1920, it was shown that the volume of traffic passing through the Panama Canal exceeded that in any previous 12 month period. The number of commercial ships passing through the canal in the fiscal year 1920 was about two-fifths above the average traffic for the period of canal operation. It was approximately one-sixth greater than the number of ships in the previous record year (1918) and one-fifth greater than the number in the fiscal year 1919.

Of the 2478 commercial ships making the transit in the past fiscal year 1180 were bound from the Atlantic to the Pacific and 1298 from the Pacific to the Atlantic.

The cargo carried through the canal by the commercial ships in the fiscal year 1920 totalled 9,374,499 tons of 2240 pounds. Of these, 4,092,516 tons were bound from the Atlantic to the Pacific and 5,281,983 tons from the Pacific to the Atlantic. The aggregate cargo in the preceding fiscal year carried by commercial ships was 6,877,649 tons.

In addition to the traffic of commercial ships 266 vessels passed through the canal in the service of the United States government, without the payment of tolls. These were practically all army and navy vessels. They carried a total of 365,898 tons of cargo.

The Panama Canal also made new records for revenues and in earnings in excess of expenses of operation and maintenance during the fiscal year. The summation of charges indicated aggregate revenues of \$8,935,871 during the year. On the other hand expenses of operation and maintenance, including a proportion of overhead, in which were the expenses of civil government, hospitals, quarantine and sanitation, the executive department, the accounting department, the Washington office, the operation and repairs of storehouses and quarters, lighting of streets, operation of water and sewer systems and roads, etc., totalled \$6,548,272. This left an excess of \$2,387,599.

Naturally there was no profit in a commercial sense, since there was no consideration of interest charges on the investment or of the depreciation of the plant.

The actual cost of the Canal projects estimated for in 1908 up to June 30, 1920, was figured at \$367,151,696, which may be considered as the capital investment on that date. Including expenditures in previous year, the aggregate of expenditures charged to operation and maintenance of the Canal to June 30, 1920, was \$36,-

657,766. The revenues offsetting this amounted to \$34,426,675, less approximately \$63,533 yet to be refunded on account of erroneous collection of tolls. The recorded deficit in operation and maintenance for the period of Canal operation to June 30, 1920, was therefore \$2,231,091, plus about \$63,533, or approximately \$2,294,624. The differences between revenues and cost of operation for some years past were as follows: 1914, loss \$151,412; 1915, gain \$220,255; 1916, loss \$4,441,207; 1917, loss \$979,648; 1918, gain \$491,500; 1919, gain \$241,822; 1920, gain \$2,387,599.

Tolls constituted about 96 per cent of the revenues. Other items were licenses and taxes, court fees and fines (about \$150,000), and profits on the business operations of the canal adjuncts. The latter item amounted to about \$200,000 for the fiscal year 1920, and was on operations in which the expenditures were over \$14,000,000. For dredging the year's expense was \$1,611,359, an excess of about \$500,000 over the previous year owing to the slides in the Gaillard cut. The report stated that the motion of the slides had been much retarded and that a new period of stability was approaching. Governor Harding predicted that within a reasonable period of normal world conditions the canal would earn an actual profit on its construction cost of \$366,650,000, this sum being exclusive of the expense for military and naval defense.

Shortly after the beginning of the war the canal was opened but travel was several times interrupted by landslides, the last serious one occurring April 15, 1916, after which traffic was hindered by government requisitions, scarcity of fuel, scarcity of vessels, high freights, and financial and industrial uncertainty. In 1919, however, conditions rapidly improved and continued to do so as the figures above indicate. Governor of the Canal Zone in 1920, was Brig.-Gen. Chester Harding.

PAPE, WILLIAM F. G. See PAINTING AND SCULPTURE.

PAPEE. The pulp and paper industry in 1920 showed considerable activity the world over, with special prosperity and high prices for the United States and Canada, but some uncertainty and depression in Europe due to unsettled conditions. In the United States the manufacture of paper had become an industry of great importance and connected with it were many collateral problems ranging from the conservation of the forests from which the wood pulp was derived, down to the widespread dissemination of intelligence in the form of printed matter in economical form. From an annual consumption of three pounds of newsprint paper in 1880 per capita, by 1920 the per capita consumption had increased to 35 pounds per annum, and there were in the United States daily papers with a circulation of over 28,000,000 copies. The available timber in the United States in 1920 was estimated at only about 40 per cent of what it was 100 years previously, and the demand for newsprint and other paper was growing constantly, the year 1920 for example showing an increased output in all lines. This naturally called for increased raw material, particularly wood pulp, and as much of this was imported there was involved the question of tariff duties and commercial relations with other countries; while, as regards domestic manufacture and distribution, trade relations within the United States itself were matters of

government interest in view of repeated demands from consumers, that is the publishers of newspapers both great and small. At the end of the year the United States Tariff Commission in submitting its Fourth Annual Report included a comprehensive wood pulp investigation and survey which analyzed the industry and stated that the serious problems of meeting consumers' needs and avoiding the injurious depletion of the American forests eventually could be solved either by a satisfactory reciprocity agreement with Canada whose wood pulp supplies were far greater than those of the United States, or by reforestation, or by the utilization of the pulp wood forests, or by the discovery of a substitute for wood in the manufacture of paper. One or more of these solutions if satisfactorily developed, might meet the situation, and all were distinctly possible. The report gave a full history of the industry and was of unusual interest.

During the year the Federal Trade Commission issued its usual monthly reports on the condition of the industry dealing with production, shipments, stocks on hand, etc. According to their compilation for the year 1920 the total production of newsprint amounted to 1,511,968 tons, shipments from factories to 1,502,574, and stocks on hand December 31st, to 27,763 tons; as compared with 1,374,517 tons production, 1,378,556 tons shipments and 15,369 tons stock on Dec. 31, 1919. Of these totals standard news was represented by 1,380,239 tons production, 1,373,004 tons shipments, and 19,573 tons stock at end of year in 1920, and 1,227,180 tons production, 1,230,498 tons shipment, and 12,338 tons stocks at Dec. 31, 1919.

The exports of paper and paper products were less in 1920 than in 1919. For the 11 months ended Nov. 30, 1920, they totalled in value \$78,437,710, as compared with \$81,773,863 in 1919, and \$47,989,241 in 1918 for corresponding periods. In 1920 exports of news print for 11 months totalled a value of \$5,523,732 as compared with \$9,717,599 in 1919.

In addition to the statistics compiled by the Federal Trade Commission the production of the larger news print mills in the United States was assembled and analyzed by a trade bureau. The output of news print paper in 1920 reported by 28 United States mills was 1,255,399 tons, or 48,986 tons, nearly 4 per cent, greater than in 1919. The mills had shipments of 1,248,796 tons, or 96.1 per cent of maximum while the production was 98.1 per cent of their maximum capacity. During the year the production of 16 Canadian mills compiled on the same basis was 883,215 tons, 75,709 tons, or 9 per cent, greater than in 1919, which was a production for the year 102.4 per cent of the maximum capacity. The shipments from these Canadian mills aggregated 878,999 or 100.2 per cent of maximum. The total production of the 44 mills in both countries accordingly was 124,695 tons or 6 per cent greater in 1920 than in 1919. There was steady production during the year, declines being noticeable rather towards the close.

As indicating the ability of the United States to develop new sources of wood pulp, it is worthy of record that in December, 1920, the Alaska Pulp and Paper Company was ready to turn out its first pulp from an 18-ton mill in southern Alaska, and that it was proposing to expand to 100 tons capacity in another mill. Naturally there were unlimited supplies of pulp wood im-

mediately available, and the water power from the Speed River amounting to 30,000 or 40,000 horse power, was one of the best in southeastern Alaska. Eventually it was hoped to make paper at these mills and the success of this pioneer experiment would have an important bearing on the pulp and paper industry of the United States.

In July, 1920, the Canadian government abolished government control of the price and distribution of newsprint, though attempts were made to continue or renew such control. These were successfully resisted by the paper interests, which began to have again a free market. In Canada, as well as in the United States, the paper industry has made great strides, and where in 1881 there were but 41 small paper mills with a total wage bill of \$460,000, in 1919 there were 99 large mills with 267,665 employees and a wage bill of \$32,323,000. In 1920 Canada's exports of pulp and paper, mostly to the United States, totalled some \$46,000,000 and formed 10 per cent of the Dominion's exports.

By 1920 the paper and pulp industry in Newfoundland ranked next in importance to fisheries, and the various mills were operating to full capacity during the year. Not much logging had been done in the winter of 1919-20 on account of the severity of the weather, but considerable work was done with the reserve stock accumulated, and in the winter 1920-21 much cutting was to be done. A new pulp mill on the Gander River was under construction by a Norwegian company, but its completion was not looked for until 1921 or 1922. The production statistics for two seasons in Newfoundland are of interest and are given herewith.

Year	Pulp		Paper	
	Tons	Value	Tons	Value
1918-19	11,151	\$475,178	21,819	\$1,545,844
1919-20	19,864	\$84,276	80,719	\$4,725,660

The paper and pulp mills in Sweden suffered a setback during the year and were short of orders. The United States was the only important customer for pulp and the European depression was severely felt. For the year 1920 the sulphite cellulose production was estimated at about 68,000 tons of bleached sulphite and 710,000 tons of unbleached, of which Swedish mills consumed some 23,000 tons of bleached and 160,000 tons of unbleached, while foreign customers near the end of the year had taken 42,000 tons of bleached and 524,000 of unbleached, leaving but a small surplus stock. Of the sulphate cellulose, production of 7000 tons bleached and 210,000 tons unbleached, Sweden took 500 tons and 60,000 tons respectively, and there had been sold 5500 and 143,000 tons, leaving a corresponding small surplus of these products also.

In France on Dec. 3, 1920, the Chamber of Deputies decided that there should be no increase in duties on paper, and while their action was approved by the newspapers and publishers, it was not relished by the paper makers. The duty of 15 or 22½ francs was claimed to be inadequate and not proportionately as advantageous as the 10 or 15 francs prevailing before the war when news print cost but 28 or 30 francs.

In Germany the wood pulp mills in 1920 had reached a production of between 70 per cent and 80 per cent of normal capacity, and the product compared with that of pre-war days. However the export of pulp and paper as in the case of

other commodities, only could be done by government license, and so many uncertainties were involved that foreign customers were as unwilling to purchase as German houses to commit themselves to future business.

The new country of Czecho-Slovakia came into possession of nearly half the pulp and paper mills of former Austria-Hungary and in 1920 was developing the industry. There were some 26,000 persons employed as compared with 17,000 before the war, and 234 Czecho-Slovak concerns were making paper and pulp products. So busily were these engaged that from April 15 to June 30, 1920, paper and pulp products were first among the exports of the country. There were large supplies of wood and conditions favorable for the industry. There were 85 mills engaged in making special grades of paper, 57 making card board, and 76 making pulp, of which 9 made chemical pulp. See FORESTRY.

PAPUA. A territory in the southeastern part of the island of New Guinea (q.v.), formerly known as British New Guinea, and constituting a British colony, but after November, 1905, taken over by the Government of Australia under the name of the Territory of Papua. Included with it are a large number of small islands. Total area, 90,540 square miles of which 87,786 were on the island of New Guinea. Population, estimated June 30, 1919, at 250,000 Papuans, 971 Europeans, and 316 colored other than Papuan. Capital, Port Moresby. The chief agricultural products are coconuts, rubber, sago, and timber. Agriculture has not been developed. On June 30, 1919, 43,560 acres of coconuts were under cultivation and at the same time the total area of plantations was placed at 58,513 acres. There are a number of gold fields in the territory and copper is mined and exported. Recently indications of petroleum have been found over a wide area. The four chief ports of entry are Port Moresby, Samarai, Daru, and Bonagai. Large steamships ply between Port Moresby and Sydney. Financial and commercial figures are as follows according to the *Statesman's Year Book*, of 1920.

Years ended June 30	Local revenue £	Expenditure £	Imports £	Exports £	Tonnage cleared and entered £
1916	49,311	77,913	223,040	125,428	247,887
1917	62,920	88,740	271,640	156,535	231,008
1918	72,594	108,176	283,792	220,599	121,727
1919	73,121	102,962	258,112	176,247	216,341

PARACHUTE RECORDS. See AERONAUTICS.

PARAGUAY. A republic of South America, situated between 20° 16' and 26° 31' south and 54° 37' and 62° west, and between the Paraguay and Alto Parana rivers. Capital, Asuncion.

AREA AND POPULATION, ETC. The area of Paraguay proper is estimated at 65,000 square miles. The so-called Chaco, that is, the region between the rivers Papaguay and Pilcomayo, with an area of over 100,000 square miles is in dispute with Bolivia. Population of Paraguay proper, about 1,000,000 exclusive of Chaco Indians roughly estimated at 50,000. The population is mainly of Guarani Indian stock. Foreigners estimated in 1917 at 60,000, of whom between 20,000 and 30,000 were from Argentina. Asuncion (founded in 1537), is the largest city with a population estimated at 120,000. Others

are Villarrica, with 26,000; Concepcion and Carapegua, with 15,000 each. Roman Catholicism is the state religion. Education is free and, so far as schools are available, compulsory. According to statistics furnished by the directorate general of schools the figures for 1919 were as follows: 1268 public schools and 75 private schools were open during the year. The total attendance of pupils was 82,420. In the government schools were 1810 teachers, of whom 655 were men and 1155 women; there were 141 teachers in the private schools. There were also 6 normal schools with 222 pupils, of whom 68 obtained a master's degree. The university bestows degrees in medicine, law, and the social sciences; its students in 1918 numbered 252. Succeeding paragraphs on production, commerce, etc., contain information supplied in 1920 by the United States Bureau of Foreign and Domestic Commerce.

PRODUCTION. There are rich forest and mineral resources, but they are as yet undeveloped; and oil-producing plants and fibre-producing plants abound. The chief source of wealth at present is the cattle industry. As there has never been a census of live stock made, no definite information as to the number in the country is available, but average estimates give the numbers about as follows: Cattle, 2,500,000; goats, 85,000; hogs, 60,000; horses, 470,000; mules and asses, 40,000; sheep, 600,000.

The live stock generally are of scrub stock, but little effort having been made to improve breeds. The cattle are small and rather thin.

Farming is in a backward state. Farms generally throughout the country consist of patches of a few acres, which are either rented from landlords who live in Asuncion or other towns or are cultivated on the shares. As cost of marketing agricultural products grown in Paraguay is excessively high, because of high transportation expense over the roadless country to Asuncion or other centres where the crops are sold, the farmer finds but little profit or encouragement in growing more than enough to supply the meagre needs of his family. No fertilizers are used. When one tract of land wears out the farmer moves on to another. The ox is the principal draft animal; no large cultivators are in use. Some modern one and two horse plows, harrows, and small cultivators are used, but the tools in common use are primitive and ill-fitted to farming.

The chief crops are yerba maté, oranges, tobacco, sugar cane, mandioca, rice, maize, and cotton, of which the only ones grown in sufficient quantities for export of any importance are yerba maté, oranges, and tobacco. Yerba maté, or Paraguayan tea, is produced from the leaf of the *Ilex paraguayensis*, a small tree indigenous to Paraguay and parts of Brazil and Argentina adjacent to Paraguay. The total estimated production per year is given as about 6,000,000 kilos. The bulk of the exports go to Argentina, where the tea is mixed with the Argentinian production for local consumption or for export from that country under the name "Paraguayan yerba maté." No estimates are available of the production of oranges for any year. All the exports of this crop go to Argentina, but owing to the lack of transportation facilities throughout the country much of the fruit rots on the ground. In 1919, 109,134,650 oranges were exported and 98,659,850 in 1918. Tobacco is one of the chief crops of the country and that on which the small

farmer relies for his chief support. While it is grown successfully in all parts of the country, the region in which it thrives best is the territory surrounding Villarrica, Barrero Grande, Atyra, Tobati, and Villa del Rosario. Both the soil and climate of Paraguay are favorable to the cultivation of tobacco, but as the methods of cultivation, curing, and protecting the plants against insects and unfavorable seasons are poor, the quality is generally of an inferior grade. Mandioca is the diet of everybody in Paraguay. It is a tuber resembling somewhat the sweet potato, and virtually takes the place of both bread and potatoes as a food; it is used also as a starch. It grows everywhere and the yield is great, a hectare of land producing as much as 16,000 kilos; but none is produced for export. Maize, rice, peanuts, a little wheat, and garden vegetables are also grown for local use. See AGRICULTURAL EXPERIMENT STATIONS.

COMMERCE. The total trade of Paraguay for 1919 amounted to 30,652,087 Argentine gold pesos. The imports were 15,835,970 pesos, and the exports 14,816,117 pesos. In 1918 the total trade amounted to 22,451,364 pesos. The imports were 11,051,622 pesos and the exports 11,399,742 pesos. The total value of the import trade and the percentage shared by each country during 1919 are shown in the following table, values being expressed in Argentine gold pesos:

Countries	1919	
	Pesos	Per cent
Argentina	6,772,230	42.8
Brazil	402,867	2.5
England	3,910,767	24.7
France	217,916	1.4
Italy	348,864	2.2
Japan	297,973	1.9
Spain	669,062	4.2
United States	2,713,680	17.2
Uruguay	352,126	2.2
All other countries	150,485	.9
Total	15,835,970	100.0

The following table shows values of exports, destinations, and the percentage going to each country in 1919:

Countries	1919	
	Pesos	Per cent
Argentina	8,291,687	56.0
Spain	1,598,330	10.8
United States	644,182	4.3
France	1,332,405	9.0
Uruguay	834,973	5.7
Italy	209,667	1.4
England	690,821	4.6
All other countries	1,214,052	8.2
Total	14,816,117	100.00

COMMUNICATIONS. The Paraguay Central railway connects Asuncion with Encarnacion on the Alto Paraná, a distance of 234 miles, and at the latter point there is communication by train ferry with the Argentine railway system. In 1920 a branch line was in process of construction from Borja to the Iguazu Falls on the Brazilian border. In 1919 a new line was projected to connect the ports of the upper Paraguay with Montevideo. Vessels entered at the port of Asuncion in 1919 numbered 4385 with a tonnage of 342,681; cleared, 4870, with a tonnage of 367,598.

FINANCE. The budget estimates for 1920, ac-

cording to a British authority were: Revenue, £1,069,530; expenditure, £1,082,846; for 1919, £1,105,911 and £1,071,332, respectively. Outstanding external debt, Jan. 1, 1919, £1,127,357; internal debt, 2,611,940 dollars gold and 36,775,387 dollars paper (exclusive of paper currency placed at 125,000,000 dollars).

GOVERNMENT. Executive power is in a president elected for five years with a cabinet of five members and legislative power in a congress of two houses, viz., a Senate and Chamber of Deputies, both elected by the people. President at the beginning of the year, Dr. Manuel Franco. He was succeeded by Manuel Gondra, elected for the term 1920-24, and inaugurated, August 15. President made up his cabinet as follows: Dr. José Guggiari, Minister of the Interior; Dr. Eusebio Ayala, Minister of Foreign Relations; Col. Chirije, Minister of War; Dr. Eligio Ayala, Minister of the Treasury; Don Rogelio Ibarra, Minister of Justice and Public Instruction.

PARK COLLEGE. A non-sectarian institution of the higher learning at Parkville, Mo., founded in 1875. The enrollment for the fall of 1920 was 431. The faculty numbered 22 with two additions. The productive fund amounted to \$781,472 and the income came to \$154,000. There were 30,000 volumes in the library. A gift of \$55,000 was received from Mr. and Mrs. George A. Lawrence of Galesburgh, Ill. The Department of Instruction increased its teaching staff and there were greater number of practical courses in curriculum. A new building which cost \$150,000 was added, Science Hall. President, Dr. F. W. Hawley.

PARKS, NATIONAL. Tourist travel increased in 1919 and 1920 as shown by the following figures: In 1918, it was 451,691; in 1919, 811,516; and in 1920, 1,058,455. The figures for the last two years, however, included the travelers to national monuments. In 1920 the number of tourists visiting the national parks was 919,504. In view of the increasing interest and importance of the national park system, the attempt of private irrigation and water power interests to get control was matter of serious concern in 1920 as in previous years. Among the various projects which were considered by the authorities as likely to injure the parks and in some instances actually ruin portions of them was the project for a dam at the outlet of Yellowstone Park, and various other projects for the utilization of the water of this and other lakes in the southern part of the park. It was believed that they would seriously damage this portion of the park. There was great danger to the park according to the director's report in the demand for a right of way in the so-called Fall River basin in the southwestern part of the Yellowstone Park. A measure to accede to this demand was before Congress and aroused protests in many quarters interested in the national parks. There was danger also, to the Yosemite Park and to the Sequoia National Park from schemes for reservoirs, aqueducts, etc. Former Secretary Lane had effectively summed up the policy of the National Park service as based on three broad principles: First, that the national parks must be maintained in absolutely unimpaired form for the use of future generations, as well as those of our own time; second, that they are set apart for the use, observation, health, and pleasure of the people; third, that the national

interest must dictate all decisions affecting public or private enterprise in the parks. It was particularly made clear that "every activity of the service is subordinate to the duties imposed upon it to faithfully preserve the parks for posterity in essentially their natural state." "The commercial use of these reservations, except as specially authorized by law, or such as may be incidental to the accommodation and entertainment of visitors, will not be permitted under any circumstances."

The following points in the Director's report for the year ending June 30, 1920 are of especial interest: Every effort was made during the year to improve the condition of wild life in the parks and monuments, to interest the public in this subject, and to promote more careful observation and study of the various species which may be observed under favorable conditions amid natural surroundings. In spite of an unusually dry summer followed by a protracted and severely cold winter in the Rocky Mountain region, losses of big game, except in the case of elk, were surprisingly small. In general, the game did as well as could be expected under existing conditions and was in excellent condition. The slaughter of the northern herd of Yellowstone elk during the Montana "open season" shocked the whole country. Between 6000 and 7000 elk, fearless of man because of the protection afforded by the national park, were forced by heavy snows to cross the park line into Montana to seek natural food in the lower altitudes and were ruthlessly slaughtered by "hunters." Very pertinent was the following quotation from the May-June, 1920, edition of *Natural History*, the journal of the American Museum of Natural History: "It is estimated that the period of the age of mammals as a whole will likely have closed by the middle of this century—that is, in but a paltry 30 years from this year 1920—through immediate destruction by man. What of conservation? Where are our adequate national and State animal preserves?" The importance of the elk herds in the Yellowstone as a source of supply for restocking other regions is demonstrated by a report prepared by the Biological Survey which shows that nearly 75 per cent of the 4000 elk which have been transferred by Federal and State authorities during the last 10 years have been shipped from the Yellowstone National Park.

The formal dedication of the Grand Canyon of the Colorado took place, April 30.

FOREIGN COUNTRIES. After the visit of the King of the Belgians to the Yosemite and the Grand Canyon the Belgian embassy declared that one result of his visit would be the establishment of the first national park in Belgium. The tract selected by the King was known as Herzogenwald, or the Duke's Forest, in the neighborhood of Malmédy, on the Belgian-German frontier, and is the highest spot in Belgium. Australia has long been in the forefront of the national-park movement overseas, and the Australian National Park in the district of Illiwarra in New South Wales, bordering on the Pacific Ocean, has a long-established reputation. Representatives of the government of Spain have in the past been studying American methods of national-park administration with a view to the establishment of national-park areas in that country. Italy had a law in preparation for the formation of a national park in Gran Paradiso,

an area of more than 35,000 hectares, of which 2200 were offered by the King of Italy; it was planned to make this a perpetual wild-game reserve. France has a number of excellent national parks, such as those of Oisans, of Peguere, of Esterel, and the Forest of Fontainebleau. Germany has already expressed keen interest in the national-park movement, and inquiries have been made by the Japanese officials regarding the extent of our national-park development. Switzerland has 1, and Sweden 10 national parks. The Argentine Republic, next to Brazil the largest republic in South America, has a national park of great beauty in the comparatively recently established L'Iguazu National Park. The supreme characteristics of this remarkable national-park area are the waterfalls, the total height of which is 60 meters, and of some double falls 30 meters each; the total length of the cataracts is 4000 meters. Canada's national parks are well known; they constitute one of the greatest assets of her people. Canada has felt that putting money into her national parks has been an investment and not an expenditure. Her national-park bureau was created in 1911, when all the parks, both scenic and historic, were placed under one control. The Canadian park movement resulted first from an endeavor to appraise and then to conserve her natural resources, and secondly from recognition of the need of large recreation areas.

PARSIFAL. See **MUSIC, Opera.**

PARSONS, ALFRED. British landscape painter, died, January 16. He was born at Beckington, England, Dec. 2, 1847, and worked for a time as clerk in the banking department of the post office. After 1867 he devoted himself to painting and became an exhibitor at the Royal Academy and other exhibitions. One of his early successful pictures was "When Nature Painted All Things Gay" (purchased by the Chantrey Fund in 1887). He made illustrations for *Harper's Magazine* and many other publications and coöperated in this work with E. A. Abbey. Among the works illustrated by him may be mentioned: "The Quiet Life"; "Warwickshire Avon"; "The Danube from the Black Forest to the Black Sea" (with F. D. Millet).

PATTERSON, JOHN HENRY. Brigadier-general, United States army, died at Selkirk, N. Y., October 5. He was born in New York City, Feb. 10, 1843, entered the Civil War in 1861 as first lieutenant of New York Volunteers, and distinguished himself in the battle of the Wilderness. He fought throughout the Spanish-American War during which he was raised to the rank of brigadier-general Jan. 18, 1899, retiring in the following month on account of wounds received in the battle of El Caney in Cuba. In 1897 Congress awarded him the medal of honor for his distinguished service in the battle of the Wilderness.

PAVEMENTS. See **ROADS AND PAVEMENTS.**

PEABODY MUSEUM. The field work of the Peabody Museum of Harvard University during 1920 has been confined principally to Arizona and Africa. Mr. S. J. Guernsey conducted explorations in the caves and rock-shelters in the Marsh Pass region of the Southwest, and has secured important collections and data relating to the so-called Basket-makers, who apparently occupied the region before the Cliff-dwellers. Mr. George Schwab, an Associate in Anthropology of the Museum has been carrying on re-

search work among the Camaroon tribes of West Africa, and the Museum has already received a valuable ethnological collection secured by him. Other important collections have been received; perhaps the largest one, composed of several hundred specimens, from the Balkan States and the Near East was presented by Mr. Herbert de Roth. An interesting collection, largely from the Pueblo region of the Southwest was the gift of Mr. Samuel K. Lothrop. The report on the Museum's exploration of the "Indian Village Site and Cemetery near Madisonville, Ohio," has been published. The following papers will soon be issued: "A Maya Grammar," by A. M. Tozzer; "A Possible Solution of the Number Series on Pages 51 to 58 of the Dresden Codex," by C. E. Guthe; and "Basket-maker Caves in North-eastern Arizona," by S. J. Guernsey and A. V. Kidder. Four large exhibition cases have been added during the year for the North American collections. In these have been installed ethnological specimens of interest from the Northwest Coast tribes. Two models of Stonehenge, the most noted of the stone circles of England, have been prepared and placed on exhibition. Director of the Museum, Mr. C. C. Willoughby.

PEAKE, ARCHIBALD HENRY. Australian official, died, April 20. He was born in London in 1859, and was taken to South Australia with his parents in 1862. He was elected to parliament in 1897 and held cabinet positions after 1905. In 1909 he was prime minister, treasurer, and minister of education and he held the same office again in 1912-15; meanwhile in 1909-10 he was prime minister, commissioner of crownlands, and minister of education.

PEARY, ADMIRAL. Discoverer of the North Pole, died at Washington, D. C., February 22. He was born in Pennsylvania, May 6, 1857, and after completing his college course became a land surveyor on the Saco River. Then, after a brief service in the United States Coast and Geodetic Survey, he competed successfully for entry into the corps of civil engineers of the navy, obtaining his commission in 1881. His interest in polar discovery was awakened by Nordenskjöld's book on Greenland and he determined to discover the character of the interior of Greenland. After an expedition in 1886; he was stationed in Philadelphia where he interested the Academy of Natural Sciences in his schemes. Another expedition to Greenland in 1891 brought results that aroused public interest. From 1898 to 1902 occurred the journeys made familiar to the public by the adventures and narrow escapes of Peary and his party. This expedition proved Greenland to be an island and at the same time indicated that it was unsuitable as a starting place for the march to the pole. After some difficulty in obtaining public support, he succeeded in organizing a new expedition in 1905 and set sail in the *Roosevelt*, but although he reached the farthest north, he did not succeed in his purpose. The final expedition started in 1908 and resulted as is well known in the discovery of the Pole on April 6, 1909. The dispute over the question of priority with Dr. Cook was generally decided in scientific circles in Peary's favor.

PELLAGRA. We do not seem to be making much progress in solving the riddle of this chronic and often fatal malady, for every hypothesis, however plausible it may be for the existence of the disease in one country or period, is apt to break down when applied to the disease in some new community. Thus the affection has now invaded California and has attacked people who in theory should have been immune to it. That is, people who are well-to-do and have plenty of food of all classes. Recently numerous experiments in Mississippi and other Southern states on prisoners, the insane in asylums, orphans in institutions, etc., have shown that an unbalanced diet consisting almost wholly of cereals which are usually finely milled will surely produce the affection in a short time, the latter subsiding promptly on changing the diet. But in Roumania, where the disease has always been prevalent off and on, a poor crop of maize which leads to the use of low grade and falsified forms, has as in earlier years been the sole and sufficient cause, thus pointing to the activity of some causal factor not present in good maize, whether something omitted or some poisonous ingredient. In the Southern States the well-to-do victims have been found in some cases to dislike and refuse to eat articles like eggs, meat, and milk, but this does not explain all cases and it is also true that on a full diet recovery does not set in with the promptness and completeness expected. Hence we are forced to conclude that while an insufficient diet, poor perhaps in vitamins, is the strongest kind of a predisposing cause some exciting factor is needed to precipitate the disease. A case has recently appeared in France, near Paris, in a native whose diet was of the type which invites the disease. There should on the dietetic hypothesis have been other cases. During the war there were Italian laborers in the town and the possibility is assumed that the native might have received some infection through the mosquito, as other rare diseases were propagated in similar fashion. In parts of Italy the disease flourishes, but in the present case the home of the Italians was not known, and there was no information as to their health.

PELOUBET, FRANCIS NATHAN. Clergyman and writer; died, March 28. He was widely known as one of the leaders of the Sunday School movement in the United States. He was born in New York City, Dec. 2, 1831; graduated at Williams College in 1853 and at the Bangor (Me.) Theological Seminary in 1857. Ordained to the Congregational ministry, he was pastor in Massachusetts parishes during many years. From 1875 to 1920, he edited *Selected Notes on the International Sunday School Lessons* (44 annual volumes of which more than 2,000,000 had been sold at the time of his death). He wrote a number of works on Bible interpretation and was engaged in the revision of *Smith's Biblical Dictionary*, and the *International Biblical Dictionary*. He published the *Treasury of Biblical Information* (1913); and *Oriental Light* (1914).

PENANG. One of the Straits Settlements (q.v.).

PENFIELD, SMITH NEWELL. American composer, died in New York, January 7. He was born in Oberlin, O., April 4, 1837. From 1882 he lived in New York as organist at various churches. His compositions consist of much

sacred music, some orchestral works and chamber-music.

PENNSYLVANIA. POPULATION. According to the preliminary report of the census of 1920, there were 8,720,017 residents in the State, Jan. 1, 1920, as compared with 7,665,111 in 1910.

AGRICULTURE. According to the census of 1920, the number of farms was 202,256, a falling off of 7.8 per cent since 1910. The following table is compiled from the estimates of the United States Department of Agriculture, covering the years 1919 and 1920:

Crop	Year	Acreage	Produce Bu.	Value
Corn	1920	1,490,000	67,050,000	\$67,050,000
	1919	1,536,000	72,192,000	108,122,000
Buckwheat	1920	232,000	4,176,000	5,011,000
	1919	230,000	4,968,000	6,955,000
Oats	1920	1,175,000	45,825,000	80,244,000
	1919	1,189,000	86,859,000	29,487,000
Wheat	1920	1,524,000	25,284,000	42,983,000
	1919	1,664,000	29,055,000	62,758,000
Rye	1920	166,000	2,656,000	3,718,000
	1919	180,000	2,880,000	4,522,000
Tobacco	1920	40,000	*60,400,000	12,080,000
	1919	41,000	*54,120,000	9,200,000
Hay	1920	2,837,000	*3,970,000	93,190,000
	1919	2,844,000	*4,122,000	98,856,000
Potatoes	1920	317,000	36,455,000	45,204,000
	1919	308,000	30,800,000	47,432,000

* Pounds. * Tons.

ANTHRACITE OPERATIONS. A preliminary statement of the general results of the census of Pennsylvania anthracite operations for 1919 in comparison with that for 1909 issued by the Bureau of the Census showed a decrease in the number of breakers and also in the number of wage earners employed. The number of wage earners decreased from 169,174 to 147,069, or 13 per cent during the decade, 1909 to 1919, while the wages paid showed an increase from \$92,169,906 to \$210,202,511. For operating cost a decided increase was shown. The quantity of coal produced showed but a slight increase over that for 1909, this increase being but 6,302,000 tons, or 8.8 per cent, while the value of the coal produced increased from \$145,881,000 to \$364,243,000. The totals were as follows:

	1919	1909
Number of reporting establishments	1250	1
Number of plants		
Breakers	256	305
Mines	335	1
Culm washeries	79	52
Dredges	81	63
Number of persons employed		
Salaried employees	6,972	4,302
Wage earners	147,069	169,174
Invested capital	\$432,391,597	\$246,713,318
Expenses (selected items)		
Salaries	13,024,557	4,572,489
Wages	210,202,511	92,169,906
Materials and supplies	60,098,707	23,472,809
Fuel	12,334,449	
Power purchased	1,868,915	3,189,279
Contract work	1,582,327	1,701,514
Rent and royalties	11,762,958	7,969,785
Taxes	14,066,012	3,356,809
Production		
Total tons (gross) produced	78,566,868	72,215,273
Value at mines	364,243,423	145,880,526
¹ Number of individual reports furnished by 200 operators.		
² Comparable figures not available.		

FINANCE. The figures for the year ending, Nov. 30, 1920 were as follows: Balance Nov. 30, 1919, \$17,990,712; receipts, corporate taxes, etc., \$62,071,294; proceeds from sale of State Road

Bonds, \$11,800,000; total, \$91,862,006; disbursements, \$74,960,112; balance in Treasury, Nov. 30, 1920, \$16,901,894.

EDUCATION. In 1920 the pupils in the public schools of the State numbered 1,616,387 and the teachers, 44,862. The average salary of teachers was \$107 a month.

ELECTIONS. The vote in the presidential election of 1920 was: Harding (Republican), 1,218,215; Cox (Democrat), 503,202; Debs (Socialist), 70,021; Watkins (Prohibitionist), 42,612; Christensen (Farmer-Labor), 15,642; as compared with the following vote in the presidential election of 1916: Hughes (Republican), 703,734; Wilson (Democrat), 521,784; Benson (Socialist), 42,637; Hanly (Prohibitionist), 28,525. The vote for United States Senator was: Penrose (Republican), 1,067,989; Farrell (Democrat), 484,362; Mrs. Leah C. Marion (Prohibitionist), 132,610; Wilson (Socialist), 67,316; Wheeler (Labor), 27,392; Jennings (Single Tax), 2110.

OFFICERS. Governor, William C. Sproul; Lieutenant-Governor, Edward E. Beidleman; Secretary of the Commonwealth, Cyrus E. Woods; Attorney-General, George E. Alter; Auditor-General, Charles A. Snyder; Treasurer, Harmon M. Kephart; Secretary of Internal Affairs, James F. Woodward; Superintendent of Public Instruction, Thomas E. Finegan; Adjutant-General, Frank D. Beary; Commissioner of Banking, John S. Fisher.

JUDICIARY. Supreme Court: Chief Justice, Robert von Moschizsker; Justices, Robert S. Frazer, Emory A. Walling, Alexander Simpson, Jr., John W. Kephart, Sylvester B. Sadler, William I. Schaffer.

PENNSYLVANIA STATE COLLEGE. A non-sectarian, co-educational institution, at State College, Pa., founded in 1859. The students enrolled for the summer session of 1920 numbered 1340 and for the regular fall session, 3059. There were 518 members in the faculty, including the research and extension staff. The productive funds of the institution amounted to \$500,000 at 6 per cent from the Federal Land Grant Fund. The income for the year was \$1,536,845. There were 75,600 volumes in the library. A new mechanical engineering laboratory was completed, as the first section of a new engineering unit. President, John Martin Thomas, D.D., LL.D.

PENNSYLVANIA, UNIVERSITY OF. A co-educational, non-sectarian institution of the higher learning at Philadelphia, Pa., founded in 1740. The enrollment for the summer session of 1920 was 1281 and for the regular fall session, 11,135. There were 1010 members in the faculty. The productive funds of the University amounted to \$9,035,037 and the income for the year was \$575,161. The library contained 503,572 bound volumes and 50,000 pamphlets. A School of Fine Arts was under construction and the important gifts were: From the estate of William B. Irvine, deceased, \$549,736, for the construction and equipment of an auditorium; the income from the balance for the maintenance of the building; and from the estate of Abraham S. Wolf, deceased, and Miriam H. Wolf, deceased, \$113,518, for the endowment of a ward in the University Hospital, to be maintained for the benefit of persons believed to be incurable. Acting Provost, Josiah H. Penniman, Ph. D., LL.D.

PENSIONS. See OLD AGE PENSIONS; and UNITED STATES.

PERAK. The most northerly of the Federated Malay States (q.v.).

PENTECOST, GEORGE FREDERICK. Clergyman, died, August 7. He was born at Albion, Ill., Sept. 23, 1842; studied at Georgetown University, Ky.; and was chaplain of the Eighth Kentucky cavalry in the Civil War. He officiated in parishes in Indiana, Kentucky, Brooklyn, and Yonkers, N. Y., and from 1914 at Philadelphia. Among his books may be mentioned: *Out of Egypt* (1884); *Bible Studies* (10 volumes, 1880-9); *Birth and Boyhood of Christ* (1896); *Forgiveness of Sins* (1897); *Systematic Beneficence* (1897); and *Precious Truths* (1898).

PENTON, ARTHUR POLE. British general, died August 28. He was born Oct. 6, 1854, and entered the Royal Artillery in 1873. He served with distinction in the Afghan War, 1878-80. From 1896 to 1901 he commanded the defense forces in New Zealand, and from 1912 to 1916 he was in command of the defenses of the southwest coast.

PERABO, ERNST. American pianist, died in West Roxbury, Mass., October 29. He was born in Wiesbaden, Nov. 14, 1845. From 1870-1900 he traveled through the United States as a concert-pianist. After that he lived in Boston, highly esteemed as a teacher. He published a number of compositions for piano and several transcriptions of orchestral works.

PEREZ-GALDOS, BENITO. Spanish novelist, died, January 4. He was born in the Canary Islands in 1845; began the study of law in Madrid in 1863; and was elected to the Royal Spanish Academy in 1899, having meanwhile completed in 1883, a series of 20 stories subsequently published in a collection under the title of *National Episodes*. In this collection he covered events ranging from Spain's struggle for independence in the Napoleonic period down through the return of Ferdinand VII, the Carlist War of 1833-40, the revolution of 1868, etc., to the close of the nineteenth century. The novels are described as remarkable for their fidelity to historical fact. He also ranked high in other fields, including romantic, realistic, and psychological novels. In his voluminous writings he showed revolutionary sympathies and frequently presented the contrast between the unthinking conservatism of Spanish life and modern progressive ideas. His writings in all fields have been widely read. A partial list of them follows: Novels, 1st, 2nd, 3rd, and 4th series. *Episodios nacionales* (1873-1907); *La Fontana de Oro* (1871); *El Audaz*; *Dona Perfecta* (1876); *Gloria* (2 vols.); *Marianela*; *La familia de Leon Roch* (12 vols.); *Sombra*; *La Descheredada* (1881); *El Doctor Centano*; *El Amigo Manso* (1883); *Tormento*; *La de Bringas*; *Lo Prohibido*; *Fortunata y Jacinta* (4 vols., 1887); *Miau*; *La Incognita*; *Realidad*; *Angel Guerra* (3 vols., 1890); *Tristana*; *La Loca de la casa*; *Torquemada*; *Nazarin*; *Halma*; *Misericordia*; *El Abuelo* (1898); *El Caballero Encantado*; *Casandra*; (plays) *Realidad*; *La de San Quintin*; *Los Condamados*; *Voluntad*; *La Fiera*; *Eleotra Mariucha*, *Barbara*; *Amor y Ciencia*; *Pedro Minio*; *Casandra* (drama).

PERKINS, GEORGE WALBRIDGE. American financier, died at Stamford, Conn., June 18. He was born in Chicago in 1862 and was employed by the New York Life Insurance Company at the age of 15. He drew attention by his energy

as an insurance agent and rose rapidly in his business until in 1901 he was chosen as a partner of Mr. Pierpont Morgan. He was one of the leading figures in the Morgan enterprises for nine years. Among his important financial achievements was the aid he rendered in the formation of the United States Steel Company and the Northern Securities Company. He retired from the firm in 1910 with a great fortune. After that he was director of the National Marine Company, and continued as the director or member of a large number of important concerns, including: National Harvester Company; Florida East Coast Railway; Great American Insurance Company; American Alliance Insurance Company, etc. In the Presidential campaign of 1912, he was one of the organizers and leaders of the Progressive party.

PERRIN, BERNADOTTE. Educator, died, August 31. He was born at Goshen, Conn., Sept. 15, 1845; graduated at Yale, 1869, and studied at the universities of Germany. He taught at Yale and at the Hartford High School from 1861 to 1881, when he became professor of Greek at the Western Reserve University, holding that chair until 1893. In that year he was appointed professor of Greek at Yale and from 1901 to 1909 was Lampson professor of Greek literature and history. He then became professor emeritus. He was president of the American Philological Association in 1897. He published many editions of Greek texts, including Homer and Plutarch, and he prepared several volumes of the Loeb Classical library.

PERRINE, ENOCH. University professor, died, April 11. He was born at Hightstown, N. J., Nov. 18, 1853, and graduated at Brown University in 1874. From 1886 to 1902, he was professor of rhetoric, and after 1902, was professor of English language and literature at Bucknell University.

PERRIS, GEORGE HERBERT. British journalist, died in London, December 23. His death followed his attendance as correspondent at the meeting of the League of Nations at Geneva. He was born at Liverpool, England, in 1866, and went into newspaper work in 1883, serving 10 years on the staff of the *Speaker* and eight years as editor of the *Concord*. Other positions held by him were that of editor of the *Tribune* and of the *Daily News*, and, during the late war, correspondent for the London *Daily Chronicle*. This last service was of special importance for he was present at most of the great battles. He was made a Chevalier of the Legion of Honor. After the armistice, he followed the army of occupation to Metz and Strasburg. He visited the United States on lecture tours several times, including a visit in 1919 when he lectured on the war.

PERROCHON, E. See FRENCH LITERATURE.

PERSIA. A monarchy of Asia, reaching from the Gulf of Oman to the Caspian Sea. Capital, Teheran.

AREA AND POPULATION. Estimates of area vary from 628,000 square miles to 635,135 square miles; estimates of population from 8,000,000 to 15,000,000 of whom about 2,500,000 are nomads. The chief cities with their estimated populations are: Teheran, 220,000 to 350,000; Tabriz, 200,000; Meshed, 60,000 to 100,000; Isfahan, 80,000; Kermanshah, 80,000. Of the nomads, 720,000 were Turks; 675,000 Kurds and Leks; 260,000 Arabs; and 234,000 Lurs. Vast

reaches of the country are absolute desert and at a high altitude, in which regions the average density of the population is said not to exceed 15 to the square mile. The central and eastern part is occupied by a salt desert, but in the north and west there are extensive forests. The only navigable river is the Karum. The Persians belong to the Shiite sect of the Mohammedans, the number being placed at about 8,500,000. The priests or ulema are exceedingly powerful and are under the authority of a chief priest, who resides near Bagdad. In 1920 it was reported that the schools numbered about 180 with 10,000 pupils of both sexes. There are numerous colleges supported by the State and a "political college" was opened in 1900 for the preparation of candidates for service in the foreign office.

PRODUCTION. The chief agricultural products are wheat, barley, rice, fruits, gums, drugs, wool, cotton, and silk. Of late years the production of opium and tragacanth has increased. The chief industry is the celebrated carpet industry which is centred at Tabriz, Sultanabad, Hamadan, and Kerman. Wool of a superior quality is raised in Khorassam. There are considerable mineral resources in Kerman and Khorassam, in the regions of the Persian Gulf, on the slope of Elbuz range and in the vicinity of the Isfahan and Nain. They include petroleum, coal, iron, copper, and lead, but development has been retarded on account of the lack of transport. The production of crude petroleum was under the control of an Anglo-Persian company and amounted to 583,200 tons in 1918; 874,000 tons in 1919; and 918,600 tons in 1920. See PETROLEUM.

According to consular reports America continued to be the best market for Persian rugs in 1919. When the restriction on the importation of rugs into the United States went into effect in April, 1918, the price of rugs decreased by at least 25 per cent. Likewise, when the restriction was removed in January, 1919, prices began to rise. By the end of the year the supply of rugs on hand at many places was almost exhausted and dealers reported an ever-increasing demand from the United States. During the year 1919, rugs valued at \$1,557,587 were invoiced at the Teheran consulate for shipment to the United States, as compared with \$390,117 in 1918 and \$875,811 in 1914. According to customs statistics, exports of rugs from the various districts of Persia for the fiscal year ended March 20, 1919, were as follows:

Aragh	\$380,766	Kurdistan	\$13,370
Belouch	4,327	Fars	56,787
Shiraz	148,751	Malayer	18,458
Hamadan	38,633	Teheran	537
Kashan	6,062	Afchar	19,209
Kerman	113,061	Turcoman	457
Kermanshah	10,335		
Khorassan	17,481	Total	\$858,234

COMMERCE. The chief products for export and import are shown in the following table from the *Statesman's Year Book* for 1920, in thousands of krans, in the years 1916-17 and 1917-18 inclusive. The kran equalled about 9 cents.

Imports	1916-17	1917-18	Exports	1916-17	1917-18
	1,000 krans	1,000 krans		1,000 krans	1,000 krans
Cottons	188,370	130,542	Fruits	90,426	48,112
Sugar	81,908	101,055	Carpets	13,471	7,130
Tea	23,141	13,508	Cotton	53,475	24,060
Gold and silver bars	19,011	8,508	Fish	9,870	3,445
Gold and silver coin	11,608	15,294	Rice	63,017	19,699
Petroleum	13,096	16,041	Gold and silver coins	2,186	7,482
Yarn	18,551	12,876	Gums	8,716	5,058
Flour	6,640	4,561	Opium	41,597	44,783
Woolens	2,773	4,411	Wool	19,290	8,098
Indigo and cochineal	4,072	6,112	Cocoons	2,092	265
Haberdashery	5,238	5,351	Skins	8,771	8,270
Rice	10,953	19,045	Animals	16,631	29,098
Spices	2,053	3,471	Silk stuff	3,004	987
Wool	1,869	3,071	Cottons	2,091	2,956
Animals	3,775	6,514	Hides	5,209	3,298
Silk goods	2,883	2,067	Silk	601	827
Tin, zinc, and lead	1,159	869	Wheat and barley	2,694	887
Tobacco	810	404	Pearls and other precious stones	887	1,597
Copper and nickel	309	5,584	Drugs	2,401	577
Iron and steel	2,839	17,814	Timber	692	2,031
Iron and steel manufactures	13,004	3,954	Tobacco	5,356	107,178
Timber	3,759	437	Petroleum	66,740	
Silkworm eggs	835				

The distribution of the foreign trade by countries in 1917-18 is shown in the following table from the *Statesman's Year Book* for 1920:

From or to	Imports 1917-18	Exports 1917-18
	£	£
Afghanistan	245,870	41,910
Germany	870
Austria	1,440
Belgium	3,670
China	38,400	790
Egypt	401,170	983,490
United States	13,850	242,370
British Empire	10,437,900	3,691,310
France and colonies	89,060	1,600
Italy	4,620
Netherlands and colonies	340,000
Russia	3,587,240	5,402,540
Switzerland	900
Turkey	232,800	561,820
Muscat	2,756	2,755
Oman	214,415	382,846

COMMUNICATIONS. Railway development began with the building of a small line six miles in length in the neighborhood of Teheran, which has been in the hands of a Belgian Company. Of late years the Russians built a line from Julfa on the Perso-Russian frontier to Tabriz, opened March 7, 1916. The total length of railway at the beginning of 1920 was placed at about 97 miles. By agreement of Aug. 9, 1919, outlined in the preceding YEAR BOOK, Great Britain and Persia were to cooperate in the development of railways and other means of transport. The only good highways down to 1903 were from Teheran to Kom and from Teheran to Resht, having a length of 91 and 220 miles respectively. Since then highways have been greatly extended and after 1916 many routes were made passable by motor cars. The principal trade routes are by way of Trebizond, Resht, and Meshed, to Russia; Khorassan and Seistan to India; Kermanshad to Bagdad; Bushire to Ispahan; and Teheran and Bender Abbas to the interior.

DEFENSE. By the Anglo-Persian agreement above mentioned it was provided that there should be a uniform military force under British officers. In April, 1920, an Anglo-Persian military commission recommended that the Persian government should assume control over the South Persia Rifles and Cossack Division, and that in the future there should be a military force of 43,000 men, under British officers and staffs until Persian officers should be sufficiently trained. The South Persia Rifles consisted in April of

two brigades under British and Persian officers numbering, respectively, 47 and 190 and with 5400 men (Persians). The Cossack division, was created in 1919 out of the Cossack brigades established under Russia officers before the Bolsheviks came into power. It consisted of 56 Russian officers, 202 Persian officers, and 7856 Persian troops. There is also a police service at the capital consisting of 8400 men.

GOVERNMENT AND HISTORY. Down to 1906, Persia was an absolute monarchy similar in form to that of Turkey. In that year the people having demanded representative institutions an attempt was made to establish a national council or Mejlis, but there followed a long period of disturbances and after many vicissitudes the Mejlis ceased to exist as a law-making body, November, 1915. For an account of the constitutional difficulties see preceding issues of YEAR BOOK. The government is under the Shah of Persia, who in 1920 was the Sultan Ahmed Shah, born Jan. 20, 1898. A cabinet was constituted August, 1917, under the Prime Ministry of Vossough-ed-Dowleh.

At the beginning of the year the Bolsheviks on the Persian frontier were reported to be advancing and threatening Khiva. There were rumors of a large concentration of Bolshevik troops in that region. Early in February it was learned that the Persian government had opened the way to a British syndicate to survey a railway from the starting point of the Mesopotamian line, and work on it was as reported begun soon afterwards. At the beginning of May Bolshevik forces appeared on the frontier between Persia and the Soviet republic of Azerbaijan. They found the way open to an attack on Persia after the revolution in Baku in April, which had brought the Azerbaijan government to their side. Before the end of the month, having seized the Persian port Enzeli on the Caspian Sea, they were threatening to remain in the country. It was believed that Northern Persia was almost at the mercy of the invaders and it was also feared that the Red propaganda had been spread widely throughout Persia. These matters which were reported with various comments in the press led to a demand that the British government should reveal what the Persian situation actually was. See GREAT BRITAIN.

PERU. A republic of South America. Capital, Lima.

AREA AND POPULATION. Area estimated at from 679,600 to 723,461, the latter including the department of Tacna. Population figures have been based on old estimates, no census having been recently taken. In 1920 a new census was projected, but its results were not available at the close of the year. The number of inhabitants has been placed at from 4,500,000 to 4,620,201. Lima had a population according to the census of 1913 of 143,500, but later estimates placed it at over 200,000. Other important cities with estimates of population are: Callao, 34,346, and Arequipa, 35,000 to 40,000. The above estimates of population do not include uncivilized Indians, whose numbers are not known. For details, see preceding **YEAR BOOKS**. The Peruvian government took special measures to encourage immigration in 1919. In 1920 there was a prospect of increased immigration from England and Germany. The following information in respect to education was supplied by the *Pan-American Union* for 1920: In 1919 there were in operation in Peru, under the bureau of public instruction, 2880 primary schools, 29 colleges of secondary instruction, and three normal schools. Of the primary schools 138 were for boys, 134 for girls, and 2608 mixed schools, employing 4284 teachers, and having an average attendance of 195,689 pupils. The school census of the Province of Lima shows 16,275 pupils, of which 9060 are males and 7215 females.

PRODUCTS. The chief product has been sugar. According to Peruvian experts the sugar was richer in Peru than in Cuba, Brazil, or Argentina. In 1919 the exports of sugar amounted to \$40,030,850. Cotton also had a very high reputation in the markets of the world. The rubber industry, formerly important, has latterly declined on account of the competition of Java and Sumatra. According to present indications the important product seems likely to be petroleum, recent investigations indicating a great petroleum deposit in the region watered by the river Madre de Dios and its branches. In 1919 cotton exports amounted to \$33,000,000. Irrigation was much needed in the agricultural region, experts declaring that the cultivatable area could be increased in that manner by 300,000 hectares. In 1918 the mineral production of Peru was valued at 8,324,960 Peruvian pounds, consisting of the following products: Coal, 346,226 tons; petroleum, 335,002 tons; gold, 1793 kilos; silver, 304,255 kilos; copper, 44,414 tons; lead, 632 tons; mercury, 1500 kilos; vanadium, 2183 tons; tungsten, 243 tons; antimony, 323 tons; molybdenum, 4 tons; borates, 523 tons; salt, 26,663 tons; and mineral waters, 128,333 litres.

COMMERCE. The value of the foreign commerce of the republic for 1911-1918 was as follows:

Years	Imports	Exports
1911	\$26,465,224	\$36,119,264
1912	25,015,480	45,871,504
1913	29,631,038	44,409,610
1914	23,495,122	42,668,450
1915	15,064,470	68,729,930
1916	42,256,551	80,497,088
1917	65,711,627	90,728,179
1918	47,229,932	97,196,634

The foreign trade of Peru for the calendar year 1919, reached the unprecedented total of \$190,296,024. The imports were valued at \$59,389,987 and the exports at \$130,906,037. Compared with 1913, the imports doubled and the

exports almost trebled, the increase for 1919 amounting to a fraction over 100 per cent for the imports and 194 per cent for the exports. The imports in 1919 were larger than ever before with the sole exception of 1917, when the receipt of \$13,505,068 in gold bullion and from the United States swelled the total of imports to \$65,711,624. In 1919 the imports of the precious metals (gold bullion) were only \$1,459,809, the imports of merchandise being larger than ever. The principal articles imported were the following, in the order of their importance: Machinery, iron and steel, coal and coke, cotton cloth, wheat, chemicals and medicines, jute fabrics, lumber, agricultural machinery, automobiles, cement, lard, electrical machinery and apparatus, instruments and tools. Manufactured articles represented 47.5 per cent of the total imports of merchandise; foodstuffs and beverages, 16.9 per cent; raw materials, 15.5; live animals, 0.1 per cent. The principal articles exported in 1919 were: Sugar, 599,926,528 pounds, valued at \$40,446,820; cotton, 87,550,742 pounds, value \$33,763,816; copper matte, including matte of copper and silver and of copper and gold, 40,903 metric tons, valued at \$23,422,114; petroleum, 256,327 metric tons, value \$11,291,828. The aggregate value of these four articles in 1919 was \$108,924,578; representing 83.2 per cent of the total value of exports. Compared with 1918 the export value of sugar was nearly doubled in 1919, although the quantity exported had increased only 45 per cent. The exports of sugar in 1918 were 436,489,221 pounds, valued at \$20,257,660, or \$4.64 per 100 pounds. In 1919 sugar was valued at \$6.74 per 100 pounds. Cotton was valued uniformly at 38.6 cents a pound in both years, but the quantity exported in 1919 was much larger. The exports in 1918 had been 47,448,624 pounds, valued at \$18,301,992. Copper matte was the only one of the four leading articles of export that showed a decrease in both quantity and value in 1919 as compared with 1918. The exports in 1918 were 44,251 metric tons, valued at \$28,370,191, or about \$641 per ton. In 1919 the average value per ton declined to \$573. The exports of petroleum increased in both quantity and value. The exports in 1918 had been 182,191 metric tons, valued at \$6,887,961, or about \$37.80 per ton. In 1919 the average value per ton was \$44. In 1918 the exports were valued at \$97,196,635. The exports in 1919 totaled \$130,906,037, showing an increase of \$33,709,402, or 34.7 per cent over the preceding year. This enormous increase is explained partly by the increased demand for raw materials abroad after the war and partly by the fact that by the end of 1918 large quantities of cotton, sugar, and other products contracted for during that year had accumulated in warehouses, owing to lack of tonnage; and could not be exported until 1919.

The foreign trade of Peru for 1918 and 1919, by countries of origin and destination, is shown in the following table. The Peruvian pound was converted at the normal rate of \$4.8665.

Countries	Imports		Exports	
	1918	1919	1918	1919
Europe:				
France	\$656,079	\$744,662	\$66,895	\$1,871,164

Total	\$47,229,935	\$59,389,987	\$97,196,635	\$130,906,087

The predominance of the United States in the foreign trade of Peru is clearly indicated by the table. In 1913 the United States furnished 28.8 per cent of the imports and received 33.2 per cent of the Peruvian exports. Its share in the imports rose to 54.3 per cent in 1918 and 61.9 per cent in 1919, while its share of the exports was about 46.5 per cent in both years. Peru imports a great variety of articles from the United States, the principal imports being machinery and other manufactures of iron and steel, manufactures of cotton, lumber, chemicals, electrical goods, automobiles, meat products, coal and coke, agricultural implements. Copper is the principal product exported to the United States, followed by cotton, wool, india rubber, mineral oils, and sugar. The great demand for Peruvian raw materials during the preceding five or six years gave Peru a large favorable balance and strengthened the position of Peruvian exchange. On Aug. 1, 1919, the Peruvian pound was quoted in New York at \$5.30, and by the end of the year had declined only to \$4.74.

During the first six months of 1920 the total foreign trade of Peru almost equaled that of 1918. The imports from January to July, 1920, were \$35,060,271, and the exports \$100,239,641. This showed a balance of trade in favor of Peru amounting to \$65,179,370.

FINANCE. No later figures covering the entire year were available than those in the preceding YEAR BOOK, which placed the ordinary receipts at £3,972,997 and the extraordinary receipts at £1,196,150; ordinary expenses, £2,680,767; extraordinary, £2,286,570. The standard of currency is the libra which is equivalent to the pound sterling or \$4.8665 in United States money.

GOVERNMENT. Under the new constitution promulgated January 18, the executive power is in the president elected for five years and not eligible for the succeeding term. The legislative power is in a senate of 57 members and a house of representatives of 128 members, the latter being in proportion of one to over 30 inhabitants. The change of importance in the new

constitution, which took the place of the old instrument of 1860, was the attitude toward religion. Peru has been the stronghold of the Roman Catholic church and no other form of religion was permitted by the State. In the new constitution while the Roman Catholic religion remained the religion of the people, the prohibition of public worship of other denominations was repealed. President in 1920, Augusto B. Leguia. As to the disputed provinces, Tacna and Arica, see the article CHILE, and as to the difficulty with Bolivia which arose in 1919-20, over Bolivian claims to a port in the province of Arica, see BOLIVIA.

PETROLEUM. In 1920 petroleum was an important consideration as never before in world affairs. In addition to its relation to industry, technology, and economics it was bulking large in the realm of world politics and was furnishing an element of friction and uncertainty in more than one quarter of the globe. This was due to the general realization that petroleum and petroleum products were essential to all commerce and industry, and that with shrinking supplies in many quarters new fields must be sought. Naturally between the United States and Mexico there was considerable difference of opinion as to the rights and privileges of American oil producers in the latter State, not to mention those of other nations, while the proposed action of Great Britain in regard to restricting the exportation and ownership of oil fields in territory assigned to it by the Supreme Council of the League of Nations, occasioned remonstrances in the United States, where equality of opportunity was urged. This was particularly true in the case of the oil fields in Mesopotamia and brought from the United States government a protest.

However, aside from political considerations the year 1920 was in every way notable in the petroleum industry the world over. The use of oil burning steamships increased, involving not merely current supplies, but also storage for fuel in various foreign ports, of course had its effect. There was the largest consumption and

production of petroleum ever known and prices reached their highest levels from which late in the year they receded. Oil exploration was active in many quarters of the world, though the unsettled conditions in southeastern Europe prevented the fullest exploitation of new as well as established fields. The American petroleum industry absorbed during the year 531,186,000 barrels of crude oil worth probably near \$1,500,000,000 against 430,541,000 barrels of about \$800,000,000 value in 1919. Production of crude oil in the United States in 1920 as shown by the preliminary figures of the United States Geological Survey was 443,402,000 barrels of an estimated value of \$1,360,000,000 in contrast to a production of 377,719,000 barrels valued at \$775,000,000 in 1919. The United States production in 1914 was 265,000,000 barrels, valued at \$214,000,000 and in 1911 220,000,000 barrels having a valuation of \$134,000,000. To make good the deficiency in home production the United States imported from Mexico in 1920 106,163,116 barrels, an increase of 100 per cent compared with similar imports in 1919, 52,751,033 barrels. American exports of mineral oil in 1920 were about 70,000,000 barrels, with a probable value of over \$500,000,000, a new high record which surpassed even the total shipments of the war years.

The total production of petroleum in the United States in 1920 according to the preliminary figures of the United States Geological Survey amounted to 443,402,000 barrels, and represented a gain of 17 per cent as compared with 1919 and 78 per cent as compared with 1913. These figures, representing the quantity of petroleum removed from producing properties, were subject to increase when the amount of oil consumed on the leases was known and after allowance was made for net changes in stocks held by producers on the leases. The 1920 production was valued at \$1,360,000,000 as compared with \$775,000,000 in 1919. Imports of petroleum during 1920 amounted to 106,175,000 barrels, more than double the imports of 1919 and were almost five times greater than the imports in 1913. These figures emphasized the growing dependence of the United States on foreign supplies.

(In barrels of 42 U. S. gallons)		Preliminary, 1920
State		
Oklahoma	105,725,000
California	105,668,000
Texas:

		443,402,000

* Average of figures collected by the Standard Oil Company and the Independent Producers' Agency.

The annual summary of the United States Geological Survey recorded for December a halt to the long-sustained increase in the production of petroleum in the United States, which had been reported monthly throughout the year except for temporary checks in May and September. The daily average production during December amounted to 1,256,806 barrels, a decrease of a little more than 33,000 barrels a day compared with revised figures for November, but more than 200,000 barrels greater than the daily average production for December, 1919. Imports during December, amounting to 12,845,482 barrels, a daily average of 414,370 barrels, decreased almost a million barrels over the imports during November, but increased more than 8½ million barrels as compared with December of the previous year. Consumption of domestic and imported petroleum during December, estimated to have been 47,909,000 barrels, decreased almost 1,000,000 barrels as compared

SUMMARY OF U. S. PRODUCTION BY FIELDS (Barrels of 42 U. S. gallons)

Field	Preliminary, 1920		Preliminary, 1919	
	Total	Daily average	Total	Daily average

PRELIMINARY SUMMARY OF STATISTICS OF CRUDE PETROLEUM FOR 1920

(Department of the Interior, United States Geological Survey. Based on revised monthly reports)

PRODUCTION OF PETROLEUM IN THE UNITED STATES
The following figures show the quantity of petroleum removed from producing properties. Oil consumed on the leases and net changes in producers' storage are not included, except for California; these data are obtained by annual canvases and are comprised in the final statistics of production.

with the figures for November, and stocks increased more than 3,000,000 barrels. A gain of 2½ million barrels was made in stocks of Oklahoma-Kansas-Central & North Texas grade and of more than ¼ million barrels of Gulf Coast grade; smaller gains were recorded for stocks of other domestic grades except California and North Louisiana, there being a loss of 342,000 barrels in stocks of California grade.

In the calendar year 1920 the imports of mineral crude oil into the United States amounted to 106,175,289 barrels, of which Mexico supplied all but 12,173 barrels. This amount can be compared with 53,821,567 barrels imported in 1919 of which all but 70,534 barrels came from Mexico. This Mexican oil to take a single month as an example was divided in November, 1920, as follows: Light Mexican crude oil, 63 per cent; Heavy Mexican crude oil, 22 per cent; Topped Mexican crude oil, 15 per cent. In 1920 the exports of crude mineral oil from the United States amounted to 8,044,907 barrels, of which 6,472,133 went to Canada, as compared with 5,924,320 barrels in 1919, of which Canada took 5,277,568.

The consumption of domestic and imported petroleum during 1920 reached the unprecedented total of 531,186,000 barrels, yet it did not keep pace with the increase in available petroleum, and at the end of the year there was recorded a net increase of stocks of more than 10,000,000 barrels, of which pipe-line and tank-farm stocks of domestic petroleum amounted to 5,823,000 barrels and stocks of Mexican petroleum held in the United States by importers amounted to 4,523,000 barrels. Although for the entire country there was this total increase of stocks for the year, conditions in California were reversed, there being recorded for that State a net decrease in stocks of 8,212,000 barrels.

The following tabulation by the United States Geological Survey epitomizes data relating to crude petroleum for the years 1919 and 1920. The figures refer to barrels of 42 U. S. gallons:

RESUME FOR 1919		RESUME FOR 1920	
	Barrels		Barrels
Production ..	377,719,000	Production ..	443,402,000
Imports *	52,822,000	Imports	106,175,000
Total	430,541,000	Total	549,577,000
Consumption ..	418,777,000	Consumption ..	531,186,000
Exports	5,924,000	Exports	8,045,000
Added to domestic pipe line and tank farm stocks ..	6,140,000	Added to: Domestic pipe line and tank farm stocks	5,823,000
	430,541,000	Mexican stocks held in the U. S. by importers ...	4,523,000

* Revised.

Prepared under the supervision of G. B. Richardson, U. S. Geological Survey.

OIL WELLS. The accompanying well data for the States east of California are based on information supplied to the United States Geological Survey by pipe-line companies. The data are only approximate, because a few pipe-line companies do not maintain lists of wells with which their lines are connected, and the data for these companies have been estimated on the basis of production per well per day. However, it was necessary to estimate less than 10 per cent of the total number of wells.

PRODUCING OIL WELLS IN THE UNITED STATES OCT. 31, 1920		
State	Approximate number of producing oil wells	Approximate production per well per day bbls.
California *	9,490	82.3

* Reported by the Standard Oil Company and the Independent Producers' Agency.

It was estimated that about 36,000 wells were completed as against 28,462 in 1919 and 24,948 in 1918. On the assumption that the average cost for a completed well was \$20,000, the total cost of new drilling of completed wells in 1920 would amount to more than \$700,000,000. Outside of the oil industry the fact was not generally appreciated that 26 per cent of existing production in the United States was from new wells, which meant, at the prevailing rate of output, 120,000,000 barrels a year from new wells. Furthermore, which fact also was not generally understood, the principal supply of petroleum came from thousands of very small producers, the accompanying table showing that 258,600 producing oil wells in the United States had an approximate daily average capacity of 4.9 gallons each.

In order to take care of the increased demand for petroleum products during 1920, refinery construction was extended greatly. There were reported in operation at the end of October, 1920, 332 refineries having almost 1,700,000 barrels daily capacity, an increase of 42 refineries and 350,000 barrels daily capacity, compared with the 1919 showing.

As already stated the price of petroleum reached a maximum in 1920, but in the course of deflation and industrial depression it naturally was not maintained and receded during the year. The accompanying table gives the high price of 1920, the price on Jan. 1, 1920, and at the beginning of 1917:

	High, 1920	Jan. 1, 1920	Jan. 1, 1917
Pennsylvania	\$6.10	\$5.00	\$2.95
Corning	4.25	3.50	2.30
Cabell	4.46	3.42	2.10
Somerset, light	4.50	3.25	2.05
Ragland	2.60	1.75	.95
Lima	3.73	2.98	1.63
Princeton	3.77	3.02	1.67
Illinois	3.77	3.02	1.67
Mid-continent	3.50	2.75	1.69
Healdton	2.75	2.00	.80
Gulf Coast	3.00	1.50	.98
Canada	4.13	3.38	2.08

New Companies and Increase of Capital. It will be quite obvious in order to take care

of the increased demand, production, and distribution of petroleum and petroleum products throughout the United States and to take care of increased exports and imports there were required additional commercial facilities. According to the *Journal of Commerce* (New York), new enterprises in the petroleum industry during 1920 involved the incorporation of 1712 companies with an aggregate authorized capitalization of \$2,786,814,000. The number of companies organized was slightly greater than in the preceding year, when 1629 were launched, but the indicated investment showed a sharp decline, amounting to about \$1,000,000,000.

The monthly average of companies incorporated indicated investment and the indicated investments per company during the periods stated are as follows:

	Monthly	Company
Five months, 1914	\$7,647,400	\$497,000
Year, 1915	6,711,100	410,900
Year, 1916	34,978,800	1,748,000
Year, 1917	70,018,283	1,641,053
Year, 1918	35,873,300	524,900
Year, 1919	315,500,500	2,324,128
Year, 1920	232,234,500	1,627,812

The following table compares the record for 1920 with that for the months of 1919:

1919—	Number	Authorized capital
January	86	\$60,825,000
February	94	51,362,000
March	110	54,005,000
April	121	104,469,000
May	199	202,305,000
June	123	355,390,000
July	161	586,216,000
August	103	173,345,000
September	153	515,510,000
October	157	613,610,000
November	141	490,760,000
December	181	578,209,000
Total	1,629	\$3,786,006,000
1920—		
January	209	\$899,956,000
February	211	165,660,000
March	188	300,295,000
April	199	316,129,700
May	160	200,350,000
June	132	161,275,000
July	133	116,841,000
August	103	118,370,000
September	76	136,100,000
October	115	496,968,000
November	91	266,190,000
December	95	108,680,000
Total	1,712	\$2,786,814,000

In December, 1920, three companies were organized with an authorized capital of \$10,000,000 or greater. In November 6 companies of such proportions were organized, 8 in October, 6 in September, 2 in August, 4 each in July and June, 7 in May, 9 in April, 8 in March, 2 in February, and 7 in January, making the total for the year 66.

Like other industries Petroleum in the United States suffered from financial and industrial conditions and there was decreased activity during the year, not so much in the industry itself, but in the work of development and promotion. In the financial markets, stocks and bonds during the year were subject to the same liquidation which affected other securities. Not only did many newer flotations suffer from overproduction of stocks, but there was liquidation of substantial established issues. As distinct from the organization of new companies an important ten-

dency of the year was the putting out of new securities by the older major companies. For the first time some Standard companies issued bonds and preferred stocks which were disposed of on the general market to the disappointment of many stockholders who had looked for stock distributions. The Standard and other large companies were not forced to undertake such new financing to cover losses, but they were seeking to assemble additional funds for capital which they believed could be employed profitably in providing for expansion, which eventually would result in increased earnings, from which stockholders would benefit.

The discussion of real and alleged monopolies in the petroleum industry in the United States continued during the year, and a public report made to Congress by the Federal Trade Commission stated that the Standard Oil Company, through long time contracts, had a monopoly in the production, transportation and marketing of petroleum and petroleum products throughout the entire Rocky Mountain section.

According to this report "There is greater concentration in the control of production of crude petroleum in the Wyoming oil fields than in any other field in the United States," and it is also declared that the only other crude oil production in the region is the comparatively small production in Colorado.

"The Midwest Refining interests," the report continued, "are controlled by the Standard Oil Company of Indiana through contracts which expire Jan. 1, 1934. Standard companies now control the bulk of the crude petroleum produced in Wyoming. The Ohio company, a Standard company, has the largest owned production in the State, and in addition to this controls considerable quantities through working agreements. Admitted Standard interests and the Ohio company control about 93 to 97 per cent of the total production."

Two standard controlled companies, the Midwest Refining Company and the Illinois Pipe Line Company, were said by the commission to transport from 97 to 98 per cent of all crude petroleum marketed in Wyoming.

Taking up the refining situation, this report stated the Midwest Refining Company, the Utah Refining Company, and other Standard Oil refineries own and operate 90 per cent of the refining capacities operating on crude Wyoming petroleum. In respect to marketing the report asserts that Standard Oil marketing companies bought 90 per cent of the refined petroleum products of Wyoming in 1919.

The report, however, declared that rates filed by the Illinois Pipe Line Company "compare favorably in cheapness with pipe line rates in other fields."

PETROLEUM SPECIFICATIONS REVISED. At the end of the year the United States Bureau of Mines published Bulletin 5 of the committee on standardization of petroleum specifications, which contained in the latest revised form all of the specifications which had been adopted by the specifications committee for Federal purchases of petroleum products. It also gives very complete descriptions of the methods of testing adopted for each product.

These specifications supersede those previously published in Bulletins 1, 2, 3, and 4 of the committee. Bulletin 5 became effective Dec. 29, 1920. The following changes have been made:

The specifications for aviation gasoline were consolidated so that only two grades were specified. A specification for turpentine substitute was added. Burning oil specifications were practically the same as in the previous bulletins, with the addition of prime white kerosene, to be used where a less expensive oil than water white kerosene is suitable. The fuel oil specifications were completely revised and the old gravity specification eliminated. A viscosity requirement was set for each grade of fuel oil and the Saybolt "Furol" Viscosimeter adopted for testing all fuel oils.

Lubricating oil specifications were practically unchanged, but several new grades were added. Chief among these were three grades of recoil oil, the lightest of which was the same as the old specification for hydrolene. An additional grade of Liberty afro oil was specified. Other new specifications were those for transformer oil, car oil, locomotive oil and greases and paraffin wax. The cup grease requirements were modified to permit the use of vegetable oils and fatty acids in their manufacture.

In general the committee accomplished considerable work in revising the wording of these specifications to make them more definite. The methods of testing also were made more definite and brought into closer agreement with standard methods adopted by the American Society for Testing Materials and other societies.

THE MEXICAN PETROLEUM INDUSTRY. The value of the oil industry in Mexico (including physical assets) according to government statistics amounted in 1920 to some \$660,000,000, whereas that of the mining industry totaled only \$400,000,000. Furthermore oil occupied a large share of the exports to the United States and exceeded 100,000,000 barrels in 1920, as compared to 51,000,000 barrels in 1919. In 1920 there were 12 refineries in operation and others under construction, and concessions had been granted for numerous pipe lines, including one to the City of Mexico and one from the Atlantic to the Pacific Ocean across the Isthmus of Tehuantepec.

In addition to this commercial importance petroleum also serves as the principal source of support of the government. A high official of the Department of Commerce and Industry was quoted as saying in 1920 that the potential possibilities of wells then open were over 1,000,000,000 barrels a year, and that, beginning with January, 1921, the government's income from export taxes alone would amount to 15,000,000 pesos (\$7,500,000) monthly. This tax was to be paid by fewer than 30 producing companies. The same authority quoted by the *Engineering and Mining Journal* (New York) estimated there were 160,000,000 acres of known oil-bearing land in Mexico, of which fewer than 400,000 have been "tromped" over.

Any consideration of the oil situation in Mexico inevitably leads to a discussion of both national and international politics as well as economic and industrial relations. (See MEXICO.) Taking a stand on Article 27 of the new national constitution which declared that oil, until it has been brought to the surface, belongs to the government, the Government of Mexico and so-called independent companies sought to maintain their position as against what were known as the "Allied" companies. The latter held that this section of the constitution infringed upon

rights legally acquired previous to its promulgation. The "Allied" concerns include most of the important producers and most of the pioneers in oil development in Mexico. During the year, however, the Aguila Company, a British corporation, and next to the so-called Doheny interests the largest in the Mexican oil fields, besides being one of the earliest explorers, withdrew from the association, and was reported to be in sympathy with the Mexican government's contention.

Notwithstanding uncertain and unsettled conditions there was considerable exploration and preliminary activity during 1920 in Mexico. The tendency was to carry on exploration further to the south and during the last three months of 1920 considerable land was purchased in the states of Tabasco and Chiapas and southern Vera Cruz. Notwithstanding the government's insistence on its ownership of oil, leases for oil rights were being entered into between land owners and representatives of important companies on the ground in considerable numbers and amounts. Such action of course was speculative, for the value of these leases must depend in a large measure on the government receding from its plainly announced position. During the year 1920 there was great activity also in new oil concessions granted by the government, almost exclusively to newcomers in the field, as the older companies largely refused to handle concessions, protesting that they were illegal and in contravention of established rights and interests.

Some of these concessions covered millions of acres, and acting on them considerable development work was begun in Sonora, Lower California, Sinaloa, Guerrero, Puebla, and Oaxaca. British capitalists towards the latter part of the year began borings at Port Angel, on the Pacific Coast, where seepages and other external evidences of oil were abundant, although the territory had been repeatedly rejected by geologists. Considerable activity also was shown in the Mexican states bordering on Texas and Arizona, though no wells actually were brought in.

The Mexican government in 1920 was on record as favoring a broad and liberal interpretation of the law and denied any intention of making the law retroactive, but at the same time it was insisting on its rights of eminent domain and was not showing any disposition to abrogate Article 27 of the new constitution around which so many legal and other disputes centred.

BRITISH PETROLEUM PROGRESS. With the great demand and growing commercial importance of petroleum and petroleum products the world over it was inevitable that during 1920 there should have been a most zealous search for liquid oil in England, both by the Government Petroleum Development managers and by private interests. With but a single producing oil well, the Hardstoft, it was however considered intensely probably that others would produce in the near future. In Derbyshire and North Staffordshire there were several well sinking projects under way, and at the end of the year these were reaching interesting depths. Unavoidable delays had checked progress, but the general position was considered to be satisfactory. It was reported that at Heath, not far from the Hardstoft well, a very encouraging show of oil took place when the bore was down 3940 feet. Later 10 feet more was drilled, and it was expected that at

least some production would be obtained here. The officials of the Petroleum Department naturally regard this Heath show as a hopeful sign of eventual success.

British private enterprise was active in the search for liquid oil and several licenses to drill were issued. The first license granted was to Oilfields of England, in order that this company's property in the neighborhood of Kelham might be commercially exploited. The first well was down over 1200 feet, and by the end of the year there had been nothing to mar the hopes of the company as to the striking of oil at between 2000 feet and 3000 feet.

FRENCH OIL ACTIVITY. Under the provisions of decree issued during 1920 the *Compagnie Française des Transports de Mazouts et Pétroles* of Paris received permission to construct a pipe line between Havre and Paris, approximately 125 miles in length for conveying petroleum oils. This step was taken in view of the increased use of crude oil as fuel due to the coal shortage and the difficulties involved in the transportation of petroleum from the receiving tanks on the coast to the industrial centres in the interior. This concession permitted the use of public roads for the new pipe line, and provided that it must have a minimum capacity of 2400 metric tons of oil daily with reservoirs at each end capable of holding at least 6000 tons. Furthermore the plans must be approved by the Ministry of Public Works and one year after such approval the pipe line must be completed. A maximum rate of 46 francs per ton of oil was stipulated subject to readjustment by the ministry and the life of the concession was fixed at 50 years. The headquarters of the company must be in France for the duration of the concession, and the chief officers as well as at least half of the other administrators must be of French nationality. French materials only must be used unless it is impossible to secure them at reasonable prices and terms of delivery.

The general draft of a bill establishing a petroleum monopoly, on which M. Laurent Eynac, Commissioner for Liquid Fuel, was engaged was ready at the end of the year to be submitted to the approval of the cabinet. The bill, it was stated, would provide that the purchase and importation of refined oils and petroleum spirits should be the exclusive privilege of the state, and that permission to import raw oils should be subject to authorization by the proper authorities. A special license would be required for the exercise of internal trade and the refining industry. The prices to be paid to the state for oil and oil spirit concessions as well as the sale prices were to be fixed by the Ministry of Finance in agreement with the Ministry for Public Works.

ROUMANIA. In 1920 it was estimated that the Roumanian oil field was furnishing an average production of oil during the year amounting to 2200 tons per day. This was much less than the production before the war as the average yield in 1913 was 5237 tons per day, or about 500 tank cars, as compared to the 1920 output of 275 tank cars. The 1920 production was in fact less than that of either 1918 or 1919, and the quantity of oil and its byproducts available for export was reported low.

Furthermore there was a decline from the 1919 output at least for the first half of 1920 when about 215,000 tons of oil was produced in the Roumanian oil field, or about 50,000 tons less

than in the corresponding period for 1919. The Pratrova district was stated to be the main producer, leading with 166,000 tons. Damboritz produced 27,000 tons, Buzen 10,500, and Bacan 10,600. Labor troubles naturally reduced production. A five years' concession was granted by the Ministry of Industry and Commerce in June to a private Roumanian company, the *Industria Rumana de Petrol*, for the distribution of oil products.

BULGARIA. As a result of political uncertainty practically no oil was produced in 1920 as most of the oil companies operating in the country were anxious to secure confirmation by the Hellenic government of their titles to oil lands in Thrace.

OIL IN THE NEAR EAST. To this region the eyes of oil producers and exporters were turned in 1920 and commercial and political developments were closely watched when not actually encouraged or participated in. There was not merely the question of production and in this connection it was stated that the opening up of fresh supplies had fallen far below the ever-growing demands of the many great industries which depend on oil situated in eastern Europe and Asia and Africa. Typical of this situation was the constantly increasing use of oil in Egypt. At Port Said and Suez the number of ships in transit fitted with combustion engines in 1920 was observed to be rapidly growing, and naturally along with this went a corresponding decrease of those using bunker coal. The fuel shortage was so serious during 1920 in Egypt that the Anglo-Egyptian Oilfields Company was actively engaged in exploration work at various sites while production was maintained at the oil wells at Gemsah and Hasgada, on the Red Sea.

MESOPOTAMIA. The Anglo-Persian Oil Corporation of London, which had been engaged in refining oil at Mohammerat, in Persia, obtained certain rights and concessions for oil developments in Mesopotamia from the Turks which had been recognized by the present British authorities though little work apparently had been done in this region up to the end of the year. An oil refinery was in construction on the Tigris, 10 miles north of Bagdad, and it was stated that crude oil would be brought there from the Persian fields to be refined for the Bagdad market. See ALASKA.

PETTEE, JAMES HORACE. Missionary, died February 17. He was for many years missionary to Japan. He was born at Manchester, N. H., July 16, 1851; graduated at Dartmouth College, 1851, and at Andover Theological Seminary in 1877. Ordained the following year to the Congregational ministry, he proceeded at once to Japan as a missionary and was engaged in that field during the rest of his life. After 1915, he was president of the Japan Society for Christian Endeavor. Meanwhile, he had written extensively on Japanese subjects for the press and was after 1880 Japanese correspondent for the *Congregationalist* and the *Christian World* at Boston. He also wrote *A Chapter of Missionary History in Modern Japan* (1894).

PFEFFER, WILHELM. German botanist, died at Leipzig, January 31. For many years he drew to his lectures as large a number of foreign students including Americans as any other German professor of botany, especially in the field of plant physiology, of which science in its present form he was the founder along with

Sachs. He was born, March 9, 1845, the son of an apothecary, and studied at the universities of Göttingen, Marburg, Berlin, and Würzburg. He taught first at Marburg, then at Bonn and Basel, and from 1878 to 1887 at Tübingen. He then became a professor at Leipzig where he remained for the rest of his life. At the last-named university, he began his laboratory work in plant physiology. Aside from his important work in botany, he carried on investigations in osmosis which were of fundamental value to physical chemistry. He was the friend and neighbor for many years of Professor Ostwald. His list of publications is too long for repetition here. It began with papers in plant geography and plant embryology and contained monographs which have been read by students all over the world. The preparation of a jubilee volume in honor of his 70th birthday and the 50th year of his scientific work began in 1914, but it was completed on a smaller scale than originally planned, on account of the war.

PHILADELPHIA, PA. See GARBAGE; and MUNICIPAL GOVERNMENT.

PHILADELPHIA SYMPHONY ORCHESTRA. See MUSIC, *Orchestras* and *Novelties*.

PHILBIN, EUGENE. Judge, died, March 14. He was born in New York City, July 24, 1857, and studied at Roman Catholic colleges and at Columbia University. After 1886, when he was admitted to the bar, he practiced in New York. He was district attorney of the county from December, 1900 to January, 1901. In 1913 he became Justice of the Supreme Court of New York. He was prominent in Roman Catholic circles and in charity administration. In politics he was a Democrat.

PHILIPPINES. AREA AND POPULATION. The area of the islands is placed at 114,420 square miles. The last official census previous to 1920 was that of 1903 and was only an uncertain estimate. It placed the population at 7,625,426. A new census was being taken in 1920 for the date, Dec. 31, 1918, and preliminary figures were available in 1920. According to these the total population at the end of 1918 was 10,350,640, distributed among different nationalities as follows: Filipinos, 9,429,857; Chinese, 45,156; Japanese, 6684; Americans, 6405; Spaniards, 4015; English, 1063; Swiss, 451; Germans, 312; French, 218; and other nationalities, 1111. The following table gives the population of the city of Manila and the three main provinces; also its density per square mile:

Provinces	Area in sq. miles	Total population	Popula- tion per sq. mile
Manila	14	283,613	20,258
Cebu	1,667	857,410	459
Pangasinan	1,944	567,644	292
Iloilo	2,040	508,272	249

EDUCATION. The year 1919 was marked by a large increase in enrollment and in attendance. Compared with the figures for the school year 1918-19, there was an increase of 749 in the number of primary schools and an increase of 111 in the number of intermediate schools. There was no increase in the number of secondary schools, because no funds were available for that purpose. In 1919, as shown by the December statistics, there was an increase over the previous year of 104,560 pupils in the elementary grades, and of 307 pupils in the secondary grades. The total

annual enrollment of pupils in the public schools for the period June, 1919, to December, 1919, was 776,596. There is an intense interest among the masses of the people in the island in the public schools. A very widespread appreciation of the advantages of education exists, and is no less marked among illiterate parents than in any other class of society. The children themselves are quiet, orderly, and docile, learn rapidly, and seem much attached to the schools.

AGRICULTURE. The year 1919 was one of great prosperity in agriculture, in spite of droughts, floods, typhoons, and rinderpest, owing to the high prices for staple products. In value, the crops were far greater than ever before, being 458,000,000 pesos for the year ending June 30, 1919, as compared with 350,000,000 pesos for 1918 and 180,000,000 pesos for 1916. Of this sum, the rice crop accounted for 188,000,000 pesos and for the first time cocoanuts displaced abaca (hemp) in second place, amounting to 75,000,000 pesos, which was an increase of 77 per cent, and 206 per cent more than in 1914, and yet only 57 per cent of the coconut trees already planted are in maturity and in bearing. Sugar products came to 74,000,000 pesos, and hemp to 65,000,000 pesos, a decrease of 11 per cent in yield and 30 per cent in value for the year. Corn increased in yield to 37,000,000 pesos, being a rise of 102 per cent in value, and tobacco decreased in yield by 8 per cent but rose in value 14 per cent to 17,000,000 pesos.

COMMERCE. For the first time since 1913 the balance of trade was against the islands at the close of the year 1919. This amounted to 11,042,452 pesos. There was also a slight decrease in the volume of foreign trade. The imports amounted only to 237,278,104 pesos, while the exports amounted to 226,235,652, making a total volume of trade of only 463,513,756 pesos, which, compared with that of the previous year, which was 467,587,387 pesos, shows a decrease of 4,073,631 pesos, or about 1 per cent. This decrease in the volume of foreign trade was due mainly to the reduction of the importation of cotton goods from 58,016,844 pesos in 1918 to 38,644,173 pesos in 1919; of rice from 16,433,585 pesos in 1918 to 8,817,362 pesos in 1919; and to the reduction of exports of hemp from 116,383,100 pesos in 1918 to 53,703,052 pesos in 1919; of copra from 10,377,020 pesos in 1918 to 8,839,376 pesos in 1919; and of sugar from 31,608,780 pesos in 1918 to 30,415,701 pesos in 1919. The greatest decrease was suffered by hemp and was due to the paralysis of the fibre market of the United States. The decrease in the export of copra is explained by the fact that much copra was crushed into oil by the mills there. While on the whole the foreign trade for 1919 was not very favorable, the islands were able to maintain some of the usual exports on their former level and to increase considerably the volume of the new ones. The exportation of coconut oil rose from 63,328,317 pesos in 1918 to 73,719,504 pesos in 1919; while that of tobacco soared from 27,169,826 pesos in 1918 to 31,390,084 pesos in 1919. The new exports—copra meal, embroidery, pearl buttons, sapan wood, shells, hats—increased respectively from 7255 pesos, 4,319,504 pesos, 181,330 pesos, 60,504 pesos, 556,994 pesos, 1,183,446 pesos in 1918 to 2,173,471 pesos, 6,913,001 pesos, 231,811 pesos, 111,484 pesos, 603,175 pesos, and 1,470,026 pesos in 1919. The general decrease in the volume of our foreign trade naturally affected trade

with the United States. The volume of trade with that country for the year under review amounted to only 264,288,113 pesos as against 295,943,059 pesos of the previous year, or a reduction of 31,654,846 pesos. The following table shows trade by countries in the calendar year 1919 in pesos:

with an aggregate net tonnage of 1,711,981 entered from foreign ports, as compared with 652 in 1918, 652 in 1917, and 705 in 1916, with an average net tonnage of 1,412,871, 1,456,163, and 1,559,346, respectively. The number cleared for foreign ports during the year is 719, with an aggregate net tonnage of 1,705,869. This was

	Imports	Per cent of total imports	Exports	Per cent of total exports	Total trade	Per cent of total trade
1. United States	150,982,829	68.68	113,305,384	50.08	264,288,213	57.02
Hawaii	4,057,758	1.71	526,437	.28	4,584,195	.99
Guam	14,848	.01	183,286	.08	198,134	.04
2. Japan	23,218,231	9.78	14,066,855	6.22	37,285,086	8.04
3. United Kingdom	5,081,506	2.14	32,029,743	14.16	37,111,249	8.01
4. China	14,810,425	6.08	7,574,430	3.35	21,884,855	4.72
5. Netherlands	209,245	.09	17,003,786	7.52	17,213,031	3.71
6. Hongkong	486,550	.20	14,396,440	6.36	14,882,990	3.21
7. France	8,170,845	1.34	8,252,958	3.65	11,423,798	2.46
8. Australasia	9,055,765	3.82	1,613,089	.71	10,668,854	2.80
9. French East Indies	8,028,757	3.38	2,427,675	1.07	10,456,432	2.26
10. Spain	1,872,254	.79	7,855,881	3.47	9,728,135	2.10
11. Dutch East Indies	7,690,649	3.24	551,379	.24	8,242,028	1.76
12. British East Indies	3,994,714	1.68	3,597,878	1.59	7,592,592	1.64
13. Siam	2,495,633	1.05	141,834	.06	2,637,467	.57
14. Switzerland	1,266,707	.53	81,213	.04	1,347,920	.30
15. Belgium	113	915,277	.41	915,390	.20
16. Germany	733,882	.31	733,882	.16
17. Canada	51,426	.02	430,013	.19	481,439	.10
18. Japanese China	188,711	.08	247,020	.11	435,731	.09
19. Italy	111,050	.05	226,054	.10	337,104	.07
20. British Africa	138,868	.06	7,094	145,457	.03
21. Norway	36,810	.02	800	37,610	.01
22. Denmark	36,667	.02	36,667	.01
23. Austria-Hungary	891	891
24. Sweden	11	11
25. Other countries	43,964	.02	801,131	.36	845,095	.18
Total	237,278,104	100.00	226,235,652	100.00	463,513,756	100.00

As will be seen from the above the total value of the imports for the year was 237,278,104 pesos, which was 40,079,681 pesos over that of the previous year, or an increase of 20.3 per cent. This was the largest on record in the history of the islands' importations. The principal products concerned in the increase were iron and steel and manufactures of the same, mineral oil, meat and dairy products, automobiles and parts thereof, wheat flour, coal, paper and manufactures of paper, leather and manufactures of leather, and other articles; while the importations of cotton and manufactures of cotton, as well as rice, showed a considerable decline. The chief exports in 1919 were cocoanut oil, hemp, tobacco, and sugar.

As was the case in 1918, in the year under review American vessels carried the greatest proportion of the Philippine trade, to say nothing of the fact that the trade carried by these vessels exceeded that carried by them during the previous year. British vessels ranked next in furnishing space to external commerce, likewise recording an increase over that for the year 1918. Japanese vessels occupied the third place in the carrying trade, further going on record as marking a decrease in their carrying capacity compared with their record of the previous year. Philippine vessels were in the fourth place on the list, making a slight progress in the trade by carrying more than 1,000,000 pesos' worth of our foreign trade over that reported for 1918. The volume of foreign trade carried by Philippine vessels had been increasing since 1916, notwithstanding the fact that there were but few vessels of Philippine registry engaged in the foreign trade. The number of vessels engaged in the foreign trade calling at Philippine ports of entry during 1919 was greater than that of the three preceding years. A total of 740 vessels

less than the number entered, owing to the fact that some of the latter had been registered for the coastwise trade.

HEALTH AND SANITATION. While the ravages of influenza in other oriental countries in recent years made the losses from the disease in the islands seem small, it is possible that the after-effects of this disease weakened the constitution of the inhabitants of these islands, for serious epidemics of cholera, smallpox, and dysentery occurred during the year. Smallpox, which seemed practically eliminated from the Philippines, broke out in 1918 in Manila and the provinces and assumed the proportions of an epidemic in the first half of 1919; during the 12 months there were 65,123 cases of smallpox in the archipelago, with 44,367 deaths, of which only 39 were in the city of Manila. The effects of the general vaccination of 1905 seemed to have worn off, and revaccination was undertaken, 360,712 vaccinated in Manila and approximately 7,500,000 in all. For the first time in the history of the serum section of the Bureau of Science, it was possible to meet the full demand for vaccine without delay; the output was more than doubled. Cholera also took a turn for the worse, with 24,337 cases in the islands and 17,261 deaths, of which 107 were in Manila. Another water-borne disease, dysentery, apparently endemic in all tropical countries, became epidemic in 1919, with 59,854 cases and 17,598 deaths, of which there were 414 in Manila. The only certain preventive measure against the outbreak of cholera and dysentery was the constantly increasing number of pure-water systems established in the towns, and the artesian wells, bored by the Bureau of Public Works; of these artesian wells, 176 were drilled in 1919, and only 13 of these were unsuccessful—a record year; there are in all 1568 of these wells now in operation,

an average of two to each of the 873 municipalities of the islands. The number of deaths recorded for the year 1919 is 328,226, with a rate of 34.26, as against 329,671 with a rate of 45.17 for 1903.

As a result of much activity devoted to the organization into sanitary divisions of all the provinces of Luzon and the Visayas which had not as yet been so organized, the provinces of Bataan, Cavite, Laguna, Samar, Sorsogon, and Ambos Camarines effected their sanitary organizations during the year, leaving Romblon alone unorganized on account of lack of funds. There were at the close of the year 36 health districts, each under the direct supervision and control of a district health officer. The services rendered by women's clubs and infant welfare institutions were of inestimable value to the country for the protection of early infancy. In the division of Mindanao and Sulu unregistered midwives received instructions from the district health officers, presidents of sanitary divisions, nurses, and midwives. The inspections made and instructions given with reference to sanitation and hygiene as well as the care of infants by members of these charitable institutions, together with the distribution of pamphlets and the giving of public lectures in even remote barrios, were important factors in the reduction of infant mortality in the Philippine Islands. Almost all the public and the private schools in the provinces were inspected, not only to examine the physical condition of the pupils, but also to improve the sanitary conditions.

FINANCE. The following table shows the balance, income, and expenditures in pesos during the years 1916-18, inclusive:

	Balance	Income	Expenditure
1916 . . .	10,234,116.77	45,704,855.69	40,906,813.13
1917 . . .	15,032,159.33	54,781,241.44	45,408,717.74
1918 . . .	24,404,683.03	68,690,105.13	57,496,043.63
1919 . . .	35,598,744.53	79,686,923.20	86,742,589.38

The increase in revenue was due principally to the receipts from operation of commercial and industrial units of the government, license and business taxes, larger earnings of the banks, revenue collected from the increased production of cigars and cigarettes, and increased imports of petroleum and gasoline and tax on income. In the operation of commercial and industrial units, there was a notable decrease of 1,844,148.64 pesos on account of the operation of chartered vessels. The budget system established in 1917 was recognized as efficient for the better understanding and more detailed analysis of the finances of the country as it makes public the financial condition of the government and brings about a coordination of and effects an economy in government expenditures. The system was adopted conditionally, with the object of observing its operation. The results of the trial had been found so excellent, it was believed that the time had come to adopt the system permanently by an act of the Legislature.

Governor-General in 1920, Francis Burton Harrison. See ANTHROPOLOGY.

PHILLIPS, FRANCIS CLIFFORD. Chemist, died, February 16. He had been a professor of chemistry at the University of Pittsburgh for 40 years, known especially for his work in the chemistry of natural gas. He was born at Philadelphia, Pa., April 2, 1850, studied at the University of Pennsylvania, and from 1875 to the

time of his death was professor of chemistry in the Western University of Pennsylvania, now the University of Pittsburgh. He retired from active service in the university in 1915 and was thereafter engaged in research. During the late war he made investigations in connection with the gas warfare service. He published in 1904 *The Methods of Analysis of Ores, Pig-Iron, and Steel used by the Chemists in the Pittsburgh Region*, and in 1903 a text-book on *Chemical German*. He left two uncompleted books on the *Life and Work of Joseph Priestley* and *Qualitative Gas Reactions*.

PHILLIPSBURG, N. J. See SEWERAGE AND SEWAGE PURIFICATION.

PHILLIPS UNIVERSITY, A non-sectarian, co-educational institution at East Enid, Okla., founded in 1907. The enrollment for 1920 was 1102. There were 52 members on the faculty. The productive endowment amounted to \$254,870. President, Isaac Newton McCash, LL.D.

PHILOLOGY, CLASSICAL. The conditions in the foreign book trade are still such that it is impossible to present anything more than a very fragmentary view of European publications in the field of classical philology. Thanks to the cost of paper and the rise in wages, prices of books published in England are, to the individual scholar, virtually prohibitive. For German books importing booksellers in this country will quote no prices prior to delivery. Even book-sellers in Germany decline to quote prices, or else, in the effort to offset the low exchange value of the mark and the high government export tax, quote enormous prices, exceeding those of the days before the Great War; charges for "packing and carriage" are extra. Foreign books reach this country only after long delays. Libraries, too, suffer from these conditions. Hence, this article will deal primarily with American work, then, to a less extent, with English work, and, finally, in very cursory fashion, with the work of other European scholars. It will include some things published in 1919, though it has not been thought worth while to use space by indicating this fact in each case. It has not been possible to see all the books listed; in such cases reliance has been placed on notices of them in reputable periodicals, or on signed reviews by competent scholars.

To the *Loeb Classical Library* (see YEAR BOOKS, for 1911-19) were added, on the Greek side, translations of Plutarch, *Lives* (the eighth and ninth of 11 volumes); by B. Perrin; Homer, *Odyssey* (the second and concluding volume); Thucydides (the first two of four volumes), by C. F. Smith; on the Latin side, Fronto, (two volumes), by C. R. Haines; Martial (two volumes), by W. C. A. Ker; Seneca, *Epistulae Morales* (the second of three volumes), by R. M. Gummere. For notices of these and other translations, not easy to enumerate, see "Recent Translations of the Classics (Especially in the Loeb Classical Library)," by C. Knapp, in *The Classical Weekly*, xiii.

It will be worth while to indicate the extent to which American scholars have participated in this Library: Aeschines, *Speeches*, C. D. Adams; Appian, *Roman History* (four volumes), Horace White; Boethius, E. K. Rand (with an English scholar, H. F. Stewart); Cicero, *De Officiis*, W. Miller; Dio Cassius (six volumes), E. Cary; Homer, *Odyssey* (two volumes), A. T.

Murray; Horace, *Odes and Epodes*, C. E. Bennett; Emperor Julian, *Works* (two volumes), Wilmer Cave Wright (Mrs. Wright); Livy (one volume), B. O. Foster; Lucian (two volumes), A. M. Harmon; Ovid, *Heroides and Amores*, G. Showerman; Ovid, *Metamorphoses* (two volumes), F. J. Miller; Plato (one volume), H. N. Fowler; Plautus (two volumes), P. Nixon; Plutarch, *Lives* (nine volumes), B. Perrin; Procopius (two volumes), H. B. Dewing; Seneca, *Epistulae Morales* (two volumes), R. M. Gummere; Seneca, *Tragoediae* (two volumes), F. J. Miller; Strabo, *Geography* (one volume), H. L. Jones; Suetonius (two volumes), J. C. Rolfe; Thucydides (two volumes), C. F. Smith; Vergil (two volumes), H. R. Fairclough; Xenophon, *Cyropaldia* (two volumes), W. Miller; Xenophon, *Hellenica* (one volume), C. L. Brownson.

In the *American Journal of Philology*, xl, 4-xli, were published "The Theory of the Homeric Caesura According to the Extant Remains of the Ancient Doctrine," S. E. Bassett (the author holds that caesura was not recognized in the classical period of Greek literature; caesura is a purely metrical matter; it does not mean a pause, either in rhythm or in sense. It is merely the conflict between the end of a word and the end of a foot); "Verbals in -tor, -ax, -dus, and -na," E. W. Nichols (an investigation of such words in Plautus, exclusive of the fragments); "Cicero and the *Poetae Novi*," T. Frank (the author maintains that the young men who gathered about Curio in politics, and the *poetae novi*, chief among whom were Calvus and Catullus, were closely associated with Cicero from 59 B. C. till the death of the most important among them); "The Literary Tradition of Gyges and Candaules," K. F. Smith (supplementing a paper in *American Journal of Philology*, xxiii, in which he reconstructed the plot of this popular tale, the author now studies the most notable feature of the later tradition of the tale, the increasing predominance in it of the two versions of the story given by Herodotus and Plato); "Why were the Jews Banished from Italy in 19 A. D.?", W. A. Heidel; "A Pun in the *Rhetoric* of Aristotle," L. Cooper; "Tacitus and Tiberius," G. A. Harter (the author holds that an unfavorable opinion of the character of Tiberius was current, independently of Tacitus; the latter made use of it, but did not create it); "Unlisted Fragments of Aeschylus," H. W. Smyth (a collection, with comments, of fragments of Aeschylus that have come to light since 1889); "Epicurean Determinism in the Aeneid," T. Frank (the author seeks to show that there is no proof in *Aeneid*, vi, that Vergil had abandoned his early adherence to Epicureanism; the semi-Stoic coloring of the book was used for artistic purposes); "Notes on the Text of Asclepiodotus," W. A. Oldfather; "Quintilian of Calagurris: An Essay," E. G. Sihler; "Names of Stinging, Gnawing, and Rending Animals, Parts I and II," F. A. Wood; "The Lover's Blindness," M. B. Ogle (the earliest examples of the satire on the lover's blindness are in Plato and Theocritus; in both writers the influence of the mime bulks large. Treatments of the matter by Cicero, Ovid, and various modern poets are considered); "Aphrodite: Mother Earth," W. S. Fox; "The Paracausithyron as a Literary Theme," H. V. Canter (a study, pursued through classical comedy, elegy, epigram, and lyric, of the *exclusus amator*); "The Arrow of Accetes," N. W. DeWitt

(the author argues that the games in *Aeneid*, v, are not funeral games; rather through them Vergil is trying to throw back into remote antiquity the popular associations at Rome of the goddess Fortuna with Caesar, as well as with the Roman State; the book deals also, he believes, with the reconciliation of Aeneas with his father's shade, a reconciliation that paves the way for the revelation which comes to Aeneas, in *Aeneid*, vi, through his interview with the shade of his father).

The following reviews in these volumes may be mentioned: of B. P. Grenfell and A. S. Hunt, *Oxyrhynchus Papyri*, Part XIII, by W. N. Bates; of H. A. Hoffman, *Everyday Greek—Greek Words in English, Including Scientific Terms*, by C. W. E. Miller; of J. Carcopino, *Virgile et les Origines d'Ostie*, by Lillie R. Taylor.

In these volumes are to be found also summaries of foreign classical periodicals: of *Philologus*, lxxv, 1-4 (1919), by G. D. Kellogg; of *Revue de Philologie*, xlii, 1-4, xliii, 1-2 (1918-19), by W. P. Mustard; of *Hermes*, liv, 1-4 (1919), by H. L. Ebeling; of *Rivista di Filologia*, xlviii (1919), by W. P. Mustard; of *Rheinisches Museum*, lxii, 3-4, by C. W. E. Miller.

From *Classical Philology*, xv, we mention the following articles: "The Importance of Hellenism from the Point of View of Indic-Philology. II," W. E. Clark; "Vergil's Apprenticeship, I, II," T. Frank (a study of the *Appendix Vergiliana*, the group of minor poems attributed by ancient tradition to Vergil's youth; Professor Frank shares the growing confidence of critics that most of these were in fact written by Vergil in his youth; he believes that we may use these poems in tracing the growth of Vergil's poetic powers. See below, in the account of *Harvard Studies in Classical Philology*, notice of an article by E. K. Rand. On the other side, note an article by W. R. Hardie, in *The Classical Review*; see below. Note also remarks by C. Knapp, *The Classical Weekly*, xiii, 145.); "A Semantic Note," C. D. Buck (a study of certain Greek words, and of the many sources of the notions 'forget,' 'die,' 'kill'); "The Sycophant-Parasite," J. O. Lofberg (a study of this character in the Greek New Comedy, in Plautus and Terence); "The Book Divisions of Thucydides," R. J. Bonner (the author rejects the view that Thucydides i-v. 26, the account of the Archidamian War, was published as a separate entity); "The 'Undated Lands' in Ptolemaic and Roman Egypt," W. L. Westermann; "Satire as Popular Philosophy," C. W. Mendell (a study of the *Satires* of Horace); "Mutiny in the Roman Army. The Republic," W. S. Messer; "The Elogium Duilianum," E. W. Fay (a criticism of a paper by T. Frank, in *Classical Philology*, xiv, "The Columna Rostrata of C. Duilius," outlined in the YEAR BOOK for 1919. The author agrees with Professor Frank in believing that the Duilius inscription was restored by an imperial commission, under Tiberius, but differs from him in holding that the inscription is a forgery); "Hittite an Indo-European Language?", C. D. Buck (an examination of the view, confidently set forth, in 1915 and 1917, by the Austrian scholar Hrozny, that this question should be answered in the affirmative. Professor Buck declares that the evidence in favor of this view is not even remotely comparable to that which we have in the case of "Tocharian" or "Kuchean," a language of Chinese Turkestan, which is held to

belong to the Indo-European family, though not to the Indo-Iranian branch; on the other hand, the evidence in the case of Hittite is vastly stronger than in the case of a number of languages—e.g. Lycian, Lydian, Eteocretan—whose Indo-European affinity various scholars assert); "Forerunners of Romance Adverbial Suffix," E. S. McCartney (a study of the use of various Latin nouns in the construction known as the ablative of manner, that is virtually as adverbs; these usages gave rise to adverbial suffixes like French *-ment*, Italian and Spanish *-mente*); "Inorganic Roles in Roman Comedy," H. W. Prescott (an argument that the general features of the technique illustrated by the employment of such rôles are Greek rather than Roman; they are found in tragedy, too); "Arrian's *Anabasis* and Book XVII of Diodorus," R. B. Steele; "Posidonius and the Sources of Pythagorean Arithmology," F. E. Robbins (in opposition to certain German scholars the author holds that, though it can be shown that Posidonius was interested in Pythagorean arithmology, and may have influenced some lines of its tradition, it cannot be proven that he was the author of any part of the general source of Theon, Anatolius, Philo, etc.); "Augustus' War in Spain (26-25 B. C.)," D. Magie; "Martial and Formal Literary Criticism," K. Preston; "Studies in the Iguvine Tables," R. G. Kent; "*Ethiologia* or *Aetiologia* in Suetonius De Grammaticis c. 4, and Quintilian i. 9," R. P. Robinson (the author, who is preparing a critical edition of Suetonius, *De Grammaticis et Rhetoribus*, decides for the reading *aetiologia*).

Important reviews in this volume are those of H. J. Edwards, translation of Caesar, *The Gallic War*, in the *Loeb Classical Library*, and of W. S. Teuffel, *Geschichte der Römischen Literatur*, vol. I, sixth edition, by C. H. Beeson; of A. E. Phoutrides, translation of *Kostas Palamas: Life Immovable. First Part*, by F. B. Hellems (the reviewer sees in Palamas a poet of high order, and finds the translation satisfactory); of J. T. Sheppard, *The Oedipus Tyrannus of Sophocles, Translated and Explained*, and of A. Rostagni, *Giuliano l'Apostata*, by P. Shorey.

From *The Classical Journal*, xv-xvi, we name "The Attitude of Ancient Rome Toward Religion and Religious Cults," E. T. Merrill; "The Primitive Roman Household," N. W. DeWitt; "How and Why: 'Just So' Mythology in Ovid's *Metamorphoses*," E. S. McCartney; "Literary Adaptations and References in Petronius," R. B. Steele; "The Reasons Which have Convinced Me of Homeric Unity," J. A. Scott; "The Non-Virgilian Aeneas," E. T. Sage (a study of ancient impressions of Aeneas in writers other than Vergil, and of some reactions of Vergil's hero upon later readers); "Is the *Octavia* a Play of Seneca?" A. S. Pease; "The Past Decade of Pompeian Studies," A. W. Van Buren; "Some Features of Ovid's Style: II. The Dramatic Element in the *Metamorphoses*," F. J. Miller; "Quintilian, the Schoolmaster," G. J. Laing; "The Place of Sulpicius Severus in Miracle-Literature," K. P. Harrington; "The Human Element," H. M. Kingery (deals largely with Cicero); "Some Phases of Negation in Latin," R. B. Steele; "Notes on the 'Cum'-Construction," H. C. Nutting; "Cicero as a Hellenist," H. S. Scribner; "Archaeological Research in Greece in Relation to Classical Philology, 1869-1919," H. N. Fowler; "Roman Women and the Vote," H. W. Flannery.

Reviews in these volumes to be named are those of C. H. Herford, *The Poetry of Lucretius*, by G. D. Hadzsits; of W. W. Fowler, *Roman Essays and Interpretations*, by A. W. Van Buren; of Innocenze Dall' Osse, *Guida Illustrata del Museo Nazionale di Ancona*, and of R. Paribeni, *Le Terme di Diocleziano e il Museo Nazionale Romano*, by E. Douglas Van Buren (Mrs. A. W. Van Buren).

In *The Classical Weekly*, xiii-xiv, appeared the following articles: "Analysis of Horace, *Sermones* 2.3," C. Knapp; "The Accusative of Specification in Latin," W. H. Kirk; "Tasso's Debt to Vergil," W. P. Mustard; "Modern Antiquities," Ethel H. Brewster (a study of the extent to which things often regarded as distinctly modern were anticipated in ancient days); "Caesar, Cicero, and Pompey," G. Lodge; "A Classification of the Similes in Homer," Eliza G. Wilkins; "A Roman 'Hall of Fame,'" S. A. Hurlbut (a suggestive study of Horace, *Carmina* 4.8, and Aeneid 6.752-860, which brings both passages into connection with the great series of statues of Roman heroes which, according to Suetonius, Augustus erected in his splendid Forum); "Hastings's Encyclopaedia of Religion and Ethics," Grace H. Goodale (a list, with comments, of the articles in this work, volumes i-ix, of interest to the student of the classics); "The Senatus Consultum Ultimum," E. T. Sage (a new study of the famous decree of Oct. 21, 63 B. C., by which the Senate put absolute power into the hands of the consuls; the author in particular seeks to explain why Cicero hesitated to avail himself of this authority against Catiline); "Studies in the Catilinarian Orations," C. Knapp (an examination of the light thrown by these orations on Roman private life); "On an Alleged Inconsistency in the Aeneid (Between 2.781 and Book 3)," E. Adelaide Hahn; "Marginalia from Vergil," E. S. McCartney; "Arma Virumque Cano," P. H. Edwards (a study of a certain use of the accusative, in Latin poetry and in English poetry); "The Lonely Word in Vergil," A. L. Keith (a study of passages which perhaps illustrate Tennyson's line about Vergil, "All the charm of all the Muses often flowering in a lonely word"); "Anthropology and the Classics," H. L. Ebeling; "The Love of Nature in Vergil. I," C. Knapp; "The Italic Languages," E. H. Sturtevant (an excellent account of the various forms of the Italic languages current in ancient Italy).

Important reviews in these two volumes are the following: of Mary Emma Armstrong, *The Significance of Certain Colors in Roman Ritual*, by G. D. Hadzsits; of M. Platnauer, *The Life and Reign of the Emperor Lucius Septimius Severus*, by A. E. R. Boak; of W. T. Rowland, *On the Position in the Clause of Ne and Ut in Certain Documents of Colloquial Latin*, by A. L. Wheeler; of C. H. Herford, *The Poetry of Lucretius*, by R. B. English; of *Recent Translations of the Classics (Especially in the Loeb Classical Library)*, by C. Knapp; of W. E. Leonard, *T. Lucretius Carus, Of the Nature of Things: A Metrical Translation*, by R. B. English; of A. F. Geyser, *Musa Americana: Second Series; Home Songs in Latin Set to Popular Melodies* by G. D. Kellogg; of J. E. Sandys, *Latin Epigraphy: An Introduction to the Study of Latin Inscriptions*, by C. Knapp; of G. Ferrero and C. Barbagallo, *A Short History of Rome*, by G. A. Harter; of Elizabeth Nitchie, *Vergil and the English Poets*, by M. B. Ogle; of A. F. Geyser, *Musa Americana: Third*

Series; Latin Odes in Classic Meters, by G. D. Kellogg.

The *Transactions of the American Philological Association*. (vol. 1) had a special interest, because it was connected with the celebration, one year late, on account of the Great War, of the fiftieth anniversary of the Association, at the University of Pittsburgh, in December, 1919. Four papers in the volume bore directly on the celebration: "A History of the American Philological Association," F. G. Moore; "Fifty Years of Classical Studies in America," P. Shorey; "Fifty Years of Comparative Philology in America," M. Bloomfield; "The Philological Association of the Pacific Coast," J. Elmore (this Association is affiliated with the American Philological Association). Five other papers deal with the fourth century A.D.: "The Latin Language in the Fourth Century," R. G. Kent; "The Church in the Fourth Century," E. T. Merrill; "The Pagan Reaction in the Late Fourth Century," C. H. Moore; "Claudian," J. C. Rolfe; "The Attitude of Jerome Towards Pagan Literature," A. S. Pease. Other papers are: "The Publication of Martial's Poems," E. T. Sage; "Oral and Written Pleading in Athenian Courts," G. M. Calhoun. Each volume of the *Transactions* contains a bibliographical record of the work done by members of the Association, as complete as the data furnished by the members will allow; the record in the volume before us covers 10 pages.

As in the *YEAR BOOK for 1917-1919*, attention is called to the fact that in the *Bulletins* or *Studies* published under the auspices of various Universities papers appear that fall in the field of classical philology. It is difficult to keep abreast of such work, since the *Bulletins* and *Studies* are published irregularly; some aid may be got here from the department of *The Classical Weekly* which is known as "Classical Articles in Non-Classical Periodicals."

In *Studies in Philology*, xvii (University of North Carolina) appeared "A Thirteenth-Century Fragment of Justinian's Digest," G. H. Harrer and J. S. Moffatt, Jr.; "The Present Status of the Satura Question," B. L. Ullman; "Marginalia," J. C. Rolfe (notes on Juvenal, Horace, Suetonius, etc.; especially interesting is a group of notes on Latin nautical terms); "An Applied Literature," G. Howe (the author remarks that the Romans held prose—history, biography, letters, jurisprudence, manuals—in greater esteem than verse. The outstanding characteristics of Latin literature are its practical nature and its devotion to the service of the State; in this sense Latin is an applied literature); "Spenser and Lucretius," E. Greenlaw (the author holds that Spenser knew the *De Rerum Natura* of Lucretius not merely as a body of great poetry, "but as a source of philosophy which he annexed as a province of his mind").

In the *University of California Publications in Classical Philology*, v, vii, several papers appeared: "The Greek Theater of the Fifth Century Before Christ," J. T. Allen; "Notes on the *Silvae* of Statius, Book IV," W. A. Merrill; "Solon, The Athenian," I. M. Linforth. The last named monograph falls into two parts: a biography of Solon, and an edition of the fragments of his poems. Nine Appendices deal with various special points in Solon's life. For a review of this book, by W. S. Ferguson, see *The Classical Weekly*, xiv.

Two volumes, xxx-xxxi, of *Harvard Studies in*

Classical Philology, claim attention. From the former we mention: "Collations of the Manuscripts of Aristophanes' *Vespae*," J. W. White and E. Cary; "Imperial Coronation Ceremonies of the Fifth and Sixth Centuries," A. E. R. Boak; "The Rhetorical Structure of the *Encomia* of Claudius Claudian," L. B. Struthers; "The Decree-Seller in the *Birds*, and the Professional Politicians at Athens," C. N. Jackson; "Young Vergil's Poetry," E. K. Rand (Professor Rand adds his weighty support to those who hold that most, if not all, of the pieces in the Appendix Vergiliana were written by Vergil. See above, in the account of *Classical Philology*, xv, the notice of the paper by T. Frank, "Vergil's Apprenticeship. I, II"). In the other volume are four papers: "The Religious Background of the Prometheus Vinculus," J. A. K. Thomson (an English scholar, who lectured at Harvard University in 1919-1920); "Τατερονπρότερον Ὀμηρικόν," S. E. Bassett (an investigation suggested by Cicero's use, in his letter *Ad Atticum* 1.16.1, of the Greek phrase which forms the title of the paper: the author believes that Cicero had in mind a kind of hysteron proteron in Homer by which a person questioned answers the questions in reverse order); "The Spirit of Comedy in Plato," W. C. Greene; "Ithaca: A Study of the Homeric Evidence," F. Brewster. Mr. Brewster thinks it not unlikely that poems which gave stories of trading or viking cruises were known to Homer, and were used by him. Such stories may well have described, correctly, sea-routes used by the early Greeks, and harbors of the west coast of Greece; from them Homer may have drawn his description, in Iliad, Book ix, of Ithaca. All the evidence, Mr. Brewster holds, points to the historic Ithaca as the home of Odysseus.

At the University of Pennsylvania, in each academic year, a free public lecture is given each week by a member of the faculty. These lectures are then gathered into a volume. The six volumes thus far published contain classical papers as follows: "Vergil and the Bay of Naples," "Martial, His Fools and Rogues," W. B. McDaniel; "Some Public and Private Sources of Income in Ancient Rome," "A Friend of Caesar's" (a study of Sallust), J. C. Rolfe; "The Spell of Aristotle," W. R. Newbold; "In the Land of Pelops," "The Quest of Health in Ancient Greece," "Aristophanes and the Great War," H. L. Crosby; "The Origin of the Greek Alphabet," W. N. Bates; "The Roman Emperor Worship," G. D. Hadzsits; "Propertius," H. B. Van Deventer; "Atoms, Old and New," H. C. Richards; "The Great National Rising of the Native Egyptians Against the Ptolemaic Dynasty," W. Max Muller; "The Struggle for Democracy in Ancient Times," A. J. Carnoy (a Belgian scholar, who lectured for a year or two at the University of Pennsylvania).

Smith College Classical Studies, No. 1, is a monograph entitled "Hellenistic Influence on the Aeneid," by Eleanor S. Duckett. The author holds that, in writing the Aeneid, Vergil had so many sources of inspiration and so many powers of poetic expression at his command, and had so marvelously welded them together that nothing Hellenistic jars upon us as we read the Aeneid, or can be separated from the whole.

In *Smith College Studies in History*, iv, appeared "A Study of the Life of the Emperor

Hadrian Prior to his Accession," by W. D. Gray.

In the *Transactions of the Connecticut Academy of Arts and Sciences*, xxiii, H. M. Hubbell published an extensive monograph, "Rhetorica of Philodemus," with translation and commentary.

Three volumes of the *Memoirs of the American Academy in Rome* have been published. It will be recalled that into the Academy the American School of Classical Studies at Rome was merged some years ago. In vol. i we find "The Reorganization of the Roman Priesthood at the Beginning of the Republic," J. B. Carter; "The Vatican Livy and the Script of Tours," E. K. Rand and G. Howe (in opposition to the views of F. W. Shipley, the authors hold that the Codex Reginensis of Livy represents only an early stage of the script of Tours); "Ancient Granulated Jewellery of the Seventh Century B.C. and Earlier," C. D. Curtis; "Capita Desecta and Marble Coiffures," J. R. Crawford (the author seeks to refute an explanation of certain segmented heads seen in many Museums; he holds that the coiffures are entirely distinct from the heads, and should not be included with them, as is commonly done. He suggests, too, that Greek and Roman sculptors were more ready than is usually admitted to employ more than one block in the making of a marble head). Vol. ii contains, besides other things, "The Gallic Fire and Roman Archives," Lucy G. Roberts (the author holds that certain temples at Rome survived the fire of B.C. 387, and that the Gauls showed more regard for temples and archives than has been generally supposed. If so, it may be necessary to revise current views of Roman history and Roman literature); "Studies in the Archaeology of the Forum at Pompeii," A. W. Van Buren (a very important paper, correcting and expanding our knowledge); "Terracotta Arulae," E. Douglas Van Buren (Mrs. A. W. Van Buren: the paper treats certain small terracotta altars which influenced sculpture in relief, especially that of Roman sarcophagi). Volume iii contains "The Bernardini Tomb," C. D. Curtis (a study of a remarkable series of objects, in gold, silver, bronze, ivory, iron, amber, glass, wood, found in 1876, in a tomb excavated at Palestrina, the ancient Praeneste. Some of the objects are clearly of Eastern origin, others are of local workmanship. The entire collection is to be seen now in Rome, in the Museo Preistorico); "Praxias," E. Douglas Van Buren (a study of an Athenian sculptor, one of the artists to whom was entrusted the important task of adorning the Temple at Delphi when it was rebuilt after its destruction in the early part of the fourth century B.C.).

Some books by American classical scholars may now be mentioned. First we name *Lucilius and Horace*, by G. C. Fiske, of the University of Wisconsin. This large and scholarly volume deals with such topics as: "The Classical Theory of Imitation; The Relation of Lucilius and the Scipionic Circle to the New Greek Learning and Literature, Lucilius and the Greek Satirists, The Satires of Book I <of Horace>, The Satires of Book II <of Horace>, The Epistles and Ars Poetica <of Horace>." Other books are the following: *An Economic History of Rome*, T. Frank (for an indication of its contents see a notice, by A. E. R. Boak, in *The Classical Weekly*, xiv); *Martial the Epigrammatist*, K. F. Smith (in this are collected, with other things,

several admirable papers published in various periodicals by the late Professor Smith, "Martial the Epigrammatist," "The Poet Ovid," "Propertius: A Modern Lover in the Augustan Age"); "Methods and Materials of Literary Criticism: Lyric, Epic, and Allied Forms of Poetry," C. M. Gayley and B. P. Kurtz (a comparative study, of much interest and importance for the student of the classics); *A Classical Technology, Edited from Codex Lucensis, 490*, J. M. Burnam (a work of value to students of ancient and early medieval technology, Low Latin, and Romance philology); *The Pronunciation of Greek and Latin*, E. H. Sturtevant (a thoroughly scholarly work); *Grammar of the Greek New Testament in the Light of Historical Research*, third edition, A. T. Robertson (far the best work on the subject); *A Grammar of New Testament Greek, Volume 2, Part I*, J. H. Moulton; *Aristotelis Meteorologicorum Libri Quattuor*, F. H. Foies (a critical edition; for a notice of it, by C. Knapp, see *The Classical Weekly*, xiii, 64).

In the YEAR BOOK for 1919 mention was made of *Musa Americana. First Series*, a collection of 12 translations into Latin, by A. F. Geyser, S. J. Father Geyser has since published *Musa Americana, Second Series: Home Songs in Latin Set to Popular Melodies, Musa Americana, Third Series: Latin Odes in Classic Metres, With English Text, and a Latin version of Goldsmith, Deserted Village*. For a discriminating and sympathetic review of the Second and Third Series, by G. D. Kellogg, see *The Classical Weekly*, xiii, xiv.

The work of younger American scholars is seen in the dissertations presented by them to various Universities in part fulfilment of the requirements for the degree of doctor of philosophy. In 1912-1916 there was published, annually, by the Library of Congress, a volume entitled, *A List of American Doctoral Dissertations Printed in . . .* The volume for 1917 is soon to appear. Dissertations on classical subjects were, of course, included. A partial list of such dissertations, published most of them, in 1919-1920, follows (the name of the University to which the dissertation was presented is given in parenthesis immediately after the name of the dissertation itself): *Macrinus and Diadumenianus* (Michigan), H. J. Bassett; *On Transition in Plato* (Chicago), Grace H. Billings; *The Platonism of Philo Judaeus*, Thomas H. Billings; *The Dramatic Values in Plautus* (Pennsylvania), W. W. Blancke; *Titus Pomponius Atticus: Chapters of a Biography* (Bryn Mawr), Alice H. Byrne; *Janus in Roman Life and Cult* (Pennsylvania), Bessie R. Burchett; *Transition in the Attic Orators* (Chicago), R. D. Elliott; *The Sequence of Tenses in Plautus* (Pennsylvania), E. H. Heffner; *An Epigraphic Commentary on Suetonius's Life of Tiberius* (Pennsylvania), Clara A. Holtzhauser; *Phases of Corruption in Roman Administration in the Last Century of the Roman Republic* (Chicago), R. O. Jolliffe; *Sycophancy in Athens* (Chicago), J. O. Lofberg; *A Study of Women in Attic Inscriptions* (Columbia), Helen McClees; *A History of the Title Imperator Under the Roman Empire* (Chicago), D. McFayden; *The Dream in Homer and Greek Tragedy* (Columbia), W. S. Messer; *The Metamorphoses Ascribed to Lucius of Patrae: Its Content, Nature, and Authorship* (Princeton), B. E. Perry; *C. Suetonii Tranquilli De Vita Caesarum Liber*

VIII: *Divus Titus: An Edition with Parallel Passages and Notes* (Pennsylvania), Helen Price; *On the Position in the Clause of Ne and Ut in Certain Documents of Colloquial Latin* (Columbia), W. T. Rowland; *Deception in Plautus: A Study in the Technique of Roman Comedy*, Helen E. Wieand; *Wagner's Dramas and Greek Tragedy* (Columbia), Pearl Wilson.

During the year American classical scholarship suffered grievously in the deaths of Edwin Whitfield Fay, Thomas Dwight Goodell, and Bernadotte Perrin (see *NECROLOGY*).

We turn now to the work of English classical scholars. - For light on such work see the volume entitled, *The Year's Work in Classical Studies*, published annually by the Classical Association of England and Wales, and the department of *The Classical Weekly*, which is known as "Classical Articles in Non-Classical Periodicals." English periodicals, too, and newspapers give far more attention, especially in reviews, to such work than similar publications in America give.

The two most accessible repositories of classical work in England are, *The Classical Quarterly* and *The Classical Review* (in each a few contributions from American scholars appear each year). From *The Classical Quarterly*, xiv, we name "The MSS. of Callimachus' Hymns," M. T. Smiley; "The Culex," W. R. Hardie (the author refused to believe that the *Culex* was written by Vergil; for the opposite view, see above, in the accounts of *Classical Philology* and *Harvard Studies*, the notices of papers by T. Frank and E. K. Rand); "Aristotelica," J. A. Smith; "Miscellanea Hesiodica," H. G. E. White; "Vindiciae Platonicae II," J. Burnet; *Vergil's Res Romanae*, T. Frank; "Plato Comicus: Frag. Phaon II: A Parody of Attic Ritual," L. R. Farnell; "The Unique Manuscript of Apuleius' *Metamorphoses* (Laurentian. 68.2) and its Oldest Transcript (Laurentian. 29.2)," E. A. Lowe; "Scipionic Forgeries," E. W. Fay (an argument that the epitaphs of the two oldest Scipios are not as old as scholars have thought; their language is not archaic, but archaistic); "The *Pervigilium Veneris* and the Tiberiani Amnis in Quatrains," J. A. Fort; "Augustus and his Legionaries," E. G. Hardy. In each number of this periodical are given valuable summaries of the contents of classical periodicals—American, German, French, English, Italian. *American Journal of Philology*, *Athenaeum* (published at Pavia, Italy), *Berliner Philologische Wochenschrift*, *Classical Philology*, *The Classical Weekly*, *Deutsche Literaturzeitung*, *Göttingische Gelehrte Anzeigen*, *Glotta*, *Hermes*, *Journal of Philology* (published in England), *Mémoires de la Société de Linguistique de Paris*, *Mnemosyne* (published in Holland), *Musée Belge*, *Revue de Philologie*, *Rheinisches Museum*, *Rivista di Filologia e di Istruzione Classica*, *Wochenschrift für Klassische Philologie*, *Zeitschrift für Vergleichende Sprachforschung*.

From *The Classical Review*, xxiv, we cite the following: "The Ignorance of Antiochus: A Study in Interpolation," L. H. Allen (an examination of parts of *Iliad*, xvii); "The *Deus Ex Machina* in Euripides," R. B. Appleton; "Fronto," C. R. Haines; "The Art of Virgil's Poetry," C. E. S. Headlam; "Terentiana," J. S. Phillimore; "Notes on Thucydides, Book VI," A. W. Gomme; "Some Passages from the *Metamorphoses* of Ovid," D. A. Slater; "The Hyporcheme of Pratinas," H. W. Garrod; "Orientation of the Dead in Greece and Italy," H. J. Rose;

"When did Agricola Become Governor of Britain," J. G. C. Anderson; "Communis Sensus," H. J. Thomson.

Of reviews in this volume we mention the following: of A. W. DeGroot, *A Handbook of Antique Prose-Rhythm*, by A. C. Clark; of R. J. Walker, *The Ichneutae of Sophocles, Edited with Introductory Chapter, Notes, and a Translation into English*, by A. S. Hunt and E. A. Sonnenschein; of Sir Robert Allison, *Lucretius on the Nature of Things Translated into English Verse*, by C. Bailey; of J. P. Postgate, *Phaedri Fabulae Aesopicae*, by A. E. Housman, of J. T. Allen, *The Greek Theater in the Fifth Century Before Christ*, and of R. C. Flickinger, *The Greek Theater and its Drama*, by G. C. Richards; of F. Holland, *Seneca*, by J. W. Duff.

Lastly, we set down here the titles of various books by foreign scholars which seem to be of importance (see the opening paragraph of this article): N. Ault, *Life in Ancient Britain* (a survey of the social and economic development of the people of England from earliest times to the Roman conquest); C. Autran: *Phéniciens: Essai de Contribution à l'Histoire Antique de la Méditerranée*; E. R. Banerjee, *Hellenism in Ancient India*; E. Bignone, *Epicuro* (a collection of the fragments of Epicurus, and of the ancient passages which bear on his life, with translation and commentary); H. E. Butler, *Sixth Book of the Aeneid, With Introduction and Notes*; J. Carcopino, *Virgile et les Origines d'Ostie*; J. Carcopino, *La Loi de Hiéron et les Romains*; E. Ciccotti, *Griechische Geschichte*, and L. M. Hartmann and J. Kromayer, *Römische Geschichte*, parts of a work entitled, *Weltgeschichte*; E. C. Clarke, *History of Roman Private Law, Part III: Regal Period*; Marjorie M. Crump, *The Growth of the Aeneid*; J. F. Dobson, *Greek Orators*; W. Warde Fowler, *Roman Essays and Interpretations* (a valuable collection of the author's scattered essays; the papers deal with matters of Roman religion, with Horace and Vergil; there are, also, sketches of the life and work of two modern classical scholars, Berthold Georg Niebuhr and Theodor Mommsen); R. Grosse, *Römische Militärgeschichte von Gallienus bis zum Beginn der Byzantinischen Themenverfassung*; B. Haarhoff, *Schools of Gaul: A Study of Pagan and Christian Education in the Last Century of the Western Empire*; O. Hamelin, *Le Système de Aristote*; W. R. Hardie, *Res Metrica: An Introduction to the Study of Greek and Roman Versification* (a book bound to attract a good deal of attention); Sir Thomas Heath, *Euclid in Greek: Book I, Edited with Introduction and Notes*; F. Holland, *Seneca*; E. Meyer, *Cassara Monarchie und das Prinzipat des Pompejus: Innere Geschichte Roms von 66 bis 44 v. Chr.*; G. Norwood, *Greek Tragedy*; C. Robert, *Die Griechische Heldensage: Erstes Buch*; J. Sargeant, *The Trees, Shrubs, and Plants of Virgil*; J. T. Sheppard, *The Oedipus Tyrannus of Sophocles* (the author maintains that, for the right interpretation of a Greek play, we need not only technical and linguistic learning, but also, and in even larger measure, a conscious apprehension of the ethical and religious presuppositions which the poet and his audience took for granted. With such apprehension we shall see that Sophocles could no more regard Oedipus as guilty than we do); W. T. Stace, *A Critical History of Greek Philosophy*; E. Stampini, *Nel Mondo Latino: Studi di Letteratura e Filologia*; W. C.

Summers, *The Silver Age of Latin Literature from Tiberius to Hadrian*; E. J. Urwick, *The Message of Plato*.

One observation may be made on this review of work in the field of classical philology in 1920; its most striking feature, perhaps, is the great amount of attention devoted to Vergil.

In conclusion, the difficulty of keeping track of work that is of consequence within the field of classical philology may be emphasized by the statement that, often, books and papers not issued by professed classical scholars offer much of prime importance to the professional classical student. Such a book, for example, is that of Elizabeth Nitchie, *Vergil and the English Poets* (noted in the YEAR BOOK for 1919. For a review of it, by M. B. Ogle, see the account, above, of the reviews in *The Classical Weekly*). Note, too, the book by C. M. Gayley and B. P. Kurtz, *Methods and Materials of Literary Criticism*, listed above. Another book which is destined to have a wide vogue among lovers of the classics is, *The Traditions of European Literature from Homer to Dante*, by Barrett Wendell, Emeritus Professor of English Literature in Harvard University. Of the 638 pages of letter-press, 158 deal with the "Traditions of Greece," 187 with the "Traditions of Rome."

PHILOLOGY, MODERN. A severe loss to the study of Romance philology in the United States was sustained in the death of Dr. L. Herbert Alexander of Columbia University. The influence of this well-trained scholar will long be felt especially through his constant efforts to systematize the classification of MSS. in Old French so as to promote their reproduction and classification. Such painstaking and unremunerative work, which is too often unappreciated, was characteristic of his self-abnegation.

Inspired no doubt by the example set by the NEW INTERNATIONAL YEAR BOOK for more than 10 years, a number of British scholars have dedicated themselves to the annual task of preparing a *Year-Book of Modern Languages*, the first number of which has just appeared (December). This publication is naturally far more pretentious than the brief article contained in these pages. For those who desire more extensive data than the limits of this study allow we recommend its purchase. The opening chapter is concerned with a critical discussion of the Report of the Government Committee to which attention was called in our report last year. (p. 522). "This document," says Professor Waterhouse of the University of Dublin, "may be justly termed the Magna Charta of Modern Languages. It sets forth plainly the history of modern studies in Great Britain, reveals their present position in our educational system and points out the road before us." Then follows a chapter on the "Civil Service and Modern Languages," by Prof. E. Bullough, of Cambridge. In a brief but very interesting chapter on the "Progress of Phonetics since 1914," Miss L. E. Armstrong, of University College, London, reveals the great interest manifested for this study in the British Isles where perhaps it has developed both practically and theoretically to a greater extent than in any other country. We share the hope of the author that "the science of Phonetics will in the future play its part in the great work of promoting international understanding, fellowship and unity." The chapter on "French" has been divided as follows:

"Anglo-Norman Languages and Literature," by Prof. Paul Studer of Oxford; a very useful select bibliography of the "Middle Ages and Fifteenth Century," by Miss K. T. Butler of Cambridge; and the literature and texts of the "Seventeenth and Eighteenth Centuries," by Miss D. W. Black. The article on the "Nineteenth Century" will appear in the next volume. "Provençal Literature" is treated by Rev. H. J. Chaytor of Cambridge. In German, the article on the "German Language," was prepared by Prof. R. A. Williams of Queen's University, Belfast; "Old and Middle High German Literature," by Dr. L. A. Willoughby of Sheffield; and on "Modern German Literature during the War," by Prof. F. E. Sandbach of Birmingham. In Italian, "Dante and Early Italian Literature," was written by Prof. E. G. Gardner of Manchester; "Literature of the Fourteenth to Eighteenth Centuries," by Mr. G. Foligno of Oxford; "Nineteenth Century Literature," by Prof. T. Okey of Cambridge; "Italian Philosophy of the Nineteenth Century," by A. Crespi; and "Recent General Literature," Prof. E. Bullough. For Spanish the arrangement is somewhat unusual and less desirable. Thus the three articles are entitled: "Cervantes," by Prof. J. Fitzmaurice-Kelly of London; "Literature of the Sixteenth Century," containing some recent revolutionary attacks on old-established theories, by H. Thomas of the British Museum; "Spanish America," by F. A. Kirkpatrick of Cambridge; and "Ruben Darfo," by Fitzmaurice-Kelly. "Russian Literature" is the subject of the article by A. P. Goudy of Cambridge; and "Celtic" is fairly satisfactorily dealt with by the late E. C. Quiggin of Cambridge and E. J. Gwynn of Trinity College, Dublin. We extend our best wishes to the new publication which should prove of incalculable value to teachers and scholars.

As our aim herein is to present the fundamental principles of philology and to indicate, if possible, in what direction this science may tend to develop, we have not hesitated during the past few years to emphasize the fact that the methods heretofore adopted in this extensive domain of research, whose vital importance to humankind the great war has only served to make more obvious, were on the eve of undergoing changes that might prove revolutionary. For that reason in the YEAR BOOK of 1914 we called attention to the theories of the brilliant Meillet who is the leader of the French school. The war which turned men's thoughts from philological research to matters of more immediate concern retarded considerably the impetus thus given to the new movement. In 1919 Mr. J. Gilliéron, one of the editors of the monumental *Atlas linguistique de la France*, published at Neuveville, Switzerland, a series of lectures on *La Faillite de l'étymologie phonétique* which, as the title indicates, is a confession of the inadequacy of the methods in vogue, notwithstanding the yeoman service they may have rendered in the past, to cope with the present-day problems. The mere fact that such a question is posed frankly and fearlessly by scholars shows that they are alive to the new demands made upon them, and that having exhausted the traditional methodology they are eager to enter upon a yet more active career of progress. The future of our study is therefore, glowing with possibilities.

GENERAL. Among the works of general interest it behooves us to note, in the first place,

John Oakesmith's *Race and Nationality* (London, 1919), an inquiry into the origin and growth of patriotism. The Rev. P. T. Mainage has begun the publication of a comprehensive work entitled *Les Religions de la Préhistoire* (Paris),* the first volume of which treats of the palaeolithic age. Other works deserving mention are G. Wallis, *Philosophy of Speech* (New York); the 2d edition of A. Bartels, *Rasse und Volkstum* (Weimar), a collection of essays; H. Schuchardt, *Sprachursprung* (pt. II, Berlin); and L. Wiener, *Contributions toward a History of Arabico-Gothic Culture* (Vol. II, New York, 1919), of which the conclusions are not always safe. Last year we called attention to the renewed interest in the great philological problem of Europe, i.e. the Basque language. In that respect the following works are noteworthy: J. de Urquijo e Ibarra, *Estado actual de los estudios relativos a la lengua vasca* (Bilbao, 1918); H. Urtel, *Zur baskischen Onomatopoesis* (Berlin, 1919); and A. Martinez Pajares, *El vasconco y el bereber* (Madrid, 1919), which consists of a critical study of the philological affinities between these two languages. If such a relationship can be proved, the problem of the origin of one of the primitive races of Europe, i.e. the ancient Iberians, may be within the possibility of solution. Useful studies on the latter of these languages, the Berber of Africa, are contained in the following: E. Laoust, *Mots et choses berbères* (Paris, 1919), with special reference to the dialects of Morocco; *Etude sur le dialecte berbère des Ntifa*, by the same author (Paris), consisting of grammar and texts; H. Basset, *Essai sur la littérature des Berbères* (Paris); E. Destaing, *Etude sur le dialecte berbère des Aït-Seghruchen* (Paris); and H. Schuchardt, *Die romanischen Lehnwörter im Berberischen* (Vienna, 1918). In Indo-European the most important contributions consist of new editions of the following standard works: O. Schrader, *Reallexikon der indogermanischen Altertumskunde* (2d ed., by A. Nehring, 2d Lieferung, Berlin); S. Feist, *Indogermanen und Germanen* (2d ed., Halle, 1919); B. Delbrück, *Einleitung in das Studium der indogermanischen Sprachen* (6th ed., Leipzig, 1919); and H. Paul, *Prinzipien der Sprachgeschichte* (5th ed., Halle). To these may be added Ch. Bartholomae, *Zur Etymologie und Wortbildung der indogermanischen Sprachen* (Heidelberg, 1919). A rare event is a work on Albanian, that puzzling descendant of ancient Illyrian, which stands alone in the Indo-European family (for Albanian, see NEW INTERNATIONAL ENCYCLOPÆDIA, 2d ed., Vol I, p. 324). This happens to be a modest text by L. Dufour, *La Langue albanaise en 30 leçons* (Paris).

INDO-IRANIAN. Since the beginning of the great war this field has not received the attention that it deserves. Among the rare works which appeared last year—and, be it added, none of which is of great importance—are the following editions and translations: *Bhagavad-Gîtâ*, *Chant du Seigneur*, translated into French by Drs. A. Auvard and M. Schultz, with preface, notes, and vocabulary (Paris); *Les Upanishads*, selected parts translated by P. Salé (Ib.); *Sakuntala*, translated by A. Mortier (Ib.); and the same, a new version written for the English stage, by L. Binyon (London).

ARMENIAN. The language of this people, whose

woes and sufferings we are too quickly inclined to forget, was commented on by J. L. Gerig in *New Armenia* (vol. xii, pp. 86-87, June, New York); and its history has been well presented by J. Laurent, *L'Arménie entre Byzance et l'Islam, depuis la conquête arabe jusqu'en 886* (Paris, 1919).

CELTIC. The important *Dictionnaire archéologique de la Gaule* has been continued after the letter L by E. Cartailhac (Vol. ii, fascicules 3 and 4, Paris, 1919). Prof. G. Dottin has produced another most useful text in *La Langue Gauloise*, which includes the grammar of the language, texts, and glossary (Paris). A. B. Scott's *The Pictish Nation, its people and its church* (London, 1919), revives a mooted problem that had been lying dormant for several years. J. D. N. White has made a noteworthy addition to the extensive literature regarding the patron Saint of Ireland in his *St. Patrick: His Writings and Life* (London). A posthumous work of Kuno Meyer is appearing under the title *Bruchstücke der älteren Lyrik Irlands* (1st part, Berlin, 1919). P. van Tieghem adds to his two-volume researches on Ossianism, so important for the history of literature in most European countries in the nineteenth century, a study entitled *Ossian et l'Ossianisme dans la littérature européenne au 18e siècle* (Groningen). For Scottish Gaelic we note L. Macbean, *Buchanan, the Sacred Bard of the Scottish Highlands: His Confessions and His Spiritual Songs* (London), consisting mainly of translations. The two most important contributions to Welsh philology are J. Loth, *Remarques et Additions à la Grammaire galloise historique et comparée de John Morris Jones* (Paris), a detailed list of errors and lacunae overlooked by the author which fills 135 pages and adds greatly to the value of his work; and M. L. Williams *The Making of Modern Wales* (London, 1919), containing studies in the Tudor settlement of Wales and a chapter (vii) on the Welsh language.

SLAVIC. The mysterious Slavic culture, so difficult for us to understand, is well sketched by A. Jensen in his *Slavisk Kultur och litteratur under nittonde århundradet* (Stockholm). The indefatigable V. Jagic, whose numerous works were the subject of frequent comment in these columns until the outbreak of the war, returns to his *premières amours* in a grammatical and critical study entitled *Zum altkirchenslawischen Apostolus* (Vienna). To Balto-Slavic we have the contributions of S. Agrell, *Balto-slavische Lautstudien* (Lund, 1919), and H. Petersson, *Baltische und slavische Wortstudien* (Lund, 1918). Other contributions to different fields of Slavic philology are A. Leskien, *Litauisches Lesebuch mit Grammatik und Wörterbuch* (Heidelberg); E. Prokosch, *Elementary Russian Grammar* (Chicago); G. Androvic, *Grammatica della Lingua jugoslava (serbo-croata)* (2d ed., Milan); and B. Guyon, *Grammatica teorico-pratica della lingua serba* (Ib.).

ENGLISH. Of a general nature are P. G. Thomas, *Introduction to the History of the English Language* (London); and H. C. Wyld, *Kurze Geschichte des Englischen* (German transl. by H. Mutschmann, Heidelberg). To the long bibliography of Anglo-Saxon may be added A. J. Wyatt, *Anglo-Saxon Reader* (Cambridge); R. W. Chambers, *Introduction to the Study of Beowulf* (Ib.), a timely work; and E. Björkman, *Studien über die Eigennamen im Beowulf*

* Where no date is given, the reader will understand that the work appeared in 1920.

(Halle). Old English receives attention in M. Redin, *Studies of Uncompounded Personal Names in O. E.* (Uppsala, 1919); and A. Keiser, *Influence of Christianity on the Vocabulary of O. E. Poetry* (Urbana, Ill.). In Middle English the following deserve attention: Jos. Hall, *Selections from Early Middle English, 1130-1250*, (Oxford), containing introduction, text and notes; and the 3d edition of B. Ten Brink's well-known study, *Chaucers Sprache und Verskunst* (ed. by E. Richardt, Leipzig). One of the most important aspects of English philology is dialectology of which the bibliography is growing rapidly, for, as a critic in the *Times* recently remarked, dialect study is essential to a thorough knowledge of English. Among the noteworthy contributions to this study are M. Sharpe, *Middlesex in British, Roman and Saxon Times*, (London); Rev. E. Gepp, *Contribution to an Essex Dialect Dictionary* (Ib.), a most laudable undertaking containing a good account of the phonology of the dialect; K. Brunner, *Die Dialektliteratur von Lancashire* (Vienna); G. Langenfeldt, *Toponymics or Derivations from Local Names in English* (Uppsala); and C. M. Drennan, *Cockney English and Kitchen Dutch* (Witwatersrand). Of a syntactical nature are N. Bgholm, *English Prepositions* (Copenhagen); A. G. Kennedy, *The Modern English Verb-Adverb Combination* (Stanford University, Cal.); and A. Darby, *The Mechanism of the Sentence* (Oxford). Of interest to semantics are R. Bridges, *On English Homophones* (Oxford, 1919); and W. Uhrström, *Pickpocket, Turnkey, Wrap-Rascal and Similar Formations in English* (Stockholm). Works relating to the different aspects of the modern language are: H. O'Grady and N. Catty, *The Early Stages of Spoken and Written English* (London); H. Bradley, the well-known lexicographer, *On the Relations between the Spoken and Written Language* (Oxford, 1919); and H. C. Wyld, *History of Modern Colloquial English* (London). For those interested in the commercial language we recommend J. B. Opdycke, *The English of Commerce* (N. Y.); G. B. Hotchkiss and E. J. Kilduff, *Handbook of Business English* (2d ed., N. Y.); W. E. Bartholomew and F. Hurlbut, *The Business Man's English* (N. Y.). W. Ripman's *First English Book* (N. Y., 1919), is a useful text, especially for foreigners. Before mentioning works of a lexicographical character it is but fitting to note H. Bradley's *Sir James Murray, 1837-1915* (Oxford), a memoir expressing full appreciation of the vast undertakings of a remarkable mind. *The New English Dictionary*, which owes its inception to the above-mentioned scholar, reached as far as Visor-Ywyer (ed. by W. A. Craigie, Oxford). Of a more practical nature are A. Loring, *Rhymer's Lexicon* (2d ed. N. Y.), with an introduction by G. Saintsbury; and A. H. Fay, *Glossary of the Mining and Mineral Industry* (Washington), issued by the United States government.

GERMANIC. Under this general heading we include not only studies on German, but also those of a general nature as well as those dealing with closely related dialects. New editions of standard works on Gothic first demand our attention. Thus, the 9th edition of W. Braune, *Gotische Grammatik mit Lesebüchern und Wortverzeichnis* (Halle); the 6th edition of W. Streitberg, *Gotisches Elementarbuch* (Heidelberg); the 2d edition of the same author's *Die gotische*

Bibel (Ib., 1919), containing the Greek text and translation; the 2d edition (1st lieferung) of S. Feist, *Etymologisches Wörterbuch der gotischen Sprache* (Halle). Among the studies of a general nature are Th. Birt, *Die Germanen* (Munich, 1918), an attempt to explain the meaning and origin of the race-name; G. Baesecke, *Deutsche Philologie* (Gotha, 1919); B. Delbrück's important *Germanische Syntax* (Leipzig, 1919), of which this part deals with the *Konjunktionssätze*; and E. Wasserzieher, *Leben und Weben der Sprache* (2d ed., Berlin). In the historical grammar of German we have H. Hirt, *Geschichte der deutschen Sprache* (Munich, 1919); a comprehensive though brief manual; parts of volumes iii and v of H. Paul's monumental *Deutsche Grammatik* (Halle); E. Wexler, *Studien zum Bedeutungswandel im Deutschen* (Uppsala, 1918); and *Aufsätze zur Sprach und Literaturgeschichte* (Dortmund), a testimonial prepared by pupils and friends in honor of W. Braune. The studies in Old and Middle High German include W. Braune, *Abriß der althochd. Grammatik* (5th ed., Halle, 1919); and E. Wahnschaffe, *Die syntaktische Bedeutung d. mhd. Enjambements* (Berlin, 1919). To these may be added A. Götze, *Frühneuhochdeutsches Lesebuch* (Göttingen). Among the works of a special nature are E. Danielowski, *Das Hiltibrantlied* (Berlin, 1919); J. Schnetz, *Herkunft des Namens Würzburg* (Lohr, 1919); and E. von Wecus, *Die Wochen- und Monatsnamen und die Festtage und ihre Bedeutung* (Zeit). In dialectology we note *Deutsche Dialektgeographie* (Marburg); O. Weisse, *Unsere Mundarten, ihr Werden und Wesen* (2d ed., Leipzig); J. Seemüller, *Deutsche Mundarten* (pt. 5, Vienna); F. Schön, *Geschichte der deutschen Mundartdichtung* (Freiburg), of which part i extends from the end of the sixteenth century to the low German classics; Dr. Rezak, *Deutsch-schweizerisches encyklopädisches Wörterbuch der oberlausitzer Sprache* (Bautzen); G. Buchner, *Bibliographie zur Ortsnamenkunde der Ostalpenländer* (Munich, 1919); E. W. Selmer, *Sprachstudien im Lüneburger Wendland* (Kristiania, 1919); L. Wirth, *Synonyme, Homonyme, Redensarten, etc. der deutschniederländischen Sprache* (2d ed., Groningen, 1919); A. Bass, *Bibliographie der deutschen Sprachinseln in Südtirol und Oberitalien* (3d pt., Leipzig, 1919); and L. Günther, *Die deutsche Gauner Sprache* (Leipzig, 1919). Dr. M. J. Rudwin's *Origin of the German Carnival Comedy* (N. Y.), is a work of great value for students of popular drama. The following parts of the masterly *Deutsches Wörterbuch* of J. and W. Grimm appeared: Vols. IV, pt. 1; VI, pt. 2; XI, pts. 3 and 7; XII, pt. 2; XIII, pt. 16 (Leipzig). Also the 60th livraison of H. Fischer, *Schwäbisches Wörterbuch* (Tübingen); and the 44th edition of W. James, *Dictionary of the English and German Languages* (London).

In Dutch there is but one work deserving mention: C. T. Lion, *Kurzgefasstes Lehrbuch der Niederländischen Sprache* (Leipzig, 1919).

SCANDINAVIAN. In Danish we have A. Olrik, *Heroic Legends of Denmark* (translated by L. M. Hollander, N. Y.), which should be of service to students interested in the sources of Beowulf; and part II of V. Dahlerup, *Ordbog over det danske Sprog* (Copenhagen). The contributions to Norwegian philology consist of A. Torp, *Nynorsk etymologisk ordbok* (Christiania); and G. T. Flom, *Norwegian Surnames* (Urbana, Ill.).

As for Swedish the following may be mentioned: E. Hellquist, *Svensk etymologisk ordbok* (pt. I, Lund); the same author's *De svenska ortnamnen på-by* (Göteborg); and A. Kock, *Svensk Ljudhistoria* (vol. iv, pt. I, Lund).

ROMANCE. Important works of a general nature include, W. Mayer-Lübke, *Romanisches etymologisches Wörterbuch* (Heidelberg), of which parts 11 and 12 appeared; K. von Ettmayer, *Vademecum für studierende der romanischen Philologie* (Heidelberg); Atkins and Hutton, *Teaching of Modern Foreign Languages in School and University* (N. Y.). Among the studies on syntax and comparative lexicography we note: E. G. Wahlgren, *Etude sur des actions analogiques réciproques du parfait et du participe passé dans les langues romanes* (Uppsala); E. Lerch, *Die Verwendung des romanischen Futurums als Ausdruck eines sittlichen Sollens* (Leipzig, 1919); I. Pauli, *Enfant, garçon, fille dans les langues romanes* (Lund, 1919); and L. Battiglioni, *L'Ape e l'Alveare nelle lingue romanze* (Pisa).

FRENCH. Though not relating to Romance languages more than to any other domain of research, it may nevertheless be appropriate to call attention here to a work of inestimable value to scholars—i.e. the 2d series of the well-known *De la méthode dans les sciences* (Paris, 1919), among the authors of which are: Borel, Janson, Meillet, Reinach, etc.—in other words, the leaders in scientific thought in France. As method is of the utmost importance in research, no further stress need be laid on this work. A syllabus of the lectures delivered by G. Janson when visiting professor at Columbia University in 1916-17 has just been issued by the press of that institution under the title, *Esquisse d'une histoire de la tragédie française* (N. Y.). This most useful guide will no doubt be welcomed by all teachers and advanced students of French literature and civilization. In line with the above, attention should also be called to A. Croizet, *Aux étudiants étrangers et la culture française* (Paris, 1919), written in the same beautiful style characteristic of the distinguished Greek scholar. The 34th and 35th fascicules of the *Catalogue des thèses et écrits académiques*, covering the years 1917-18 with a *table de matières* from 1914, are also most welcome. Of a more definitely philological character are: K. Vossler, *Französische Philologie* (Gotha, 1919), consisting of an extensive and practically complete bibliography for the years 1914-1918; F. B. Luquiens, *Introduction to Old French Phonology and Morphology* (2d ed., New Haven, 1919); and the 11th edition of the standard *Grammatik des Altfranzösischen* of Schwan-Beihrens (Leipzig, 1919). In Old French L. Foulet, *Petite Syntaxe de l'ancien français* (Paris), will be found to be useful notwithstanding its rather unique plan. At almost the same time appeared the 12th edition of K. Bartsch's *Chrestomathie de l'ancien français* (ed. by L. Wiese, Leipzig). As important from a literary point of view the following may be mentioned: a new edition of Petit de Julleville, *Histoire de la littérature française* (Paris), of which volume I deals especially with the literature of the Middle Ages; *La Chanson de Roland*, translated by C. K. Scott-Moncrieff (London); H. Hingst, *Enfrances Guillaume* (pt. I, Greifswald, 1919); E. Zubke, *La Comtesse d'Anjou* (pt. II, Ib.), a poem of the year 1316; and M. de Pange,

Les Lorrains et la France au moyen-âge (Paris, 1919). Of a philological or syntactical character are: Eva Seifert, *Zur Entwicklung der Proparoxytona auf -ite, -ita, -itu im Gallo-Romanischen* (Berlin, 1919); E. Oehmman, *Studien über die französischen Worte im Deutschen in 12. und 13. Jahrh* (Helsingfors, 1919); P. Fuchs, *Das altfranz. Verbum errer* (Munich, 1919); E. Graff, *Das participium praesentis im Französischen* (ib.); and R. Ruppert, *Die spanischen Lehn- und Fremdwörter in der französischen Schriftsprache* (Ib.). Among the works containing or devoted to material of regional or dialectal philology, the following may be cited: J. Ruel, *Histoire des Normands, 628-716* (2 vols., Paris, 1919); P. Studer, *The Study of Anglo-Norman* (Oxford); L. Gauchet, and J. Jeanjaquet, *Glossaire des patois de la Suisse romande* (vol. ii), containing an important bibliography; and F. Sarrau, *Petite Grammaire gasconne* (Auch), devoted to the dialect of Armagnac. Syntactical and etymological studies in modern French include, P. B. Fay, *Use of tu and vous in Molière* (Berkeley, Cal.); N. E. Taube, *Etude sur l'emploi de l'argot des malfaiteurs chez les auteurs romantiques* (Uppsala, 1918); D. Adam, *Contribution à l'étude de la langue des Mémoires de Saint-Simon* (Paris); and General Chapel, *Sur l'Origine guerrière des noms de lieux* (Ib.). The very comprehensive and detailed *Dictionnaire historique et biographique de la Suisse* has now reached fascicule v (aquaviva, p. 368). Among modern grammars and treatises on style may be mentioned: C. Bally, *Traité de stylistique française* (Heidelberg); E. F. Bauer, M. Fischer and E. de St. Etienne, *Le Parler de France* (Paris); and H. Bauche, *Le langage populaire* (Ib.) devoted to the everyday language of Paris. Since the armistice the French seem especially interested in our customs and methods of doing business. This is obvious from the large number of technical dictionaries that are constantly appearing. A list of these should prove very useful to us. Among such works may be noted: G. Barrière, *Dictionnaire français-anglais; Termes techniques* (Paris); A. Lainé, *Dictionnaire de l'aviation* (Ib.); J. Bompas and L. Mettée, *Dict. franç.-anglais de la correspondance commerciale* (Ib., 1919); Hermann and Simonier, *Vocabulaire de l'assurance; franç.-allemand, et all.-franç.* (Strasbourg, 1919); L. Anspach et A. Coutanche, *Dict. de droit et de termes juridiques anglais* (Paris), containing a brief exposé of English law; P. Fehner, A. Hermann and Ch. Ganser, *Dict. juridique et administratif allemand-franç. et franç.-all.* (Ib.); H. Viard, *Télégraphie et téléphonie sans fil: Vocabulaire en cinq langues* (Ib.); and the various *Guides techniques Pluon* (Paris), of which there appeared in 1920: I. *Les Transports: Dict. des termes techniques, franç.-anglais et angl.-franç.*; II. *L'Usine: Vocabulaire des termes techniques franç.-angl. et angl.-franç.*, for the use of engineers; and XXVIII. *Le Béton armé: Dict. des termes techniques franç.-angl.-italien*, for those interested in construction with concrete. As an indication of the influence of English on French due to the relations established by the war—a fact anticipated in these pages—we have the interesting work of E. Bonnaffé, *Dict. étymologique et historique des Anglicismes* (Ib.). Other useful dictionaries are *Le Tout Petit Dict. de mots usuels* (Ib.); C. Bourdaud, *Vocabulaire français il-*

lustré (Strasbourg, 1919); E. Maloubier, *French English Practical Phrase-Book* (N. Y.), for tourists; and R. W. Hurst, *366 Eng. Proverbs literally translated into French* (London, 1919).

ITALIAN. The 4th volume of the *Chartularium Studii Bononiensis* (Bologna, 1919) is, like its predecessors, important as a contribution to the history not only of the University of Bologna, but of medieval education in general. For students of the dialects of Italy we note Zérndele, *sturiell e narzisat* (Ib., 1920), a collection of poems in the Bolognese dialect; L. Bottiglioni, *Fonologia del dialetto imolese* (Pisa); T. Spoerri, *Il Dialetto della Valsesia* (Milan, 1919), a dissertation of the University of Berne; A. Giuriato, *Canzoniere vicentino* (Vicenza, 1919); and A. Rovinelli, *Il Gergo nella Società, nella storia, nella letteratura* (Milan, 1919). Among the most useful dictionaries are the 14th edition of James Grassi, *Dict. of the English and Italian Language* (ed. by A. de Beaux, London); M. M. Dander *Dizionario internazionale di aeronavigazione e costruzioni aeronautiche* (Milan, 1919); in Italian, French, English, and German; F. A. Marangoni, *Dizionario commerciale italiano-inglese e ingl.-ital.* (Ib.); A. Marenduzzo, *Vocaboli italiani meno comuni e meno noti* (Livorno, 1919); and E. Zaccaria, *Raccolta di voci affatto sconosciute o mal note ai lessicografi ed ai filologi* (Marradi, 1919).

SPANISH. A most important contribution is that of F. de Onís, *El Español en los Estados Unidos*, an inaugural address read at the University of Salamanca in October, 1920. This distinguished scholar sketches the remarkable growth of the study of Spanish in our institutions and, with unusual comprehension, outlines its future development. Of a more special character are: R. Blanco y Sánchez, *Catálogo de caligrafos y grabadores de letra* (Madrid) with useful bibliographical notes; and J. A. Bolufer, *Tratado de la formación de palabras en la lengua castellana* (Ib.). One would imagine that Spanish alone of all modern languages should be exempt from attempts at spelling reform, and yet we have the following: M. Menéndez Pelayo, *Ortografía racional* (Barcelona, 1919), a posthumous work of the great critic; U. Enríques, *Someros reparos a las diez razones de una nota académica sobre ortografía* (Valparaíso, 1919); and I. Rodríguez, *Tratado de ortofonía española* (Ponce, P. R., 1919). In dialectology are: G. M. Vergara Martín, *Ensayo de un vocabulario de localidades o comarcas de España* (Madrid, 1919); the 14th cuaderno of the *Diccionario gallego-castellano* (Coruña) by the Royal Galician Academy; A. Sevilla, *Vocabulario murciano* (Murcia, 1919); B. Ortín Benedito, *Gramática valenciana* (Valencia, 1919); J. Raz Guzmán, *Voces homófonas* (Mexico, 1919); R. del Castillo, *Estudios lexicográficos nahuatlismos y barbarismos* (Ib.); J. E. Machado, *Cancionero popular venezolano* (Caracas, 1919); and E. Constantino Guerrero, *Diccionario filológico; Estudio general sobre el lenguaje venezolano* (Nietheroy). Students of prosody and grammar will find the following of interest: P. Henriquez Ureña, *La Versificación irregular en la poesía castellana* (Madrid); and a new edition of the *Compendio de la gramática de la lengua castellana* (Ib.) by the Spanish Academy. The only works of lexicographical nature that deserve to be noted are F. Rodríguez Marín, *Un Millar de voces castizas y bien autorizadas*

que piden lugar en nuestro léxico (Ib.); and B. Quijada, *La Ornitología en el diccionario de la lengua castellana* (Santiago, 1918).

CATALAN. The productivity of scholars in this field continues, as is obvious from the following publications issued mainly by the Institut d'estudis catalans: L. N. D'Olivier, *Literatura catalan* (Barcelona), a panorama of its history; K. A. Hagberg, *Modärna Trubadurer; Ur Nuktansk digtning i vdra dagar* (Lund, 1919); P. Barnils, *Textes catalans, avec leur transcription phonétique précédés d'un aperçu sur les sons du catalan*, by J. Arteaga Pereira (Barcelona); the 8th fascicle of the *Diccionari Aquiló*. (Ib.) reaching as far as gall; A. Bulbena Tosell, *Diccionario catalán-castellano* (Ib.); and J. Givanel Mas, *Argot barceloni* (Ib.), a study of the slang of Barcelona.

PROVENÇAL. Only three works have come to hand, viz., O. Schültz-Gora, *Provenzalische Studien* (Berlin); J. Anglade, *Les Origines du Gai Savoir* (Toulouse, 1919); and H. Jaeschke, *Der Trobador Elias Cairel* (Berlin, 1919).

RHAETO-ROMANCE. The 12th section of the *Rätoromanische Chrestomathie: die modernen Dichter* (Erlangen), by C. Cammada and M. Decurtius, was a welcome contribution.

RUMANIAN. A few works deserve mention: H. Baric, *Albano-rumänische Studien* (Pt. I, Vienna, 1919); the first part of Puscaru, Sextil and E. Herzog, *Lehrbuch der rumänischen Sprache* (Czernowitz); N. Jorga and S. Gorceix, *Anthologie de la littérature roumaine* (Paris, 1919); and M. Beza, *Papers on the Rumanian People and Literature* (London).

PHONETICS. Among works of a general character are H. W. Pollak, *Phonetische Untersuchungen* (Vienna), with special reference to accent; and W. Perrett, *Some Questions of Phonetic Theory* (Cambridge, 1919), discussing perception of sound. The following works will be of use to students of the different languages to which they relate: A. Ehrentreich, *Zur Quantität der Tonvocale in Modern-Englischen* (Berlin); I. M. G. Ahern, *Phonetics of French Pronunciation* (London, 1919); and E. V. Zappia, *Di una vecchia questione di fonetica italiana* (Milan), which discusses a few of the orthographical variations of modern Italian.

For list of contributors: John L. Gerig, A.M., Ph.D., Associate Professor of Celtic; Executive Officer, Department of Romance Languages, Columbia University, New York.

PHILOSOPHY. See LITERATURE, ENGLISH AND AMERICAN.

PHONETICS. See PHILOLOGY.

PHOSPHATE. According to the United States Geological Survey, the quantity of phosphate rock marketed in the United States in 1919 appeared to be less than in any year within the last decade except 1915. The production in South Carolina was nearly treble that of 1918, Tennessee greatly increased her output, and the Western States made a proportionately large gain, but a strike in the Florida pebble phosphate field, which lasted several months, so greatly reduced the output from that State that the record for the whole country showed a decided decrease in quantity. The value of the product in 1919, however, appeared to have been greater than in any year since 1913. According to estimates made by the Geological Survey, from incomplete returns, the quantity of phosphate rock sold in the United States in 1919 was about 1,941,-

700 long tons, valued at \$10,335,900, as compared with 2,490,760 tons valued at \$8,214,463 in 1918. Crude phosphate was formerly imported into the United States in quantities amounting to several thousand tons annually, but by 1919 the imports became practically negligible. From 1913, when more than 1,300,000 tons of phosphate rock was exported, the quantity leaving the United States steadily decreased until 1918, when it was only 143,455 tons, a little more than one-tenth of the exports in 1913. In 1919, however, as more vessels became available for commerce, the exports increased to 378,000 tons. In 1918-1919 most of the high-grade rock exported was sent to Sweden and Norway, and much of the land pebble to England, France, and Spain. Cuba and Canada also were notable consumers of phosphate rock mined in the United States. In 1919 Denmark was by far the largest importer of high-grade phosphate rock from this country and Sweden and Germany stood in the second and third places. England, the Netherlands, and Denmark took more than half the exports of land pebble, England taking the largest quantity by a small margin.

As to production, the notable feature of the phosphate rock industry in 1920, was the increase in production in the Western States. Total production of phosphate rock in the United States in 1920 was about 3,265,000 long tons, as compared with 2,249,000 tons in 1919.

PHOSPHATIC FERTILIZER. See FERTILIZERS.

PHOTOGRAPHY. See AERONAUTICS.

PHYSICAL CHEMISTRY. See CHEMISTRY, *General Progress of.*

PHYSICS. The year 1920 is again a notable year for progress in physics. The structure of the atom, mass spectrography of isotopes, crystal analysis, relativity,—were topics of the liveliest interest and fruitfulness. Perhaps the most extraordinary new event in physics is the publication of Aston's research results on isotopes, using the Thomson positive ray analysis with a new refined form of positive ray or mass spectrograph. The latter has become in the hands of Aston an apparatus of wonderful promise in atomic research. By a combination of electric and magnetic forces, the atoms of an element are made to describe parabolic trajectories, the length of which are proportional to the atomic weight of the atoms. The atoms following the parabolic path strike a photographic plate, thus autographically recording their own atomic weight on a scale of measurement easily and accurately established. For example neon (classic atomic weight 20.2) was projected and the points of impact 20 and 22 showed that the gas was a mixture of two kinds of atoms, both neon, but with atomic weights 20 and 22, respectively. The intensities of the respective photographic traces showed that the proportion was as 9 to 1, indicating that the neon atoms of atomic weight 20 were nine times as numerous as those of atomic weight 22. Aston has applied the method to many elements and found all (except hydrogen) of those investigated consisted of atoms of whole numbered atomic weights or of mixtures of different atoms each having a whole numbered atomic weight. Thus Dalton's theory that the atoms of a given element are equal is refuted. Likewise disappear the classic data as to fractional atomic weights,

the greatest obstacle to the theory of a single building unit of all the elements.

Aston shows that many of the elements are such mixtures of isotopes and gives a table of their number and their masses, the isotopes found being 2 each for boron, neon, silicon, chlorine, bromine, and 5 for xenon, 6 for krypton (and possibly hydrogen). The isotopes for chlorine were found to be 35 and 37 respectively. Harkins during the year reported the separation of hydrochloric acid by prolonged diffusion, the residual increasing in density at a rate confirmatory of Aston's isotopes, 35 and 37, of chlorine. To Harkins belongs the full credit of being the first to physically separate the atoms of an element into two portions of different atomic weights. Aston finds isotopes to be "elements having the same nuclear charge but different nuclear mass." If a positive and a negative particle both enter the nucleus, the charge is unchanged, but the mass changes as an isotope is formed. If a positive particle alone enters the nucleus, the element of the next higher number is formed.

Broensted and Hevsey have partially separated the isotopes of mercury by evaporating under reduced pressure about one-seventh of a given quantity of mercury and recondensing it. The lighter atoms are naturally the first to evaporate, so that the recondensed and the residual portions of mercury were found respectively lighter and heavier than the density usually given for ordinary mercury, by 80 millionths and 31 millionths respectively. The error of measurement was less than one part in a million.

Harkins has further developed his helium-hydrogen atom formation theory and has derived the formulas for the composition of each of the nuclei of the first 27 elements and of the radioactive elements using only the atomic weights and atomic numbers, upon the three assumptions: that the nuclear mass is the sum of the constituent masses; that the nuclei all consist only of helium nuclei, hydrogen nuclei, and electrons; and that not more than three hydrogen nuclei are present as such (except in isotopes). The remarkable success of Harkins in thus accounting for the nuclear composition of the first 27 elements is convincing evidence to support his contention that the hydrogen nucleus is the long-sought positive electron. One link yet remains, namely the experimental proof of the presumption that the helium nucleus is built up of hydrogen nuclei.

That the positive nucleus of an atom may be broken up was reported by Rutherford last year, a result attained while there was being printed in America a book expounding the latest views of the physics of the atom and containing the following dictum: "Changes in the nucleus . . . cannot . . . in any way be caused to happen artificially." Rutherford confirms by further experimental results the reported shattering of the positive nucleus of the nitrogen atom by bombardment with the alpha particles (nuclei of the helium atom) from radium C. Among the fragments shot off from the nitrogen atom Rutherford finds the hydrogen nucleus as before and also a new particle of mass 3, possibly an isotope of helium. The alpha particle moves at such high speed (18,000 miles per second) that in spite of its small size (27 billions in a cubic millimeter) its striking energy makes it the most powerful projectile available for physical

experiment. However, the hydrogen atom (one ten-millionth of a millimeter in diameter) is so small a target that to score a single hit requires 100,000 alpha particles shot through a centimeter of hydrogen gas. When a collision occurs (meaning that the alpha particle comes within a few billionths of an inch of the hydrogen atom) the impact is so powerful that the projectile (helium nucleus of mass 4) imparts its momentum to the hydrogen atom (mass 1) proportionately increasing its penetrating range which Rutherford carefully measures. By exposing nitrogen (or even nitrogen compounds) to a similar bombardment Rutherford still found the fragments to consist of hydrogen atoms and of particles of mass 3,—the first known controlled transmutation of an element. Rutherford has suggested other possible means of breaking up the positive nuclei. Ishada is now studying the effects of bombarding oxygen, nitrogen, and other elements by means of electrons, and then observing the spectrum in the vacuum tube. The subject is one of absorbing interest and important developments may be expected in this field.

Of particular interest in this connection is the triatomic hydrogen observed by Wendt and Landauer produced either by alpha ray action, alternating discharge at low pressure, or by passage through an ionizer. Thomson and Rutherford have both observed an atom of atomic weight three, but the Wendt atom seems to be more reactive. A lively question arises since the valency theory does not allow a hydrogen molecule of more than mass 2. D. Wood assumes that hydrogen has an isotope of nuclear mass 2 and charge 1 and also that there may be an atomic nucleus of mass 1 without a charge consisting of hydrogen nucleus and an electron closely united. The latter having no external field except very near, would pass freely through ordinary matter.

The utilization of natural energy by man is a problem of deep concern to physicists. It is fundamentally a physical problem and physics must cooperate with engineering by both data and research in unlocking nature's vast stores of energy and putting them at work for mankind. It is significant that several of our leading physicists are taking a deep interest in the subject. Both Lodge and Arrhenius have recently reviewed the subject of the world's supply of energy with characteristic thoroughness. The problem is a serious one, for the visible coal supply, according to Arrhenius, may not last 15 centuries at present rate and methods of use. For the more direct and scientific utilization of solar heat and light, Seymour's proposed "sunlight engineering" is an interesting new field of activity, covering such practical subjects as height of buildings; width of streets; disposition, shape, and size of windows; and the orientation of houses in azimuth.

The successful experiment near Cairo, where Shuman's solar power plant is harvesting a horse power for each 20 meters of exposed mirror, is of unusual interest and promise. The measure of the solar constant, allowing for transformation loss, shows that on every housetop enough radiant energy is wasted to do the entire manual labor of the household. Numerous similar experiments are reported, Coblentz and others attacking the problem by means of thermocouples which transform solar heat energy di-

rectly into electric currents. Far more fascinating is the eventual possibility of unlocking the vast stores of intra-atomic energy, the total amount of which is incredibly greater than all other sources of energy known. The first practical step in this direction was the discovery of radioactivity by Becquerel, the Curies discovering radium, and Schmidt discovering thorium, all of which are notably radioactive. The belief is growing that all substances are somewhat radioactive. The released energy is now known to be due to explosions of atoms in which particles and radiations are shot off at enormous velocities and with great energy. The radium series would yield in its cycle about 250,000 times the energy to be derived by burning an equal weight of coal.

Subatomic energy is believed by Eddington to be the only known adequate source of energy from which the sun and the stars could maintain their great furnaces. The extraordinary fluctuations in the radiation of the Cepheid type stars led him to assume that the pressure-temperature conditions were critical in such stars for the formation of helium gas from hydrogen and that the enormous short-period outbursts of energy thus released cause the characteristic variability of the Cepheid stars. A possible analogy is known in our own sun as the "hydrogen bombs" observed by Ellerman, and characterized by enormous explosive velocities of short duration. Rejecting the "contraction theory" as untenable and hopelessly inadequate, Eddington is driven to subatomic releases of energy, for which recent advances in physics prepare the way. Specifically, he suggests that when helium (atomic weight 4) is formed from four hydrogen atoms (atomic weight 4×1.008) the surplus fraction is released as free energy. The magnitude would be consistent with the measured loss of mass on synthesis, about 1 part in 120. If 5 per cent of a star's mass is hydrogen slowly combining into more complex forms, no other source of the star's heat need be looked for. The sun contains sufficient such energy to maintain its present heat radiation 15 billion years. Eddington adds significantly that this "seems to bring a little nearer fulfillment our dream of controlling this latent power."

Angeheister points out a relationship between solar activity, solar radiation, and terrestrial magnetism based upon the $26\frac{1}{2}$ day solar rotation period. An unusually interesting problem was the study of the effects of the great sunspot observed on the sun at the end of the year 1919 and since. At each rotation of the sun the passage of the spot across central position was followed by auroral display which culminated on the 22nd of March, 1920, in auroras of extraordinary brilliancy. Turner correlates sunspot periods and earthquakes in an interesting study showing the commensurability (correct to the hundredth part of a year) between the sunspot periods and earthquakes. On the long period (78 years, or seven times the single sunspot period) the earthquake period coincides within about a tenth of a year. An interesting observation and one which may have extraordinary importance in solar research is Douglas's confirmation of the repeated reports that the sunspot maxima and minima are periodically reflected in the thickness of the annual ring growth of trees.

The year 1920 marked a new triumph of phys-

ics in astronomical research in the real introduction of interferometry for the measurement of the diameters of the stars. In 1891 Michelson and Hamy had separately measured the diameters of Jupiter's principal satellites by the interferometric method and obtained concordant results. It is characteristic of the lag in making use of proposed methods that it is only after 30 years that the first results on star diameters have been obtained. As this article goes to press announcement comes that Michelson has obtained a measure of the diameter of alpha Orionis—the bright red star Betelgeuse of magnitude 0.7 in the constellation of Orion. The result is startling for it gives a diameter 300 times that of the sun, or a volume 27,000,000 greater than our sun. The principle is to admit the starlight by two parallel slits in the field of the telescope. The diffraction pattern formed depends upon the distance apart of the slits. For each size of star disc there is a definite distance apart for the discs at which the diffraction pattern disappears owing to the optical interference effect in the waves forming the two sets of diffraction fringes. By adjusting the slits until this occurs and measuring the distance apart, the angular diameter of the star disc is computed by simply multiplying the wave length used by 1.22 and dividing by the distance apart of the slits. Using the same method during the year Hale measured the position angle and distance interval of the binary star Capella, which had never been visually separated, but was known from spectroscopic evidence to be a binary. The measures taken early in the year showed the rapid orbital motion confirmatory of the spectrograms.

At quite the other end of the scale of measurement is the Weddington "ultra-micrometer" perfected and announced during the year by means of which lengths may be measured of the order of atomic diameters. He employs a parallel-plate condenser and inductance, making a circuit kept in oscillation with a thermionic valve. A change in the interval between the plates as small as one two-hundred millionth of an inch can easily be detected by the change of frequency detectable by "beats." The method is not limited by the length of waves of light producing interference fringes as in optical interferometry.

Pierucci assuming that the atomic volumes express the true volumes of the atoms only at absolute zero, finds for 29 elements that the atomic radii are integral multiples of one and the same length. Chadwick's incomplete work indicates that in general the number of free unit positive charges in the nucleus equals the atomic number. Collins adds that when the atomic weight is an even number the atomic number is half the atomic weight, and when the atomic weight is an odd number the atomic number can be obtained by subtracting one from the atomic weight and halving the result. Chlorine and nitrogen are the only two exceptions.

In view of the failure of the Bohr atom to give atomic properties concordant with those experimentally determined, Langmuir quite properly calls for as many models as can be devised to explain the facts. Bradford deems it possible to reconcile Langmuir's theory with that of Bohr. Langmuir makes this possible by accepting possible rotation or oscillation of the electrons about their assigned positions.

Of some interest in the present problem of sub-

atomic orbits is Birkhoff's suggestion, based on the dynamics of Sundman and Weierstrass, that the sum of the three distances is a system of three bodies (for example, the sun, earth, and moon) increased indefinitely. If the earth, sun, and moon are taken as three particles, the latter two will remain near each other but recede from the sun indefinitely.

Langmuir has proposed a helium atom with two electrons oscillating in semi-circular paths in the plane of the nucleus and symmetrical with respect to a second plane through the nucleus perpendicular to the orbital plane. He also suggests a hydrogen molecule in which the electrons move in separate orbits in a plane perpendicular to and bisecting the line connecting the two nuclei. The electrons are assumed to oscillate in different halves of the same circle, roughly, repelling each other as they approach and going back over the same paths. Oxley finding Langmuir's atom paramagnetic suggests that the two electrons rotate in the same circular orbit midway between the two nuclei, in the same plane, the fusion of the orbits being controlled magnetically (Oxley) instead of electrostatically (Bohr).

Hull believes that the several theories of atomic structure are nearer a harmonious and complete picture than we realize. The magnetic nucleus of Ritz makes the force determining the vibration dependent upon the velocity rather than the position of the electron. Bohr contributes the stable orbits. Thomson attributes to a skeletal structure of the nucleus giving rise to the Bohr stable orbits and the quantum relations connected with them. Sommerfeld has shown that the orbits, either circular or elliptical, can account accurately for spectral doublets. Millikan has shown that the absorbed energy must always exceed h times ν by the amount of the work necessary to detach the electron from the atom, and only the kinetic energy of the escaping electron is an exact quantum. Langmuir accounts for the known chemical properties by stationary electron shells concentric with the nucleus.

The exact data of spectral measurements have recently been made profoundly significant through Planck's law of radiation, that radiant energy is proportional to the radiant frequency, and through Bohr's law of constant angular momenta. The latter assumes that the angular momentum of the electron equals some whole number multiplied by a universal constant. The universal angular momentum gives the Rydberg fundamental frequency. Duane now calculates this frequency for eight elements (atomic numbers ranging between 13 and 74) and the computed results agree with observed values within a few per cent. Duane here assumes a distribution of electrons derived from the Lewis and Langmuir theory of the static atom. The attempt to derive physical results from the Langmuir postulates is of particular interest in view of the predictive success of the latter.

Allen regarding the electron as a rotating anchor ring of negative electricity suggests a theory of optical rotation, and finds a numerical expression for the amount of rotation per unit length. He portrays graphically the dextro- and laevo-rotatory forms of an optically active compound based on the Lewis-Langmuir structure. Langmuir stated to Allen in this connection that in practically all carbon compounds, eight elec-

trons surround the carbon nucleus, four pairs, each pair rotating about the line connecting the kernels of the adjacent atoms.

Priest continues his fundamental researches in chromaties. He finds that if two spectral distributions of light excite the same color they are always found to have the centres of gravity of the two distributions identical. Priest in a study of the stimulus for white light found by experiments on four observers that results show that the normal stimulus of white is equivalent to a black body at 5200 degrees absolute.

The crystal as the universal norm of structure of solids merits the closest study, for its architecture is the result of ultimate building units disposed by ultimate forces. Laue's theoretical foundation for the X-ray analysis of crystal structure has opened up the whole field of allocation of atoms with most fruitful results. The Braggs, Hull, Debye, and Scherrer, and others have obtained results with many crystals of elements and compounds. The use of powdered crystals has replaced the tedious work of observing with a single crystal and brought more rapid results. X-ray analysis now goes further than the mere allocation of the atoms in the crystal. Rinne showed that theoretically the effect of the electrons must be considered in determining crystal structure. Debye and Scherrer find ionization in crystals, for example, in sodium fluoride in which the number of electrons was derived from measures of the intensity of reflection from planes composed of a single type of atom. Born and Landé conclude that atomic structures are three dimensional and that the plane electronic system is not satisfactory. They had found that the compressibility computed on the Bohr basis was found not to give the observed compressibility. Landé therefore assumes that the symmetry of the electronic orbits is cubic. Bohlen during the past year found thorium and nickel to be composed of face-centred lattices and magnesium of two interpenetrating simple hexagonal lattices.

Bohlin has developed Debye and Scherrer's method of X-ray crystallography by pulverized crystals, in which the latter is formed into a concave cylindrical surface exposed to a divergent beam of X-rays devised to produce spectrograms of sharply defined lines. By the new method Bohlin determined the space lattices of aluminum, thorium, niton, and magnesium.

Bragg finds an empirical relation for interatomic distances and crystal structure such that crystals may be pictured as groups of spheres of appropriate diameters held in relative positions by contact with their neighbors. The distance between centres of any two neighboring atoms may be expressed as the sum of two constants (these being the respective radii of the two spheres). He only claims fairly close approximate validity for the empirical relation which he suggests as useful in the analysis of complex crystal structures where various arrangements of the atoms have to be tried out to explain the intensities of the reflected X-ray spectra produced by diffraction in the crystal.

As a result of laboratory and field studies of the elements of the earth's crust, Washington suggests the probability of an outer surface layer of petrogenic elements (occurring as oxides, silicates, chlorides, and fluorides), under which is a zone of nickel-iron, and below this a central core of metallogenic elements (occurring as

ores). This agrees with Abbot's suggested distribution of the elements in the sun. Washington also shows from analyses that the average densities of the continents, ocean floors, etc., are in inverse relation to their elevation, a fact confirmatory of isostatic theory.

After 30 years of painstaking mathematical work, Brown has issued his new tables of the motion of the moon. These take account of 1500 separate terms which might appreciably affect the determination of the moon's position. While every term has been considered which might influence the lunar position neither Newton's nor Einstein's theories fully explain the moon's motion. The tables mark an epoch quite comparable to the Clairaut tables of 1752 and Delaunay's issued in 1911, for the values of each term are worked out once for all for use in navigation and astronomy.

American physicists will greet the 1920 edition of the Smithsonian tables with satisfaction. Fowle, the compiling editor, found the six years since the previous edition fruitful in numerical data calling for entirely new or revised tables. Certain new subjects have been added, such as astrophysics, meteorology, geochemistry, atomic and molecular data, colloids, and the coöperation of the leading national laboratories was secured in making the new edition as authoritative as possible. Useful as the volume may prove, physicists increasingly realize the imperative necessity of an agency for making promptly and universally accessible the newly acquired numerical data pertinent to physics. Again, since specialists notoriously are no more able to keep abreast with their own literature, systematic reviews of each topic of physics are called for, somewhat after the manner of recent symposia. The forthcoming "Physiological Review" furnishes a model, for it will give no abstract, but furnishes each quarter with well prepared and thoroughly assimilated reviews of all topics in this science. America should have a similar journal for physics.

Humphrey's "Physics of the Air" marks an era in American meteorology, for the author is in close touch with both subjects and will furnish a reliable collation of the physics of the atmosphere for basic weather research. A practical correlation shown is a graphic chart of the pyrheliometric values and mean temperature departures as related to sunspot numbers and violent volcanic eruptions. This correlation shows the startling effect of volcanic dust driven into the upper (the isothermal) stretches of the atmosphere resulting in lowered surface temperatures over the earth for prolonged periods.

The third crucial test of the validity of Einstein's theory of relativity is reported as confirmed numerically by Grebe and Bachem. Others express doubt. Einstein had predicted that a strong gravitational field would slow down luminous vibrations to lower frequency, resulting in a shift of the spectrum lines toward the red, amounting, as he computed in the case of the sun, to a shift caused by a radial velocity (recession) of the light source of 0.6 kilometers per second. Grebe and Bachem are reporting as finding a shift equal to a Doppler effect of 0.56 kilometers per second. If confirmed, the three effects claimed as unique consequences of the relativity theory are now quantitatively verified. Since the three predictions were counter to classical physics their verification numerically and

qualitatively is probably without a parallel in the history of science.

Heated controversy wages over many of the implications of the theory, some opposing the theory as radical since other mathematical procedures are possible. Slate would make general the Newtonian relations for energy, momentum, and force, holding that relativity and Newtonian dynamics may be adjusted to eliminate contradictions and reestablish them as properly equivalent procedures. Holst praises Einstein's success in establishing covariant expressions for general physics but believes many of the results may be obtained from simpler considerations. Larmor holds that what remains of the original notion of relativity coincides with the principle of Newton, Faraday, and Maxwell, originated by Descartes, that the operations of nature are elaborated in a fourfold extension according to a scheme purely differential, that is by transmission from element to element of the cosmos, in no case leaping across intermediate elements as action at a distance would imply. Evershed, doubting the Einstein effect on the basis of his Venus results, still finds the cyanogen band and metal line displacements of the right direction and magnitude for the relativity view. St. John's recent measure from iron lines and the magnesium triplet in the green give displacements smaller than required by Einstein.

So the controversy stands. The apparent confirmations of Einstein's formulas deduced from his theory has aroused profound interest among physicists and has brought the most fundamental concepts of philosophy into the heart of physics. Certainly the implications and conceptions of the finitude of the universe, spherical space, and the meeting of the ends of a straight line, and other almost grotesque deductions will awaken discussion. Perhaps most startling is the computation of the volume of the new universe, that is of the new finite but endless "spherical space."

$$7 \times 10^{41}$$

The expression is that the volume =

$$\sqrt{p^3}$$

cubic centimeters where p is mean density of distribution of matter.

Last year this review quoted Planck's opinion of Einstein's work. Perhaps the most fulsome tribute to the general relativity theory of Einstein is given by Schlick who has written an excellent treatise on the theory. He says: "The structure of the universe which the general theory of relativity unveils to us, is astounding in its logical consistency, imposing in its grandeur, and equally satisfying for the physicist as for the philosopher. . . . The world is not confined by any boundaries, and is yet harmoniously complete, for no energy or matter can wander off to infinity, because space is not infinite. . . . By a combination of physical, mathematical, and philosophical thought, genius has made it possible to answer, by means of exact methods, questions concerning the universe which seemed doomed forever to remain objects of vague speculation. Once again we recognize the power of the theory of relativity in emancipating human thought, which it endows with a freedom and a sense of power such as has been scarcely attained through any other feat of science."

PILANDER, Admiral A. A. L. Stockholm, Sweden, died August 9.

PILGRIM TERCENTENARY. The 300th anniversary of the year (1620) when the Pilgrims sailed from England to find a home in America was celebrated in 1920 by ceremonies in Great Britain and the Netherlands as well as in the United States. As was noted in the preceding YEAR BOOK the Federal government decided to participate in the celebration and in June, 1919, a committee of Senators and Congressmen was appointed to confer with the Massachusetts State officials to that end. The preliminary activities of societies of *Mayflower* descendants and other bodies were also noted in the article CELEBRATIONS in that volume. In the United States, the President issued a proclamation, August 4, calling upon the people to participate. This met with a prompt response throughout the whole country. Hundreds of thousands of dollars were appropriated by the cities and nation, and about 2000 cities organized ceremonies including pageants and religious exercises, which lasted from August to the close of the year. Exercises were held at Provincetown, Mass., August 20th and August 30th, in which representatives of Great Britain, France, and the Netherlands took part. The celebration included a parade with many floats representing historical incidents, and addresses from the American Secretary of State and the Dutch representative. Other ceremonies followed at Provincetown in September, November, and December, including the celebration on November 11th of the signing of the compact on board the *Mayflower* when she was in the Provincetown harbor. November 21st was observed as the Pilgrims' sabbath. Exercises were held at Plymouth December 31st, including speeches by prominent Massachusetts officials. It was provided that the final celebration should be held at Plymouth in the summer of 1921.

Abroad many commemorative exercises took place in Great Britain and the Netherlands. In February Washington's birthday was celebrated in London with special reference to the Tercentenary and speeches were made by the Lord Mayor and the Lord Chief Justice, to which the American ambassador replied. The earliest pageant was staged at Southampton, July 24. The official celebration took place, September 23, at Plymouth, England, where a pageant was performed around the so-called "Pilgrim Stone," which marked the point from which the Pilgrims had departed. This was witnessed by some 20,000 people. It was followed by a reception in the Guildhall, religious ceremonies, and other celebrations during the week. The event was also celebrated at Dartmouth, September 8, Southampton, September 10, Torquay, September 12, and many other places, including Boston, England. In the Netherlands, the celebrations began at Leyden, August 29, when a memorial service was held at the place where the chief Pilgrim father, John Robinson, had lived. On the same day similar services were held at Amsterdam, where also a meeting attended by about 2000 Dutch, American, and British delegates was held. On September 2d, a boat trip was made along the canal over which the Pilgrims had traveled.

PINES, ISLE OF. An island off the western end of Cuba comprised within the Province of Havana. Area, 986 square miles.

PINK BOLL WORM. See COTTON.

PITTSBURGH, UNIVERSITY OF. An institution of the higher learning, at Pittsburgh, Pa.; founded in 1819 under the name of Western University of Pennsylvania, present name adopted in 1908. The enrollment for the summer session of 1920 was 824, and for the regular fall term, 5256. There were 579 members in the faculty. The library contained about 150,000 volumes. The Alumni Hall was almost ready for occupancy, and cost \$550,000. It was the gift of the alumni. President, John Gabbert Bowman, A.M., LL.D.

PLATINUM. With an American stock of platinum at the beginning of 1920 stated at 29,228 troy ounces, or slightly below normal, there were maintained for the first two months of the year the record prices that ruled in 1919. However, notwithstanding the continued absence of large supplies of Russian platinum, imports from Europe increased and platinum from the Choco region and the Cendoto and San Juan rivers of Colombia, South America, reached the United States in increased amounts. In the first nine months of 1920 American imports of platinum amounted to some 58,700 ounces indicating a total for the year of nearly 78,300 ounces or 23,800 ounces more than were imported in 1919. The result of these increased imports and a strike of jewelry workers in the Eastern United States was that the price of platinum fell to \$82 an ounce by June, but rallied when jewelry manufacture was resumed to \$117 per ounce in early September. Subsequently due to slackened demand it steadily declined until at the end of the year a price of \$75 an ounce was reached which had not prevailed since 1916. Of course Russia with her extensive platinum fields was the key to the situation, and it was apparent that until production there was secured there would hardly be a return to pre-war prices. It was considered likely that some small amounts of platinum might enter commerce from Russia through various channels, or with political developments and proper financing some large amounts, but everything depended on the many uncertainties of the country. Larger supplies were received from Colombia in 1920 and with more extensive and more efficient operation it was expected that South American platinum would continue to figure more and more in the world's trade. See ALASKA.

WORLD'S PRODUCTION. Statistics of the world's production of platinum and allied metals supplied by the United States Geological Survey on the basis of most reliable information obtainable were as follows:

ESTIMATED WORLD'S PRODUCTION OF CRUDE PLATINUM, 1911-1919, IN TROY OUNCES									
Country	1911	1912	1913	1914	1915	1916	1917	1918	1919
Borneo, India, and Sumatra			200	(*)	18	9	52	(*)	(*)
Canada	30	30	50	30	100	60	80	30	30
Colombia	12,000	12,000	15,000	17,500	18,000	25,000	32,000	35,000	35,000

PLAYGROUND AND RECREATION ASSOCIATION OF AMERICA. This association was organized in 1906 to help in the establishment of year-round municipal recreation systems. Since the war there has been great interest in physical education, and the association feels that it has much to do in this direction. During 1920 the association, as usual, sent field workers into communities desiring their services to help plan the work, and to secure municipal appropriations, published a number of pamphlets, and a monthly magazine, *The Playground*, answered through correspondence thousands of inquiries from all parts of the world regarding various phases of community recreation, and maintained an employment department for the service of recreation officials and workers throughout the country. Legislation with appropriations has been gained in many of the States and cities for recreational purposes. Compulsory physical education laws have been urged by the National Physical Education Service in both State and Federal legislatures. Considerable progress is reported. The officers for 1920 were: President, Joseph Lee; treasurer, Myron T. Herrick; and secretary, Howard S. Braucher. Headquarters are at 1 Madison Avenue, New York City.

PODOLIA. Formerly a government of the Russian Empire, but after the revolution comprised within the territory of the Ukrainian Republic; situated to the east of Galicia and between Volhynia and Bessarabia. Area, 16,224 square miles; population, estimated, Jan. 1, 1915, 4,127,600. Capital, Kamenets Polsk, with a population before the war estimated at 52,000, of whom one-half were Jews.

POETRY. See LITERATURE, ENGLISH AND AMERICAN; also articles on French, German, Spanish, and Scandinavian Literature.

POINCARÉ, LUCIEN. French mathematician and physicist, brother of the former president, Raymond Poincaré, and vice-rector of the Academy, died, March 9. He was one of the leading authorities on modern education in France. He taught in the provinces during his early career, but returned to Paris having obtained the degree of Doctor of Science. His works on modern physics and electricity gave him a world-wide reputation. After teaching in the university for some years, he entered the administration and was successively inspector-general of lycées and colleges, director of secondary education, and director of higher education. In October, 1917, he was appointed head of the University of Paris.

POISONOUS PLANTS. See VETERINARY MEDICINE.

POLAND. A European state reconstituted as a result of the war and comprising the territory formerly divided among the great powers of Austria-Hungary, Russia, and Prussia after the three partitions of Poland in 1772, 1793, and

1795; boundaries still indefinite at the close of 1920. Before the partition of 1772, the area was 274,018 square miles but this did not represent all the territory which at that time was ethnologically Polish, a number of territories having already been annexed by Austria and Prussia. A Polish estimate in 1919 placed the area at 135,267 square miles and the population at 36,234,727. During 1920 in the discussions of the subject the estimates varied widely from this figure. Before the war Russian Poland had an area of 43,946 square miles with a population estimated Jan. 1, 1915, at 12,247,600, of whom according to the Russian census of 1897, 71.8 per cent were Polish. Roman Catholicism was the religion of about three quarters. The capital is Warsaw, with a population before the war of 909,491; estimated (1919), 820,180.

PRODUCTION, ETC. It has been estimated that 85 per cent of the total area is productive, and about 50 per cent under cultivation. The chief agricultural products have been wheat, rice, barley, oats, and sugar beets. Before the war Polish territory produced great numbers of live stock, especially pigs. In the production of sugar it ranked third before the war and in the production of potatoes it held the second place. The chief minerals are coal, iron ore, zinc, and lead ore, mineral salt, and rock oil. The output of petroleum in Galicia has been placed at 5 per cent of the world's production. The new territory acquired is rich in minerals and in general the mineral wealth is next in importance to the agricultural resources. No later figures for production and commerce were available than those given in the preceding YEAR BOOKS. The railways open for traffic in 1919 had a mileage of 7295. During the year 1920 the first railway line built by Poland since the armistice was formally opened for traffic between Kutno and Strzalkow, 111 kilometers (68.97 miles), effecting a cutoff of 71 kilometers (44.12 miles) in the rail connection between Warsaw and Posen. It had been determined in February, 1919, to undertake construction which was begun the following July. Temporary bridges at first were used but as operation progressed work was prosecuted on building second track and permanent bridges. The new line was intended also to serve as a link in the projected International Transcontinental Railway between Vladivostok, Moscow, Warsaw, Paris, and London. A merchant marine was in process of construction, the Parliament having provided for 220,000 gross tons, including 20 vessels of 8000 tons and 10 of 3000 each, together with small craft for the coast trade. The revenue for the nine months ending March 31, 1920, was placed at 3,060,594,213 Polish marks and the expenditure at 15,158,562,352 Polish marks. (See NAVAL PROGRESS.) At the beginning of 1920 the Polish army was estimated at 700,000 men and 14,000 officers. The military budget for the nine months ending March 31st was estimated at 7,496,184,060 Polish marks.

GOVERNMENT. The constitution under consideration in 1920 provided for universal suffrage of both sexes. Executive power was vested in a president who was commander-in-chief of the army, elected by plebiscite for seven years from two candidates proposed from the Sejm or national parliament. Legislative power was in the Sejm or parliament and in the president, the latter having the veto power. The President in

1920 was Gen. Joseph Pilsudski, elected Feb. 20, 1919.

The ministry at the beginning of the year was as follows: General Leszniewski, Minister of War; M. Grabski, Minister of Finance; M. Hebdzinski, Minister of Justice; M. Iopuszanski, Minister of Public Instruction; M. Olszewski, Minister of Commerce and Industry; M. Bardell, Minister of Agriculture; M. Coyree, Minister of Transportation; M. Tolloczko, Minister of Posts; M. Kenzidor, Minister of Public Works; M. Sliwinski, Minister of Food; M. Opolowski, Minister of Labor; M. Seyda, Minister of the Former Prussian Province. Owing to the internal disorders, a cabinet crisis occurred and on June 24th a new ministry was constituted as follows: Premier and Minister of Finance, M. Grabski; Minister of War, General Leszniewski; Minister of Foreign Affairs, Prince Eugene Sapieha; Minister of Food, Stanislas Slivinski; Minister of Railroads, M. Bartel; Minister of Posts and Telegraphs, M. Tolloczko; Minister of Education, M. Lopuszanski; Minister of Commerce and Industry, Antony Olszewski; Minister of Public Health, M. Chodzko; Minister of Public Works, Gabriel Narutowicz; Minister of Agriculture, Professor Bujak; Minister of the Interior, M. Kuczynski; Minister of Justice, John Morawski.

CABINET CRISIS. As noted in the last YEAR BOOK the Paderewski government fell from power Dec. 7, 1919, and was succeeded by the new ministry mentioned above under *Government*. In March a revolutionary strike was narrowly averted, following serious labor disorders in Warsaw and in Galicia but in spite of that, protests against the government continued and resulted in attacks upon the ministry in Parliament. A cabinet crisis followed which ended June 24th with the forming of the new ministry which is also noted above under *Government*. The Radical element including members of the Socialist and Workingmen's parties were dissatisfied and declared their lack of confidence from the first. Meanwhile elections of the Diet were held on May 16th resulting in the following apportionment of seats among the respective party groups: German National People's party, 34; Independents, 21; Social Democrats, 19; Centre, 17; Free Economic Association party, 12; German Democratic party, 10; Polish, 7.

HISTORY

POLAND AND THE SOVIET GOVERNMENT. On January 9th the Polish government declared that it would send troops into the Ukraine, General Denikin having now evacuated that region, and would thus check the advance of Bolshevism. In the latter part of January the Soviet government renewed its demands for peace which had been made on Dec. 22, 1919, saying that it had from the first recognized the independence of the Polish Republic and that no question remained that could not be settled by peaceful means. The Polish terms were submitted February 24th, including self-determination for the population west of the frontier of 1772, indemnity for damage done by Russian troops in Poland and under the Russian government to Polish citizens in Russia. The Supreme Council protested February 28th, that Poland's eastern boundary as agreed upon Nov. 25, 1919, lay far to the west of the region claimed. Military operations were resumed early in March. An offensive alliance was formed between Poland and the Ukraine to-

ward the end of April. By June 1st the Soviet troops were driven out of Little Russia, but during that month Polish and Ukraine forces were in turn repulsed.

DANGER OF BOLSHEVISM. The efforts of the French on behalf of Poland had for their motive in part the fear that unless Poland withstood the wave of Bolshevism, all western Europe might succumb to it. In French political discussions throughout the year there was constant insistence upon the necessity of a strong Poland which would serve as a rampart against attacks of Bolshevism. The French wished to prevent the Bolsheviks from getting a foothold on the Vistula or in the coal fields of the former Russian Poland and former Austria Silesia or in the Polish part of the former duchy of Teschen. The coal regions of Teschen were in the territory of Czecho-Slovakia. With the Bolsheviks in Upper Silesia there would be grave danger to this region. If the Bolsheviks held the territory as far as the Vistula, the English fleet could accomplish nothing against them. Moreover, if the Lithuanians, Letts, and Estonians were surrounded by Bolsheviks they would have no protection from Red propaganda. Such considerations as these were constantly urged by the French press throughout the year as showing the need of protecting Poland, and they professed not to be able to understand why the other Allies could not see this same necessity.

DEFEAT OF THE BOLSHEVISTS. Polish successes continued in September and by September 17th the fortified city of Lutsk was taken, giving the Poles the virtual mastery of a considerable territory; and soon afterwards a general Polish advance along the southern front was driving the enemy out of Eastern Galicia. To the north and east of the river Dniester, the Ukrainian forces were aiding the Poles. Toward the end of September the Poles began an advance toward Grodno on the northeast front, and by September 29th they had taken the city of Lida. As their march now faced toward Vilna, the Lithuanian government took alarm (see LITHUANIA). The Red forces also began to retreat north of the Pripiet River. By September 30th the Soviet troops had been defeated on the entire northern front and were fleeing to the east, closely pursued by the Poles. At that time the number of prisoners taken by the Poles was reported by them at 26,000 and the Poles also claimed to have captured the entire staff of the fourth Bolshevik army. On October 3d the pursuing Polish cavalry reached Minsk and in this region the defeat of 16 Bolshevik divisions was announced, including the capture of 42,000 prisoners, along with munitions, machine-guns, and other war material. Meanwhile General Wrangel was down to this time reported to be successful in his attacks upon the Red forces of the Crimea. The situation looked desperate to the Bolsheviks and impelled them to accept terms of peace favorable to Poland. Meanwhile, peace negotiations had been going on at Riga since September 21st. A few days before, the head of the Polish delegation, M. Dombiski, and the head of the Soviet delegation, M. Adolph Joffe, had met at a preliminary conference. After the proposals of the Russians and the counter-proposals of the Poles had been presented, the Russian delegate, M. Joffe, suddenly presented the final Russian terms, saying that the Soviet government would at once begin its winter campaign if an armistice were not con-

cluded within 10 days. These terms amounted to an acceptance of the position which the Poles had taken at the conference of Minsk. They were a complete back-down from the former Russian attitude. According to them, the Russian Soviet government accepted the view of Poland that the reduction of the Polish army, the surrender of arms, the demobilization of Poland's war industries, and other demands previously made by the Soviet government could not be conceded. The Soviet government renounced these terms. The Poles thereupon submitted among other proposals the following: Recognition of Polish sovereignty and non-interference in Poland's domestic affairs; renunciation of indemnities for the expenses of the war; exchange of war prisoners; mutual amnesty for Russian and Polish citizens; freedom of Poland from any obligation arising from its former status as part of the Russian Empire; allowance of sufficient time for the formation of the terms of the treaty, which should be immediately negotiated, etc. Committees were appointed and set to work on the studying of these proposals. On October 5th the respective leaders of the Polish and Soviet delegations agreed on the terms of an armistice beginning October 8th. According to the outline of these terms at that time published, the principal points were as follows: Recognition of the independence and sovereignty of Poland and renunciation of all subversive propaganda in Poland; acceptance of a boundary cutting off Lithuania from Russia and granting Poland a corridor; acceptance by Poland of any form of government that the Russians should set up in White Russia and the Ukraine; the abandonment by Russia of claims to East Galicia, the destiny of that region to be settled between Poland and the Allies. The treaty was signed on October 12th. Its terms appeared to be generally acceptable, but the extreme war-like parties in the countries concerned were not satisfied, and in Lithuania there was resentment at the granting of the corridor to Poland.

THE VILNA AFFAIR. For the complication arising from General Zeligowski's occupation of Vilna see article WAR OF THE NATIONS. At the close of the year this problem was still causing difficulties though many methods of adjustment had been discussed. The envoy of the Soviet government protested December 11th, saying that it had proof that war supplies were furnished by the Polish government to General Zeligowski. The Russian envoy also protested against the action of the League of Nations in proposing to send an expedition to Vilna. The Polish minister of foreign affairs replied sharply to these protests. He pointed out that General Zeligowski was not occupying territories which were contiguous to the Soviet republics. Throughout the closing months of the year negotiations were going on between Poland and Russia with a view to making peace a permanent one.

UPPER SILESIA. The date for the plebiscite in Upper Silesia was fixed on Jan. 17, 1921. Polish claims were supported by France. The matter was of great importance because the region, which had an area of some 5000 square miles, was considered one of the richest in Europe on account of the great wealth of its coal deposits. The subject was much agitated in the closing weeks of the year. See WAR OF THE NATIONS.

POLAR RESEARCH. While the year has not been marked by any important additions to

research in unknown polar lands, yet current activities hold forth promise in the near future. The most notable expeditions in 1920 were those of Amundsen, who returned to Nome unsuccessful in his trans-polar drift and again set out in renewal; the initiation of Koch's explorations of northern Greenland; the success of Hansen in establishing at Cape Columbia, Grinnell Land, a relief depot for Amundsen; MacMillan's preliminary trip to Baffin Bay to gain knowledge for his Baffin Land explorations of 1921; and the Antarctic expedition of Cope, with Falkland Islands as the primary base.

ANTARCTIC. A long and perilous journey is planned by Dr. J. L. Cope, commander of the British Imperial antarctic expedition. As originally proposed the expedition was to be gone for five years, during which the great, ice-clad continent of Antarctica was to be explored by a large airplane, to which a sledge was to be attached. Cope hoped to ascertain the possibility of mineral or other resources capable of exploitation. In a way it is possible that these researches would inure to the development of the Falkland Island Dependencies (q.v.). The scope of the expedition appears to have been modified. Cope sailed in June, 1920, for the purpose of charting the western coasts of Weddell Sea, and obtaining such information as would enable this land to be made a base of operations. It was thought that such surveys would take 18 months. Cope cabled from Port Stanley, Falkland Islands, as follows: "Am sailing from here December 20th with full equipment and dogs. Hope to land at Graham Island December 25th. All the party well. Expect to hear from us in 18 months."

ARCTIC. The most interesting phase of arctic exploration during the year pertains to the Amundsen expedition. He planned to push into the polar ice in the Siberian Ocean, and when beset to drift across the arctic zone. This method, initiated by De Long in the *Jeannette*, was later followed by Nansen in the *Fram*. Meeting with conditions unfavorable to besetment, Amundsen was obliged to put the *Maud* in winter quarters at Aion Island, Siberia, not far from Bering Strait. Frozen in until July 7th, the *Maud* then proceeded to Nome, Alaska, where refitting she renewed her voyage on August 8th. When last heard from, September, Amundsen was attempting under unfavorable conditions to enter the main pack north of Wrangel Land. The *Maud* was then wedged in the ice 20 miles north of Cape Serge, Siberia. The results of his exploration of the Siberian coasts were valuable. He discovered and explored a new land near the Nicholas II archipelago. He now goes down to history as the only one who has navigated the northern coasts of both America and Asia. From the winter quarters at Aion Island, Sverdrup visited the primitive Tchutchee tribes and studied their life conditions. Large scientific collections were made of birds, mammals, mammoth remains, etc., while observation of tides, weather, magnetism, etc., were systematically made. To ensure the safety of his first year's work Amundsen sent a sledge load of the most important records and collections, under two sailors, Tessem and Knudsen, to be forwarded to Norway from the nearest Siberian village. The men evidently perished, as no traces of them have been discovered despite active search. In his renewed voyage Amundsen is accompanied by only three men, the rest

of the party leaving the expedition at Nome.

The safety of the Amundsen expedition caused the sending of a relief party to lay down food supplies at various points. In 1919 the Norwegian government asked the cooperation of the Danish government to lay down a depot on the arctic coast of north Grinnell Land, to meet any exigencies that might arise from the drift of the *Maud* to this sea. The performance of this duty was entrusted to Capt. Godfrey Hansen, Royal Danish navy, who was especially fitted for this work through his extended and successful field work while serving as a subordinate to Amundsen in the magnetic expedition to the north magnetic pole in 1903-04. Hansen made the base of his expedition at Thule, Robertson Bay, a station established for the care and benefit of the Etah Eskimo. In the autumn of 1919 Hansen organized a field party of Eskimo and established advance depots for the spring work. On March 16, 1920, he left Thule with a large force, taking about 200 dogs and 16 sledges. Open water and drifting floes made it impossible to cross Kane Sea to Grinnell Land. The route followed was northward over the shore ice, past the great Humboldt glacier of Kane and Cape Constitution of Morton. Reaching Franklin Island, of Hall, the supporting sledges were sent back, while the advance part crossed Kennedy Channel to Discovery Bay, Greely's station in 1881-83. The station proved useful to the party, both in going and in returning. Leaving hunters at this point, who killed large numbers of musk-ox, Hansen proceeded north, and on April 20th reached the most northerly land, Cape Columbia, 83° 07' N., within 413 geographical miles from the Pole. Here he left ample provisions, ammunition, etc., and a detailed map of the best route to the south for Amundsen's possible use. Returning safely Hansen reached Thorshavn, Iceland, October 7.

A Danish commemorative expedition is now engaged in the thorough survey of northernmost Greenland. It is led by Lange Koch, an associate of Rasmussen in the second Thule, Greenland, expedition. This expedition is to celebrate the bicentenary of the introduction of Christianity into Greenland, by the missionary Hans Egede, in 1721. Koch left Denmark July 15, 1920, for Greenland, where he was to establish his base of operations at Robinson Bay, Inglefield Gulf. With one white companion, Slott, a traction engineer, Koch will depend entirely on Eskimo subordinates. By novel arctic transportation, especially constructed tractors, an advance depot of supplies was to be cached in the summer of 1920 on Warming Land, south of Sherard Fiord. With the Warming depot as an advanced base, in 1921 a dog-sledge party will exhaustively search Independence Fiord, for the missing field records of Mylius Erichsen, who perished there in 1907, while in command of the *Danmark* expedition. Later the extreme northern parts of Hazen Coast (Peary Land) will be surveyed from the farthest of Lockwood and Brainard—the world's record of the Greely expedition, 1881-84,—to Peary's farthest on the northeast coast, 1900. It is to be noted that the Danish government, with its usual liberality, has lately published the scientific results of the *Danmark* expedition, 1906-08, to extreme northeast Greenland, where Erichsen and Koch completed the circumnavigation, and so absolutely determined the insularity of Greenland, previously suspected but not really known. Special attention is given to the eth-

nology of the extinct tribes of Eskimo who lived on this inhospitable coast many ages ago.

Jan Mayen—a no man's land—has been occupied by Norwegian subjects, whether temporarily or permanently is not stated. While no reason for this occupation is given, it may be surmised that its mineral and other possible resources will be investigated. If sufficiently plentiful and easily accessible for commercial exploitation, Jan Mayen may succeed Spitzbergen and Bear Island as sources of raw material. Among the results of the last Katmai expedition of the National Geographic Society to Alaska, are insect collections among which are many new to science, and advances in vulcanology through researches by the Carnegie Geophysical Institution of Washington. Ethnological researches by Jenness of the Eskimo east of Colville River, show that they are self-supporting for all purposes—clothing, food, and shelter, but their future depends on the survival of trapping conditions. The entrapping by ice of the *Polar Bear* off the Siberian coast, near Wrangel Land, were grounds for a sledge relief party from Nome, in November.

POLITICAL AND SOCIAL SCIENCE, AMERICAN ACADEMY OF. The American Academy was organized nearly 30 years ago as a forum for the scientific discussion of social, civic, industrial, and economic topics. The Academy publishes as its official organ a bi-monthly journal, known as *The Annals*, in which discussions on questions of national or international importance are presented. These volumes are sent to all members. During the year 1920 the following volumes were published: January, *The New American Thrift*; March, *Bonds and the Bond Market*; May, *Present Day Prices*; July, *Industrial Stability*; September, *Labor, Management, and Production*; and November, *Social and Industrial Conditions in the Germany of To-day*. The following officers were elected at the annual meeting: President, Dr. Leo S. Rowe; vice-presidents, Carl Kelsey, Charles W. Dabney, and David P. Barrows; Secretary, James P. Lichtenberger; editor, Clyde L. King; and treasurer, Charles J. Rhoads. Headquarters are maintained care of West Philadelphia Post Office, Philadelphia, Pa.

POLITICAL ECONOMY. Economic subjects are re-treated under their respective heads in this volume. A discussion of them will be found in such articles as BANKS; COÖPERATION; FINANCIAL REVIEW; LABOR ARBITRATION AND CONCILIATION; OLD AGE PENSIONS; RAILWAYS; SOCIAL INSURANCE; STRIKES AND LOCKOUTS; TARIFF; TRADE UNIONS; UNEMPLOYMENT; etc. See also LITERATURE, ENGLISH AND AMERICAN, AMERICAN ECONOMIC ASSOCIATION. Representatives of the Association were appointed early in the year to serve on the directorate of the National Bureau of Economic Research and to take part in the American Council of Learned Societies. Professor Allyn A. Young who offered his resignation at the annual meeting of December, 1919, was succeeded as secretary and treasurer by Professor Ray B. Westerfield of Yale University. In response to a request of the Internal Revenue Bureau early in September the Association sent one of its members, a tax expert, to attend the conference of revenue officials at Washington in respect to changes in the forms and schedules for the tax year 1920. The 33rd annual meeting of the Association was held at Atlantic City, December 27-30, and the

following papers were read: "The Railroad Situation: An Appraisal," by Frank H. Dixon; "Our Foreign Trade Balance since the Armistice," by John H. Williams; "An Introductory Survey of the Bituminous Coal Industry"; "The Irregular Operation of the Coal Industry," by F. G. Tryon; "Costs and Prices in the Coal Industry," by David L. Wing; "The Marketing of Coal," by George H. Cushing; "The Transportation Problem in the Coal Industry," by A. G. Gutheim; "Comments of an Ore Engineer," by Arthur J. Mason; "The Theory of Production," by Leo Wolman; "An Index Number of Production," by Walter W. Stewart; "A Revaluation of Traditional Economic Theory," by Carl E. Parry; "Soundings in Non-Euclidean Economics," by J. M. Clark; "Profits and Income," by Henry R. Hatfield; "Federal Taxation of Profits and Income," by F. R. Fairchild; "A Review of Federal Reserve Board Policy," by O. M. W. Sprague. There were "round table" discussions of the teaching of elementary economics and on farm marketing, in the course of which several papers were read on special aspects of the latter subject. The president's address was on the subject of "The Post-War Outlook." Officers, Herbert J. Davenport, president; Ray B. Westerfield, Secretary.

POLITICAL SCIENCE, ACADEMY OF. This society was organized in New York City in 1880 for the purpose of promoting social and political studies. The semi-annual meeting was held in New York on April 30, 1920, at which the subject was "Inflation and High Prices: Causes and Remedies." The discussion was carried on by many noted men, authorities on the subject. The situation in the United States was compared with that of Europe. The annual meeting (40th year) was held in New York on Dec. 9, 1920, at which the subject was "American Foreign Trade Relations." Both these meetings were attended by approximately 1200 persons. The report of the semi-annual meeting was published as Vol. 9, No. 1, of *The Proceedings* in January, 1920; about 5000 copies of this volume have been distributed. Volume 9 No. 2 of the *Proceedings* to be published in January, 1921, will be entitled *American Foreign Trade Relations*.

The present membership of the Academy is about 4300. The Academy publishes the *Political Science Quarterly*, the *Annual Record of Political Events*, and the *Proceedings* of each meeting. The officers in 1920 were: Board of Trustees, president, Samuel M. Lindsay; vice-presidents, Albert Shaw, Paul M. Warburg; secretary, Roswell C. McCrea; treasurer, George G. Plimpton; and editor of the *Quarterly*, Henry R. Massey. Headquarters are at Kent Hall, Columbia University, New York City.

POLITICAL SCIENCE. See LITERATURE, ENGLISH AND AMERICAN.

POLO. The national open polo championship of the United States was won in 1920 by the Meadowbrook Club which defeated the Coopers-town four in the final match by a score of 12 goals to 3. Meadowbrook also captured the senior national title by its 13 to 5 victory over Rockaway. The junior national honors went to the Foxhunters who defeated Byrn Mawr in the final round by a score of 9 to 5.

Arrangements were made during the year for international cup matches between the United States and England at Hurlingham, England, in June, 1921. The English players took the

trophy to their country in 1914 but owing to the war no attempt was made by the United States players to regain it.

POND, GEORGE GILBERT. Chemist, died at Hartford, Conn. He was born at Holliston, Mass., March 29, 1861; graduated at Amherst College, 1881; and studied at German universities. After teaching in the department of chemistry at Amherst he became professor of chemistry at Pennsylvania State College. He was dean of the School of Natural Science in that college from 1896 to the time of his death.

POOL. See BILLIARDS.

PORK. See LIVE STOCK.

PORTER, ELEANOR HODGMAN. Author, died, May 21. She was chiefly known as the author of *Pollyanna* stories. She was born at Littleton, N. H., Dec. 19, 1868, and studied under private teachers and at the New England Conservatory of Music. After 1901 she devoted herself to writing. Among her stories were: *Cross Currents* (1907); *The Turn of the Tide* (1908); *The Story of Marco* (1911); *Miss Billy* (1911); *Miss Billy's Decision* (1912); *Pollyanna* (1913); *Pollyanna Grows Up* (1915); *Dawn* (1919); *The Tie That Binds* (1919), etc.

PORTLAND CEMENT. According to estimates of the United States Geological Survey of the production, shipment, and gross value of Portland cement, 1920 was a record year. The production was estimated at 100,302,000 barrels, and the shipments at 96,329,000 barrels, valued at \$193,548,000 compared with 80,769,378 barrels manufactured and 85,596,616 barrels, valued at \$146,656,076, shipped in 1919, an increase of 24 per cent in production, 13 per cent in shipments, and 31.9 per cent in value of shipments in 1920. The stocks of finished cement increased from 5,852,497 barrels at the end of 1919 to about 8,290,000 barrels at the end of 1920, or more than 41 per cent. The average factory price in bulk at the mills for the whole country was \$2.01 a barrel in 1920, compared with \$1.71 in 1919, an increase of 17.5 per cent.

PORTLAND, ORE. See CITY PLANNING.

PORTO RICO. AREA AND POPULATION. The area of the island is placed at 3435 square miles. The population in 1920 was 1,297,772, an increase of 179,760 in less than 10 years and an increase of 344,579 since the census was taken by the American administration in 1899. At the last census under the Spanish government in 1887 the population was given at 798,565 and it increased during the last 22 years of Spanish government by 221,595, or 30 per cent. Under the 21 years of American government it increased 344,579 or 36 per cent. As a result of this increase the density of the population has become enormous, that is to say, 377.8 per square mile.

EDUCATION. The total enrollment for 1920 in the public schools was 184,991 as compared with 160,794 in 1919 and it was distributed as follows: Rural schools, 115,077; elementary urban schools, 59,174; secondary schools, 3,882; collegiate departments of the University of Porto Rico,

644. The rest were in special schools or night schools. The private school enrollment was 5823. The school population, that is to say persons from 5 to 18 years of age, was 452,446 or 35 per cent of the total population and the enrollment in the public schools was only 40.7 per cent of the school population. The number of teachers was 3288, as compared with 2984 in 1919; and all the teachers were native Porto Ricans, except 153. The number of buildings used for schools was 1903 of which 569 were owned by the government and built for the purpose. In 1919 the department of education undertook a complete enumeration of the children of school age in the rural districts. This gave the number of children of school age as 204,017; number of parents who could read and write, 25,044; parents who were illiterate, 59,502.

AGRICULTURE. Statistics indicate that out of the total area amounting to 2,072,068 acres about 500,000 acres are cultivated in any one year. This is due to the fact that a large portion of the surface is mountainous and unfit for cultivation and that the country is practically tropical and most of the ordinary cereals could not be raised. The Farm Loan Act was extended to Porto Rico in 1920. The following table shows the number of acres of cultivated and uncultivated land for three fiscal years:

	1916-17	1917-18	1918-19
Cane	205,106	258,431	238,901
Coffee	167,729	147,612	158,913
Tobacco	13,212	23,981	22,912
Pineapples	3,331	3,286	2,879
Oranges	5,196	5,843	6,122
Coconuts	6,832	9,887	9,152
Minor fruits	102,575	94,660	102,435
Pasture	1,062,097	1,001,919	1,014,741
Timber and brush	484,216	457,935	445,932
Marshlands	15,193	16,370	18,952
Other lands	32,928	46,308	51,129
Total	2,048,415	2,063,732	2,072,068

See AGRICULTURAL EXTENSION WORK.

COMMERCE. Over 90 per cent of the commerce is with the United States, the trade of the United States with Porto Rico exceeding that with any Latin American country, except Argentina, Brazil, Chile, and Cuba. The chief exports are sugar, tobacco, cigars, coffee, and fruits. The chief imports are rice, flour, cotton manufactures, manufactures of iron and steel, and fertilizers. In 1919-20 imports were valued at \$96,388,534 and exports at \$150,811,449, both showing a large increase over the preceding year, which was a record year. Breadstuffs of which almost all came from the United States, amounted to \$21,565,029 and the importation of cotton goods rose to \$18,021,275. The sugar exports to the United States amounted to \$14,018,912 short tons, valued at \$98,802,436. The United States took almost the entire sugar supply. Exports of unmanufactured tobacco amounted to 20,507,565 pounds, valued at \$13,416,388. The following tables show the development of external trade during 20 years, including the fiscal year, 1920:

MERCHANDISE SHIPPED FROM PORTO RICO TO THE UNITED STATES AND FOREIGN COUNTRIES

Years	To the United States	To foreign countries	Total	Years	To the United States	To foreign countries	Total
1901	\$5,581,288	\$3,002,679	\$8,583,967	1906	19,142,461	4,115,069	23,257,530

HEALTH AND SANITATION. During the year much attention was given to tuberculosis, malaria, and uncinariasis, the three diseases along with infant mortality which accounted for 60 per cent of the death rate. This was due largely to the visit of the commission from the Rockefeller Foundation which studied health conditions with the coöperation of the local sanitary office. Their investigation tended to confirm the opinion that about 90 per cent of the people were infected with uncinariasis. A campaign was started with the aid of the Rockefeller Foundation funds against this disease and the other two above mentioned. Two hospitals were established for the regions afflicted with malaria and two for uncinariasis. A number of dispensaries were also opened. Infant mortality was found to be 43.09 per cent of the total mortality and this was the lowest figure in 10 years. The death rate for the fiscal year ending June 30, 1920, was 23.33 per cent per thousand. Total deaths were 30,280; total births, 50,729.

FINANCE. The income of the insular treasury, estimated for the fiscal year 1920-21, was \$9,015,000 and the total assets for the year including cash on hand amounted to \$10,203,405 which, estimating the total liabilities at \$9,797,319, would leave an estimated cash balance. June 30, 1921, of \$306,086. The total bonded indebtedness was increased during the year by the sale of \$1,000,000 of public improvement bonds of 1919, making a total bonded indebtedness at the close of the fiscal year of \$10,264,000. The limit of indebtedness under the Jones act (the organic act) on the basis of assessed valuation in 1919-20, was \$18,486,000.

ECONOMIC CONDITIONS. The year was a prosperous one, but in the early part there were several serious strikes among the workers in the sugar cane fields. The strike broke out in January and lasted until April 20th, involving nearly the whole island and in the course of it cane fields were set on fire and other disorders occurred. It was settled as the result of negotiations carried on early in March. There was also a strike of the stevedores in San Juan and other cities which began in May and lasted for several weeks. Of these two strikes the first resulted in a substantial increase in wages and the second failed to obtain the demands of the workingmen. All industries and every form of business with a possible exception of the citrus fruit growers were

in a prosperous condition and the laboring class benefited from the great increase of wages.

LEGISLATION. The Legislature met April 26, 1920, in special session and adjourned May 6 after passing 19 acts and six joint resolutions. The following were the chief measures according to the governor's report: The excise laws, the municipal law, the election law, and workingmen's compensation law were all amended in several important particulars. In addition an act was passed authorizing the incorporation of co-operative societies of production and consumption as well as a law increasing the salaries of all the employees and officers of the insular government. The appropriation for the maintenance of the police force was also increased, in order to meet the exigencies of the situation caused by the widespread strike in the cane fields.

There was also enacted a law to aid in the development of the project of a new workingmen's barrio for the city of San Juan. The plan for such a barrio has long been in process of development, but its final execution was made more urgent by the imminence of the actual beginning of the dredging operations which would immediately force the removal of a large part of the laborers from the congested district of Puerto de Tierra.

OFFICERS. Governor, Arthur Yager; Executive Secretary, Roman Siaca Pacheco; Treasurer, José E. Benedicto; Auditor, J. M. Bonner; Attorney-General, Salvadore Meatre; Commissioner of Education, Paul G. Miller; Commissioner of the Interior, Guillermo Esteves; Commissioner of Agriculture and Labor, Romon Gandin Cordova; and Commissioner of Health, Alejandro Ruis Soler.

PORTS. See DOCKS AND HARBORS.

PORTUGAL. A republic occupying the western part of the Iberian peninsula; the most westerly of states on the Continent of Europe. Capital, Lisbon.

AREA AND POPULATION. Area, 35,490 square miles; population (1911), 5,957,985, giving a density of 152.8 per square mile. The largest cities are Lisbon (435,359 in 1911) and Oporto (194,009 in 1911). For details see 1917 and preceding YEAR BOOKS.

PRODUCTION. Of the total area, 26.2 per cent is cultivated; forest land is placed at 17.3 per cent and waste land at 43.1 per cent. The chief products are corn, wheat, rye, oats, barley, beans, and potatoes, and other vegetables; wine, olive

oil, and fruits. Live stock includes oxen, pigs, sheep, and goats. In the north, the land is parceled out in small holdings and agriculture is retarded by the high price of modern machinery. In the south, large farms prevail and agricultural machinery including the tractor is employed. In 1919 wheat production was placed at 4,767,665 bushels as compared with 6,051,000 bushels in 1918; rye, 1,785,838 bushels; oats, 3,037,831 bushels; barley, 1,009,780 bushels. The following information in regard to wine production was supplied by the United States Bureau of Foreign and Domestic Commerce in 1920: The quantity of wine produced during the past four years was as follows: 1916, 381,301,333 litres (1 litre = 0.264 gallon); 1917, 300,246,158 litres; 1918, 258,731,378 litres; 1919, 439,278,000 litres. The various qualities produced in 1919 were: Sweet wines, 109,126,000 litres; table wines, 205,886,000 litres; green wines, 103,510,000 litres; liquors, 20,756,000 litres. Owing to the excellent prices and the demand for wine for export thousands of new vines were planted, although labor was paid 9 to 10 times as much as in 1913. See AGRICULTURE.

COMMERCE, ETC. In 1919 there was a slight increase in exports while the value of imports more than doubled. This was due to the falling off in productive capacity and to the need of foreign articles to replace stocks depleted during the war. The eight-hour day law recently passed was also believed to have tended to reduce agricultural production. Overseas trade was as follows for 1918 and 1919: Exports (1918), 76,199,000 escudos; and imports, 90,152,000 escudos; exports (1919), 110,554,000 escudos; and imports 231,603,000 escudos—the escudo at par having a value of \$1.08, but varying widely during this period. The United States during 1919 held its advantage as a source of supply, and its trade with Portugal maintained itself in a satisfactory manner. Interest in promoting further development of the commerce between the two countries was shown by the unusual number of American salesmen who came to Lisbon during the year. More investigations were made of this market in 1919 than during any previous year. One interesting feature of the increased trade activity between the two countries was that American ships were carrying a large percentage of the shipments to Portugal. During 1919, 1302 steamers and 372 sailing vessels called at Lisbon, of which 43 steamers and 39 sailing vessels carried the American flag. Ships of some of the other nationalities were as follows:

Nationality	Steamers	Sailing vessels
Portuguese	249	135
British	372	67
Dutch	156	12
French	79	156
Norwegian	142	...
Swedish	37	7
Spanish	52	29
Brazilian	29	2
Belgian	32	...

During the year the proposal for the construction of an electric railway from Sintra to Estoril, Vascaes, and Boca to Inferno by the Companhia Sintra-Atlantico of Lisbon went forward so that bids for track laying and operation for a 75 year term could be called for.

FINANCE. The following table showing the

budget estimates for 1920 is taken from the *Statesman's Year Book* for 1920:

Revenue		Escudos
Direct taxes	15,618,025
Registration and stamps	17,550,000
Indirect taxes	26,447,250
National property	730,494
Revenue earning, administration, etc.	39,700,249
Total	100,046,018
Extraordinary	13,351,340
Grand total	113,397,858 (25,199,413 l.)
Expenditure		Escudos
Public debt	48,853,066
Presidency, Congress	2,805,345
Ministry of Finance	10,105,755
Ministry of Interior	19,208,419
Ministry of Justice	1,757,836
Ministry of War	39,008,846
Ministry of Marine	12,803,803
Ministry of Foreign Affairs	1,358,663
Ministry of Commerce	8,292,404
Ministry of Colonies	923,153
Ministry of Instruction	8,133,595
Ministry of Labor	1,449,766
Ministry of Agriculture	2,019,693
Ministry of Food	3,266,951
Total	154,982,297
Extraordinary	40,438,423
Grand total	195,420,717 (43,425,604 l.)

GOVERNMENT. Portugal became a republic after the overthrow of the monarchy in 1910. On August 20th of the following year a new constitution was adopted. Executive power is in the President, elected by the Congress, and legislative power in the Congress consisting of two chambers, the upper chamber having 71 members elected by the municipal councils and the lower chamber or National Council, 164 members, elected by direct suffrage for three years. The President in 1920 was Dr. Antonio José de Almeida and the ministry in 1920 was constituted as follows: Prime Minister and Interior, Senhor Liberato Pinto; Instruction, Senhor Augusto Nobre; Colonies, Senhor Gomes; Labor, Senhor Domingues Dos Santos; War, Senhor Alvaro De Castro; Justice, Senhor Lopez Cardoso; Commerce, Senhor Antonio Fonseca; Foreign, Senhor Dominos Pereira; Marine, Senhor Julio Martins; Finance, Senhor Cunha Leal; and Agriculture, Senhor John Goncalves.

HISTORY. A new Liberal ministry came into power on the resignation of the Cardoso cabinet, June 6. But the Prime Minister, Fernandes Costa, and his fellow members lost the support of Parliament soon afterwards and a coalition cabinet was formed under Domingos Pereira, which in turn was promptly overthrown on account of the railway strike. The government having failed to meet the demand of the railwaymen's association, the latter declared a general strike. The government resigned March 6th and a new ministry was organized under Colonel Baptista on a platform of the restoration of order and reduction of the cost of living. The Prime Minister died June 6th and was succeeded by Ramos Petro who had been Minister of Justice. Portugal ratified the Peace Treaty on April 1st.

After the expulsion of King Manoel II, he fled to England, Oct. 5, 1910. When the Republic was established, he expressed sympathy several times with the republican form of government, but did not formally renounce the throne. During the past 10 years counter-revolutions in his name had greatly disturbed the new republic.

In many cases he repudiated these movements. In 1920 he took a definite step toward putting an end to the disturbing efforts made on his behalf by definitely renouncing the throne (September 9th) in favor of his son, Prince Duarte. Soon afterwards, in a letter to his representative in Portugal, he said that the middle class ought to unite for the purpose of saving the country from anarchy and he urged the necessity of pardoning all political prisoners. See NAVAL PROGRESS.

PORTUGUESE EAST AFRICA. A Portuguese colony on the east coast of Africa with an area of 428,532 square miles, comprising three parts, namely: (1) the Province of Mozambique (295,000 square miles); (2) the territory under the Mozambique Company (59,840 square miles); (3) the district under the Nyassa Company (73,292 square miles). Total population is estimated at 3,000,000 natives, 10,500 whites and 1100 Asiatics and half-castes. The capital and chief port is Lourenço Marques with a population in 1912 of 13,154. Other ports are Beira (8821); Mozambique (5000); Ibo (5000-6000); Porto Amelia (5000); Quilimane, and Chinde. The chief products are sugar, cocoanuts, rubber, beeswax, and minerals. Imports in 1917, 12,730,496 escudos; exports, 6,704,889 escudos; re-exports, 9,595,121 escudos; transit, 27,486,929 escudos. The following information in respect to the trade of 1918 for the Province of Mozambique was supplied by the United States Bureau of Foreign and Domestic Commerce in 1920: For the year 1918 the total trade of the Province of Mozambique was shown as 57,800,000 escudos in round numbers—an increase of 1,300,000 escudos over 1917. Of the imports into the Province 815,000 escudos came from the United States, a falling off of 219,000 escudos from the 1917 total. This is accounted for, however, by the fact that during 1917 railway material for the Quilimane Railway was imported to the extent of 234,453 escudos against only 40,000 escudos in 1918. The transit trade from the United States also fell from 8,450,000 escudos in 1917 to 5,188,000 escudos in 1918. This is largely due to the fact that many of the steamers leaving American ports for South Africa, loaded cargo for ports as far as Durban only. The trade of Portugal and possessions with this colony for 1918 was 13,986,000 escudos, against 12,290,000 escudos for 1917, of which 1,216,400 escudos was transit trade, against 883,000 escudos in 1917. The trade of Great Britain and possessions was 31,950,000 escudos (17,990,000 escudos transit), as compared with 28,122,000 escudos (15,301,000 escudos transit), for 1917. Owing to currency fluctuations the above values are given in Portuguese money, the escudo, which in normal times is equal to \$1.08. The value during 1918, however, varied from \$0.57 to \$0.60. A British authority gave exports from the colony to the United Kingdom in 1919 at £1,579,990, and imports from the United Kingdom at £1,279,837.

An account of the recent railway activity in the region of Beira was given in the preceding YEAR BOOK. Consular reports in 1920 supplied the following information in regard to railway conditions in the Province of Mozambique: Following the announcement that the government would receive offers for the building of railways apart from government construction, a company formed in the Transvaal, called the Railway Construction Company, laid proposals before the

government for the building of a railway from the port of Lourenço Marques to the interior. Other railways were also being considered. A survey for a branch line was being made from a point on the main line of the railway between Lourenço Marques and the Transvaal to connect with Namahacha, a town in the mountains destined to be the future summer residential place and health resort of Lourenço Marques.

The revenue in 1917-18 was \$10,195,918.

In 1918, 37,496 natives were recruited for work in the mines of the Transvaal as compared with 41,483 in the preceding year. Recently a strong agitation against recruiting the natives for work outside the province had developed owing to the great shortage of labor for agricultural and industrial purposes within the province and a demand was made that the treaty which admitted this recruiting should be abrogated. It had been formed between the province and Transvaal before the latter joined the Union of South Africa.

Under the treaty of Versailles, Portugal was acknowledged Sept. 23, 1919, as the rightful owner of the territory south of the Rovuma known as the "Kionga Triangle" which had formerly been a part of the German East Africa. In 1920 there were frequent reports of a design on the part of the Union of South Africa to annex the colony and the subject was the cause of repeated discussions and great anxiety in Portugal.

PORTUGUESE GUINEA. A Portuguese colony on the western coast of Africa, including the archipelago of Bijagaz along with the island of Bolama. Capital, Bolama. Area, 13,940 square miles; according to other estimates about 25,000 square miles. Population variously estimated, from 289,000 to 1,000,000. Estimated revenues for 1917-18, 723,418 escudos; expenditure, 708,700 escudos.

POST, AERIAL. See AERONAUTICS.

POSTAL UNION. The International Postal Union Congress met at Madrid in Spain in the first week in October. There was a division as to the principle of rate increase between the respective representatives of the east and west. North American and South American representatives wished to fix their own rate, and this was accepted on the condition that the rate did not exceed the maximum to be fixed by the Postal Union. Plans for a new organization were formed, namely, a Pan-American Postal Federation, which was to begin its meetings after the next congress of the Postal Union should hold its session at Buenos Aires in Aug. 21, 1921. The Postal Union at its meeting also agreed upon the establishment of International payments for the transit of mails on the basis of the gold dollar and upon allowing only parent countries to vote in future congresses, the colonists to send delegates, but not to vote.

POST OFFICE. See UNITED STATES.

POTASH. According to the United States Geological Survey the quantity of potash produced in 1919 fell far short of the production in 1918 and hardly equaled that of 1917, as is shown by the table opposite.

California produced 41.5 per cent of the output in 1919; Nebraska, 29.2 per cent; Utah, 16.3 per cent; and other States, 13 per cent.

A comparatively small quantity of potash ma-

DOMESTIC POTASH PRODUCED AND SOLD IN THE UNITED STATES IN 1915-1919

Year	Number of plants	Crude potash (short tons)	PRODUCTION		SALES		Value
			Available content of potash (K ₂ O) (short tons)	Crude potash (short tons)	Available content of potash (K ₂ O) (short tons)	Crude potash (short tons)	
1915	5	4,374	1,090	4,874	1,090	4,874	\$342,000
1916	70	35,739	9,720	25,739	9,720	25,739	4,242,730
1917	95	128,961	32,578	128,961	32,578	128,961	13,980,577
1918	128	207,686	54,803	140,343	38,580	101,763	15,839,618
1919 ^a	77	110,243	30,845	173,786	46,732	127,054	11,370,445

^a Production for 1919 includes a quantity of material either utilized by producer or reported as not marketed; sales for 1919 include material produced in 1918 but sold in 1919.

terials, including refined potassium salts, is exported from the United States, and data concerning these exports were meagre. As to the imports, prior to 1913 the United States imported annually more than 250,000 tons of potash (K₂O) from Germany. This source of supply was cut off entirely during the recent war, and imports declined to less than 8000 tons annually. France gained control of the Alsatian potash mines and shipped some potash to the United States in 1919, but not nearly as much as had been anticipated, because of the condition of the mines and of difficulties in transportation and labor. In July the War Trade Board removed restrictions on the importation of German potash, and in September it began to come into this country. But the imports from Germany were small, as stocks were low, especially muriate, transportation facilities were inadequate, labor was unreliable, and the coal situation was unfavorable.

The potash produced in the United States during the first three months of 1920, as reported to the Geological Survey from 43 plants, amounted to 42,008 short tons of crude material containing 11,969 short tons of available potash (K₂O), valued at \$2,738,195. Alunite was used in 1920 only in experiments made by companies that reported production of potash from this material in 1919.

The following table shows the production of potash in the first three months of 1920:

POTASH PRODUCED IN THE UNITED STATES THE FIRST THREE MONTHS OF 1920, CLASSIFIED ACCORDING TO SOURCE

Source	Number of producers	Production of crude salts (short tons)	Available potash (K ₂ O) (short tons)	Percentage of total	Total value	Percentage of K ₂ O in crude product
Natural brines:						
Nebraska lakes	7	23,337	5,859	49.0	\$1,280,819	22-28
Other brines	5	9,726	4,104	34.3	936,161	15.8-56
	12	33,063	9,963	83.3	2,216,980
Alunite, blast-furnace dust, and silicate rock	3	1,336	565	4.7	174,912	9.8-52
Dust from cement plants	7	4,015	314	2.6	44,246	2.3-35
Wood ashes	14	108	65	.5	36,671	60
Steffens waste water	3	1,870	440	3.7	118,666	12-42
Kelp and molasses distillery waste ..	4	1,616	622	5.2	146,720	26-51
	43	42,008	11,969	100	2,788,195

Formerly Germany produced almost the entire world's supply of potash, about 95 per cent of the output coming from the mines at Stassfurt and about 5 per cent from the mines in Alsace. Practically normal production (about 1,000,000 metric tons of (K₂O) was maintained by Germany throughout the war, and, according to figures by Edwards, the total production of actual potash in 1919 from the mines at Stassfurt was 946,000 short tons, or 858,439 metric tons (K₂O). The output from the Alsatian mines in 1919 was 96,546 tons (probably metric).

The combined output from Germany and France was therefore 954,985 metric tons. The combined output from the German and Alsatian mines during recent years is shown in the following table:

POTASH (K₂O) PRODUCED BY THE GERMAN AND ALSATIAN MINES, 1880-1919

	Metric tons		Metric tons
1914	903,988	1880	68,550
1915	679,776	1890	122,302
1916	883,976	1900	803,610
1917	1,004,281	1910	857,888
1918	1,003,000	1911	939,927
1919	954,985	1913	1,110,369

The separation of Alsace from Germany broke the monopoly in the potash industry which Germany had theretofore held.

POTASH AS FERTILIZER. See FERTILIZERS.

POTATOES. Data regarding the world's potato production in 1920, as has been general in recent years, were very incomplete. The International Institute of Agriculture, Rome, published estimates showing that the 1919 yield in the northern hemisphere, together with the 1919-20 yield of the southern hemisphere, amounted to 3,159,633,000 bushels as compared with 2,653,161,000 bushels for the corresponding preceding seasons. The 1920 production was reported as increased over the yield of 1919 in Spain, England and Wales, Switzerland, Finland,

Italy, and the United States, and production above the average in Spain, Finland, Switzerland, Canada, the United States, and Japan. The yields of a number of countries were provisionally estimated as follows: Prussia 727,520,000, Belgium 55,318,000, Spain 91,501,000, England and Wales 112,610,000, Hungary 69,341,000, Italy 49,840,000, Netherlands 88,462,000, Sweden 58,352,000, and Japan 45,807,000 bushels. According to the Dominion Bureau of Statistics the potato harvest of Canada for 1920 was represented by 138,527,000 bushels from an area of

784,544 acres, as compared with 125,574,100 bushels from 818,767 acres in 1919. The average yield per acre was about 176.5 bushels while in 1919 only about 153.5 bushels were secured.

Estimates published by the Department of Agriculture place the potato production of the United States in 1920 at 430,458,000 bushels as against 357,542,000 bushels in 1919 and an average of 382,113,000 bushels for the five years 1914-1918. The area in potatoes was given as 3,929,000 acres or 52,000 acres less than the year before and 9000 acres under the average acreage for the five years 1914-1918. The average yield per acre was 109.6 bushels while in the preceding year it was 89.8 bushels, and for the 5-year period 97 bushels. The average farm value on Dec. 1, 1920, was \$1.164 per bushel, a decrease of 44.4 cents compared with 1919 and an increase of 18.3 cents over the 5-year average. On this basis the crop of 1920 represented a total value of \$500,974,000 or over \$73,000,000 less than the total value of the 1919 crop, but still \$125,957,000 above the average total value for the five years 1914-1918. During February and March the retail price of potatoes reached as high as \$6.50 per 100-pound sack in some of the larger eastern markets of the United States.

Owing to the small crop of 1919 the importation of potatoes into the United States was quite large. Imports from Canada in 1919 up to November 18 amounted to 1841 car loads while during the same period in 1918 only 13 car loads had been shipped in. Potatoes were imported also from Denmark during the year, but some of the shipments were refused entry on account of infection with scab and rot. A larger supply of certified seed potatoes was produced in the United States in 1920 than ever before. It was estimated that 220,000 bushels of such seed would be available in Maine and New York for shipment to other States. Michigan produced its first certified seed potatoes in 1920 and Canada produced 100 per cent over any other year of field inspected seed tubers.

POTTERY PRODUCTS. According to the United States Geological Survey, the value of the pottery products of the United States in 1919 was about \$76,140,000, an increase of \$12,228,000 over that in 1918. The total increase in 1919 over 1917 was \$19,997,000, or 36 per cent, and over 1913, \$38,148,000, or 100 per cent. Every kind of pottery increased in value in 1919 except chemical stoneware and chemical porcelain. White ware (household wares except china) valued at \$29,700,000, showed the largest increase, \$4,394,000; sanitary ware, valued at \$14,480,000, increased \$3,239,000; china, valued at \$7,625,000, increased \$1,318,000; porcelain electrical supplies, valued at \$12,190,000, increased \$995,000; and red earthenware, whose output in 1918 was affected indirectly by curtailment of fuel, recovered in 1919 and was valued at \$1,160,000, an increase of \$253,000. The value of white ware and china, which comprise the general household wares and constituted 49 per cent of all pottery products in 1919, was \$37,325,000, an increase of \$5,712,000, or 18 per cent, over 1918. If to this sum is added the value of sanitary ware and porcelain electrical supplies, which formed 84 per cent of the output in 1919, the total value was \$63,995,000, or \$9,947,000 more than in 1918. The production of chemical stoneware, which was used largely in the manufacture of munitions in 1918, naturally fell off

with the cessation of hostilities, so that the production in 1919 was valued at \$645,000, a decrease of \$903,000. The decrease in chemical porcelain, valued at \$180,000, was \$42,000, and may possibly be ascribed to the same cause.

POWELL, MAUD. American violinist, died at Uniontown, Pa., January 8. She was born at Peru, Ill., Aug. 22, 1868, studied first in Chicago and later at the Leipzig Conservatory in Paris and Berlin. She made her first appearance in Berlin in 1885 with marked success and returning soon after to the United States immediately received recognition. She was soloist for the orchestras of Thomas, Seidl, Nikisch, Damrosch, and others and besides many tours in the United States, she made long tours in Europe and South Africa. She was remarkable for the introduction of novelties in her programmes. She married Mr. H. G. Turner in 1904.

POWER PLANTS. See STEAM ENGINE; STEAM TURBINE.

PRAIRIE PROVINCES. The name applied to the three Canadian provinces of Manitoba, Saskatchewan, and Alberta, separated from the United States on the south by the 49th parallel of latitude. Area, estimated at 758,817 square miles; population according to the census for June 1, 1916, 1,698,220.

PRATT, DAVID S. Chemist, died at St. Louis, Mo., January 28. He was born at Towanda, Pa., Sept. 20, 1885; studied at Cornell University and was appointed fellow in chemistry there, but subsequently joined the staff of the Bureau of Chemists at Washington. He spent three years in chemical research in the Philippines. In 1914 he became professor of chemistry in the University of Pittsburgh and in 1917 was made assistant director of the Mellon Institute of Industrial Research from which position he resigned on Jan. 1, 1920, in order to practice as consulting chemist at St. Louis. He was chiefly known for his published studies on phthalic acid derivatives and was reputed to have a profound knowledge of pure organic chemistry.

PRATT INSTITUTE. A non-sectarian, co-educational institution of the higher learning at Brooklyn, N. Y., founded in 1887. The enrollment for the fall of 1920 was 3305. There were 131 members in the faculty, including directors. The library contained 123,696 volumes. President, Frederic B. Pratt.

PRENDERGAST, JAMES M. Broker, died at Boston, Mass., November 29. He was well known as an originator of the Boston park system, whose model was followed largely in other cities. He was born at Boston, Oct. 29, 1851, and became prominent in the financial enterprises of the city, holding important executive and financial offices in the Boston Elevated Railway Company and banking and various industrial companies. In politics he was a Republican.

PRESBYTERIAN CHURCH. United under the Presbyterian Alliance there are 11 denominations, besides a few small independent churches. In 1920 statistics show there were 2,896,803 communicants in the Alliance, while it was estimated that there were over 5,000,000 adherents. These figures show an increase over the figures for 1919. World figures show about 35,000,000 adherents to the denomination, besides 5,000,000 Reformed Lutherans.

The largest branch of the denomination is the Presbyterian Church in the United States of America. The following statistics are for 1920:

40 synods, 288 presbyteries, 9924 ministers, 44,025 elders, 17,178 deacons, 9769 churches, 1,637,105 communicants, 1,351,260 Sunday school scholars, \$3,228,089 contributed for home missions, \$3,516,884 for foreign missions, \$1,069,360 for educational work, \$25,760,382 for congregational work, and with contributions for other evangelistic and relief work, making a total of contributions for year of \$43,071,072. Although the number of churches was decreased during the year, the number of communicants increased slightly, and the contributions increased greatly. The denomination is connected with 57 educational institutions which had during the year 25,647 scholars, 1705 professors and teachers, total assets, \$45,866,555; income, \$4,641,538. Home missionary work is carried on in Alaska, Porto Rico, Cuba, and in the United States among the Indians, Mexicans, Mormons, and mountaineers. Besides the Board of Missions of the church, there is the Woman's Board of Home Missions, which in 1920 had 5433 women's missionary societies and 7149 young people's and children's organizations with a total membership of 359,243. The Board of Foreign Missions maintains 26 missions, 166 stations, 1428 missionaries, 6856 native helpers, 1027 fully organized churches, 178,299 communicants, 2034 schools, 78,733 pupils, 232,321 pupils in Sunday schools, 175 hospitals and dispensaries, 350,284 patients treated annually, 100,669,579 pages of Christian literature printed in over 20 languages. There is also a Woman's Board of Foreign Missions. The denomination maintains 12 theological seminaries scattered all over the United States. The 132nd General Assembly of the denomination was held in May, 1920, at which time the union with the former Welsh Presbyterian Church was made complete. This denomination had in May, 1920, six synods, 17 presbyteries, 72 ministers, 14 licentiates, 119 churches, 14,668 communicants, 127 Sunday schools, and 11,062 Sunday school pupils.

The Presbyterian Church in the United States is a separate denomination which had 376,517 communicants in 1920, a slight increase over 1919. This denomination is sometimes called the Southern Presbyterian Church as most of its churches are in that part of the country. The United Presbyterian Church of North America had 203,910 communicants in 1920. Independent churches had about 50,000 communicants. Besides these denominations there are six reformed Presbyterian churches, statistics for which will be found under REFORMED PRESBYTERIAN CHURCHES. Statistics for the Cumberland Presbyterian Church will be found under that heading.

There are two branches of the denomination in Canada, the largest of which is the Presbyterian Church of Canada, which had 343,185 communicants in 1920. The Church of Scotland in Canada had about 10,000, while total adherents for both churches numbered about 600,000.

The Presbyterian Church of England had 85,551 communicants, the Church of Scotland in England had about 4000 communicants, while adherents to both churches numbered about 200,000. The Calvinistic Methodist or Presbyterian Church of Wales had about 200,000 communicants with 400,000 adherents. The Presbyterian Church in Ireland had 104,033 communicants, the Reformed Presbyterian Church in Ireland had 4000 communicants, other churches in that

country had 2000 communicants, while adherents numbered about 200,000. The Church of Scotland had 722,750 communicants, the United Free Church of Scotland had 523,808, the Free Church of Scotland had about 10,000, other churches in that country had about 10,000, while adherents to all numbered about 2,000,000. The following figures are approximately correct for 1920: Bohemia and Moravia, 300,000 adherents; France, 1,000,000; Germany, 5,000,000 (the Reformed who entered into union with the Lutheran Church number at least 5,000,000); Holland, 2,500,000; Hungary, 3,000,000; Italy, 250,000; Switzerland, 1,700,000; other European countries, 500,000; Africa, 1,000,000; Asia, 600,000; Australasia, 900,000; South America, 100,000. See also RELIGIOUS DENOMINATIONS.

PRESCOTT, JOHN EUSTACE. British prelate, died February 17. After 1883 he was archdeacon and canon of Carlisle, and after 1900, chancellor of the diocese of Carlisle. He was born at Wakefield; graduated with honors at Cambridge; and was ordained in 1858. He wrote, *Christian Hymns and Hymn Writers*; and works on local church history.

PRICE, WILLIAM THOMPSON. Author, died, May 3. He was born in Jefferson County, Conn., Dec. 17, 1846; was educated in the private schools of that State and in the German universities; joined the Confederate army in his youth and was captured and imprisoned at Rock Island, Ill., but escaped. He was dramatic critic on the *Courier-Journal*, Louisville, Ky., 1875 to 1880, and was for a long time play-reader for A. M. Palmer and for Harrison Grey Fiske. He founded and became the director of the American School of Play-writing in 1901, and founded the *American Playwright Monthly Magazine*. He wrote the *Technique of the Drama* (1892) and *Analysis of Play Construction and Dramatic Principle* (1908).

PRICES. An analysis of the rise and fall of living costs after 1914, made by the Department of Labor, placed the increase to a "standard family" in New York City during the period from June 1, 1914, to Dec. 31, 1920, at 101.4 per cent.

"The high-water mark was reached in June, 1920, when the living costs of a family in New York were 119.2 per cent above the costs on June 1, 1914. A continuing increase in living costs in almost every necessity of life was shown from June 1, 1914, until June, 1920. The break came during the summer and fall of 1920. Figures include cost of food, taken as representing 42 per cent of essential expenditure of the family; clothing, 16.6 per cent of expenditure; housing, 14.3 per cent; fuel and light, 4.3 per cent; furniture and furnishings, 3.3 per cent, and miscellaneous, 18.7 per cent. Prices of clothing showed the heaviest increases since 1914, and furniture and furnishings were next in line. Housing, fuel and light, and expenses listed as "miscellaneous" were the only ones which failed to show a decrease during the period from June to December, 1920. Housing showed an increase during this period of 5.7 per cent, and fuel and light 26.4 per cent. The analysis covers living costs in thirty-two cities. Detroit heads the list in living cost increases. The increase from December 31, 1914, to June 20, 1920, for that city is given as 136 per cent. On December 31 living costs had dropped to 118.6 per cent above the 1914 level. Portland, Ore., and San Francisco showed the smallest increases. Prices in San Francisco jumped 96 per cent between December, 1914, and June, 1920, and then fell off by December, 1920, to 85.3 per cent above the 1914 level. In Portland prices increased 100.4 per cent up to June, 1920, and then dropped back to 80.3 per cent from the 1914 level."

At the end of May the price index number of the Federal Reserve Board stood at about 273 and on December 17 it was reported at 212. These were highest and lowest points respec-

tively for the period following the entry of the United States in 1917. The highest, lowest, and closing of leading commodities in the year 1920 are shown in the following table prepared by the *Journal of Commerce*:

	High	Low	Close
Wheat, No. 1 Northern...bu.	\$3.04	\$1.81	\$1.98½
Wheat, No. 2 Northern...bu.	8.01	1.72	1.96½
Flour, Spring Patents...sack	15.00	8.25	9.25
Flour, Winter Straights...sack	13.50	8.50	8.75
Corn, No. 2 Yellow...bu.	2.32½	0.95½	0.97½
Oats, No. 3 White...bu.	1.48	0.59	0.59
Hay, No. 1 Timothy...ton	70.00	36.00	38.00
Straw, Long Rye...ton	37.00	18.00	22.00
Butter, Creamery Extras...lb.	0.77	0.51½	0.56
Cheese, Aver. Fancy, fresh...lb.	0.31½	0.22	0.22½
Eggs, Western Aver. Best...doz.	0.81½	0.41½	0.75
Tallow, Special Loose...lb.	0.18	0.06½	0.06½
Sugar, Raw Cent., 96 deg.			
100 lbs.	23.57	4.63	5.89
Sugar, Refined Granulated			
100 lbs.	22.00	7.90	7.90
Coffee, Rio No. 7...lb.	0.16½	0.06½	0.06½
Rice, Domestic...lb.	0.13½	0.06½	0.06½
Wool, XX Ohio...lb.	0.78	0.47	0.47
Wool, Staple Ter. fine...lb.	2.10	0.95	0.95
Cotton, Middling Upland			
100 lbs.	43.75	14.50	14.50

The popular impression that the drop in prices toward the close of the year was peculiar to the United States or more pronounced in this country than elsewhere had no foundation. In Great Britain, France, Italy, and Australia the index numbers followed about the same general course. (See GREAT BRITAIN, section on *Cost of Living*). The following table shows the wholesale price indexes for these countries together with Sweden, Canada, India and Japan:

WHOLESALE PRICE INDEXES (Average prices, 1913=100)			
	Jan., 1920	Apr., 1920	Oct., 1920
United States.....	242	263	208
United Kingdom....	288	313	282
France	487	584	503
Italy	504	679	665
Sweden	319	354	346
Canada	248	261	284
Japan	301	800	226
India	218	200	206
Australia	203	217	...

PRIMITIVE METHODIST CHURCH. See METHODISTS, WESLEYAN.

PRINCE EDWARD ISLAND. One of the Canadian Maritime Provinces; the smallest province in the dominion; situated at mouth of the Gulf of St. Lawrence, and separated from the mainland by the Northumberland strait. Area, 2184 square miles; population (1911), 93,728. The capital and largest town is Charlottetown, with a population (1911) of 11,203. It is under a lieutenant-governor and legislative assembly of 30 members elected for four years, one-half on a suffrage based on property and one-half on manhood suffrage. At the beginning of 1920 the members of the legislative assembly were distributed by political parties as follows: Liberals, 26; Conservatives, 4. Lieutenant-governor at the beginning of 1920, Murdock McKinnon.

PRINCETON UNIVERSITY. A non-sectarian institution for the higher education of men

at Princeton, N. J., founded in 1746. The number of undergraduate students for the regular term of 1920 was 1814; of graduate students, 153. There were 213 members in the faculty. The income for the year, including fees, rents and gifts amounted to \$1,056,490. There were 444,268 volumes in the library. President, John Grier Hibben.

PRIVATE BANKS. See STATE BANKS.

PROCTOR, THOMAS REDFIELD. Banker, died July 4. He was born at Proctorsville, Vt., May 25, 1844, and served in the navy during the Civil War. He afterwards was engaged in banking in Utica, N. Y., and became director or official in many of the leading financial institutions of that city. He was a prominent member of numerous important patriotic, historical, art, and social organizations.

PROPORTIONAL REPRESENTATION.

See MUNICIPAL GOVERNMENT.

PROTESTANT EPISCOPAL CHURCH.

At the time of the American Revolution the Church of England was firmly established in the Colonies, and after the separation from England, a large number of members returned to their mother country. The others, however, after much difficulty, organized the Protestant Episcopal Church in this country, which is now one of the largest single bodies in the United States. The doctrines of the church are the same as those of the Church of England in all important principles. In 1873 a few churches separated from the main body to form the Reformed Episcopal Church which is less ritualistic in its ceremonies, but otherwise very similar. See REFORMED EPISCOPAL CHURCH.

Figures for the Protestant Episcopal Church for 1919 show 1,085,068 communicants, a decrease of about 7000 from 1916. At the beginning of 1920 there were 1,077,042 communicants. This decrease is probably due to the war, as there was a 23 per cent increase from 1906 to 1916. Churches numbered 8190 and there were 5783 ministers. At the General Convention in 1920 a new canon was adopted providing for the organization of the Presiding Bishop and Council. It was declared that this Council, among other things, should exercise all the powers of the Domestic and Foreign Missionary Society, and have charge of the unification, development, and prosecution of the work of Missions, Church Extension, Religious Education, and Christian Social Service. However, the Missionary Society retains its corporate existence and continues to receive and hold bequests, trust funds, and titles to property of all kinds. Domestic missionary work is carried on for the Indians, the negro communities, the Swedes, the Japanese in California, and the deaf-mutes in the South and West. This department also covers the work in Hawaii, the Philippines, Porto Rico, the Panama Canal Zone, and Alaska. Foreign missionary work is being carried on in Africa, China, Japan, Haiti, Brazil, Cuba, and Mexico. There is a Woman's Auxiliary which does much valuable work. *The Spirit of Missions* is the official organ of the missionary work.

The chief organization among the men of the church is the Brotherhood of St. Andrew with about 1200 chapters and 8000 members. The organizations among the boys are the Knights of St. Paul, with 160 chapters and the Knights of St. John. Among the special organizations for mission work are the Church Mission to

Deaf Mutes, Society for the Promotion of Church Work Among the Deaf Mutes, the Mid-Western Deaf Mute Mission, Conference of Church Workers among the Deaf, and the Seabury Society of New York. Among the national organizations for women and girls are the Girls' Friendly Society in America, the Order of the Daughters of the King, organizations for the Increase, Aid, and Better Sustenance of the Ministry, Clergymen's Mutual Insurance League, the Clergymen's Retiring Fund, and the Church Pension Fund. Organizations for educational purposes, church defense and propaganda are: The Protestant Episcopal Society for Promotion of Evangelical Knowledge, the Clerical Union for the Maintenance and Defense of Catholic Principles, the American Church Union, Albany Cathedral Summer School, Society for the Home Study of Holy Scripture and Church History, Cambridge Conference, the Church Periodical Club, New York Bible and Common Prayer Book Society, the Church Historical Society, the Church Missions Publishing Company, the American Society of Church Literature, and the Joint Diocesan Lesson Board. Organizations for social amelioration and advancement are: the Church Association for the Advancement of the Interest of Labor, the Church Socialist League, the Church Temperance Society, the Church Mission of Help, and the Society for Social Advance. There are many other local societies established for promoting church unity, various guilds for devotional purposes, and religious orders for both men and women.

PROUST, MARCEL. See FRENCH LITERATURE.

PROVENÇAL. See PHILOLOGY.

PRUSSIA. Till the October revolution of 1918 a kingdom of the German Empire; proclaimed a republic, Nov. 13, 1918. (See GERMANY and WAR OF THE NATIONS.) Capital, Berlin. Area, before the war, 134,650 square miles; population, according to the census of Dec. 1, 1910, 40,165,219. For details of population see preceding YEAR BOOKS. After the Treaty came into force modifications were made in the frontiers and during 1920 the exact limits were not fixed, but it was estimated that the loss to Prussia as the result of the war would amount to 31,266 square miles and a population of 7,965,000, thus leaving the area at about 103,384 square miles with a population, based on the census of 1910, of about 32,000,000. In 1910 the Protestants numbered 24,830,547 and the Roman Catholics, 14,581,829. The public debt, April 1, 1919 was given at 14,724,436,874 marks; revenue for 1919, 6,546,699,278, balancing the expenditure. Statistics for education, production, commerce, etc., dated in 1920 from the period before the war and will be found in preceding YEAR BOOKS.

The constitution was adopted in April, 1920, having been framed by the Prussian constituent national assembly, which was elected by universal suffrage and met March 1, 1919. Under the constitution, the ministry was vested with the powers formerly possessed by the king, and the parliament was elected for four years. The ministry appointed March 29, 1920, was constituted as follows: Premier and minister of agriculture, Herr Braun (Socialist); minister of the interior, Herr Severing (Socialist); minister of justice, Herr Zehnhoff (Centre); minister of public worship, Herr Hanisch (Socialist); minister of finance, Herr Ludemann (Socialist); minister

of national welfare, Herr Stegerwald (Centre); minister of railways, Herr Oeser (Democrat); and minister of commerce, Herr Fishbeck (Democrat).

PSYCHICAL RESEARCH. The year has seen the passing of the crest of the wave of popular interest in matters psychical. There is a change in the general tone of the writers, and in the nature of the subjects handled. The collection of evidence, in its various forms, still holds a place of importance.

The American Institute for Psychical Research lost by death its secretary, Dr. James H. Hyslop, on June 17, 1920, at the age of 66 years. Dr. Hyslop was also editor of the *Journal of the American Society for Psychical Research*.

Summarizing the general situation, J. H. Hyslop, in *Results of Psychical Research* (*The N. Amer. Rev.*, cexi, 80), finds that the evidence favors the spiritistic hypothesis as against that of mental telepathy as explanatory of messages, whose actuality he assumes. He believes that the difficulty of communication is due to our irrational way of living; a more rational and ethical life here will aid in establishing connections. H. N. Brown, in *Psychical Research* (*Harvard Theological Review*, xiii, 45), also holds that the whole matter resolves into the question of telepathy *vs.* spirits, with the argument favoring the spirits. The following new editions have appeared: H. Holt, *On the Cosmic Relations and Immortality*; Sir O. Lodge, *Survival of Man*; F. W. H. Myers, *Human Personality and Its Survival of Bodily Death*; and R. Ingalese, *History and Power of Mind*. Some of the many new books are: H. Bergson, *Mind-Energy*; *Lectures and Essays*, in which we are bidden to free the mind from the body, and to put it into its proper relations to the world of spiritual energy; H. Carrington, *Higher Psychical Development*, in which the secrets of the Hindu Yogis are brought into relation with the psychical investigations of the West; H. W. Dresser, *Open Vision*; *A Study of Psychical Phenomena*—namely, of the phenomena by which we are supposed to achieve an inner awareness of the spiritual world of which we are a part; J. A. Hill, *Psychical Miscellanea*; *Being Papers on Psychical Research, Telepathy, Christian Science, Etc.*, a sympathetic treatment of the topics given in the sub-title; J. Magnussen, *God's Smile* (tr. by D. K. Dodge), the story of a Danish dramatist who found the evidence from table-tipping and automatic writing convincing; and P. E. Carnillier, *La survivance de l'âme*, the story of a painter who hypnotized his model, as a means of diversion, whereupon the model showed mediumistic powers, and after some hundred sances the skeptical painter evinced faith. Other books of a general nature are: E. K. Bates, *Children of the Dawn*; G. Cannan, *The Release of the Soul*; L. Chevreuil, *Proofs of the Spirit World*; W. N. Clarke, *Immortality*; M. Heindel, *The Web of Destiny*; H. Holt, *Essays on Psychical Research*; C. Kernohan, *Spiritualism*; J. S. King, *Dawn of the Awakened Mind*; A. W. Lane and H. B. Beale, *To Walk with God*; M. A. McEvilly, *Meslom's Message from the Life Beyond*; A. J. Schofield, *Modern Spiritism*; *Its Science and Religion*; L. Spence, *An Encyclopedia of Occultism*; R. Steiner, *Investigations in Occultism*; G. Williams, *Fear not the Crossing*; W. S. Walsh, *The Psychology of Dreams*; and M. Weil, *Experiences of a Medium*. The follow-

ing aim more directly at instruction, or at bringing daily life and literature into relation with the doctrines of spiritualism: R. T. Brown, *The Mystery of Space*; H. Carrington, *Coming Science and Your Psychic Powers and How to Develop Them*; J. L. French, editor, *The Best Psychic Stories*; Lady Gregory, *Visions and Beliefs in the West of Ireland*; A. de Koven (Mrs. Reginald), *A Cloud of Witnesses*; J. W. McSpadden, *Psychic Stories*; A. Sinnett, *Occult Teaching; Collected Fruits*; G. E. Wright, *Practical Views on Psychical Phenomena*; and G. V. Owen and H. A. Dallas, *The Nurseries of Heaven*. Most of the articles have to do with evidential cases from which, however, no conclusions are drawn: a studied attempt not to antagonize by dogmatic assertion. From the *Proceedings* of the English Society we mention Miss Radclyffe-Hall and (Una) Lady Troubridge, *On a Series of Sittings with Mrs. Osborne Leonard* (*Proc. S. P. R.*, xxx, 339), in which the medium transmits messages about past and present events as well as discloses facts unknown to the sitters. C. G. Jung, in *The Psychological Foundations of Belief in Spirits* (*ib.*, xxxi, 75), concludes that spirits are autonomous complexes which appear as projections because they are not associated to the Ego. T. W. Mitchell, in *The Doris Fisher Case of Multiple Personality* (*ib.*, 30), finds no proof or necessary reason for assuming the spiritistic explanation of the personality of Sleeping Margaret. The *Journal of the American Society for Psychical Research* devotes two numbers (*Jour. A. S. P. R.*, xiv, 425-522), to an *In Memoriam* for J. H. Hyslop, some of whose papers are: *Incipient Mediumship* (*ib.*, 72), *Consulting Spirits* (*ib.*, 119), *Recent Experiments with Mrs. Chenoweth as Medium* (*ib.*, 163), and *Experiments for Phasmatographs* (*ib.*, 284). Other articles are: G. O. Tubby, *Three Evidential Sittings* (*ib.*, 9); W. F. Prince, *The Oracles of Baalam* (*ib.*, 556). See also C. Scott, *Clairvoyance, Spiritism, and Occultism in Music* (*Etude*, xxxviii, 15), and *Psychic Influence in Modern Music* (*ib.*, 229); F. R. Whitzel, *Cosmos and Its Meaning; A Philosophic Interpretation of the Tenets of the Psychical Research Society* (*Open Court*, xxxiii, 693); and J. Jastrow, *Spiritualism and Science* (*Rev. of Revs.*, lxi, 504).

PSYCHOLOGY. All psychologists of whatever school or trend deplore the death of the foremost representative of this science. W. Wundt, professor of philosophy at Leipzig and founder of the famous psychological laboratory, died September 1st at the age of 88 years. Wundt was fortunately able to round off his life's work by the completion of his 10-volume *Völkerpsychologie*, the greatest of all contributions so far made to Social Psychology.

Others lost to psychology by death are: T. Flournoy, professor of philosophy and psychology at the University of Geneva, Nov. 5, 1920, at the age of 66 years; P. Ladame, psychiatrist, author of works on hypnotism, neurology, and aphasia, Oct. 21, 1919, at the age of 77 years; E. E. Southard, Bullard professor of neuropathology at Harvard University, Feb. 8, 1920, at the age of 44 years; and A. Tamburini, professor of psychiatry at Rome, founder of the first Psychological Laboratory in Italy in 1896, July 28, 1919, at the age of 71 years.

The annual meeting of the American Psychological Association was held at Chicago, Ill.,

December 28th, 29th, and 30th, under the presidency of Dr. S. I. Franz. The Third Congress of Italian psychologists met at Naples in July under the direction of Prof. C. Colucci. There has been founded a new Institute of Psychology at the University of Paris, which absorbs the Institute of Pedagogy. The *Archivio Italiano di Psicologia* is a new periodical edited by F. Kiesow and A. Gemelli.

GENERAL PSYCHOLOGY: TEXT-BOOKS AND TREATISES. J. Fröbes' *Lehrbuch der experimentellen Psychologie* is a compendium or hand-book of experimental results. O. Külpe's *Vorlesungen über Psychologie*, a posthumous work edited by K. Bühler, is interesting for its treatment of feeling and disappointing by its failure to discuss the processes of thought. There is a second edition of T. Flournoy's *Métaphysique et Psychologie*, with a preface by H. Höfding. C. Stumpf's *Empfindung und Vorstellung* is systematically important. H. Gruender has published the first volume of an *Introductory Course in Experimental Psychology*; it contains 125 short experiments requiring simple equipment. *The Foundations of Music* by H. J. Watt is in part a psychological treatment of the subject. Other technical books are: B. Erdmann, *Grundzüge der Reproduktionspsychologie*; W. Wirt, *Spezielle psychophysische Massmethoden*; A. Pfänder, *Einführung in die Psychologie*. The following are of a more popular type: C. A. Ruckmick, *Brevity Book on Psychology*; E. Severn, *The Psychology of Behavior*; F. Tracy, *The Psychology of Adolescence*; J. T. Merz, *A Fragment on the Human Mind*; H. L. Eno, *Activism*; C. G. Shaw, *Short Talks on Psychology*; W. D. McKim, *Study for the Times*; J. B. Pratt, *The Religious Consciousness; A Psychological Study*; W. Macpherson, *Psychology of Persuasion*; A. G. Tansley, *The New Psychology and Its Relation to Life*; and G. S. Hall, *Recreations of a Psychologist*. J. S. Haldane, D'Arcy W. Thompson, P. C. Mitchell, and L. T. Hobhouse discuss the question: *Are Physical, Biological, and Psychological Categories Irreducible*, and on the whole reply to it in the affirmative. E. G. Boring and E. B. Titchener (2101) give a critical analysis of Wrightson's theory of hearing. R. M. Ogden, in *The Tonal Manifold* (19,136), presents graphically the tonal manifold with the dimensions of intensity, volume, and pitch-brightness. W. Resch (6,e,1) gives a résumé of Wundt's psychology of the will. Other general articles are: A. Storch (6,c,113), on the psychology and pathology of self; K. Gross (28,lxxviii), on the psychological motives of monism; M. Moog (6,c,301), on the relation of psychology to logic and epistemology; E. R. Jaensch (28,b,257), on the psychology of color; and T. Haering (6,c,1), on evaluation. E. B. Titchener (2,213) presents a tentative form of "touch" pyramid which relates all the qualities, except warm and cold, which have their end organs in skin, muscle, joint, and tendon.

The problem of perception stands out as dominant for the year. Theoretical and epistemological discussions find but a small place; direct experimental investigations of phenomenological tendency are fairly numerous. F. L. Dimmick, in *An Experimental Study of Visual Movement and the Phi Phenomenon* (2,317) discovers a gray flash, independent of the background color, as the correlate of Wertheimer's "pure" visual movement. V. Benussi, in *Ver-*

suche zur Analyse taktil erweckter Scheinbewegungen nach ihren äusseren Bedingungen und ihren Beziehungen zu den parallelen optischen Phänomenen (6,b,), finds that the most important condition is the quotient of total time and time between stimuli; that there is very clearly something given in experience; and that the magnitude of the movement is practically without limit. In another study (6,c,233), the same writer examines four types of complex illusory movement, mostly by the stroboscopic method. The appearance or the failure of the particular illusion depends very largely on the attitude of the observer. K. Koffka (28,a,257) attempts a formal analysis of Wertheimer's supposed central irradiation in terms of Korte's laws. M. J. Zigler (2,273) takes up the work on the perception of form where Schumann dropped it. By variation in method he is able to go beyond Schumann and to isolate the data of experience for most of the forms studied; he also demonstrates the correlation of these diverse data with shifts in meaning. M. A. Goerrig (6,b,) makes a psychophysical study of the influence of time on unseen movements of the arm. M. Binnefeld (6,c,129) investigates the relation of sensations from movements of the eyes to the estimation of linear and punctual extents. The DL's as well as the empirical factors vary with changes in the conditions. K. Goldstein and A. Gelb (28,b,07) give the results of a study of the tactual localization, the perception of movement and the tactual space perception of a blinded subject whose wound affects the left occipital lobe. The subject could not distinguish two points or tell the position of a limb with the body at rest; and although he could make a drawing of an object he was unable to recognize the drawing as that of a particular object. The authors distinguish two kinds of "ideas" of movement, and conclude that there is no cutaneous or kinæsthetic basis for the perception of space. F. Schumann (28,d,224) continues the work of Hering and Jaensch on the perception of "seen" depth. He maintains the existence of a specific "glassy" sensation. H. Friedlaender (28,b,258) examines the conditions affecting the perception of lifted weights, and finds that duration, area, and intensity of stimulus are all important. Subcutaneous sensations and cutaneous pressures are alike adequate for the perception. Objectification, which makes for finer discrimination, depends upon the direction of attention to visual ideas and to past experiences of the same kind. L. B. Hoisington (2,114) finds that the non-visual perception of the length of lifted rods depends upon two opposed pressures which stand to each other in a certain limited range of intensive ratio; on the objective side, the distance of the centre of mass from the hand is important. C. R. Griffith (14,89) shows that dizziness is a complex perception, that certain of its component sensations fall off rapidly and even disappear with repetition, and that the mental and bodily state of the observer influences the experience in a marked way. In another study (14,15), the same writer proves that nystagmus, as measured by the duration, the number, and the amplitude of eye movements, decreases rapidly with repeated rotations. In a study of "some factors in the perception of relative movement" H. A. Carr and M. C. Hardy (19,24) find that increased size and intensity of the stimuli (lights) favor the perception; rate of movement

is of less account. The results obtained by G. W. Stewart (19,425) upon auditory localization confirm the "phase difference" theory. R. Prantl (28,a,293), in an experiment on the perception of words turned at different angles to the observer, discovers that any deviation from the normal position decreases the rate of reading, and that the greatest decrease occurs at 150° and 210° with slight improvement at 180°. The results of O. Kutzner (6,a,), who used a greater variety of conditions, point to the determining influence of form of combination. O. Sterzinger (6,b,) shows that the "form" of a musical interval depends on the character of the higher single tone, distance, and consonance, and that its æsthetic value depends on direction of attention and associative factors. R. H. Paynter (7,No.3) publishes a practical study on the perception of names in connection with trade-mark infringements. Krass (6,c,300&402) reports two touch illusions; J. Kollerts (6,c,403) an auditory and a touch illusion. J. Wittman (6,e,69) discusses various theories of perspective involution in relation to experimental results. J. Lindsey (22,69) and G. E. Moore (4,1) consider perception from an epistemological point of view.

Experimental investigations of purely sensory experience are scanty. H. Sheppard (2,34) shows that adaptation to color takes place under high as well as under moderate or weak conditions of illumination, and that differences in chroma and to a less extent in brightness explain the differences in the time of complete adaptation. C. E. Ferree and G. Rand (19,1) find with a single observer that the limits of color sensitivity for R, Y, and B coincide with that for white light, if the intensity of illumination is very high; with lesser intensity, the fields narrow but remain concentric and interlaced. The limit for G obeys the same laws, but is narrower. According to M. A. Bills (20,No.127), the lag in visual sensation varies with wave-length and with intensity. The colors shift their position, relatively to the amount of lag, with increased intensity. E. R. Jaensch and E. A. Mueller (28,b,266) give the conditions effective for the phenomenon of visual transformation and conclude, against Hering, that it obeys the same laws as contrast and does not depend upon contrast. E. R. Jaensch (28,b,342) finds that Katz' law of transformation holds likewise for contrast. F. L. Dimmick (2,301) argues that Gr is a terminal quality between Bk and W; we thus have two series, W to Gr and Gr to Bk, instead of the one ordinarily assumed. A. P. Weiss and E. L. Gatewood (2,166 and 194) publish studies of the vocal character of tones. The former writer employs pure tones, the latter, tuning-fork, violin, and piano tones, with children and unpracticed observers. The lower and higher tones give fairly consistent results; the intermediate tones show much inconsistency. The results do not support Köhler. J. H. Alston (2,303) finds that the sensory quality of heat may arise when the simultaneously stimulated warm and cold spots are as far apart as 12 cm., and that the heat-quality may appear with or without the warm or the cold. R. H. Wheeler (18,No.5) reviews the "literature" of synæsthesia and makes an inconclusive report on the synæsthesia of a blind subject. He inclines to an explanation in reflex terms. S. D. Robbins (19,38) proposes a new test for types of verbal imagery. Long vowels receive more attention

than short, and short vowels more than consonants. J. Segond gives us a practical study in *L'imagination pure et la vie esthétique* (23,58). E. R. Jaensch (28,d,37) discusses the nature and the conditions of two types of visual imagery.

Size, measured in terms of intensity, is a condition of attention according to A. M. Bowman (2,31), although the influence of position cuts across the results. K. M. Dallenbach (14,183) confirms and extends the work of Britz on the conditions of cognitive clearness. He is able on the basis of the reports of his observers to distinguish clearly between attributive vividness and cognitive clearness. The conditions of the former condition the latter, although the reverse of this statement is not true. A. Gemelli and A. Galli (*Arch. Ital. Psicol.*, i,39) report a study on the duration of attention by a new method. They find that attention fluctuates within short intervals.

J. B. Watson and R. Rayner (14,1) are able to set up conditioned fear-reactions in a child nine months old. If they stimulated erogenous zones simultaneously with the presentation of the object that called forth the fear-response, this concurrent stimulation interfered with the persistence of the conditioned fear. L. Cellerier (5,257) reviews the "literature" of organic reaction and affective state, and shows that there is no specific reaction to pleasantness and unpleasantness, but that the "affective" reaction is really one of adjustment. W. Boyd (*J. Exp. Ped.*, v,128) studies a long list of children's fears, and concludes that there are some specific and some general instinctive tendencies to fear. I. R. Kaiser (24,243) gives a popular account of the psychology of the thrill. J. T. Troland (1,376) explains affective phenomena in terms of conductance: the quality depends on sign and the intensity upon rate. J. P. McGonigal (19,73) argues that the fear-reaction is a descendant of the death-feint in lower forms of life, due primarily to the effect of thyroxine.

Action has attracted but few investigators. S. Grundland (6,a,) makes out, under five sets of instructions, nearly 40 types of simple reaction. The distinction between sensory and motor reaction depends upon the activity or passivity of the fore-period, and not upon simple direction of attention. P. Mueller (6,e,89) determines the temporal limens for disturbed and undisturbed reaction. Under the reactive attitude the two limens agree; under the anticipatory attitude, the difference averages 64σ. E. L. Gatewood (20,No.126) finds different reaction-times for the different fingers, as well as for the two hands. When taken in combination, a right-hand and a left-hand finger gave the shortest time; two right-hand fingers, the next; and two left-hand fingers, the longest. Three types of reaction significant for the detection of deception appear in the work of W. M. Marston (14, 72). J. E. Downey (2,208) finds that pen-lapses derive from visual experiences.

MEMORY, ASSOCIATION, THOUGHT. S. Kovacs (6,c,283) makes out two kinds of memory, recognitive and communicative, with their corresponding attitudes. T. V. Moore (20,No.120) concludes that power of retention and power of perception tend to deteriorate together. Since, however, there are cases where the one fails out of all proportion to the other, they must be separate functional abilities. Y. Delhorbe (5,309) finds a very high correlation between memory for

words and memory for images. K. Lewin (28, lxxvii,) concludes that the essential condition for association is the readiness of reproductive "activity," and not consecutive repetition or *Aufgabe*. O. Selz (28,b,211) argues for the complex of the thought-psychologists and against the constellation of the associationists. O. Sterzinger (6,c,363) traces the elements and their form of combination in poetic images. A. A. Gruenbaum (6,b, ;c,74;d,182) offers three papers on the general nature of the thought-consciousness. Two papers on kindred subjects are by L. Rangette (6,b,) and M. Nachmansson (6,b,). Two studies on the process of abstraction are by E. Achenbach (6,a,) and F. Seifert (28,lxxviii,); two on the relation of process to meaning are by T. V. Moore (20,No.119) and A. R. McDonough (20,No.122). R. H. Wheeler (18,No.2) publishes *An Experimental Investigation of the Process of Choosing*, and F. Paulhan (23,1) *La sensibilité, l'intelligence et la volonté dans tous les faits psychologiques*.

MENTAL MEASUREMENT. E. G. Boring (*Psych. Bull.*, xvi, 335; 2,1; *Science*, N.S. ii,129) calls for a close scrutiny of some of the fundamental assumptions of mental measurement. He holds that we are not justified, in the case of mental functions, in postulating the validity of the normal law. B. Ruml (21,57) declares that, in mental testing, we assume certain working hypotheses which, if not false, need to be proved. G. H. Thomson (9,319), in *The General Factor Fallacy in Psychology*, shows, in opposition to the argument of Spearman and Garnett, that a hierarchical arrangement of coefficients of correlation does not necessarily imply a common factor. E. L. Thorndike (3,25) points out a constant error in psychological ratings. S. W. Fernberger (14, 126) obtains very different results from experiments with lifted weights according as the second weight is always preceded by a lighter or by a heavier weight. W. McClelland (9,315) proposes a correction for all psychological and educational measurements. The Scott Co. Laboratory (3,115) publishes a table to facilitate the computation of coefficients of correlation by the rank-order method.

APPLIED PSYCHOLOGY. The interest in the selection of men by the use of psychological principles and tests developed during the war has carried over into the industrial world. W. H. R. Rivers, in *Psychology and the War* (*Scribners Mag.*, lxxviii,161), sums up the general situation by saying: "War emphasized the need of a psychology that has or may have social application. The work on neuroses and the industrial relations has started us on the way to a more practical psychology from the social standpoint." H. L. Hollingworth answers in the affirmative the question *Can Workers Be Tested* (*Business Personnel*, i,16). G. S. Hall (24,281) discusses six basal instincts in their bearing on the industrial situation. H. C. Link, in *A New Application of Psychology to Industry* (3,245), finds that the psychological test not only selects the right person for the particular work, but also aids in the discovery of bad conditions which make for discontent and so for inefficiency. E. Frost, in *What Industry Wants and Does not Want from the Psychologist* (3,18), argues that the psychologist helps most in the solution of industrial problems when he shows the importance of psychology itself. M. C. Jarrett, in *The Mental Hygiene of Industry* (16,867), upholds

the theses that industrial organization calls for attention to individual mental characteristics; that the mental sciences can give practical help in dealing with minds in everyday actions; and that it is feasible to use mental science in industrial organization. H. D. Kitson, in *Economic Implications in the Psychological Doctrine of Interest* (*J. Polit. Econ.*, xxviii,332), maintains that it is the psychological state of interest that must be brought out in our economic relations. E. E. Southard, in three articles (16,43;281; 550), tells of the important part psychologists and psychiatrists are to play in our industrial life. Other articles are: F. B. Gilbreth and L. M. Gilbreth, *How to Increase Production* (*Ind.*, cii,354); H. D. Kitson, *Vocational Guidance and the Theory of Probability* (*School Rev.*, ii,143); C. S. Meyers, *Psychology and Industry* (9,177). Some books which deal with the relation of psychology to industry are: E. L. Benedict, *Practical Psychology*; H. Chellow, *Human and Industrial Efficiency*; S. Cody, *Commercial Tests and How to Use Them*; F. C. Kelly, *Human Nature in Business*; B. Muscio, *Lectures on Industrial Psychology*; and F. Watts, *The Psychological Problems of Industry*. Two books of a special nature are: W. D. Scott, *Psychology of Advertising* and H. D. Kitson, *Manual for the Study of the Psychology of Advertising and Selling*. In the following papers we find accounts of specific trade tests: W. Benary (27,250), H. M. Johnson (*Science*, civ,449), E. Murray (3,30), R. S. Roberts (13,101), O. Lippman and O. Stolzenberg (27,173), and S. Wyatt and H. C. Weston (9,293).

EDUCATIONAL PSYCHOLOGY. D. W. LaRue's *Psychology for Teachers* is a text written from a purely practical point of view. M. V. O'Shea's *Mental Development and Education* follows the lines laid down in his earlier works. O. Lippmann publishes a brief *Psychologie für Lehrer*. M. Drummond, in *The Dawn of Mind*, gives a fairly orthodox view of the development of mind; she follows McDougall in her treatment of the instincts. Another general treatise is A. S. Edwards' *Fundamental Principles of Learning and Study*. R. A. Mackie's *Education during Adolescence* applies the principles of G. S. Hall. B. Muscio in *Fluctuations in Mental Efficiency* (9,317) finds no evidence for decreased efficiency after work. Sir R. Blair (*Nature*, cvi,323) pleads for a science of education which goes beyond mere applied psychology. In *Imagination and Its Place in Education*, E. A. Kirkpatrick applies to school subjects the facts so far gathered concerning the imagination of children. F. H. Allport, in *The Influence of the Group upon Association and Thought* (14,159), finds that the group improves quantity and not quality. Other studies are: P. Tyer, *Training the Subconscious Mind in the School Room* (*Ed.*, xl, 289); H. E. Purcell, *Teaching Psychology via Life* (*Ed. Rev.*, lix,395); A. Richards, *School Adjustment and the Psychic Environment* (24,178); T. R. Garth, *The Psychology of Riddle Solution: An Experiment in Purposeful Thinking* (13,16); R. C. Moore, *The Emotion of Admiration and Its Development in Children* (*J. Ea. Ped.*, v,221); G. F. Arps, *Work with Knowledge of Results versus Work without Knowledge of Results* (20, No. 125); G. S. Snoddy, *An Experimental Analysis of a Case of Trial and Error Learning in the Human Subject* (20, No. 124); J. Peterson, *The Backward Elimination of Errors in Mental Maze*

Learning (14,257); and P. E. Kretzmann, *Psychology and the Christian Day-School*.

MENTAL TESTS. Workers in the field of mental testing tend to place more emphasis on practical application and less on the tests as tests. The tendency shows itself especially in the use of tests in schools and colleges as the basis for grading or for college entrance in the absence of other examinations. As examples we have: S. S. Brooks, *Using Standardized Tests in Rural Schools for Grading Purposes* (12,729); R. Pintner and H. Noble, *The Classification of School Children According to Mental Age* (12,713); S. L. Pressy and L. W. Pressy, *Measuring the Usefulness of Tests in Solving School Problems* (26, 531), where brief tests for the Junior High School and the entering primary classes corrected all gross misplacements; and W. D. Armstrong (13, 165), who found the Otis scale satisfactory for classifying high-school pupils. Other reports are: L. M. Terman, *The Use of Intelligence Tests in the Grading of School Children* (12,20); W. M. Proctor, *Psychological Tests as a Means of Measuring the Probable Success of High School Pupils* (12,258); *The Use of Psychological Tests in the Educational Guidance of High School Pupils* (12,369). M. M. Wentworth (26,58) finds the army Alpha tests better than teachers' estimates for selecting students of college grade; and W. H. Smith (26,71) proves that the results from the use of the Otis Group Intelligence Tests afford a reliable basis for predicting high-school success. Some reports on the use of tests with college students are: J. E. Anderson, *Intelligence Tests of Yale Freshmen* (26,417); E. A. Jones, *Army Tests and Oberlin Freshmen* (26, 389); E. L. Noble and G. F. Arps, *University Students' Intelligence Ratings According to the Army Alpha Tests* (26,233); A. L. Rodgers, *Mental Tests as a Means of Selecting and Classifying College Students* (13,181); M. J. Van Wagenen, *Some Results and Inferences Derived from the Use of the Army Tests at the University of Minnesota* (93,59); and I. N. Madsen, *High School Students' Intelligence Ratings according to the Army Alpha Tests* (26,298). S. S. Colvin, in *The Validity of Psychological Tests for College Entrance* (*Ed. Rev.*, lx,7), gives three reasons why psychological tests fail to agree with college records. Practically all the new tests are for group examination. They include the National Intelligence Tests prepared under the auspices of the National Research Council by M. E. Haggerty, L. M. Terman, E. L. Thorndike, G. M. Whipple, and R. M. Yerkes, Chairman; the *Otis Group Intelligence Scale*; the *Standard Educational Tests* by M. E. Haggerty; *Haggerty Reading Examination*; the *Terman Group Test of Mental Ability*; W. H. Pyle, *A Manual for the Mental and Physical Examination of School Children* (revised); E. Reedy and J. W. Bridges, *A Short Point Scale for Mental Measurement* (3,258); R. Pintner and F. Fitzgerald, *An Educational Survey Test* (13,207); S. L. Pressy, *A Brief Group Scale of Intelligence for Use in School Surveys*; D. Herderschee, *Tests für taubstumme Kinder* (27,40), a series of 31 tests graded according to year; and M. J. Van Wagenen, *Graded Opposites and Analogies Tests* (13,240). R. Pintner and S. Renshaw, in *A Standardization and Weighting of 200 Analogies* (3,263), give three significant values. Other articles dealing with some phase of tests are: E. Claparède, *Percentilages de quelques tests d'aptitude* (5,

313); *De la constance des subjects à l'égard des tests d'aptitude* (5,325); G. E. Bird, *A Test of Some Standard Tests* (13,275); J. N. Curtis and G. A. Taylor, *The Application of Mental Tests to Persons over Fifty Years of Age* (3,39); E. A. Lincoln, *The Effects of Native Intelligence upon Scores in Standard Tests* (acquisition) (26, 441); L. W. Pressy, *The Influence of Inadequate Schooling and Poor Environment upon Results with Tests of Intelligence* (3,91); G. C. Myers, *Intelligence of Troops Infected with Hookworm vs. Those not Affected* (24,211); J. F. Dashiell, *The Effect of Practice on Two Mental Tests* (13, 151); and C. S. Yoakum and R. M. Yerkes, *Army Mental Tests*. On the side of special abilities we have: G. Revèz, *Prüfung der Musikalität* (28, d,163); S. L. Pressy and O. R. Chambers, *First Revision of a Group Scale Designed for Investigating the Emotions* (3,97); and J. E. Downey, *The Adolescent Will Profile* (13,157) and *Some Volitional Patterns Revealed by the Will Profile* (14,281). M. E. Loughlin (20, No. 121) gives the results of an inquiry into the etiology of feeble-mindedness, and H. A. Toops and R. Pintner (14, 231) publish *Curves of Growth of Intelligence*. S. Cody (21,572) formulates rules for mental measurement. M. R. Trabue and F. P. Stockbridge, in *Measure Your Mind*, offer a handbook for the layman.

SOCIAL PSYCHOLOGY. Mention has already been made of Wundt's *Völkerpsychologie*. An important book in this field is W. McDougall's *The Group Mind*, developed along the lines laid down in the author's *Social Psychology*. I. Edman, in *Human Traits and Their Social Significance*, deals with social institutions as means of control over man's unchanged nature. G. E. Partridge, in *Psychology of Nations*, outlines the social past and gives a programme of education for the future. E. D. Martin, in *The Behavior of Crowds; A Psychological Study*, makes hate the impelling motive of the crowd. R. R. Marett, *Psychology and Folk Lore*; C. I. Major, *How to Develop Will Power*; G. W. Patrick, *The Psychology of Social Reconstruction*; and F. A. Parsons, *The Psychology of Dress* are books with a social reference. Works which treat of the political aspect of social life are: F. A. Beecher, *National Politics in Its Psychological Aspect* (*Open Court*, xxxiii, 653) and L. Maury, *Psychologie et politique* (*Rev. polit. et litt.*, lviii, 632). Psychology in its relation to criminal procedure is the theme of: G. G. Fernald, *Importance of Character Study in Criminology* (10, 107); E. A. Doll, *Study of Multiple Criminal Factors* (10,33); J. R. Oliver, *Emotional States and Illegal Acts* (10,77); C. E. Benson, *Study in Criminal Psychology* (10,119); P. L. Gray, *Children and the Cinema* (*J. Exp. Ped.*, v,194); and R. Pettow, *Zur Psychologie der Transvestie* (8,b,).

PSYCHOLOGY OF THE ABNORMAL. *The Psychology of Subnormal Children* by L. S. Hollingsworth is an outstanding book in this field. The author brings to her work insight enriched by years of experience. Another book of general interest is *Abnormal Psychology and Education* by F. Watts. Books on general and special neuroses are: M. Culpin, *Psychoneuroses of War and Peace*; G. Dumas, *Troubles mentaux et troubles nerveux de guerre*; Dumas et Aime, *Névroses et psychoses de guerre chez les Austro-Allemands*; H. L. Hollingworth, *Psychology of Functional Neuroses*; Porot et Hesnard, *Psy-*

chiatric de guerre et l'expertise mentale militaire; E. Jones, *Treatment of the Neuroses*; and Roussey, Boisseau, D'Oelsnitz, *Traitement des psychonévroses de guerre*. A. Leclère offers a *Contribution à l'étude des régressions psychiques* (23,203). J. C. Foster, in *Significant Responses in Certain Memory Tests* (3,142), finds that both the quality and the quantity of response are significant for certain psychoses. S. Freud's *General Introduction to Psychoanalysis* is both simple and authoritative. Two other books, B. Low's *Psychoanalysis* and A. Tridon's *Psychoanalysis; Its History, Theory, and Practice* give general accounts of the Freudian theory. P. H. Furfey and T. V. Moore, in *Conscious and Unconscious Factors in Symbolism and Hypnotic Analogies* (20, No. 121), argue for an extension of subconscious motives. According to G. Humphreys, in *The Conditioned Reflex and the Freudian Wish* (1,338), the wish is a more or less complicated system of interdependent reflexes and does not derive necessarily, or in any case directly, from the sex-complex. C. E. Corey (1,369) describes a case of automatic drawing which is of interest because the dissociated controlling complex belongs to one of the highest functions of mind. In *Psychoanalysis and Behavior*, A. Tridon shows how all human conduct may be interpreted from the psychoanalytic point of view. E. Holmes (15,509) and E. M. Caillard (15,776) wish to put the principles of psychoanalysis to use for preventive purposes. I. H. Coriat, in *Repressed Emotions*, treats psychoanalytically of repressed emotion in primitive society and in literature. The following are specific cases of psychoanalytic treatment: E. S. Conklin (2,59) *The Foster Child Fantasy*; G. Berguer, *Quelques traits de la vie de Jésus au point de vue psychologique et psychanalytique*; R. de Saussure, *A propos d'un disciple D'Untermyer* (5,297); I. H. Coriat, *Hysteria of Lady Macbeth*; L. Dooley, *Psychoanalysis of Charlotte Brontë, as a type of the Woman Genius*; (2,221); and L. Pruetf, *A Psychoanalytic Study of Edgar Allen Poe* (2,370). The following list attests the popular interest in the subject: P. M. Blanchard, *The Adolescent Girl*; M. K. Bradby, *Psychoanalysis and Its Place in Life*; R. Briffault, *Psyche's Lamp*; P. Bousfield, *Elements of Psychoanalysis*; P. C. Bjerre, *History and Practice of Psychoanalysis* (2d ed); E. Evans, *Problem of the Nervous Child*; H. J. O'Higgins, *The Secret Springs*; J. Varendouck, *The Psychology of Day Dreams*; W. S. Walsh, *Psychology of Dreams*; B. Malzberg, *Child's Mind à la Freud* (*Soc. Hyg.*, vi,105); S. N. Paten, *Analysis of Mental Defects* (*Monist*, xxx, 107); D. G. Mason, *Psychoanalysis and Music* (*Arts and Dec.*, xiii,106); and H. C. Grumbine, *Reaction of a Layman to Psychoanalysis* (*Scribners M.*, lxxviii,602).

PUMPELLE, JOSIAH COLLINS. Lawyer, died January 5. He was born at Owego, N. Y., Aug. 16, 1839; graduated at Rutgers College in 1860, and studied at Columbia University. He aided in raising and drilling men in the Civil War. He was one of the founders of the Huguenot Society in the United States and a member of other social organizations. He published *Our French Allies and Other Addresses* (1889) and was on the staff of the *American Magazine*.

QUAKERS. See FRIENDS.

QUEBEC. A province of Canada, extending from Ontario to the northern border of the United States and New Brunswick, northward to the Hudson Strait and including most of the Labrador peninsula. Capital, Quebec. Estimated area, 706,834 square miles, including 15,969 square miles of water. Population (1911) 2,003,032, of whom 1,605,339 were of French origin. The above figures apply only to the area possessed by Quebec before 1912, namely 351,873 square miles and do not include Ungava which was annexed in 1912. In 1917 the population of the whole province was estimated at 2,380,042, of which 1,145,646 was rural and 1,234,396 urban. Population of the chief cities in 1917: Montreal, 700,000; Quebec, 103,000; Maisonneuve, 37,200; Hull, 25,400. It is under a Lieutenant-Governor who acts through an executive council or a responsible ministry; a legislative council of 24 members appointed for life and a legislative assembly of 81 members elected for five years. As the result of the election held in June, 1919, the members of the legislative assembly were distributed by political parties at the beginning of the year as follows: Liberals, 72; Conservatives, 7; Labor, 2. Lieutenant-Governor at the beginning of 1920, Sir Charles Fitzpatrick; Prime Minister, Sir Lomer Gouin.

QUEENSLAND. A state of the Commonwealth of Australia, situated to the north of New South Wales, and next to the largest of the Australian states. Area, 670,500 square miles; population (1911) 605,813; estimated, June 30, 1919, 712,827, exclusive of aborigines, who were estimated at 20,000. Immigration in 1918 was 110,878 and emigration including the expeditionary forces, 104,749. Total births in 1918 were 19,560; deaths, 7158. Capital, Brisbane, with a population estimated in 1918 at 181,199. Executive power is in a Lieutenant-Governor who acts through a responsible ministry; and legislative power in the legislative council of 49 members appointed by the Crown for life and the legislative assembly of 72 members elected by male and female adult suffrage. The Governor at the beginning of 1920 was Maj. Sir Hamilton John Goold-Adams and the Prime Minister, E. G. Theodore. See AUSTRALIA.

QUICKSILVER. Preliminary figures showing the production of quicksilver in the United States in 1920, compiled by the United States

Geological Survey, gave a total of 13,070 flasks. Of this output 9366 flasks was credited to California, 3601 flasks to Texas, 79 flasks to Nevada, and 24 flasks to Oregon. So far as known neither Idaho nor Arizona produced any quicksilver. The year was a discouraging one to quicksilver mine operators, who had to face a decline in prices consequent upon a decreased demand for their product and found little relief from the prevailing high cost of labor and supplies. Such demand as there was for the metal was met from surplus stocks accumulated during the war, from quicksilver originally sold abroad but resold in this country, and from imports. The average price of quicksilver in 1920 per flask of 75 pounds, as quoted by the mining and scientific press for the San Francisco market, was \$79.66. The highest monthly average was \$100, in April, and the lowest was \$52, in December. The price held up fairly well to the end of August but then fell steadily to the end of the year.

RACING. Thoroughbred racing attained the heights of popularity in 1920 especially in the United States. Record crowds visited the tracks in the vicinity of New York daily, the climax being reached on Memorial Day at Belmont Park when there were 42,000 paid admissions. The season was also noted for the remarkable showing made by Man O'War, a three-year old owned by Samuel C. Riddle. This superhorse piled up the unprecedented total of \$244,465 in winnings during 1919 and 1920, being undefeated in 11 starts in the last-named year.

A summary of Man O'War's wonderful record during 1920 follows:

May 18—won Preakness Stakes at Pimlico; May 29—won the Withers at Belmont Park, establishing a new track record of 1 minute, 35½ seconds for the mile; June 12—won the Belmont Stakes at Belmont Park, establishing a world's record of 2 minutes, 14½ seconds for a mile and three-eighths; June 22—won the Stuyvesant Stakes at Jamaica; July 10—won the Dwyer Stakes at Aqueduct, establishing a new American record of 1 minute, 49½ seconds for a mile and one-eighth; August 8—won the Miller Stakes at Saratoga; August 21—won the Travers Stakes at Saratoga, establishing a new track record of 2 minutes, 1½ seconds for a mile and a quarter; September 4—won the Lawrence Realization Stakes at Belmont Park, establishing a new world's record of 2 minutes, 40½ seconds for a mile and five-eighths. September 11—won the Jockey Club Stakes at Belmont Park, establishing a new American record of 2 minutes, 28½ seconds for a mile and a half; September 18—won the Potomac Stakes at Havre de Grace, establishing a new track record of 1 minute, 44½ seconds for a mile and one-sixteenth; October 12—won a match race from Sir Barton at Windsor, Canada, for a \$75,000 purse and gold plate valued at \$5000.

The winners of the more important racing fixtures in the United States in 1920 were:

Brooklyn Handicap, Cirrus; Saratoga Handicap, Sir Barton; Suburban Handicap, Paul Jones; Saratoga Cup, Exterminator; Futurity, Step Lightly; Latonia Derby, Upset; Kentucky Derby, Paul Jones; Brooklyn Derby, Man O'War.

J. Butwell was the leading American jockey. He had 536 mounts, finishing first 109 times, second 92 times, third 105 times, and was unplaced on 230 occasions. J. Rodriguez piloted 105 winners and finished second 113 times. The

most successful English jockey was S. Donoghue, who scored 122 firsts, 98 seconds, and 74 thirds. The leading English owner was Sir R. Jardine with \$91,510. Capt. G. Loder's Spion Kop captured the English Derby and Comrade, owned by M. E. de St. Alary, won the Grand Prix de Paris.

The Grand Circuit season comprised 310 races, 181 for trotters and 129 for pacers. Tommy Murphy and Fred Erdman were the leading drivers, each winning 30 events. Peter Manning was the largest individual winner with a total of \$26,550. This horse also set a new world's record for the best three heats at a mile, his times being 2:03, 2:02¾, and 2:02½. Single G. established a new world's pacing record by traveling three heats in 1:59, 2:00, and 2:00¾.

RACQUETS and COURT TENNIS. C. S. Pell captured the national amateur racquets singles, defeating S. G. Mortimer by scores of 9-15, 15-9, 15-2, 15-8. The doubles title went to Jay Gould and J. W. Wear who defeated C. S. Pell and S. G. Mortimer 15-9, 15-11, 9-15, 15-10, 16-18, 6-15, 15-7. Jack Soutar triumphed over Otto Glockler in matches for the American professional racquets championship by scores of 15-5, 16-5, 9-15, 15-10.

A. J. Cordier of the Yale Club, New York City won the national amateur squash championship, defeating Anderson Dana of the Crescent A. C. 17-15, 15-9, 15-3. Jay Gould again reigned supreme in the court tennis singles. The court tennis doubles honors were gained by Gould and J. W. Wear.

RADCLIFFE COLLEGE. A non-sectarian institution of the higher learning for the education of women, at Cambridge, Mass., founded in 1879. The enrollment for the regular fall session of 1920 was 614. The faculty numbered 133, who were instructors and professors of Harvard University. The productive funds amounted to \$1,900,000 and the income to \$90,000. There were 44,000 volumes in the library. President, LeBaron Russell Briggs, LL.D., Litt.D.

RADIO-TELEGRAPHY. See WIRELESS TELEGRAPHY AND TELEPHONY.

RADIO-TELEPHONY. See WIRELESS TELEGRAPHY AND TELEPHONY.

RADIUM, MEDICAL USES OF. It is not yet generally understood that radium may extend more hope for the mitigation of persistent high blood pressure and hardening of the arteries than any other of our resources. This is pointed out by Dr. Field, Director of the New York Radium Institute, in the *Medical Record* for Dec. 25, 1920. The title of his paper is "The Influence of Radioactivity in the Treatment of Hypertension." The greatest proved efficiency of radium is in the treatment of malignant disease (see CANCER) and here the metal acts as a surgical resource, a substitute for the knife. Its use here is sometimes styled radiosurgery. But there are also radiomedical possibilities, for gaseous radium, known as emanation, has all the virtues of solid radium and solutions are easily rendered radioactive. Radium has in fact been used medicinally from the outset but heretofore has done nothing that could not have been done as well or better by other means. Dr. Field is, however, quite sanguine as to the future of the metal in the field of persistent high blood pressure and arteriosclerosis, and believes that at least three-fourths of patients with these conditions can have their lives prolonged for many years. He believes that the drug will be as serviceable here as

it has been in cancer, which is saying much. There is considerable similarity between the two affections, for both often attack the robust subject who has never been ill and at about the same age period; and both come on insidiously. To the latter characteristic is due the admonition to have periodical examinations made while yet in health, and needless to state the case which is soonest discovered is usually the one to benefit most from treatment. Persistent high blood pressure is the forerunner of actual hardening of the arteries and the latter in turn precedes the degenerative diseases of the heart, kidneys, and the blood vessels themselves.

So commonly are these three types of degeneration associated in the same individual that we speak of cardiovascular disease as a pathological entity. The great liability of these subjects to cerebral apoplexy makes the brain a participant to some extent in this great complication of diseases. We know very little of the first causes of persistent high blood pressure. According to the author it is hardly encountered in the manual toiler, but this statement should be qualified because certain of the physical workers are predisposed to arteriosclerosis, depending on the amount and character of the work performed. It is true that sedentary lives and mental workers are menaced by the disease, especially those who, carrying burdens of responsibility, are under constant mental stress and who work for long hours at a stretch with neglect of exercise and with the habit of eating considerably more than their physical requirement. These subjects improve considerably under a radical change of habits—an active outdoor life and reduction in diet, with relief from mental strain.

Since radium stimulates most of the functions it is difficult to understand its exact rôle in relieving arterial disease. Recently it has been claimed that it exerts a direct action on the automatic activity of the heart beat. That it does relieve the symptoms of high tension and arteriosclerosis is readily apparent, and it is probable that if used in season the treatment may prove curative. If only a palliative the treatment will of course need renewing from time to time. Even with advanced organic disease of the heart and kidneys life can be prolonged and symptoms relieved.

The subject of administration is one of the greatest interest because radium is still scarce and the supply will hardly be equal to the constantly increasing demand. Used medicinally it exerts its influence in very small quantities, and even the minute amounts natural to certain mineral springs have given notable results.

In addition to the use of radioactive mineral waters, gaseous radium or emanation may be inhaled and baths may be taken in radioactive water. Radium element proper in solution may be injected beneath the skin or into the veins. The metal is given thus in one of its salts—bromide or chloride. The author has used radium element in this manner in nearly 3000 treatments and has never seen any toxic effects. The foreign substance is not retained in the body but is eliminated in the usual manner. Gaseous radium does not remain long in the body but radium element may be demonstrated in the latter for as long as 12 weeks. Dr. Field will not undertake cases unless the subject will remain under treatment for a maximum of 16 weeks. He obtains good results without coinci-

dent dieting and hygiene, although he advises that other measures be utilized along with radium. The worst symptoms such as headache and dizziness, pain in the cardiac region, insomnia, etc., disappear in a few days, while at the end of the treatment the blood pressure may show a reduction of from 15 to 44 mm. in cases originally 160 to 200 mm., the greatest reduction being naturally seen in the higher pressures. As a rule the patients remain well from 6 to 12 months at which juncture there may be a return of high pressure; if this is promptly treated the period of treatment may be reduced to two or three weeks. Relapses are apt to follow certain abuses like overeating. Subjects threatened with relapse should be able by means of right living and the use of some form of gaseous radium such as radioactive mineral waters to ward off or keep down the tendency. Many patients treated four years ago have been free from relapse.

RAILROAD TERMINALS. See CITY PLANNING.

RAILWAYS. The Transportation Act became a law on Feb. 28, 1920, and on March 1, 1920, the railroads which had been taken over by the United States government as a war measure Jan. 1, 1918, were returned to the private corporations that owned them. This Transportation Act was the enactment into law of certain parts of the Cummins bill originating in the Senate and the Esch bill originating in the House of Representatives, containing some provisions however, that were not in either bill and omitting many provisions that were in one or other of the bills. Its passage marked a distinctly new epoch in the history of regulation of American railroads. It provided for the termination of "Federal control" of railroads, the settlement of disputes between common carriers and their employees, and an amendment to the Act to Regulate Commerce of 1887.

The larger railroads of the country had been rented by the government from the private corporations that owned them and operated by officers appointed by the government and by employees paid by the government from Jan. 1, 1918, to March 1, 1920. The Transportation Act provided for relinquishment of this rental but for a guarantee to such private corporations as elected to accept it of a net revenue equal to government rental for six months—that is up to August 31st—on condition that any net earnings in excess of the amount of the rental should be turned over to the government. Nearly all of the railroad corporations accepted this guarantee, the more important exceptions being the Southern Railway, the Pere Marquette, the St. Louis Southwestern, the New York, Chicago, and St. Louis, and Long Island. It provided also for the funding of indebtedness of the carriers to the government for a period of 10 years at 6 per cent interest. This indebtedness was incurred by the carriers through the expenditure by the government of sums for additions and betterments to the property of the carriers and advances by the government of sums for the refunding of corporation securities maturing during the period of government operation.

The operating expenses of the carriers had been increased so much under Federal operation that with few exceptions the government was called upon to make up very considerable deficits for the six months period.

The Act created a Railroad Board of Labor Adjustment composed of nine members, three representing the employees, three representing the managements, and three representing the public, with salaries of \$10,000 each, to pass upon wages and working conditions. The findings of this board are to be made public but are not enforceable by law.

President Wilson on April 13th appointed the following nine men as members of the Railroad Labor Board:

Public representatives: G. W. W. Hanzer, assistant commissioner of the United States Board of Mediation and Conciliation; Henry Hunt, former mayor of Cincinnati; R. M. Barton, former member of the Tennessee Court of Appeals.

Management representatives: Horace Baker, former general manager of the Cincinnati, New Orleans, & Texas Pacific; J. H. Elliott, former general manager of the Texas & Pacific; W. L. Park, Federal manager of the Chicago Great Western.

Labor representatives: Albert Phillips, vice-president Brotherhood of Locomotive Firemen and Enginemen; A. O. Wharton, president Railroad Employees Department American Federation of Labor; J. J. Forrester, president Brotherhood of Railway and Steamship Clerks, Freight Handlers, and Express and Station Employees.

The Interstate Commerce Act is amended so as to provide that the Interstate Commerce Commission shall fix such freight and passenger rates as will provide the railroads as a whole with a net operating income equal to $5\frac{1}{2}$ per cent or 6 per cent on the fair value of the property devoted to transportation. Earnings by any railroad in excess of 6 per cent shall be divided, half to be retained by the railroad company as a reserve fund and half to go to the government for the establishment of a contingent fund. The commission is also given the power to fix minimum rates as well as maximum rates. The commission is given the power to pass on the division of through rates as between two or more railroads. Approval of the commission must be obtained for the issuance of new securities. The approval of the commission must also be obtained for the building of extensions and new facilities.

The Act provides that combinations of railroads may be formed subject to the approval of the Interstate Commerce Commission but that the combinations shall be carried out in such a way as to preserve existing competition. The commission is empowered to lay out a general plan for the combination of railroads and has interpreted this to mean that it shall lay out such a general scheme. It was working on this scheme at the end of 1920.

As indicative of the attitude of the commission towards this subject the handling of the application of the Delaware, Lackawanna, & Western is significant. The Lackawanna has for a number of years been paying 20 per cent dividends on its stock and earning a large surplus over and above its dividend requirements. The company claimed in its application to the Interstate Commerce Commission that the value of the property was many times (the petition does not fix an exact amount) the amount of the par value of the stock and asked permission to declare a stock dividend. At the same time permission was asked to merger another road—name not made public—with the Lackawanna. The commission has held

up both applications on the ground that this proposal may not coincide with the plan which the commission is making for the consolidation of all roads into various systems.

Another important application in regard to the capitalization of surplus was made to the commission in 1920 and has been left undecided. The Chicago, Burlington, & Quincy has outstanding 110,839,100 par value of stock of which 107,611,600 is deposited as collateral for an issue of joint bonds of the Great Northern and the Northern Pacific with a face value of double the par value of the Burlington stock. These 4 per cent bonds become due in 1921. The Burlington has been paying regular dividends of 8 per cent on its stock (just sufficient to meet the interest on the 4 per cent bonds under which it is deposited) and occasional extra dividends and has put back into the property very large surpluses. The proposal of the company is to issue additional stock against this surplus.

The question presented to the commission is interesting. The Transportation Act specifically provides that even where surpluses are earned by successful competition against other roads charging the same rates—that is rates fixed by the commission itself—this surplus above 6 per cent must be divided with the government. This applies however to surpluses under rates which by the new law are required to be high enough to yield at least 5½ per cent on the aggregate value of railroad property. The surpluses of the Lackawanna and the Burlington were earned in a period when there was no guarantee of minimum net earnings of all railroads except such as may be found in the Constitution.

As provided for in the Transportation Act the railroad companies made an application, on May 1, to the Interstate Commerce Commission for an increase in freight rates. It was estimated by the companies that an increase of 28 per cent in freight rates in Eastern territory and of 23.4 per cent in western territory would be necessary to yield in the aggregate 5½ per cent on the investment in their property. Before the hearing had gone far various classes of railroad labor appealed to the Labor Board for increase in wages. The two hearings went on simultaneously, but before different government commissions. It was necessary however for the Interstate Commerce Commission to make some estimate of what the new wage scale would be because to arrive at a figure for net income gross income must be adjusted to a presupposed expense. What actually happened was that there was some unofficial consultation between the two commissions and the Railroad Labor Board made its award on July 20 and the Interstate Commerce Commission made its award on July 29.

WAGE AWARD. The United States Railroad Labor Board awarded the various classes of employees a flat increase in wages averaging 21 per cent above the wages then being paid and adding \$586,340,336 to the annual pay rolls of the railroad companies making no allowance for increased rates of overtime. Clerks got an increase of 25 per cent, maintenance of way employees 25 per cent, mechanics and shop labor 19½ per cent, station agents and telegraphers 23 per cent, and engine men and trainmen, each 23 per cent. In making the award it was said that, "the board has endeavored to fix such wages as will provide a decent living and secure for the children of the wage earners opportunity for

education, and yet to remember that no class of Americans should receive preferred treatment and that the great mass of the people must ultimately pay a great part of the increased cost of operation entailed by the increase in wages determined herein."

The different labor unions representing railroad employees generally accepted the award, but it is of importance in the history of labor legislation to make a note of the fact that although the responsible leaders of the unions had agreed to await the decision of the Wage Board there were serious strikes of railroad employees while the hearings were going on. These strikes were called "outlaw" strikes by the labor leaders and it was claimed that they were without the sanction of the unions and were engaged in by members of the unions in defiance of their leaders. The argument, however, was continuously used before the Wage Board by the labor leaders—while these outlaw strikes were in progress—that unless the Wage Board granted the demands of the unions the leaders would no longer be able to control the action of the membership. The outlaw strikes started with the switchmen in Chicago, but spread to other classes of employees and pretty well all over the country. They died out in time, but so far as is known no punishment was imposed on the "outlaws" by the labor unions.

In the last four months of 1920 the supply of railroad labor for the first time since 1915 exceeded the demand and some reduction in forces was made possible by a falling off in freight business.

THE RATE ADVANCE. The Interstate Commerce Commission on July 29 granted a general increase in freight and passenger rates. The increase in passenger rates was 20 per cent above the 3 cents a mile fixed during government operations. To this there was added a surcharge of ½ a cent a mile for passengers riding in Pullman cars. The surcharge goes to the railroad company not to the Pullman Company.

The eastern roads were allowed an increase of 40 per cent in freight rates, the western roads east of the Colorado common points were given an increase of 35 per cent, the Mountain-Pacific roads were given an increase of 25 per cent and the southern roads were given an increase of 25 per cent. Both freight and passenger rate increases were to apply to both interstate and intrastate business, but some states were still withholding increased rates on intrastate business up to the end of 1920.

In making the award the Interstate Commerce Commission took as its tentative value of all the roads \$18,000,000,000, which is less by \$1,700,000,000 than the total of the property investment accounts of the railroads. The par or face value of all outstanding railroad securities roughly corresponds to the total of the property investment accounts so that the Commission tentatively accepted a valuation for the railroads lower by some 8 per cent than the face value of outstanding securities, but very far above the market value of the aggregate of these securities. The net operating income which the Commission found to be fair under 1920 wage and traffic conditions was \$1,134,000,000 per year. The Commission was unanimous as to the increases, but Commissioners Eastman and Woolley objected to the method of arriving at the decision.

Engineer J.C. Crowley oiling the 5015 before it starts to push a train up the ERIE'S Susquehanna Hill.

This is one of the 3 largest locomotives in the world, all owned by the ERIE Railroad. The 5015 weighs 432 tons and has 24 drive wheels; has pushed 250 loaded cars in a test.

EARNINGS AND EXPENSES. Julius H. Parmelee of the Bureau of Economics, writing in the *Railway Age*, says that in 1920 the American railways had, "the greatest traffic in railway history; the greatest operating revenues; the greatest operating expenses; the greatest wage aggregate; the greatest taxes, and the smallest net operating income in more than 30 years." The total operating revenues of all United States railroads, excluding the small companies that have less than \$1,000,000 a year each in revenues, is estimated at \$6,230,000,000. This compares with \$5,184,000,000 total revenues in 1919 and is an increase of 20.2 per cent over that year. Freight revenue in 1920 amounted to \$4,291,000,000, an increase over the previous year of 20.6 per cent. Passenger revenue amounted to \$1,317,000,000, an increase of 11.8 per cent. Mails, express, and miscellaneous revenue amounted to \$622,000,000 an increase of 38.5 per cent. The total freight traffic handled in 1920 was the equivalent of moving 448 billion tons one mile. This compares with 395 billion tons moved one mile in 1919, an increase of 13.4 per cent. The passenger business was the equivalent of carrying over 46 billion passengers one mile. This was about the same, or possibly a little less, than the passenger business of 1919. The figures for mail, express, etc., are not completed on a ton or pound basis so that the volume of business cannot accurately be compared with that of previous years. It will be noted that in both freight and passenger business a considerable part of the increase in revenues was due to increased rates and this was true also of revenue from mails. The increased freight and passenger rates in effect for four months in the year raised the total earnings from passengers and freight, but not to the extent that had been predicted during the rate case discussion partly because there was a falling off in all classes of freight and passenger business. Besides granting an increase in rates paid by shippers and travelers the Interstate Commerce Commission awarded the railroads an increase in the compensation which the government pays for carrying the mails. This increase was made retroactive for 1920.

Operating expenses of the roads earning more than \$1,000,000 a year amounted in total to \$5,750,000,000, an increase of \$1,330,000,000, or 30.1 per cent over 1919. The award of the Labor Board was retroactive to May 1, thus making eight months of increased wages. Fuel costs were considerably higher in 1920 than in 1919 and railway material costs were higher.

MAINTENANCE OF WAY. Two years of operation by the government—one of them under war conditions—had left the roads in bad shape physically. During 1918 the government had been unable to get all the rails that were needed and in 1919 labor was so scarce that even the rails which were bought were laid only at excessive cost. Furthermore, the standard which was made theoretically uniform for all roads was much lower than that in use in actual practice by the so-called strong roads that is, such roads as the Atchison, Topeka & Santa Fe, Pennsylvania, etc. Even in the first nine months of 1920 track labor was very scarce and demanded high wages. The railroad managers could not or thought they could not, raise the regular wage scale for track labor to the level of that for the same class of labor in other industries.

For instance the railroads in the Pittsburgh district were offering between 30 and 40 cents an hour for section men while the steel mills were paying 65 cents an hour. In Iowa the farmers were paying \$90 a month and board for labor and the railroads were offering 31 cents an hour or less than half the equivalent of what the farmer was offering. Where, as in the southwest, the roads use Mexican labor for track work, they were able to hold their forces because Mexicans do not as a rule make good farm hands. In other parts of the country, especially in the East, the experiment of contracting out maintenance of way work was tried. Whether this was a cheaper way of getting the work done is open to question, but it had two points at least to recommend it to railroad managers, it maintained on the railroad payroll the existing spread between skilled and unskilled labor wage scales and it nominally maintained a rate of about 30 cents an hour for railroad track labor which would be sufficient to attract labor when unemployment became general.

THE EQUIPMENT SITUATION. During the 26 months of government operation the rule which requires a car which is off the line of the railroad which owns it to be loaded for movement only in the direction of the home line was suspended and all cars were treated as common property of all roads. This had the effect of completely scattering all cars. For instance, let us take the case of the Pennsylvania R. R. steel open top coal car loaded with anthracite for domestic use in New Orleans. When the car was unloaded at destination it would have been held at New Orleans until a load was obtained north bound, or at least in the general direction of the Pennsylvania, or else it would have been hauled empty to the nearest point on the Pennsylvania under the car rules in effect before government operation. Treating this car as common property, however, the government would have loaded it with any freight that could be shipped in such a car and sent it possibly out to Arizona, over the Southern Pacific. It might then have gotten into mine run service at the copper mines. Under normal conditions the eastern roads, which have a large number of cars especially adapted to their own business, keep 80 per cent of their cars on their own lines and have other companies cars on their line to the number about equal to the 20 per cent of cars owned, but away from the home line. Under government operation this was just reversed and the proportion of owned cars on home lines to total cars owned fell as low as 10 per cent.

No railroad wants to repair the cars owned by other companies and this was especially true under government operation, because the officers of each road were very anxious to make a good showing on holding down expenses. One road making repairs to a foreign car could not bill the cost to the road owning the car even when the repair was necessitated by a defect in the car—as it could under private operation—and, therefore, had to charge the entire cost to its own expenses. The result was that all equipment was allowed to deteriorate to a greater extent than ever before in the history of the railroads.

When business resumed normal proportions and even in some industries something of the nature of a boom took place there was a severe

shortage of freight cars. This was partly because so many cars were unfit to run. There arose a demand that the government lend the railroad companies money to buy a large quantity of new equipment, both locomotives and cars. A majority of the railroad executives joined in this demand, notwithstanding the fact that the price asked by builders of equipment was two and one-half times the pre-war price in the case of locomotives and three times the pre-war price in the case of freight cars. The temptation to use unsound economic reasoning is strong. If a railroad repairs a car that is in bad shape the cost must be charged to expenses. Assume the cost is \$800 and there are 1000 cars that need repairs, then the railroad manager must face the fact that he adds to his expenses \$800,000, which is the same as subtracting this amount from the net income available to meet interest charges. On the other hand, if the company buys 1000 new cars with money borrowed from the government, there is no charge to expenses, the shipper is better satisfied, the unanalytical stockholder is satisfied, and the equipment manufacturer is delighted. On the other hand, there is a condition under which new equipment must be bought to meet the just demands of shippers. The majority of the railroad executives thought that that condition had been reached in March, 1920. The minority led by L. F. Loree, president of the Delaware & Hudson, thought that the car shortage could be almost entirely overcome by the repair of the cars already owned, as a matter of fact, business fell off so much in the last three months of 1920 that the programme of the majority was not fully carried out.

The price of locomotives and of steel freight cars is roughly proportionate to the weight. Thus, a locomotive weighing 320,000 pounds cost \$80,000 in 1920 whereas the average price in 1910-1914 was about \$30,000. The total number of locomotives ordered in 1920 by United States railroads according to the figures compiled by the *Railway Age*, was 1771 and by industrial companies 227, and by Canadian roads 189, and by foreign countries 718; a total of 2905. This compares with total orders in 1919 of 1170 and in 1918 of 4888. The total number of locomotives built in the United States in 1920 was 3439.

The total number of passenger cars ordered by United States railroads, the Pullman, and other companies, was 1781, and by Canadian roads 275, and by foreign countries 38; a total of 2094. The total in 1919 was 782 and for 1918 it was 157. In the 10 years before the war it varied from 3000 to 4000 per year.

The United States railroads ordered 52,294 freight cars, private car companies and industrial companies 31,913, Canada 12,406, and foreign countries 9056; a total of 105,669 ordered from American and Canadian builders in 1920. In 1919 the total was 163,185.

NEW CONSTRUCTION. There was 314 miles of new first track built in the United States in 1920. In addition there was 91 miles of second track, less than two miles of third track, and less than eight miles of fourth or other track built. In Canada there was 306 miles of new first track and 32 miles of second track built. The mileage of new first track was less than half as great as that of 1919 which was the lowest figure heretofore reached since a record of

railroad construction had begun to be kept. The new lines built in 1920 were all short extensions from half a mile to 10 miles in length, most of them to new mines. The mileage of lines abandoned in the United States was 535, and in Canada 35.

RECEIVERSHIP AND FORECLOSURE SALES. There were 10 short roads with a total mileage of 541 miles that were placed in the hands of receivers. There were seven short roads with a total mileage of 380 sold under foreclosure. The Denver & Rio Grande was ordered sold and a sale took place on November 20, but had not been confirmed up to January, 1921.

RAILWAYS, ELECTRIC. No new work in the electrification of steam railways was undertaken during the year. The completion of the Pacific Coast extension of the Chicago, Milwaukee and St. Paul Railway to Seattle, Washington, gave that line a total of 651 miles of track operated by electric locomotives. These engines, one design of which was illustrated in the 1919 YEAR BOOK, were giving highly satisfactory service over the steep grades of the St. Paul's mountain divisions. The regenerative braking apparatus, by which the momentum of the train while descending grades was employed to check its speed, functioned so perfectly that the air brakes were not used in controlling the train. This result was accomplished by such an arrangement of the armature and field connections of the motors that the latter were converted into generators and a large part of the energy thus developed in them was restored to the line as an electro-motive force opposed to that from the power station.

In Europe, the St. Gotthard railway between Lucerne, Switzerland, and Chiasso, Italy, was operated by alternating current electric locomotives, energy being supplied from an overhead conductor at 15,000 volts to the single-phase motors of the locomotives. In Australia, the system of suburban tramways radiating from the city of Melbourne was practically completed during the year and a large and increasing passenger traffic was successfully handled. In France, the Midi Railway extended the use of multiple unit electric trains on part of its system, and from Italy it was reported that extensive plans were under consideration that would soon entirely replace steam locomotives with electrics in that country.

Electric railways, both street and interurban were going through a difficult period of their existence. Labor and material costs were rising, and while the increased fares urgently asked for by the companies were granted in many localities, the relief so obtained was insufficient to strengthen their credit to the point where funds could be borrowed on terms enabling extensions or even necessary betterments to be made. In New York City, the surface lines as well as the elevated and subway roads continued their fight for an increased fare and were backed by a moderately expressed public sentiment, but the Board of Estimate and the State Legislature stoutly opposed all efforts looking to the improvement of their financial condition. At the close of the year, the Interborough Rapid Transit Co., operating subway and elevated lines experienced great difficulty in making arrangements to pay interest due on its obligations. These lines, during the year ending Dec. 31, 1920, carried 1,006,331,698 passengers, of whom 625,521,692

were carried on the subway. The American Electric Railway Association published a compilation of figures showing that the electric railways of the United States represented an investment of more than \$5,000,000,000 and they urgently needed \$300,000,000 for their proper rehabilitation.

In many cities, the competition of jitney buses made severe inroads on the earnings of the trolley lines and while in exceptional cases they were valuable feeders to such railways, their irresponsible and unregulated operation and service were frequently a source of annoyance to the public as well as to the street car lines. Accidents were frequent and injured passengers found great difficulty in securing redress through the courts. The service was unreliable and subject to more inconvenience and discomfort than confronted passengers using the regular means of street transportation. In New York City, the Fifth Avenue Coach Company demonstrated its value to the public and was constantly increasing its facilities to enable it to care for its patronage. Though charging a 10-cent fare, its business increased rapidly. Street railway managers in general were looking to the wider use of the one-man car (see RAILWAYS, ELECTRIC, 1919 YEAR BOOK) as the solution of some of their difficulties and were beginning to win public favor in connection with their financial needs, as was evidenced by a more friendly tone in the comments on their situation in the daily press.

killed in train accidents in 1919, 517, was 48 per cent less than the total in 1918; but in the earlier year were included under this head of "other persons, not trespassers" killed at highway grade crossings. Those thus classed in 1919 numbered nine, whereas in 1918 the number was 117. Considering only the passengers and employees (including employees not on duty) the decrease in 1919 over 1918 was 43 per cent. The number of employees on duty killed in train accidents (359) was 34 per cent less than in 1918. In connection with the decrease in the number of passengers killed in train accidents it should be remembered that the statistics for 1918 included two of the worst railway disasters on record; at Ivanhoe, Ind., on June 22, 1918, killing 68 persons, and Nashville, Tenn., on July 9, 1918, killing 101.

The grand total in the accompanying table, 6978 killed added to 149,053 injured or 156,031 was the smallest recorded for the railways of the United States since 1910; and the total of killed was the smallest since 1898. A notable feature of the 1919 record was the decrease in the number of trespassers killed by being struck or run over by trains. For the 10 years 1905-14 the average annual number of trespassers killed (including those killed in train accidents) was 5290, as compared with 2553 in 1919. The largest annual death roll of trespassers, 5612, was that for the year ending June 30, 1907.

The economic waste due to the many losses

CASUALTIES TO PERSONS IN TRAIN ACCIDENTS AND TRAIN SERVICE ACCIDENTS; THREE YEARS

^a Includes persons struck by trains at highway crossings. ^b A small percentage of the persons classed as trespassers represents employees. ^c Of the 52,601 persons here recorded as injured, 502 were reported by the railroads as having subsequently died.

RAILWAY ACCIDENTS. In the United States the Interstate Commerce Commission in its annual record of collisions, derailments, and other accidents on the railroads of the United States compared with a record for 1918 of 286 passengers, 366 employees, and 41 other persons killed in train accidents, and 4549 passengers, 3202 employees, and 124 other persons injured; as compared with a record for 1917 of 286 passengers, 554 employees, and 156 other persons killed and 4655 passengers, 4250 employees, and 500 other persons injured. The total number of persons

involved in American train accidents may be appreciated by reference to the table on page 572 for the years 1919 and 1918. It must be realized that the amount of damage to freight or the sums paid or payable on account of bodily injury to persons is not included in the totals given. The table also classifies the nature of the train accidents.

One serious feature to which attention is called by the Interstate Commission is that while the number of trespassers killed and injured showed a large reduction, the number of persons killed

or injured at highway grade crossings in 1919 was more than double the number in 1910. Since 1911 the number of persons killed had been more than 1000 each year; and the totals for 1919 were 1784 killed, and 4616 injured.

ice employees were at fault for 7 of these collisions, while the other was due to the failure of an operator to deliver a train order, and of the despatcher to observe a rule governing the issuance of meet orders.

^a Excluding trespassers. ^b In thousands.

During the year ended June 30, 1920, the Bureau of Safety of the United States Interstate Commerce Commission investigated 90 train accidents, which included 58 collisions and 32 derailments. The collisions resulted in 179 deaths and 1158 injuries, and the derailments resulted in 60 deaths and 481 injuries, a total of 239 persons killed and 1639 persons injured.

Thirty-one of these collisions occurred on lines operated by the block system; 20 occurred on lines operated by the time-table and train-order system, and 7 were yard accidents.

Of the 31 collisions investigated in block-signal territory, 20 occurred on lines equipped with automatic block-signals, of which 14 were rear-end collisions, 5 were head-end collisions, and 1 was a side collision. The same question of human failure again was encountered for of the 20 collisions occurring in automatic block-signal territory, 16 were due directly or indirectly to the failure of enginemen properly to observe and obey signal indications: 1 was caused by a despatcher authorizing a movement against the current of traffic without knowing whether opposing trains were being held and by a yard clerk allowing an opposing train to proceed; 1 was due to a closed angle cock on the rear of the tender; 1 to the failure of a conductor to see that a sufficient number of hand brakes were set to hold the portion of his train left standing on a mountain grade; and 1 to the air brakes not being in proper working order through lack of adequate inspection and test.

Likewise of the 16 collisions investigated in automatic block-signal territory in which enginemen were involved either directly or indirectly, 10 were due to failure of enginemen to observe or obey stop signals, all of which might have been prevented by an adequate automatic train-control system.

The 11 collisions in non-automatic block-signal territory consisted of six rear-end and five head-end collisions. Five of these accidents were due to the failure of enginemen to operate their trains under proper control in occupied blocks. Enginemen were also primarily responsible in three other instances. One of these collisions was due to a flagman being authorized to proceed against the current of traffic without utilizing the safeguards provided by rule, and one to the failure of a despatcher to deliver to one of the trains an order which changed a meeting point, resulting in a lap order.

The 20 collisions occurring on lines operated under the time-table and train-order system consisted of 6 rear-end collisions, 13 head-end collisions, and 1 side collision. Errors in handling or failure to obey train orders were responsible for 8 of the rear-end collisions; train serv-

Track conditions were involved in 15 of the 32 derailments. Four derailments were due to broken rails and four to open switches, three of which were opened with malicious intent. One derailment was due to a defective switch, one to insufficient ballast, one to excessive speed in view of existing superelevation, one either to an obstruction or excessive speed in view of existing superelevation, and three to a combination of track and equipment defects. Of the remaining 17 derailments, 8 were due to defects of equipment, 3 to obstructions, 2 to excessive speed, 1 to running off a derail, and 1 to the failure of an engineman to note an open draw-bridge, while the causes of 2 derailments were not ascertained.

The work of the Bureau of Locomotive Inspection of the Interstate Commerce Commission during the fiscal year ended June 30, 1920, is shown in the report of the chief inspector.

The summary of all accidents and casualties occurring during the fiscal year ended June 30, 1920, covering failures of the entire locomotive and tender and all of their parts and appurtenances, as compared with the year ended June 30, 1919, given in the annual report of the chief inspector of the Bureau of Locomotive Inspection of the Interstate Commerce Commission showed an increase of 49 per cent in the number of accidents, an increase of 16 per cent in the number killed, and an increase of 42 per cent in the number injured. This increase was due almost wholly to disregard of the requirements of the law and rules, as well as of safety of construction and operation. This was especially true with respect to parts sometimes considered unimportant; for example, 26 per cent of the increase in accident and injuries was due to failure of grate shakers; 10 per cent was due to failure of reversing gear; and 10 per cent to failure of squirt hose.

The summary of all accidents and casualties caused by failure of the boiler and its appurtenances only for the fiscal year ended June 30, 1912, the first year of the existence of the law, as compared with the year ended June 30, 1920, showed a decrease of 47 per cent in the number of accidents, a decrease of 48 per cent in the number killed, and a decrease of 49 per cent in the number injured.

BRITISH RAILWAY ACCIDENTS. 1919. The annual accident report for the railways of Great Britain previously compiled in the office of the secretary of the railway department of the Board of Trade, in 1920 was prepared by the chief inspecting officer, Col. J. W. Pringle, reporting to the Director General, Public Safety, and General Purposes Department of the Ministry of Transport. It stated that train accidents on the

railroads of Great Britain and Ireland in the year 1919 numbered 1278, consisting of 292 collisions, 527 derailments and 459 other accidents. The fatalities involved in these accidents 3 passengers, 7 employees and 8 other persons killed, 513 passengers, 114 employees and 30 other persons injured; a total of 18 killed and 657 injured. A railroad mileage of 26,724 miles was involved and this must be considered in any comparison with the statistics of other countries.

In "train service" accidents 83 passengers, 318 employees and 426 other persons were killed, and 1835 passengers, 3845 employees and 217 other persons were injured. In "non-train" accidents 12 passengers, 52 employees and 23 other persons were killed, and 429 passengers, 16,489 employees and 445 other persons were injured. The totals of the three classes aggregated 932 persons killed and 23,983 injured. There were eight passengers killed in train accidents in 1918.

RAINFALL. See METEOROLOGY.

RALEIGH, Sir THOMAS. British public official and university professor, died at Oxford, February 8. He was born in 1850, received his early education at Edinburgh, then studied in Germany and finally graduated at Oxford where he won a prize for an historical essay. He was called to the bar in 1877, but gave up the practice of law and in 1884 became a fellow of All Souls at Oxford. In 1899 he accompanied Lord Curzon to India as regent member of the Vice-Regal Council, and in 1900 he was appointed Vice-Chancellor of the Calcutta University. On his return to England he served as member of the Council of India from 1909 to 1913. He wrote, *Elementary Politics* (1886); *An Outline of the Law of Property* (1889).

RAMSAY, Sir JOHN GEORGE. British soldier and civil servant, died March 31. After 1911 he was agent in Baluchistan. He was born Dec. 5, 1862, and went into the Indian Civil service at an early age. In 1893 he became political agent and he was revenue commissioner at Baluchistan, 1898-1906 and political resident in Turkish Arabia, 1907-10.

RAPID TRANSIT. Urban and interurban transportation continued throughout 1920 to be a leading topic as increased cost of operation and lack of funds for equipment, construction, and extension, were universal conditions throughout the United States. At various points there were strikes, elsewhere lines went into the hands of receivers, or were abandoned entirely, and everywhere there was uncertainty or controversy. In New York City, for example, there was a distinct lack of harmony between the municipal authorities and the Interborough Railway Company operating one of the great systems, and the receiver appointed by the United States district Court to operate the Brooklyn Rapid Transit lines. The question of increased fare figured here as it did elsewhere, and much of the discussion and dispute failed to consider fundamental facts. The limits of cost for a five cent fare in many cities long since had been reached, though the citizens clung to this time-honored standard often unmindful of greater costs of operation and increased length of journey made possible by extensions and systems of transfers not contemplated at an earlier date. The financial conditions of the year did not render easy the promotion of new enterprises often sorely needed, and even municipal construction was held back where badly required for the natural

growth of congested communities where more and more concentration was taking place. Various experiments of government ownership, or operation during war times had not been such as to further the demand for municipally owned and operated railways, and while these continued such advocacy yet the general movement had not gained in force.

FEDERAL ELECTRIC RAILWAY COMMISSION. An interesting development of the year was the report submitted on July 28, 1920, by the Federal Electric Railway Commission appointed by President Wilson on May 31, 1919, acting on suggestions made by the Secretaries of Commerce and Labor, to investigate the street railway situation. This Commission was composed of eight representatives of different organizations as follows:

Charles E. Elmquist, president and general solicitor of the National Association of Railway & Utilities Commissioners.

Edwin F. Sweet, Assistant Secretary of Commerce.

Philip R. Gadsdon, representing the American Electric Railway Association.

Royal Meeker, Commissioner of Labor Statistics, Department of Labor.

Louis B. Wehle, general counsel of the War Finance Corporation, representing the Treasury Department.

Charles W. Beall, representing the Investment Bankers' Association of America.

William D. Mahon, president of Amalgamated Association of Street & Electric Railway Employees of America.

George L. Baker, Mayor of Portland, Oregon, representing the American Cities' League of Mayors.

The report of the Commission, submitted July 28, was published in full in the *Electric Railway Journal* of August 28. This report recognized that the electric railway industry as it was in 1920 was without financial credit, and was not properly performing its public function. It recognized that this condition was the result of early financial mismanagement and economic causes, accentuated by existing high price levels of labor and materials, and of the failure of the uniform unit fare of five cents, prescribed either by statute or by local franchise ordinances or contracts to provide the necessary revenues to pay operating costs and to maintain the property upon a reasonable basis. It believed that the industry could be restored to a normal basis only by the introduction of economies in operation, improving its tracks, equipment, and service, and securing a reasonable return upon the fair value of its property used in the public service when honestly and efficiently managed.

It was realized that the electric railways must expand to meet the growing needs of their communities; therefore, the first essential was to restore credit in order to obtain necessary new capital for the extension and improvement of service.

The committee further stated that the full co-operation of labor was essential to the highest prosperity and the usefulness of the industry. The employees engaged in this occupation should have a living wage and humane hours of labor and working conditions. They should have the right to deal collectively with their employers, through committees or representatives of their own selection. All labor disputes should be set-

tled voluntarily or by arbitration, and the award of such a board should be final and binding upon both parties. It was intolerable that the transportation service of a city should be subject to occasional paralysis, whether by strikes or by lockouts.

The report also recognized that there could be no satisfactory solution of the electric railway problem which did not include the fair valuation of the property employed in the public service, and where that was done, the companies should voluntarily reduce any excessive capitalization to the basis of such value.

It referred to the fact that cost-of-service contracts were in the experimental stage, but where tried, they seemed to have secured a fair return upon capital, established credit, and effected reasonably satisfactory public service. Such contracts may safely be entered into where the public right eventually to acquire the property is safeguarded.

While eventually it might become expedient for the public to own and operate electric railways, the Committee stated that there was nothing in the experience thus far obtained in this country to justify the assertion that it would result in better or cheaper service than privately operated utilities could afford if properly regulated.

Public ownership and operation of local transportation systems, whether or not it be considered ultimately desirable, was recognized at the same time practicable in so few instances because of constitutional and statutory prohibitions, financial and legal obstacles, the present degree of responsibility of our local governments, and the state of public opinion, that private ownership and operation must as a general rule be continued for an extended period.

Another interesting report of the year was that of The American Electric Railway Association, on the condition of the electric railway industry throughout the country in 1920. In this there was a hopeful note with indications of a gradual and steady approach to a stable basis. It also recognized that regulatory bodies, recognizing that fair rates of return were essential to the maintenance of good service, had steadily ordered relief throughout the country; and, also, such agencies were aware that rehabilitation of lines would be a slow process and that at least the present advanced rates must be maintained for some time even if falling costs, anticipated but not realized as yet, should come. Badly needed improvements had been deferred by virtually every company.

The report showed that 548 cities, representing more than 90 per cent of the riding population in cities, were paying fares ranging from five cents with a one-cent charge for transfers, to a flat rate of 10 cents. One hundred and twelve cities paid a 10-cent fare. Electric railway receiverships were not so numerous. There were only 16 in 1920, representing a total capital stock of \$25,313,655, as compared with 48 receiverships, representing a capital stock of \$221,259,354, in 1919. During the year 450 miles of track were dismantled and 308 miles of track abandoned.

From every part of the United States the reports coming to the American Electric Railway Association showed not only regulatory bodies but car riders generally were taking the greatest interest in the restoration of companies to a

healthy state. The inclination to prevent companies from receiving sufficient return to maintain good service was in the belief of the Association confined to a small number of persons.

NEW YORK. The annual report of John H. Delaney, Transit Construction Commissioner, for the fiscal year ended June 30, 1920, showed that during 1920 there was an unprecedented increase in the traffic of the rapid transit and street car lines operating in the City of New York. The number of passengers in 1920 as compared with those of the preceding year were as follows:

	1920	1919
Rapid transit railroads*	1,424,166,581	1,204,266,664
Surface lines	940,608,486	875,676,340
Total	2,364,775,067	2,079,943,004
Increase	284,832,063	104,430,815
* Including Hudson and Manhattan tubes.		

In other words there was an increase of approximately 220,000,000 passengers in the rapid transit traffic during the fiscal year 1920, of which all but 9,000,000 of the increase were carried in the subway and elevated lines, making up the Dual System in which the city had a large financial interest. Traffic on the Interborough increased from 461,147,058 in 1919 to 586,098,633 in 1920, or an increase of 27.1 per cent while the Brooklyn Rapid Transit System which had transported 308,879,791 passengers in 1919 increased to 376,782,635 in 1920, or an increase of 21.98 per cent. On the elevated lines traffic increased 15.99 per cent and on the Hudson and Manhattan Tubes 7.21 per cent or about 9,000,000. Traffic on surface lines in Manhattan decreased 5.71 per cent and in Richmond 4.96 per cent. In Brooklyn and the Bronx travel on the surface lines increased. The total increase of passenger travel in 1920 over the increase in 1919 was approximately 175 per cent.

"With an annual increase in traffic exceeding 10 per cent," stated Mr. Delaney in his report, "it is obvious that provision must be made without delay for extension of local transit facilities for all sections of the city. When the Dual Contracts were signed in 1913 the rapid transit lines carried 810,000,000 passengers for the 12 months immediately preceding the adoption of the new programme. There has been an increase of approximately 615,000,000 passengers, or 76 per cent, in the intervening seven years, and the new trunk lines are already showing congestion."

In August, 1920, a report was made on a comprehensive plan intended to meet the requirements of the various boroughs of the city for the ensuing 25 years. The object of the plan was to encourage municipal growth in every direction and to prevent abnormal and congested conditions in certain sections and strangulation of growth in other areas. The transit plan and the general city plan for new thoroughfares and highway improvement involved mutual coördination in order that the best results might accrue to the general public. The growth of traffic per annum it was pointed out had been constantly in excess of the annual per capita growth of the city.

The enlarged system as projected would provide for an annual traffic of 5,000,000,000 passengers. The report recommended the doing away with surface car operation either on the main arteries of travel or on the main cross streets of Manhattan Borough, and stated that surface passenger transportation must be by subway travel

with crosstown "tie-lines" operated on a moving platform device, shuttle cars or by omnibuses. Because of the fact that the congested section of Manhattan had but 11 north and south through traffic arteries to serve more than 150 cross streets, it would be necessary to resort to "double-deck" subway trunk lines in the central traffic arteries of the city that remain available for transit lines.

It was suggested that the proposed scheme should not be carried out in its entirety but that it should be proceeded with methodically and continually. At pre-war prices it was estimated that the lines contemplated in the suggested programme for the next 25 years would cost approximately \$175,000,000 for construction. At prices prevailing in 1920, however, this cost would amount to close to \$350,000,000, exclusive of equipment, interest during construction, engineering, and superintendence. For proper facilities and equipment an additional \$200,000,000 would probably be required at present price level.

The plan in its entirety involved the construction of 21 two-track sub-aqueous tunnels, 830 single track miles of new line, three crosstown moving platforms, and two-story subways of eight and six tracks. An abstract of the report of D. L. Turner, chief engineer, in which this project is proposed may be found in *Engineering News-Record* for Oct. 14, 1920, Vol. 85, No. 16, page 754. This discussed in detail the proposed new routes and gives maps.

As regards actual construction during 1920, the New York City rapid transit system was increased by the completion and placing in operation of 55.38 track miles which served to bring the grand total of elevated and subway lines in operation to 601.2 miles out of a total of 618.9 miles projected for the entire dual system as laid out. Of the year's increase 40.56 miles were extensions of the Interborough System, and 14.82 miles were extensions of the New York Municipal System. The extensions opened in 1920 involved an outlay of \$67,150,000 and were as follows:

	Cost
Eastern Parkway, Brooklyn	\$15,250,000
Livonia Avenue, Brooklyn	2,500,000
Nostrand Avenue, Brooklyn	7,250,000
Westchester-Pelham Bay, Bronx	5,750,000
White Plains Road, Bronx	650,000
Webster Avenue, Bronx	2,750,000
Malbone Street, Brooklyn, to Whitehall Street, Manhattan	22,750,000
Sixtieth Street, Manhattan to Queens Plaza	9,250,000
Culver Line, Avenue X to Coney Island ..	1,000,000
	\$67,150,000

There were located on these newly opened sections of the dual system 43 passenger stations with a daily average passenger traffic of 350,000 persons. Furthermore at the time of the strike on the Brooklyn Rapid Transit, New York Municipal Railway, the Eastern Parkway and Nostrand Avenue section of the Interborough, then recently opened, prevented an entire paralysis of transportation in Brooklyn. It was stated that within 10 days of the opening of the Interborough extensions in Brooklyn they were handling a daily traffic of approximately 240,000 passengers.

The completion of the lines referred to above meant that practically all of the rapid transit lines under construction, with the exception of the 14th Street-Eastern Brooklyn line had been placed in public service. The needs of the Borough of the Bronx had been fully met, and

the New York Municipal system had been extended to Queens. Throughout the five boroughs a five-cent fare service had been established though actual operation on this basis was quite a different matter.

In addition to the record of construction and completion, plans and preparations were being made for rapid transit work to be placed under way or put into operation in 1921 under the provisions of the dual contract. This was as follows:

	Route mileage	Track mileage
<i>Interborough Lines</i>		
Steinway tunnel extension to Times Square	0.38	0.76
<i>New York Municipal Lines</i>		
14th Street-Eastern line:		
Subway	3.88	8.04
Elevated	3.40	7.10
Total	7.28	15.14
Nassau Street line	1.00	2.00
Total	8.66	17.90

The extension of the Steinway tunnel planned was to run from its existing terminus at Park Avenue and 42d Street west under 42d Street to a point west of Fifth Avenue, whence the tunnel would pass diagonally under Bryant Park to 41st Street and Sixth Avenue, and thence under 41st Street to a point midway between Seventh and Eighth avenues. There were to be stations under Fifth Avenue and under 41st Street below the stations of the New York Municipal Broadway line and the Interborough West Side line. The 14th Street-Eastern Parkway line construction suffered during 1920 by a default of the contractor on the section under contract between Irving Place and Avenue B in Manhattan. The under river section between the foot of 14th Street, Manhattan and Seventh Street, Williamsburgh, was scheduled for completion in the spring of 1921, while two subway sections in Brooklyn were to be finished about the same time.

Plans were under way for beginning the construction of the section under Nassau Street, Manhattan, connecting the terminal under the Municipal Building at City Hall, Manhattan, with the Montague Street tunnel to Brooklyn. This was believed to be the most difficult and expensive rapid transit construction ever to be undertaken and the cost of the mile was estimated at from \$8,000,000 to \$10,000,000 exclusive of the real estate required for the location of proper station facilities. Here the alternative was presented of encroaching upon the foundations of existing buildings or of building the two tracks on different levels with a double deck station at Fulton Street and a double island station at Broad and Wall streets.

At the end of 1920 the City of New York and the two operating companies had an investment of approximately \$435,000,000 in the construction and equipment of the rapid transit lines included in the dual system. Of this amount the city had invested \$215,000,000 for construction, real estate, and interest charges. This outlay was exclusive of \$57,000,000 invested by the city in the original subway.

As a result of considerable controversy with the street railways on Staten Island leading to their shut down earlier in the year the City of New York began on Dec. 2, 1920, municipal operation of 28 cars on that portion of the electric street railways of Richmond Borough known as

the Midland lines. The company owning the lines shut them down in January, 1920, because it could not get an increase of fares above five cents. The city intended to charge the former fare of five cents a ride.

CHICAGO. One of the projects proposed by the Chicago traction commission was an 18-mile subway system to begin in the business district and extend west under Madison Street to Ashland Avenue, where the lines would diverge to the northwest and southwest sections, with loop terminals at Lawrence Avenue and 63d Street respectively. Plans for this subway had been prepared by G. W. Jackson, engineer for the commission.

BOSTON. Problems of fare and operation continued during 1920. In the second report of the public trustees of the Boston Elevated Railroad it was stated there was no prospect for any immediate reduction from 10 cents as the basic flat fare. For the 12 months ended Dec. 1, 1920, the cost of service exceeded receipts by \$595,155, while during the preceding 12 months ended Nov. 30, 1919, the cost of service had exceeded receipts by \$2,585,137.

"The actual cost of operation from July 1, 1920, to Dec. 1, 1920, covering the first five months of the third year of operation by the trustees exceeded receipts by \$579,012," stated the report. "It is known, however, that the results of operation in December will show a substantial profit which, taken with the numerous offsetting credits to be made by adjustment in closing the books for the year, will very materially reduce previous losses." A total of 335,526,561 passengers was carried in 1920, as compared with 324,758,685 in 1919.

PHILADELPHIA. The engineers of the Philadelphia Department of Transit during the year were making specific application of experiences derived from the construction of the Frankford elevated line and the earlier Market Street line in the design of the Woodland Avenue elevated railway of the Darby line. In this extension a number of changes from previous practices were made. On account of the heavy cost of placing the entrances inside the block area as was done with the earlier Frankford line it was decided to place the station entrances of the Woodland Avenue line on the sidewalks, which on that street were 18 feet wide, and it was intended to build mezzanine floor stations having fare-collector booths and other public facilities on a floor intermediate between the street and the track floor. This type was not only low in first cost and economical in operation, but one fare collector could serve traffic in both directions during slack hours.

As the wider sidewalks of Woodland Avenue made side columns unobjectionable, it was decided to use the ordinary and more desirable bent construction with transverse main girders carried by columns at the curb line instead of single column bent. Furthermore ballasted solid-slab deck construction was to be used in general on the Woodland Avenue line "to give a high grade of street protection against dirt and noise, with economy of expenditure." In front of station platforms, and at one or two other points, the track was to be of subway type, with rails carried on short wood blocks embedded in concrete; to give economy in maintenance. The concrete deck in either form of construction was to consist of small arches carried on transverse steel

beams, with concrete curb along either edge to retain the ballast.

DETROIT. The public approval of a \$15,000,000 bond issue on April 5, 1920, for a Detroit municipal street railway system, was followed by the calling for bids on about 20 miles of street railway tracks, including excavating, concrete foundation, ties, rails, and all track equipment.

During the year work was begun on the Charlevoix-Buchanan cross-town line. The new lines were intended to supply at least a part of the much needed east and west crosstown service, and to relieve traffic in the congested factory districts as well as overcome the necessity for passengers going down town to the City Hall to transfer to other parts of the city. The conditions of the contracts provided for the work and materials to be let under three classes, (1) foundation work which comprises excavating, concrete foundation, tile draining and crushed stone backfilling; (2) oak ties; and (3) steel work, including all the required steel from rails to spikes. T-rails weighing 91 pounds per yard were specified. The main quantities involved were 95,080 cubic yards of excavation, earth or other material; 115,230 square yards of 8½-inch concrete foundation; 6665 cubic yards of ½-inch crushed stone backfill; 55,000 oak ties; and 4400 tons of steel rails.

This great Detroit project brought out the important fact that the State of Michigan apparently had no legislation contemplating public ownership of such a utility as the city proposed to construct, and the Michigan Public Utilities Commission requested from the Attorney General an opinion regarding its powers with regard to the project. There were in controversy the subject of various safety devices and other matters and it was the general opinion that the law did not provide the commission with power to direct a municipality constructing its own lines to pay the charges that might otherwise be assessed against a private company. See CITY PLANNING.

RATTIGAN, A. B. British jurist, died, January 11. He was born Oct. 11, 1864; educated at Oxford and was called to the bar in 1888. He was for a long time in judicial service in India and after 1909 was judge of the Chief Court in the Punjab. He wrote *Law and Divorce in India*, and edited the *Digest of Customary Law of the Punjab*.

RAWNSLEY, CANON (HARDWICKE DRUMMOND RAWNSLEY). British author, died in Westmoreland, England, May 28. He was born in 1851 and educated at Oxford, where he distinguished himself in athletics. He took orders in 1875 and became the Vicar of Wray three years later. He was a leader in the movement for the preservation of places of historical interest and natural beauty. As to his literary work, it included numerous and varied publications among which may be mentioned: *Sunset at the English Lakes*; *Literary Associations with the English Lakes*; *Edward Thring*; *Ballads of Brave Deeds*; *Memories of the Tennysons*; *Ruskin and the English Lakes*.

READING, ENGLAND. See SEWERAGE AND SEWAGE PURIFICATION.

RECLAMATION. General readjustment of industrial and financial conditions has been so nearly world-wide that little land reclamation was undertaken in 1920. High prices of labor and supplies operated to prevent such work in the earlier part of the year, and later falling

prices of agricultural products discouraged attempts to develop more farm land.

IRRIGATION IN UNITED STATES. There has been a very limited amount of new irrigation construction in the United States during 1920. No large new projects have been begun in any State, although several very large ones have been proposed.

The United States Reclamation Service reports the total receipts from the sale of public lands from the passage of the act (1902) to June 30, 1920, as \$100,078,475.68, and from the sale of town lots as \$493,329.63. To this has been added a special appropriation of \$1,000,000 for the Rio Grande project and a loan of \$20,000,000, and \$1,162,005.81 from the act providing for increased compensation to civil employees, making a total in the Reclamation fund from original sources of \$123,178,779.77. Collections creditable to the Reclamation fund have amounted to \$32,864,058.01, and to the Rio Grande project \$91.78, making the grand total of funds \$156,042,929.56. The gross expenditures for construction to June 30, 1920, were \$133,832,460.69, and the total revenues during construction have been \$9,008,747.51, leaving a net cost of construction of \$124,823,722.18.

The total cost of operation and maintenance to June 30, 1920, was \$9,565,595.63, and of this \$230,187.94 was charged over to construction. The total revenues credited to operation and maintenance to June 30, were \$7,668,306.25, leaving a deficit on operation and maintenance of \$1,667,101.44. The total acreage in projects is 3,300,000 acres, the acreage to which the Service was prepared to supply water in 1920 was 1,634,000, and the acreage irrigated in 1920 was 1,187,638. The receipts from the sale of public lands and from repayments to the Reclamation fund have not been sufficient to permit of the undertaking of new projects, all funds being used in the completion of existing projects.

Congress has provided by law two new sources of revenue, but funds are not yet available from either source. The Act of Feb. 25, 1920, known as the "oil leasing act," provides that 52½ per cent of the receipts from bonuses, royalties, and rentals under the act shall be credited to the Reclamation fund; and the Act of June 10, 1920, creating the Federal Power Commission, provides that 50 per cent of charges arising from licenses under the act shall be credited to the Reclamation fund. The first of these acts is retroactive to some extent and will immediately produce revenue, but the power act will produce revenue only after power is developed under Federal licenses. It is expected that these additions to the reclamation fund will make it possible to undertake new projects in the near future.

Both the Democratic and Republican parties declared in their platforms of 1920 for the continuation and expansion of the reclamation work of the Federal government. The Democratic platform declared for ample appropriations for continuation and expansion along the same general lines followed in the past "with the government ultimately reimbursed for the entire outlay." Heretofore there have been no direct appropriations for reclamation work, and this declaration seems to favor a change in this regard. The Republican platform declared for "a policy to reclaim lands and the establishment of a fixed national policy of development of natural resources in relation to reclamation through the

now designated government agencies." Since both of the great political parties are favorable to this work it is probable that Congress will provide funds for the enlargement of the governmental reclamation work.

There are pending in Congress several bills providing for the reclamation of land to be allotted to veterans of the World War, under plans which contemplate the furnishing of employment to veterans in the preparation of the land for settlement, and the sale of the land to the veterans on long time and easy terms, with loans for improvements and stock. The bills propose direct appropriations to provide funds for this work, to be repaid by the sale of the lands at prices based on the cost of reclamation.

In none of the arid States did the legislatures meet in 1920. Consequently there was no new legislation on the subject of irrigation. In California a bond issue to provide funds for land settlement work was to have been submitted to popular vote at the regular election in November, 1920, but a defect in the law providing for this referendum prevented a vote.

In the United States there were no new undertakings on a large scale in 1920. Irrigation development consisted in a more complete utilization of existing projects.

A Federal census of irrigation was taken in 1920, but the results have not been published.

IRRIGATION IN FOREIGN COUNTRIES. In Canada the Dominion and provincial governments have been making investigations of possible irrigation projects, and one large project has been organized—the Lethbridge Northern project. A proposal for the issue of \$5,400,000 worth of 30-year 7 per cent bonds has been approved. The project includes more than 100,000 acres of land. The project is organized under the Alberta irrigation district law, which provides that for the first seven years only interest shall be paid, the payments on the principal beginning in the eighth year.

With the improvement in conditions in Mexico proposals for land reclamation are being revived. The state of Sonora is investigating the feasibility of state construction of a project to cost about \$5,000,000. It is proposed that the National government provide for 60 per cent of the cost, by the sale of bonds. Purchasers of bonds are to be eligible to purchase lands and water rights. It is proposed also that the owners of private lands turn over to the state one-half their holdings, in order that these may be sold to meet a part of the cost. In Lower California there has been some expansion under the works supplying water also to the Imperial Valley, in California.

On the island of Jamaica, it is proposed to water the Liguanea Plains, near the city of Kingston. These plains are so dry that practically nothing is grown on them, while nearby are springs which are producing large swamps. It is proposed to use the water from these springs for irrigation and thus reclaim both the swamps and the dry plains.

The National Government of Brazil is undertaking a large irrigation project in the north-eastern part of that country. Appropriations for this work have been made, and an American engineer has been employed to take charge of the work.

In the coast country of Peru irrigation is necessary and many internal combustion engines are being installed for pumping. It is estimated

that in this section gravity irrigation from streams costs \$75 to \$80 per acre, and that pumping costs about as much more as the cost of the pumping machinery, which averages about \$25 per acre. Sugar cane is the principal crop grown on the irrigated land.

In Bolivia the Province of Cochabamba is investigating the possibilities of extending irrigation. This province has a dry winter—June, July, and August—but not more than 10 or 12 per cent of the land is irrigated. It is proposed to increase this area considerably.

Plans for the extension of irrigation in Egypt and the Sudan, by the regulation of the Blue Nile and the White Nile, have been in preparation for some years, but the work has been delayed by the war and by controversies between the engineers interested in the work. It was claimed by the engineers in charge of the investigation that the proposed use of the water in the Sudan would not affect the supply for Egypt; while engineers interested in Egypt contended that Egypt had first claims on the water and that the proposed use would decrease the supply. There were also charges of bad faith and garbling of records. This controversy led to the appointment of an international commission to investigate both the merits of the controversy and the practicability of the proposed plans. This commission decided that there had been no perversion of the records, but that the Egyptian engineers were correct in their contention that the proposed use in the Sudan would decrease the water supply for Egypt, and that Egypt should be supplied first. The plans are being revised in accordance with the report of the commission, and it seems likely that the improvement of the Blue Nile and the White Nile will begin soon and will result in the enlargement of the area subject to perennial irrigation in Egypt, and also provide water for a large area in the Sudan.

In Asia Minor both the Turks and the English undertook large irrigation enterprises in 1915 and have been doing more or less work on them since that time. The Konia district in Mesopotamia is the most important of the English projects. In this district in 1920 there were about 135,000 acres under ditch with 98,000 acres under actual cultivation. Land holdings are limited to 135 acres. Peasants can obtain land by working an assigned tract for 15 years, or can obtain title sooner by making cash payments. Wheat, barley, and hardy vegetables are the principal crops grown. The climate is too cold for rice or cotton.

In India plans have been prepared for the building of three new canals from the river Indus and have been submitted to the Government of India for approval. This scheme provides for a barrage about 2 miles below the gorge of the Indus, at Sukkur, and a series of perennial canals on both sides of the Indus to irrigate approximately 5,000,000 acres. The barrage will be about 5000 feet long, and will raise the water high enough to provide a perennial supply to the canals to be built. These high-level canals will render obsolete several existing canals, and will supply water to the land by gravity flow, doing away with the lift irrigation now generally practiced. The present annual cultivation on the left bank of the Indus amounts to 657,000 acres, whereas, it is anticipated that when irrigation has fully developed under the new scheme, the cultivated area will amount to more than 2,000,000 acres, all having a reliable water supply. A system of

canals on the right bank of the Indus will supersede the whole of the existing flood-water canals in that section. At present 893,000 acres are irrigated annually but it is anticipated that this will ultimately be increased to 1,725,000 acres. In addition to increasing the acreage, this assured water supply should greatly increase the crops grown per acre.

There will be also a large canal taking water from the Indus to the Eastern Nara River, to supplement the supply for the canals taking water from that stream. The area irrigated at present from the Eastern Nara is 484,000 acres. When the proposed works are completed it will be possible to irrigate annually 1,530,000 acres. The total area at present irrigated in the territory under discussion is slightly over 2,000,000 acres. The area that it is estimated can be irrigated under the new scheme exceeds 5,000,000 acres—an increase of over 3,000,000 acres. The estimates of cost place this at about \$52,000,000, or about \$10 per acre.

The Government of Ceylon is making investigations looking to increasing very largely the cultivation of rice in that island.

Construction on the interstate project on the Murray River in Australia has begun and is being pushed as rapidly as possible. The plans for this project include a reservoir with a capacity of 1,000,000 acre-feet, and canals to water 1,000,000 acres. It will help, also, to control floods and maintain navigation in the Murray. The estimated cost of this project is \$22,000,000, of which \$5,000,000 is to be paid by the Commonwealth of Australia, while the balance is divided equally among Victoria, New South Wales, and South Australia. These three states are undertaking experimental work in irrigation to aid in the utilization of the water made available. It is expected that the construction of this project will aid in the soldier land-settlement movement.

DRAINAGE IN UNITED STATES. There was very little new drainage work undertaken in the United States in 1920. In the arid region the necessity for draining irrigated lands is becoming more urgent from year to year, and drains are being installed on most of the large irrigating projects. On the Roosevelt project, in the Salt River Valley, Ariz., a very interesting experiment has been made in the past two years. In sections where the ground water has come too near the surface wells have been put down into the gravel which underlies the valley and water is pumped into the irrigating laterals which cover the land. The well water is mingled with the river water, in order that its salts may be sufficiently diluted to prevent injury to crops. It has been found that the pumping has lowered the ground water and added to the supply of water for irrigation without injuring the land on which the water is used.

Few legislatures met in 1920, and no important drainage legislation was enacted. The proposed soldier-settlement legislation in Congress, previously mentioned, includes reclamation by drainage, as well as by irrigation.

DRAINAGE IN FOREIGN COUNTRIES. The drainage of the Zuyder Zee, decided upon some years ago, has begun, and this has raised some interesting economic questions. While this work will increase the area of agricultural land, it will destroy the occupation of a large number of people engaged in fishing and associated industries.

The number of people affected is estimated at about 500,000. A commission representing the national government is investigating the conditions with the object of proposing a plan for compensating the persons injured. It is proposed to pension those whose means of earning a livelihood are destroyed, but no definite sums have been proposed.

Since the close of the war there has been great activity in drainage in Italy, particularly in Lombardy, Piedmont, and Venetia. The provinces approved 562 drainage projects to be undertaken with public aid in 1920.

In the Nile delta there is great activity in drainage, and it is estimated that the area available for cotton growing there will be increased by more than 600,000 acres by this means.

It seems probable that the fall in the prices of agricultural products, in progress at the end of 1920, will have a deterring effect on land reclamation by either irrigation or drainage.

RED CROSS, AMERICAN. The American Red Cross, operating under a charter granted by Act of Congress Jan. 5, 1905, is officially designated: (1) To furnish volunteer aid to the sick and wounded of armies in times of war in accordance with the conventions of Geneva; (2) To act in matters of voluntary relief and in accord with the military and naval authorities as a medium of communication between the American people and their army and navy; (3) To continue and carry on a system of national and international relief in time of peace and to apply the same in mitigating the sufferings caused by pestilence, famine, fire, floods, and other great national calamities; and (4) To devise and carry on measures for preventing the same.

The fiscal year 1920 saw the American Red Cross devoting all its energies to two major undertakings, viz., complete fulfillment of its obligations to the veterans of America's participation in the World War and to their families; completion so far as possible of relief work among the war-exhausted peoples overseas.

SERVICE TO WORLD WAR VETERANS. When the year began there were approximately 1,000,000 men still in the service. There were also more than 3,000,000 ex-service men, many of whom were finding it difficult to readjust themselves to civilian life. There were 500,000 disabled men, some still in the army but many who had been discharged, who needed a great deal of skilled and friendly service to enable them to avail themselves of the substantial provisions made by the government for their support and rehabilitation.

To the men still in the army, the Red Cross continued to furnish recreation, assistance in straightening out domestic problems, including emergency loans, and various forms of comforts. Special Red Cross service was available for those in the military and naval and United States Public Health Service hospitals. In addition Red Cross Home Service Sections were looking after the families as well as serving the ex-service men who had returned to their homes. This chain of over 4000 Red Cross service stations operated with effectiveness in helping to solve the difficult problems which clustered around men suffering from mental afflictions, from tuberculosis and from other serious disabilities resulting from the war, as well as those caused by the general upheaval in family life caused by the war.

One of the interesting post war rehabilitation operations carried on entirely by the Red Cross

was the Red Cross Institute for the Blind, at Evergreen, Baltimore, Md., where nearly every service man blinded or partially blinded in the World War was treated and reeducated to become self-supporting in the workaday world.

The extent to which Red Cross Home Service had rendered service to men and their families was revealed in the annual report of the society, which showed that from the entrance of the United States into the World War to the end of the fiscal year of 1920 there were 7,000,000 instances in which this help was extended the man or his family at his home, involving an expenditure of over \$20,000,000.

FOREIGN RELIEF OPERATIONS. American Red Cross foreign relief operations were carried on during the fiscal year or some part of it in the following countries: France, Belgium, Poland, Rumania, Serbia, Montenegro, Albania, Greece, Bosnia-Herzegovina, Latvia, Esthonia, Lithuania, Finland, Austria, Hungary, South Russia, Turkey (for Russian refugees), Italy Czecho-Slovakia, and Siberia. By the end of the year the contraction of Red Cross foreign operations resulted in its overseas work being confined to Poland, Serbia, Montenegro, Albania, West Russia, Vienna, and Budapest, Constantinople, and South Russia.

In closing its relief work in France and Belgium the Red Cross furnished supplies to 3865 villages and directly benefited 3,030,000 persons by gifts or sales of necessities of life at cost price. Hundreds of coöperative stores established in this area during the year by the Red Cross were operated by the French and Belgian authorities long after the Red Cross withdrew.

In Poland, which during the year became the most extensive operation by the American Red Cross in Europe, it established 258 hospitals with a capacity of 26,123 beds. It aided 30 established dispensaries and helped establish 82 others. It furnished supplies to 22 sanitary and bath trains in the fight against typhus. It established and maintained three medical training institutions with a capacity of 1075 beds. It aided 207 orphanages, where 16,470 individuals were cared for. It distributed clothing to over 80,000 children, gave general relief to 2316 towns with a population of more than 700,000. All of this was in the northern part of the new republic, in an area still under the lash of war. In Southern Poland also, however, more than 1000 hospitals and other charitable institutions were aided.

Rumania was among the first of the Balkan countries to return to semi-normal conditions, the American Red Cross assisting in this consummation during the year by operating 6 hospitals, furnishing supplies to 295 other hospitals, treating over 6000 patients at dispensaries, furnishing relief supplies to 219 schools and 232 orphanages, conducting 322 soup kitchens where nearly 100,000 were fed, dry food distribution to over 170,000, and distributing miscellaneous relief articles to half a million people.

In Serbia the work of the American Red Cross during the year was comparatively light, consisting chiefly of education along sanitary lines. In Albania the American Red Cross established hospitals at 4 central points, in addition to creating 5 medical dispensaries, 4 dental dispensaries, and numerous infant welfare and milk stations. More than 25,000 persons were aided by the distribution of 96,000 garments transported to the hill tribes by pack train. Child-feeding was the

principal task in Montenegro, 30,000 orphans being cared for by institutions which drew their supplies largely from the American Red Cross. The greatest need in Greece was for warm clothing, and the Red Cross distributed 120,000 garments and blankets. In Bosnia-Herzegovina child-feeding was the principal activity.

In Western Russia and the Baltic states (Latvia, Esthonia, Lithuania, and Finland), operations by the American Red Cross relieved the distress of nearly 300,000 civilian poor, while over 21,000 refugees and over 2500 war prisoners were assisted. Red Cross physicians treated nearly 20,000 typhus victims, 19 disinfecting stations being established. Among the institutions aided were 62 dispensaries, 217 hospitals, and 110 orphanages. Ten food kitchens and 45 dry food distribution centres also were operated.

South Russian operations of the American Red Cross, extending into the Crimea and among the refugees crowding the vicinity of Constantinople consisted largely of caring for the thousands of refugees fleeing from the fighting zones and in combating typhus and cholera.

During the year the need of direct relief in Italy diminished to a point where it was possible for the American Red Cross to confine its operations to Home Service for American soldiers and their families, and the founding of welfare institutions for children.

Desperate food and medical conditions were found in Vienna and Budapest. In the former city the Red Cross unit aided 98 hospitals and distributed more than 76,000 articles of medicine and clothing, 55,000 pounds of milk, meat, and cocoa and helped care for 40,000 under-nourished children. Similar work was carried on in Budapest.

In Czecho-Slovakia Red Cross relief operations closed with the exception of assistance to the native agencies in building up disease-fighting institutions.

The far-flung Red Cross operations in Siberia brought to a close, except for the distribution of large stores of supplies still on hand, with the withdrawal of the American forces during the year. When the work stopped the cargoes of 30 relief ships from America had been distributed among the needy, not to speak of portions of the cargoes of 92 other ships from other countries. The relief trains covered 332,000 miles. Eighteen hospitals were operated in addition to the work of the typhus trains, while an average of 7 articles of clothing was given to each of 387,500 women and 775,000 children. The American troops also were assisted in numerous ways. Over 500 American relief workers, in addition to hundreds of natives were needed to carry on the work.

At the end of the fiscal year there were 3575 active Red Cross chapters in the United States.

Total expenditures by the American Red Cross during the fiscal year, exclusive of disbursements by chapters, were \$69,400,000 divided as follows:

Relief in foreign countries	\$51,000,000
Military relief in the United States	8,600,000
Civilian relief in the United States	2,800,000
Other relief in the United States (including public health and nursing services)	4,400,000
Service to chapters in developing peace-time programme	300,000
Management	2,300,000
Total	\$69,400,000

For home work see CHARITIES.

REED, JOHN. American magazine writer and Socialist, died of typhus in Moscow, Russia, October 17. His funeral was celebrated with public honors. He was born at Portland, Ore., Oct. 22, 1887, and graduated at Harvard in 1910. During the next three years he served on the staff of New York magazines and in 1913 was correspondent with Villa's army in Mexico for four months, writing for the *Metropolitan Magazine* and the *New York World*. He was a war correspondent in Europe in 1914 and 1915. He was also an editor and a member of the Board of Directors of *The Masses*. His experience in Mexico resulted in the publication of *Insurgent Mexico*. He also wrote various short stories, poems, and plays and his play entitled *Moon-Down* was produced by the Washington Square Players. He was associated with the more radical Socialist groups and after the Russian revolution, having determined to join the Bolsheviks, went to Petrograd and was well received by the Bolshevik leaders. His activities had brought him into conflict with American authorities and he had been arrested several times. In the course of his adventurous life he was reported killed or captured in various European cities on several occasions. Besides the books above mentioned, he wrote *The War in Eastern Europe* (1916), *Tamburlaine* and other poems; *Red Russia*; *The Days in Bohemia* (1912); *Sangar* (1912); and the *Pageant of the Paterson Strike*.

REED COLLEGE. A co-educational institution of the higher learning at Portland, Ore., founded in 1911. The enrollment for the fall was 119 men and 137 women. The faculty had 30 members. The endowment of the institution is variously estimated for much of the property is real estate which bears interest. According to the tax assessed in 1918, the holdings of the college exclusive of the campus and college buildings were valued at about \$1,500,000. The library contained 16,000 volumes. New faculty houses have been built by the college accommodating six families. The Anna Mann Cottage was built for the women of the college from the funds provided in the will of Mrs. Anna Mann. President, having resigned (William T. Foster), Mr. A. A. Knowlton was acting chairman of the Administration Committee.

REEDY, WILLIAM MARION. Editor, died, July 26. He was born at St. Louis, Mo., Dec. 11, 1862, and received an academic education. He afterwards studied accounting at the St. Louis University. In 1880 he began work on St. Louis newspapers and was on the staff of several down to 1893, after which he became the editor, and in 1896, the proprietor of the well-known magazine, *Reedy's Mirror*. In the field of literary journalism, he was widely known and much admired for his generous appreciation of new writers and his discernment of literary merit. His acquaintance among the writers of the country was extraordinary and many who have since risen to high reputation, made their first appearance in his magazine. He was himself the possessor of a vigorous style and wrote papers of great interest on a wide range of subjects.

REFORMED EPISCOPAL CHURCH. This denomination was formed from a number of members of the Protestant Episcopal Church led by Bishop David Cummins of Kentucky who separated from the mother church because they believed it to be too ritualistic. The denomina-

tion was organized in New York City in 1873. Its doctrines are very similar to those of the Protestant Episcopal Church and also those of the Church of England. It is in close relation with the Liturgical Free Churches of England. Triennial Conventions are held, the next one being scheduled for May, 1921. To the last convention (1918) there were reported 11,217 communicants, showing a slight increase over the figures for 1916, and 9496 Sunday School members. In 1916 there were 75 churches. The Board of Home Missions aids needy churches and negroes in the South. Seventeen missionaries carry on this work. Eight foreign missionary stations are maintained in India, with 6 missionaries and 20 native helpers. The church also conducts 17 primary schools, 2 hospitals, where 45,000 persons are treated annually, and an orphanage with about 50 inmates. A theological seminary is maintained in Philadelphia, where is also located the church publishing house. The church boasts the oldest church periodical in the United States, *The Episcopal Recorder*. The Presiding Bishop is the Rt. Rev. Samuel Fallows, Chicago, Ill., and the bishop of the Eastern synod is the Rt. Rev. Robert L. Rudolph, Philadelphia, Pa.

REFORMED PRESBYTERIAN CHURCHES. In 1906 seven denominational churches combined to form the Council of the Reformed Churches in America holding the Presbyterian System. The churches are: The Reformed Church in America, the Presbyterian Church in the United States of America, the Presbyterian Church in the United States, the Reformed Church in the United States, the United Presbyterian Church, the Associate Reformed Presbyterian Synod, and the Cumberland Presbyterian Church, Colored. The Council is for the prosecution of work that can be done better unitedly than separately. A meeting was held in Philadelphia during 1920.

Statistics for 1920 for reformed Presbyterian churches are as follows: The Reformed (Dutch) Church in America had 135,935 communicants; the Reformed Church in the United States, 329,937; Christian Reformed Church in North America, 41,795; Reformed Presbyterian Church, Synod, 8520; the Associate Reformed Presbyterian Synod, 16,564; Reformed Presbyterian Church, General Synod, 2400. See also **PRESBYTERIAN CHURCH, CUMBERLAND PRESBYTERIAN CHURCH, and RELIGIOUS DENOMINATIONS.**

REHABILITATION OF DISABLED SOLDIERS. See **EDUCATION IN THE UNITED STATES.**

REINDEER. See **ALASKA.**

REJANE, GABRIELLE (CHARLOTTE REJU). Celebrated French actress, died in Paris, June 14. She was born in Paris, June 6, 1857, the daughter of an actor, and in 1874 won the second prize for comedy at the Conservatory. She appeared in vaudeville in the following year and soon won success by her creation or original interpretation of many rôles. She went to the Variétés Theatre in 1882 and later in the same year to the Ambigu, where she gave proof of great powers in her rendering of Madame Cezambre, in Richépin's *La Glu*. Later she married the manager of the Odéon, and appeared with great success in many rôles at that theatre, especially the rôle of Madame Sans-Gene in the play of that name by Sardou and Moreau. She appeared in London in

1894 and later appeared several times in the United States where her Madame Sans-Gene was highly appreciated. During the Great War she did much for the cause of the Allies and appeared in several patriotic plays.

RELATIVITY. See **PHYSICS.**

RELIEF FOR WAR VICTIMS. During the winter of 1919-20 the larger relief organizations had provided for over 3,200,000 children, and 5,000,000 adults in Europe. The amount provided by America in charity approximated \$100,000,000. As the result of gradual recuperation and this relief work, as well as the Congressional appropriation of flour the subsistence condition in central and eastern Europe was distinctly better than that of the previous year. But the need of charity in food relief particularly for the undernourished children of the poor, continued over the winter of 1920-21. With the harvests of 1919 and 1920, Belgium, France, Serbia, and Rumania were enabled to care for their own destitute childhood. Finland, the Baltic states, and Czecho-Slovakia had made great improvement and reduced the number of dependents upon relief organizations, but it was evident that the recuperation of Poland, Finland, Czecho-Slovakia, and Austria had not proceeded far enough to enable them to find food through private credits, and that chaos through starvation threatened the stability of their governments. Toward the end of 1920 there were still 11,000,000 European destitute war orphans. In the Baltic provinces there were 150,000 orphans; in Poland, 500,000; in Austria-Hungary and Czecho-Slovakia, 1,000,000; in Roumania, 200,000; in Jugo-Slavia, 600,000; in Soviet Russia three to four million orphans. The typhus epidemic in Poland, which had ravaged that country for three years had increased in intensity primarily because of the large influx of refugees and prisoners of war from Russia and the thousands of cases imported from Ukraina and other eastern territories. 360,000 cases were estimated for 1920 with a mortality of from 45 to 60 per cent. The whole of Armenia was in need of assistance.

The most important relief work this year has been done by the American Relief Administration, the Red Cross (q.v.), the Near East Relief, and the American Friends Service Committee. American Relief Administration. When it became evident to Mr. Herbert Hoover that the urban districts in Finland, the Baltic states, Poland, Austria, Serbia, and Czecho-Slovakia would require exterior assistance over the winter of 1920 to prevent actual starvation, he volunteered to continue the American Relief Commission as a private charity (see preceding **YEAR BOOK**), and established the European Children's Fund for the feeding of 2,500,000 children. The organization was based upon a series of central and sub-committees of principal residents in all those areas. It established over 3000 kitchens for the feeding of the children, and undertook the supply of foodstuffs to orphan asylums and children's homes generally. It was stipulated that the governments and private charity in these different countries should pay not only the entire cost of maintaining the distribution systems in the countries themselves, but also that they should contribute such native food supplies as were available, the American intervention, therefore, taking the form of the initial organization instruction as to method, and the continuous import of such foodstuffs as were not locally avail-

able, such as milk, fats, etc., and an inspection service for the purpose of maintaining the efficiency of the system. The European Children's Fund was supported largely by racial groups in the United States, and by the Jewish Joint Distribution Committee.

The number of children under charitable assistance in the spring of 1920 was approximately as follows:

Poland	1,400,000
Austria	300,000
Czecho-Slovakia	500,000
Serbia	200,000
Hungary	130,000
Finland	60,000
Lithuania	40,000
Estonia	30,000
Latvia	30,000
North Russia	20,000
Russian Armenia	200,000
Total	2,910,000
Germany (coöperating with Friends' Service Committee)	600,000
Total	3,510,000

Coördination has been arranged in support of the feeding of children of German poor through the American Friends' Service Committee and various other activities. A method has been devised for the remittance of orders for food on warehouses established in Europe, to take the

on credit by the Grain Corporation. Transportation of these supplies was supported by the Red Cross, the Commonwealth Fund, and the British government. The total expenditure of the American Relief Administration during the year ending Aug. 1, 1920, has been \$22,983,782. Certain friends of the American Relief Administration made two gifts aggregating \$500,000 for the purchase of food drafts and clothing for the educated professional people of Austria, Hungary, Czecho-Slovakia, and Poland.

The European Relief Council, composed of the American Relief Administration, the American Red Cross, the American Friends' Service Committee, the Jewish Joint Distribution, the Federal Council of Churches of Christ in America, the Knights of Columbus, the Y. M. C. A., and the Y. W. C. A. was formed for the purpose of co-operation between the larger relief societies in the work over the winter of 1920-21, priority to be given in appeals to the support of the 4,000,000 undernourished children and students.

The Commission for Relief in Belgium had completed its work during the year 1919. When the war books were finally balanced it was found that during five and one-half years of operations the Commission had delivered 4,945,975 tons of food of which 1,077,506 tons had been supplied to Northern France. The support of the operations rose from the following sources:

	For Belgium	For France	Totals
Total Government subsidies	\$479,982,268	\$238,338,327	\$718,320,595
Commercial Exchange	6,330,220		6,330,220
World charity	43,938,929	5,111,900	49,050,829
Profits made on resales of imported food to self-supporting population	107,243,418	18,295,243	125,538,661
Total C. R. B. accountability	\$637,499,835	\$261,745,470	\$899,240,365

place of monetary remittances to relatives abroad and by coöperation with the American Bankers Association is effecting a large measure of substantial relief.

On this operation a margin of profit is earned and given over to the support of the Children's Fund. In this way \$605,194.61 was added to the fund in proportion to the number of food drafts sold for each country as follows: Germany, \$144,762.55; Austria, \$289,222.50; Hungary, \$45,813.23; Czecho-Slovakia, \$44,481.81; Poland, \$80,914.52.

Flour on credit is now being supplied by the Grain Corporation, and its transportation has been furnished partially by the British and neutral governments under transport arrangements coöperated in by American Relief Administration officials in Europe.

A large active campaign in combat of typhus has been organized in Poland under the Relief Administration, comprised of volunteers from the American Army Medical Corps, and with supplies furnished through the American Relief Administration by various Allied armies. Altogether, with the sales of flour on credit by the Grain Corporation and the continuation of these various charitable activities, which are themselves furnishing over \$7,000,000 per month in relief, the countries under duress should weather through until next harvest, when the last echo of famine should have died away. The supervision of relief measures in Russian Armenia has been continued under the American Relief Administration. The relief supplies were furnished by the Near East Relief and from sales of flour

These accounts do not include the handling of internal production which was controlled through a decentralized system of local committees under the direction of the Commission. Their accounts involving some \$300,000,000 were simply audited by the Commission.

C. R. B. EDUCATIONAL FOUNDATION. When it came to the disposal of the funds remaining, the Belgian government requested Mr. Hoover to establish some permanent memorial to the relief work of America in feeding 7,500,000 Belgian people during the war by making use of the funds remaining with the Commission for Relief in Belgium upon the completion of its services. These balances accumulated after the Armistice largely from profits on the sale of foodstuffs to those who could pay, the rapid diminution of the numbers of destitute in Belgium making the balances unexpectedly large. The total balances, so far available, are approximately 210,000,000 francs (\$42,000,000 par exchange). The C. R. B. Educational Foundation, Inc., was, therefore, created in America, and the Fondation Universitaire, chartered by Act of Parliament in Belgium. For these separate foundations, perpetual associations, for the general purpose of advancement of learning in Belgium and the systematic exchange of intellectual ideas between Belgium and America, a total sum of about 115,000,000 francs (\$23,000,000 par value) has so far been turned over. The Commission for Relief in Belgium has made payments amounting to 95,000,000 francs for the rehabilitation of Belgian universities, as follows: University of Brussels, 20,000,000 francs; University of Ghent, 20,000,000 francs;

University of Liege, 20,000,000 francs; University of Louvain, 20,000,000 francs; School of Mines at Mons, 5,000,000 francs; Colonial School at Antwerp, 10,000,000 francs.

The American Foundation has established 48 exchange graduate fellowships between Belgium and American universities, 24 Americans having been chosen each year to study in Belgium, and 24 Belgian fellows to study in America. It has also established exchange professorships between Belgian and American universities, has made grants for special investigations, and has allocated the major portion of its annual income to the Fondation Universitaire, which has also received 25,000,000 francs directly from the liquidation of the Commission for Relief in Belgium. In its work of providing vocational educational opportunities in Belgium to students who are not otherwise able to secure these opportunities it is expected that about 4000 boys and girls will benefit each year.

JEWISH WAR RELIEF WORK. The year 1920 did not bring any improvement in the terrible condition of the Jewish war sufferers in eastern Europe, according to reports received by Felix M. Warburg, Chairman of the Joint Distribution Committee of the American Funds for Jewish War Sufferers. The situation is particularly distressing in the Ukraine and in the territory east of the Bug in Poland.

More than 60 American representatives of the Joint Distribution Committee are now doing relief work in the various countries where the Committee is active. The disbursements for the year amounted to \$10,633,580.20. Large shipments of food, clothing, and medicaments were made to Poland, Russia, Rumania, Czechoslovakia, Austria, Hungary, Lithuania, and the Baltic states. Aid was likewise given to Palestine, while the Committee cooperated with other agencies so that many war prisoners in Siberia were repatriated. Besides this the Committee appropriated \$5,000,000 for reconstructive measures, such as the organization of credit co-operatives, the restoration of destroyed homes and shops, and other measures that will help the ruined merchants and artisans to their feet. From Jan. 1 until Sept. 30, 1920, the Committee's Transmission Department forwarded \$5,223,000 in individual remittances from American Jews to relatives located in places which it was difficult for private banks to reach. Finally, the Committee appropriated \$2,000,000 for medical and sanitary relief work, which will be carried on by a special unit of 17 under the direction of Dr. Harry Plotz.

The Joint Distribution Committee cooperated with the Red Cross, the American Relief Administration, and other American relief organizations active in the war-stricken countries. It contributed the sum of \$725,000 to the American Relief Administration, to be used chiefly for non-sectarian relief work among children. It also gave \$100,000 for the tuberculous children of Germany.

The funds disbursed by the Joint Distribution Committee included money collected by the American Jewish Relief Committee, of which Lewis Marshall was president; the Central Jewish Relief Committee, and the People's Jewish Relief Committee. From its organization in October, 1914, until Dec. 27, 1920, the Joint Distribution Committee disbursed \$35,919,191.85. The offices of the Committee are located at 20

Exchange Place, New York City. Mr. Albert Lucas is secretary.

NEAR EAST RELIEF. The Near East Relief is an organization incorporated by the Congress of the United States in August, 1919, "to provide relief and to assist in the repatriation, rehabilitation, and reestablishment of suffering and dependent peoples of the Near East and adjacent areas; to provide for the care of orphans and widows and to promote the social, economic, and industrial welfare of those who have been rendered destitute, or dependent directly or indirectly, by the vicissitudes of war, the cruelties of men, or other causes beyond their control." (Articles of Incorporation.)

The work of the Near East Relief has extended from Egypt to the Caucasus, from Constantinople to Mesopotamia and Persia, including within its field of operations, Syria and Palestine, Anatolia and Cilicia, the small Armenian Republic of the Caucasus, and some work in Georgia Azerbaijan as well. The crying need for relief in this great region, characterized by Herbert Hoover as the "most desperate in the world" arose not simply from war devastation and scarcity, but from the unique situation which had been brought about by the Turkish policy of exterminating its subject Christian peoples. The Armenian and Greek populations of Turkey had been torn from their homes and were deported to distant desolate regions. Thousands (especially the men) were massacred outright, leaving chiefly women and children as survivors.

From the North of Turkey some 500,000 Armenians effected escape to the Russian Caucasus, where lived a large number of their race. Eventually the small Armenian Republic was set up here, after the collapse of the Russian Empire. The horrors of unequalled warfare against Turkish aggression, famine, and congestion reduced the whole population, native and refugee alike, to the verge of starvation. In Syria and Palestine blockade, famine, and epidemic, the result of Turkey's war policy, almost halved the population and left the country crushed and prostrated. In Egypt, hundreds of refugees had found an asylum under British protection. In North Persia the Assyrian people had been attacked by Turks and Kurds, and finally the whole nation had taken flight to the south. The years 1917 and 1918 found all of Persia in a state of famine, the result of isolation, the ravages of contending armies, and the sudden stagnation of trade and industry.

Before the armistice the Near East Relief had carried on a piece of work in these regions against the greatest odds. The armistice brought the opportunity to enlarge the work, and during the year 500 American workers, food supplies, and hospital units were sent over.

In point of financial operations, the Near East Relief has received and administered in cash more than \$41,000,000 since its organization. If the value of the flour contributed by the United States Grain Corporation and administered through Near East Relief is included, the total relief operations of the organization are considerably in excess of \$50,000,000.

In the Near East the region is divided into four big regions—Caucasus Area, Constantinople, Anatolia Area, Syria-Allepo Area, Persia-Mesopotamia Area. The official statistics of the year show the following accomplishments:

	<i>Caucasus</i>	<i>Beirut-Aleppo</i>	<i>Constantinople Anatolia</i>	<i>Totals</i>
American N. E. R. personnel	538
Hospitals	43	11	9	63
Beds	5,681	346	525	6,552
Clinics	85	21	22	128
Rescue homes	5	6	11
Orphanages	81	27	121	229
Children:				
1. In orphanage	20,779	8,007	25,814	54,600
2. Partial support outside of orphanage ..	55,039	1,000	56,039
Food relief	561,970	Number in Anatolia-Aleppo areas vary monthly with changing political conditions; for example, 10,000 rehabilitated Armenians became refugees again after the attack on Marash.		
Supplies	1,300,000 lbs. of old clothing and shoes shipped from America in 1920. This does not include garments made in Near East Industrial Shops.			
Personal service	187 persons in the Near East were put in touch with their relatives in America and transportation was provided for 462 persons from Armenia to America by their relatives through Near East Relief, during a single recent month.			
				\$720,000 1,300,000 lbs.

The work represents the literal saving from death of hundreds of thousands of people, who would have otherwise undoubtedly perished from starvation and disease. It has given the first chance for life and health and education for little children who have known nothing but cruelty, cold, and hunger during five years of homeless wandering. Homes have been rebuilt, fields cultivated again, and artisans started in their work. The changing political situation constantly brings new problems. The work of rehabilitation has been retarded, the siege of Adana has necessitated the running of big soup kitchens now for many months, serving as many as 60,000 persons. The very presence of the Near East Relief workers has been a protecting and stabilizing force in the chaos of renewed hostilities, which has engulfed Cilicia, the Caucasus, and nearly all of Anatolia. In Marash nearly 10,000 Armenians were killed in February of the present year. It was chiefly through the intervention of American relief workers that a substantial remnant were saved. To-day some more than 5000 of them are being cared for in the city of Marash alone, by the Near East Relief, until such time as they can, with safety, leave the city for their homes or for other fields of self-support.

The largest and most important part of the work of the Near East Relief is the orphan work, which must necessarily continue for some time in order that these children, who have been rescued from death, may be brought up healthy, well-trained citizens, who can take their part in reorganizing this shattered region of the world.

The headquarters of the organization in the United States is No. 1 Madison Avenue, New York, and Washington (Woodward Building).

OTHER FUNDS. An interesting work for the continued care of American soldiers disabled in the war was done by the Carry On Association, Inc., of 271 Madison Avenue, New York, Wendell Phillips, Chairman. This Association undertook to provide club homes for disabled men who were receiving vocational training from the Federal board and those whose allowances were not adequate to enable them to live comfortably without some such provision. Homes were opened in New York, Minneapolis, and Denver. Receipts of the National Association for the six month period ending March 31, 1920, amounted to \$94,190.71. While the number of organizations active in the Allied countries of western Europe gradually

decreased as France, Belgium, and Italy became more able to solve their own domestic problems, many continued their work without interruption. The American Committee for Devastated France, 16 East 39th Street, New York, which began its work in 1918 as the outgrowth of the civilian division of the American Fund for French Wounded, continued to work with the civilian population in certain devastated regions to which it was assigned by the French government. Since November, 1918, 17,562 inhabitants had been returned and established in their homes. 2500 children fed daily and 1000 children given special care under a child hygiene expert. Particular emphasis was placed on child health work. The work abroad was in charge of Mrs. A. M. Dike and Miss Anne Morgan. Receipts for the fiscal year ending March 31, 1920, totalled \$804,300.95. Another piece of work for children was carried on by the Argonne Association, 140 West 58th Street, New York, Dr. Haven Emerson, treasurer, organized early in 1919. Its aims were to care for French war orphans, to train them to earn their livelihood in a simple healthful manner, to reclaim children from city life, to provide agriculturists for France by the training of boys in agricultural work, to stimulate the use of modern methods in small farming and to administer a model system of child care. The first part of the work to be put in operation was the child placing centre at Dun-sur-Auron for the care of children from 4 to 14 years of age. For the four months ending June 30, 1920, the sum of \$20,599.24 was collected for the work of the Association. The American Free Milk and Relief for Italy, Vanderbilt Hotel, New York, Walter Meacham, treasurer, continued its interesting work of supplying dried milk especially for the use of Italian children up to the age of four years. A dispensary was opened in Rome for the distribution of milk, for general medical care and advice to children and their mothers. Receipts for the seven month period ending June 30, 1920, amounted to \$119,763.11. It was impossible during the year for relief agencies to begin any substantial work in Russia, although representatives of some American agencies succeeded in reaching interior cities and beginning work in a small way. The American Central Committee for Russian Relief was organized in November, 1919, with Montgomery Schuyler as secretary, and offices at the Buckingham Hotel.

New York. Its original plan was to send relief to those parts of Russia not under Bolshevik control. It was found more effective, however, to concentrate on relief work for refugees outside of Russia, who themselves presented a very serious problem. It was estimated that there were over a half million refugees, in the states bordering on Russia and at various other points. There were so many at Constantinople that the Committee decided to centre its work there for the present, although a group of tubercular Russians in Switzerland had also been given special care. Total receipts for the fiscal year ending Sept. 30, 1920, were \$145,420.99.

RELIGION. See LITERATURE, ENGLISH AND AMERICAN.

RELIGIOUS DENOMINATIONS. See articles on the respective denominations.

RENSELAER POLYTECHNIC INSTITUTE. A non-sectarian institution for technical training at Troy, N. Y., founded in 1824. There were 1050 students enrolled in the regular fall session of 1920. The faculty numbered 76. The productive funds of the institute amounted to \$1,950,000. The total assets for the year were about \$350,000. The library which is purely scientific contained about 13,500 bound volumes and there were 15,700 pamphlets. In November the addition to the chemical laboratory was completed, costing about \$175,000. As soon as building prices reach a reasonable condition a new dormitory is to be built for which the institution has \$112,000. President, Palmer C. Ricketts, LL.D.

RENTS. See HOUSING.

REORGANIZED CHURCH OF JESUS CHRIST OF LATTER DAY SAINTS. According to the decisions of the United States district courts of Ohio and Missouri, this is the legal and actual continuation of the church which was founded in 1830 at Fayette, N. Y., by Joseph Smith, and is identical in faith and practice with that church. Its organization was based on what Joseph Smith claimed to be a divine revelation, telling him that he would be instrumental in setting up a church strictly conforming to the New Testament pattern, and that the church organized by his command would be endowed with the ancient gifts and authority.

As an essential part of this restoration, Smith claimed that he received a set of golden plates which had been hidden for centuries in the Hill Cumorah in New York State, and that by the power of God he translated these plates and found them to be a history of the Indians and their forefathers from the time they came away from Jerusalem, about 11 centuries before Christ until about 400 A. D. This record was called the Book of Mormon after the name of one of its principal characters, and purports to be an additional witness for Christ.

With an initial organization of six members in 1830, the sect grew and in a short time went to Ohio where it built the city of Kirtland, and a beautiful temple which stands yet to-day. At Kirtland the organization of the church was completed to what they claim was the New Testament model, and an active proselyting campaign was begun. Within a few years, owing to a fierce opposition, the church went to Missouri, and thence to Illinois, where it built the flourishing city of Nauvoo, and drew a large number of converts. At Nauvoo, persecution still raged, and as its culmination, Joseph Smith and his brother, Hyram, were killed by a mob on June

27, 1844. Confusion followed and Brigham Young and others with him led a large group west, which body ultimately arrived in the Salt Lake Valley, set up the Mormon Church, and introduced polygamy. The majority of the Latter Day Saints refused to follow Young's leadership and settled quietly in small groups throughout Illinois, Iowa, and Wisconsin. By 1860, Joseph Smith, son of the prophet, had taken charge and the believers in the original faith gathered together, and effected a reorganization. Under his leadership they began a vigorous offensive against Utah Mormonism, and were particularly active in attacking the Utah doctrine of polygamy. They used the Book of Mormon to combat the practice, because that book forbids it in the words: "There shall not any man among you have save it be one wife." The two organizations have always remained antagonistic and to quiet title to various church properties, the matter was taken to court and in every instance the Reorganized church was declared in legal succession to the original church.

The church now has a membership of 95,000 located in small groups throughout the United States, Canada, and foreign lands. It is actively prosecuting missions at home and abroad and Zionism is an important part of its programme. Frederick M. Smith, Ph.D., grandson of Joseph Smith, founder of the church, is now president and lives at Independence, Missouri, which is headquarters of the church. In addition to missionary work, the church maintains a hospital, homes for children and aged, a college, and a publishing house. Its economic theory is based on co-operation, and the church is financed on the ancient system of tithes, voluntarily contributed.

REUNION. An island belonging to France, situated about 420 miles east of Madagascar. Area, 920 square miles; population (1912) 173,822, of whom 159,218 were Europeans, 130,000 of these being of French origin. Chief towns are: St. Pierre, with a population of 29,481; St. Denis, with 23,972; St. Paul with 18,646; and St. Louis with 13,346. The chief port is Pointe de Galets, connected by rail with St. Pierre. The elementary schools in 1918 numbered 1173 with 370 teachers and 16,891 pupils. The chief products are sugar, rum, coffee, manioc, tapioca, spices, etc. The leading exports are sugar and rum. In 1918 the budget balanced at 6,798,558 francs. No later figures for commerce were available than those given in the preceding YEAR BOOK.

REVILLE, MARC. Former French deputy, died in November. He was born in 1863 and studied law; entered the administrative service; in 1903 was elected to the Chamber of Deputies. He was reelected in 1906-10, but failed in his canvass of 1914. In the Chamber he specialized in economic questions and played an important part in the investigation of the textile industries. He was member of many commissions on customs, commerce, industries, etc., and he served as Minister of Commerce, Industry, Posts and Telegraphs in the Cabinet of Ribot, which lasted only a few days (1914). He was enrolled among the Radicals of the Left. Among his writings may be mentioned: *The Régime des cultes d'après la loi de 1905* (1906); *L'Inventaire des biens et des établissements du culte* (1906); *L'Etat et les Eglises* (1909).

REYNOLDS, JAMES EMERSON. British chemist, died February 19. He was born in Ireland

in 1844 and educated at Dublin University. In 1873 he became professor of chemistry at the Royal College of Surgeons, Ireland; in 1891 president of the Society of Chemical Industry; and from 1875 to 1903 was professor of chemistry and chemical philosophy at Dublin University. In the course of his career he discovered a large number of chemical substances including thiocarbamide and many of its allies, a new class of colloids, and many derivatives of the elements of silicon. After 1903 he was engaged in research work in the Davy-Faraday laboratory of the Royal Institution. He published in 1874, *Lectures on Experimental Chemistry*, and in 1880, *General Experimental Chemistry*.

RHAETO-ROMANCE. See PHILOLOGY.

RHEAD, GEORGE WOOLISCROFT. British painter, etcher, illustrator, and writer on art education; died, April 30. He was a National Art scholar and gold and silver medallist. He studied under Legros and Ford Madox Brown. His paintings include: "Vespers," "The Wise and Foolish Virgins," "A Sacrifice to Neptune," etc. Among his etchings may be mentioned: "The Dream of Sardanapalus," and etchings of paintings by Watts, Pettie, Boughton, Stone, and others. He illustrated Bunyan's *Pilgrim's Progress* and Tennyson's *Idylls of the King*, and he wrote the *Handbook of Etching; Studies in Plant Form; The Principles of Design*; and various works on pottery, practical design, costume, etc.

RHODESIA. A territory belonging to Great Britain, situated to the north of the Transvaal and extending northward to the borders of the Congo State and former German East Africa; constituting a British protectorate under the administration of the British South Africa Company, whose charter dates from Oct. 29, 1889. It is divided into Northern Rhodesia which lies to the north of the river Zambezi and Southern Rhodesia, which lies to the south of that river and comprises the two former provinces of Mashonaland and Matabeleland. The Zambezi River is spanned at Livingstone, just below the Victoria Falls, by an American made cantilever bridge bearing the Cape to Cairo railroad. As the water plunges 400 feet, the electrical energy to be developed is incalculable. It has been proposed to carry the wires on steel "poles" fashioned like oil derricks, to the Kimberly mines, Johannesburg, Pretoria, and around to Cape Town, on the one hand, and up through Khartum and the Nile valley.

Northern Rhodesia comprises two provinces of Northeastern and Northwestern Rhodesia, which were amalgamated Aug. 17, 1911. Area, estimated at 291,000 square miles; population, about 890,000 natives and a permanent European population in 1918, estimated at 2400. The seat of government is Livingstone on the Zambezi River. Chief agricultural products are: corn, cotton, tobacco, wheat, and fruits. Rubber is produced and there is abundant timber. Gold, copper, lead, and zinc are worked. The exports include live animals, copper ore, lead, grain, hides, and skins. No later figures were available than those given in the preceding YEAR BOOK. Administrator in 1920, Sir Laurence A. Wallace.

Southern Rhodesia has an area of about 149,000 square miles with an estimated population in 1918 of 770,000 natives and about 37,000 Europeans. There were also 2900 members of the

Asiatic and other colored races. In 1918 there were 76 public schools and four aided schools. In 1917 the pupils numbered 4063. There are rich resources of gold and other minerals and the country is well suited for agriculture. The principal crop is corn. Tobacco has latterly been produced in increasing quantities. On Jan. 1, 1919, the output of gold was valued at £42,728,293. Administrator of Southern Rhodesia at the beginning of 1920, Sir Drummond Chaplin. See ANTHROPOLOGY.

RHODE ISLAND. POPULATION. According to the preliminary report of the census of 1920, there were 604,397 residents in the State, Jan. 1, 1920, as compared with 542,610 in 1910.

AGRICULTURE. According to the census of 1920, the number of farms was 4084, a falling off of 22.8 per cent since 1910. The following table is compiled from the estimates of the United States Department of Agriculture, covering the years, 1919 and 1920:

Crop	Year	Acreage	Produc.	Bu.	Value
Corn	1920	8,000	320,000		\$576,000
	1919	8,000	360,000		670,000
Hay	1920	47,000	52,000		1,718,000
	1919	47,000	61,000		1,945,000
Potatoes	1920	3,000	345,000		552,000
	1919	4,000	400,000		720,000

c Tons.

FINANCE. The balance on hand, Jan. 1, 1920 was \$675,429; the receipts during the year were \$6,909,172; the expenditures, \$6,187,173; and the balance on hand, Dec. 31, 1920, was \$1,397,428. The net indebtedness of the State reported by the Treasurer at the end of 1920 was \$9,200,082.

EDUCATION. Statistics of public schools in 1920 were as follows: Number of schools, 2127; school population, age 5 to 17 years, 138,625; pupils enrolled in public schools 91,056; pupils enrolled in other schools, 21,855; number of teachers, 2966; average number of teachers, 2741; average salary of teachers, \$987.05.

LEGISLATION. Among the measures passed in the regular session of the legislature may be mentioned: Complete revision of the State's corporation law; provision that State board of tax commissioners shall deduct property exempt in determining corporate excess tax; regulation of sale of intoxicating liquors for non-beverage purposes; promotion and maintenance of highways; provision for annual school census; bonus of \$100 for State's veterans of late war; regulation of State's water supply and prohibition of pollution.

ELECTIONS. The vote in the presidential election of 1920 was: Harding (Republican), 107,463; Cox (Democrat), 55,082; Debs (Socialist), 4351; as compared with the following vote in the presidential election of 1916: Hughes (Republican), 44,858; Wilson (Democrat), 40,394; Benson (Socialist), 1914. The vote for governor was: San Souci (Republican), 109,138; Sullivan (Democrat), 55,963; Sherwood (Socialist), 3299.

LEGISLATION. Features of the legislative session were the ratification of the suffrage amendment; authorization of the \$500,000 bond issue for highways; permission to cities and towns to increase their tax assessment; and amendment of the State compensation law.

RICE. The international rice trade in 1920 was affected by the shortage of production in

1919 in the Far East and by an exportable surplus in the United States. At one time large stocks of rice accumulated at Hong-Kong could not move because America was not a buyer and Japan was unable to purchase for the time being on account of a crisis in the financial situation. Likewise large supplies of rice piled up in Cuba so that the Cuban government prohibited its importation from Sept. 6, 1920 to Jan. 1, 1921. During the first quarter of 1920 the United States exported over 300,000 pounds of rice to Japan, while less than 1000 pounds was shipped to that country during the entire year of 1919. Sumatra also imported rice from the United States during the summer of the past year. Siam, ordinarily a large exporting country, placed an embargo on the exportation of rice and rice products during the calendar year 1920.

Provisional figures published by the International Institute of Agriculture, Rome, placed the production of British India in 1920 at nearly two and three-quarter billion bushels, or about one-seventh more than was harvested the year before. The Japanese crop was estimated at 550,702,600 bushels, or over 2 per cent above the preceding year's yield. As estimated by the Department of Agriculture, the United States produced 53,710,000 bushels on 1,337,000 acres, or at the rate of 40.2 bushels per acre, as compared with 42,790,000 bushels on 1,091,000 acres and an average acreage of 39.2 bushels. The average farm price on December 1 was \$1.189 as against \$2.668 on Dec. 1, 1919. On this basis the total value of the crop was \$63,837,000 and \$114,152,000 for the two years respectively. Louisiana produces about one-half and Louisiana, Texas, and California nearly seven-eighths of the total crop of the country.

RICE, GEORGE STAPLES. Civil engineer, died, December 7. He was born at Boston, Mass., Feb. 28, 1849, and from 1869 to 1872 was assistant engineer at the Lowell (Mass.) and Boston waterworks. He was after that engaged in Boston on the water supply and was then engaged in mining engineering in Arizona and Colorado. In 1891 he was the chief engineer in the Boston Rapid Transit Company; and in 1905-07 was on the Rapid Transit Commission of New York and from 1907 to 1919 he was division engineer in the Public Service Commission for the first district of New York.

RICE INSTITUTE. An institution of the higher learning at Houston, Texas, founded in 1912. There were 736 students enrolled in the regular fall session of 1920. The faculty had 47 members with 57 fellows, assistants and student assistants. The endowment amounted to \$10,000,000 and the income for the year was \$600,000. There were 21,000 volumes in the library. The gift of Herbert Godwin was the Godwin Lectureship on Public Affairs, inaugurated by the Hon. William H. Taft. An athletic field was erected at a cost of \$75,000. President, Edgar Odell Lovett, Ph.D.

RICKER, MARILLA M. Woman lawyer and philanthropist, died November 12. She was born at Newdurham, N. H., March 18, 1840; educated at New London and taught school for several years. She studied abroad and after taking law courses in this country under private tuition, she was admitted to the bar of the District of Columbia in 1882. She practiced at Washington after that year and in 1884 was appointed United States Commissioner and Examiner in Chancery

by the District Supreme Court. In 1891 she was admitted to the bar of the Supreme Court of the United States. For many years she was known as the "prisoners' friend" from her practice of visiting and befriending prisoners, and also as an advocate of equal rights for women. During national campaigns she spoke in various States and was well known as a political writer. She also wrote on behalf of free thought in religion, defending Thomas Paine and Robert G. Ingersoll. Her books include: *The Four Gospels—The Gospel of Ingersoll, Paine, John Calvin, and Jonathan Edwards* (1911); *I do not Know, Do You?* (1916); *I Am Not Afraid Are You?* (1917).

RIDGELY, WILLIAM BARRETT. Banker, died, May 1. He was born at Springfield, Ill., July 15, 1858, and graduated at the Rensselaer Polytechnic Institute, 1879. He then engaged in mining, manufacturing, and banking in Springfield, Ill., until 1899, when he became the secretary and vice-president of a large iron and steel company. From 1901 to 1908 he was the United States Comptroller of the Currency. In politics he was a Republican.

RIGHI, AUGUSTO. Italian physicist, died in 1920. He was professor in the University of Bologna. He was regarded as among the most remarkable personalities in the field of pure science, combining the gifts of a popularizer with great capacity for original research. His contributions to physical science extended over a period of 50 years and number nearly 250 papers. He was a co-worker of Herz and a teacher of Marconi to whose great discovery he contributed invaluable aid.

RINALDINI, ARISTIDES. See ROMAN CATHOLICS.

RINDERPEST. See VETERINARY MEDICINE

RIPLEY, EDWARD PAYSON. Railway president, died February 4. He was born at Dorchester, Mass., Oct. 30, 1845; went into the railway service as a clerk in a Boston office in 1868 and from 1878 to 1886 was the general agent of the Pennsylvania Railroad. After Jan. 1, 1896, he was president of the Atchison, Topeka, and Santa Fe Railroad. He was also president of the Gulf, Colorado and Santa Fe Railway and director of the Continental and Commercial National Bank of Chicago, Ill.

RIP VAN WINKLE. See MUSIC, Opera.

RITTENHOUS, ELMER ELSWORTH. Writer on insurance, died, January 2. He was born in New York City, June 9, 1861; went to Colorado in 1880 and became a telegrapher; subsequently went to Korea where he engaged in railway construction and was correspondent for the New York Herald and its Paris edition, 1898. In 1902 he was special correspondent in Europe. From 1909 to 1912 he was president of the Provident Savings Life Insurance Society of New York and was commissioner of Public Service and Conservation in the Equitable Life Insurance Society after 1916. He wrote extensively on subjects of health and life conservation, and insurance.

RIVIERE, BRITON. British animal painter, died in London, April 20. He was born in London, Aug. 14, 1840, of French descent. After a private education he devoted himself to painting and was at first an enthusiast for the Præ-Raphaelite theories, but in this field he was not successful, and he finally applied himself to the

painting of animal life. In this he achieved a long series of successful and widely-known works.

ROADS AND PAVEMENTS. Although high prices and railway transportation difficulties were unfavorable to construction work, the recent vast American highway improvement programme was enlarged at many points and much road building went on. The states of New York and Illinois shut down new construction early in the year, but much work was done on old contracts. The Minnesota highway department advised county authorities to curtail their work. In California, State road building had to be halted because of the difficulty in floating $4\frac{1}{2}$ per cent road bonds, but at the November election the people authorized a higher interest rate, up to 6 per cent, with a State Highway Finance Board to fix the rate of interest of each new road bond issue according to current money market conditions.

Under Federal Aid, legislation and appropriations passed by Congress within recent years vast sums of money from the Federal treasury have been made available for road building, provided that the several states, their counties or other local governing bodies, would match dollar for dollar, the states organize for road supervision, and make the road work conform to Federal standards. Up to June 30, 1920, according to a bulletin issued by the United States Bureau of Public Roads, the Secretary of Agriculture had approved 2985 road projects, estimated to cost \$385,000,000, of which about \$164,000,000 will be Federal Aid. On the same date, 2116 projects calling for 15,944 miles of roads estimated to cost about \$200,000,000, had either been completed or put under construction. During the year, hundreds of millions of road bonds were rated by states and counties and a few score million were defeated. Some of the larger State issues voted were: Minnesota, \$75,000,000; Missouri, \$60,000,000; West Virginia, \$50,000,000. In addition, Virginia and Minnesota passed a constitutional amendment under which the respective legislatures may vote road bonds; Virginia up to \$50,000,000; while in Kansas no limit was named. The kinds of materials used for roads and also for city pavements is substantially as noted in earlier YEAR BOOKS. Increased attention is being given to the choice of a road or a street surfacing designed to meet the character and weight of traffic that is likely to pass over it. For special studies of "The Trend of Highway Development" in states chosen to represent various conditions and large geographical sections see a series of weekly articles in *Engineering News-Record*, beginning Nov. 11, 1920, and covering, up to the end of the year, Maine, Massachusetts, Rhode Island, Connecticut, Indiana, Michigan, Wisconsin, Minnesota, Nebraska, Kansas, and Arkansas. *Snow Removal* was given much attention during the year, being taken up systematically by numerous State highway departments in order to keep through highways passable in winter. *New York City*, after trying experience with heavy snows in the winter of 1919-20, bought many caterpillar tractors and snow plows for use in the winter of 1920-21.

ROBERTS, JOHN VARLEY. British organist, died, February 9. He was born near Leeds, England, Sept. 25, 1841, and took the musical degree from Oxford in 1871. He was organist in Oxford and other churches for many years and

published Church cantatas and various works on church music, especially the organ, and methods of training choristers, etc.; he also published about 60 anthems and a large number of songs.

ROBERTS, WILLIAM HENRY. Clergyman, died, June 26. He was born at Holyhead, Wales, Jan. 31, 1844, and came to this country in his youth and graduated at the College of the City of New York in 1863. He was statistician in the treasury at Washington and assistant librarian of Congress till 1871, when he prepared for the church. He was ordained in the Presbyterian ministry in 1873. From 1886 to 1893 he was professor of practical theology at the Lane Theological Seminary at Cincinnati, O. After 1884 he was stated clerk of the general assembly of the Presbyterian church in this country. He held other important offices in the church, being moderator of the Presbyterian general assembly in 1907; president of the Federal Council of Churches of Christ in America in 1908; and chairman of the conference on organic union (1918-19). He wrote a number of works pertaining to the history, system, laws and observances of the church. He edited the minutes of the General Assembly in 34 volumes, from 1884 to 1919, etc.

ROCHESTER, N. Y. See GARBAGE.

ROCHESTER, UNIVERSITY OF. A non-sectarian co-educational institution of the higher learning, at Rochester, N. Y.; founded in 1850. The enrollment for the regular fall session of 1920 was 413 men and 290 women. Students taking the extension courses numbered 166 men and 685 women. There were 70 members in the faculty, 12 of whom were new. The productive funds were: Arts and Science College, \$2,171,898; Ross Fund (Research work and study of nutrition), \$850,940; and Eastman School of Music (School now being constructed), \$2,234,509; total, \$5,257,347. The income for the year was: Arts and Science College \$210,000; Ross Fund, \$56,135; and Eastman School of Music (income from endowment only), \$100,000, totaling \$366,135. There were 81,500 volumes in the library. Mr. George Eastman added \$1,000,000 to his gift of \$3,500,000 for a School of Music. Of the total, of \$4,500,000, over \$2,000,000 was set aside for endowment and the balance of \$2,500,000 for real estate, buildings, and equipment. In addition to this gift to the Music School, Mr. Eastman gave \$4,000,000 which was supplemented by a gift of \$5,000,000 from the General Education Board for a School of Medicine, Dentistry, and Surgery. A campaign for endowment was conducted and \$915,000 was realized. The object of this endowment was: (1) To cancel indebtedness of about \$60,000, incurred during the years of war; (2) to add \$100,000 to the library fund; and (3) the income from the balance to be used to make an increase in the salaries of professors. The College of Arts and Science and the School of Music was started. A new School of Medicine, Dentistry, and Surgery was in process of organization. President, Rush Rhees, A.M., D.D., LL.D.

ROCKEFELLER PHILANTHROPIC BOARDS. The Rockefeller Foundation was chartered by the State of New York in 1913 "To promote the well-being of mankind throughout the world." Although its chartered purposes are thus unlimited, it has so devoted its resources to programmes of public health and medical education throughout the world, that

these have come to be regarded definitely as its fields. Its present resources in securities as reported at the end of 1920 are \$170,000,000, both the income and principal of which are available for appropriation. The Rockefeller Foundation accomplishes its work through (1) agencies which it creates to carry out specific programmes, and (2) other existing organizations unaffiliated with the Foundation, to which it makes appropriations to enable them to carry specific items of programmes in public health and medical education. Agencies of the first class are (1) The International Health Board; (2) The China Medical Board; (3) The Division of Medical Education.

The International Health Board has from the beginning been under the directorship of Mr. Wickliffe Rose. During 1920 the Rockefeller Foundation made available for the use of this Board approximately \$2,500,000. This was expended in public health demonstrations and in the development of coöperative public health programmes in different parts of the world. These programmes, always in coöperation with government authority, in 1920 were carried on principally in 12 Southern States in this country in combating malaria and hookworm disease, and in 22 foreign countries, states, or islands in combating these diseases and yellow fever. Marked progress in the eradication of yellow fever has been made during 1920. The disease has been completely stamped out in Guayaquil, Ecuador, which since 1740 has been an endemic centre. No case appeared after May, 1919. A yellow fever commission visited West Africa for a preliminary survey. Control measures have been undertaken in Mexico and continued in several countries of Central America, and in Brazil. The Board has thus extended its activities to every section of the world where yellow fever is known to exist. Assistance is being given to the Republic of Czechoslovakia in the organization of its public health administration and laboratory service. For the purpose of training native personnel and promoting greater efficiency and higher standards in public health, foreign fellowships for the study of public health in the United States have been provided. The International Health Board's Commission for the Prevention of Tuberculosis in France has continued, during 1920, its work begun during the war. As a part of its public health work the Rockefeller Foundation has directly established and is maintaining a School of Public Health at Johns Hopkins University.

The second subsidiary board of the Foundation, the China Medical Board, is charged with the development of the Foundation's programme of medical education in China. Dr. George E. Vincent, the President of the Foundation, serves as chairman and general director of this board. The China Medical Board has planned and is supporting in full a medical centre at Peking, including a medical school, free medical school, hospital, and nurse training school. Aid is given by the Foundation through the China Medical Board to medical schools and hospitals already established in China, and fellowships and scholarships are provided to make possible advanced medical study in the United States for medical missionaries on furlough and for Chinese physicians and nurses.

A Division of Medical Education under the directorship of Dr. Richard M. Pearce has been

created and has conducted investigations of medical education in Canada and western and central Europe. Increased activity in this field has marked the past year's work. Five million dollars has been set aside for aiding medical schools in Canada. Of this amount \$3,000,000 has already been distributed to six medical schools in the Dominion. A coöperative programme, involving contributions of approximately \$4,000,000 by the Foundation has been undertaken in connection with the medical centre in London composed of University College and University College Hospital Medical School. Emergency assistance in supplying American and British medical journals and in replenishing scientific equipment has been given to universities in central Europe.

The executive officers of the Foundation were: George E. Vincent, president, and Edwin R. Embree, secretary. The offices are at 61 Broadway, New York City.

The General Education Board was chartered by Congress in the year 1902 for the purpose of promoting educational progress in the United States. It possesses \$35,874,357 endowment and distributes an annual income amounting approximately to \$2,950,000. During the period 1919-1920, Mr. Rockefeller has increased the resources of the Board to the extent of \$70,000,000; giving a fund of \$50,000,000 to be used in assisting colleges and universities to increase teachers' salaries, and the sum of \$20,000,000 for the improvement of medical education. From this special gift of Mr. Rockefeller's for increasing teachers' salaries, the Board had up to July 1, 1920, appropriated \$19,635,707 towards a total to be raised by the institutions of \$59,769,041. From 1902-1919 the Board had contributed \$15,598,994 towards a total to be raised by the institutions of \$71,867,861. In the 18 years of its history the Board has thus contributed to college and university endowments upwards of \$35,000,000 towards a total increase of their endowments amounting to \$131,636,902. The Board has made appropriations aggregating \$18,178,021 for the development of medical education since its organization. Of this sum, \$13,061,747 was appropriated during the past year. Of this sum, the most considerable items are the following:

University of Rochester	\$5,000,000
Vanderbilt University	4,000,000
Washington University	1,577,500
Yale University	1,129,145
Harvard University	650,000
Meharry Medical School for Negroes	150,000
Howard University for Negroes	250,000

In the field of negro education, the Board has made appropriations to the endowments of four institutions, amounting to \$1,100,000, and it has made annual grants for increasing teachers' salaries, amounting to \$120,500. For improving the physical plants of six colleges for colored students, it has appropriated \$153,000 towards a total to be raised of \$385,125. Its total appropriations for the year to negro education are the largest ever made by the Board, aggregating \$2,291,737. Appropriations are also made for the equipment of county training schools and for the promotion of teachers' institutes, home makers' clubs and other related activities. The Board makes appropriations to the State Departments of Education for the purpose of employing rural school supervisors in the following

states: Alabama, Arkansas, Florida, Georgia, Kentucky, Louisiana, Maine, Maryland, Mississippi, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, Virginia, and West Virginia. Following the school surveys of Maryland and Delaware, the Board has this year completed a survey of public education in the State of North Carolina, and has begun a survey of public education in Kentucky. The Board has also maintained the Lincoln School at Teachers College, an elementary and secondary school of experimental type. Fuller information regarding the activities of the Board will be found in its Annual Report for the fiscal year ended June 30, 1920, a copy of which will be sent upon request. The executive officers of the Board are Wallace Buttrick, president, and Abraham Flexner and Trevor Arnett, secretaries. Address, 61 Broadway, New York City.

THE ROCKEFELLER INSTITUTE FOR MEDICAL RESEARCH. Founded in 1901. This institute has three chief departments: laboratories of pathology, bacteriology, chemistry, pharmacology, physiology, experimental surgery, experimental biology, a hospital for the study of special problems in clinical medicine, both in New York City; a department of animal pathology, the former laboratories near Princeton, N. J. The Institute's publications are, *Studies from the Rockefeller Institute for Medical Research*, giving the results of various investigations made by them. A series of monographs published by the Institute include, the *Journal of Experimental Medicine*, the *Journal of General Physiology* and the *Journal of Biological Chemistry*. During 1920, John D. Rockefeller presented the Institute with a city block adjacent to their present building between 67th and 68th Streets on Avenue A, New York City. The return from war work has been completed and the Institute continued its work in the usual wide field of research during the year.

ROMAN CATHOLICS. One of the most notable incidents of the year was the constant development among the nations of the influence and prestige of the Pope as a factor in the affairs of the world. No less than 26 nations had established permanent diplomatic relations with the Vatican and special progress was made to restore the entente with France. There was also report of negotiations looking to the revival of the official representation from the United States that lapsed in 1868. A large number of the bishops of the United States visited the Pope to make their first official reports since before the World War and were received with marked favor, the pontiff praising on several occasions the loyalty and devotion of the church here. On August 1, the Pope issued a *Motu Proprio* warning against the dangers now threatening society. The World War let loose a flood of "naturalism," and men, running madly after the things of earth, have forgotten the Christian rules of life with which is bound up the family. Thence arise social troubles, good workmen being drawn into Socialism, the danger whereof the Pope points out, quoting his own letters to the Bishop of Bergamo and others, and Pope Leo's encyclicals, which showed workmen their duties as well as their rights. All should turn to the simple life of St. Joseph and the Holy Family as an example, because the family is the basis of Christian life. Another letter later drew attention to the destitution, especially among children, in central Europe and advising

charity and help for them. The American hierarchy took concerted action on this and ordered a general collection all over the country for this relief fund. To distribute it and to act as their representatives, the Right Rev. Mgr. Rempe, vicar-general of Chicago, started for Europe the last week of the year.

There were a number of great ceremonies at Rome incidental to the formal additions to the list of saints and martyrs: May 9, beatification of the Ven. Louise de Marillac, Foundress of the Sisters of Charity of St. Vincent de Paul; May 13, canonization of Blessed Margaret Mary Alacoque and of Blessed Gabriel dell' Addolorata; May 16, canonization of Blessed Joan of Arc; May 23, beatification of the Ven. Oliver Plunket, Primate of Ireland; May 30, beatification of the Ven. Anna M. Taigi, a Roman matron; June 6, beatification of the Martyrs of Uganda; June 13, beatification of the martyred Sisters of Charity of St. Vincent de Paul and of the Ursuline Nuns of Valenciennes killed during the French Revolution.

The Pope in June revoked the rule against foreign rulers visiting the Quirinal during a stay in Rome, and on December 18th the King of Denmark made a formal call at the Vatican, the first time in four and one-half centuries that a royal Dane had done homage to a Pope.

These Cardinals died during the year: Aristides Rinaldini, February 11; Philip Giustino, March 27; Julius Boschi, May 15; Leon Adolphe Amette, August 29; Victoriano Guisasola y Menendez, September 3; and Joseph Sebastian Netto, December 7. These deaths reduced the number of the members of the Sacred College to 59; or, 30 Italians, 28 non-Italians, and 1 "reserved-in-petto" member, thus leaving 11 vacancies to be filled. Not all the Cardinals are physically able to keep up with the duties of the office. As the successor of Cardinal Amette of Paris, on December 1st, Cardinal Louis Ernest Dubois, transferred from Rouen, assumed the duties of the see of Paris.

The deaths among the hierarchy of the United States included those of Bishop John E. Fitzmaurice of Erie, Pa., June 18; Bishop John Joseph Hennessy of Wichita, Kas., July 13; Bishop Thomas D. Beaven, of Springfield, Mass., October 5; Bishop E. A. Garvey, of Altoona, Pa., October 22. The death of the Rev. Theodore A. Metcalf of Boston in May left Cardinal Gibbons the only surviving American who attended the Vatican Council (Dec. 8, 1869-Oct. 20, 1870) where Father Metcalf acted as one of the stenographers and secretaries. Later he was vice-rector of the American College, Rome, and then chancellor of the Archdiocese of Boston. There were 698 members of the Council from all over the world present at the first session, Dec. 8, 1869, and of these at the close of 1920, Cardinal Gibbons was the sole survivor. The death of Cardinal Netto also made him the senior member of the College of Cardinals.

Other changes in the hierarchy were the appointment (January 19th) of the Rt. Rev. John J. McCort, titular Bishop of Azotus, and rector of the Church of Our Lady of Sorrows, Philadelphia, to be coadjutor of Altoona. He succeeded Bishop Garvey in October. The Rev. William F. O'Hare, S.J., of New York was consecrated Bishop of Jamaica, February 25, and the Rt. Rev. John M. Gannon, auxiliary bishop, succeeded Bishop Maurice in the see of Erie, Pa.

(August 27); the Rev. Francis J. Tief of Kansas City was named Bishop of Concordia (December 16th). These auxiliary bishops were appointed by the Pope: Rev. John G. Murray, Hartford, Conn (consecrated April 28th); Rev. Thomas E. Molloy, Brooklyn, N. Y. (June 28th); Rev. Patrick J. Keane, Sacramento, Cal. (September 12th). Bishops P. J. Nussbaum of Corpus Christi, Texas (April 28th), and J. F. R. Canerin of Pittsburgh, Pa. (November 29th), resigned their sees.

The archbishops and bishops of the United States met for their second annual conference at Washington, September 22-23, and took action on a number of questions the most important of which was that of education, on which it was decided:

First, that a general survey be made of the present condition of Catholic schools.

Second, that measures be taken for the more thorough preparation of teachers in all Catholic institutions, so that there may be an efficient body to carry out the directions of the hierarchy. Courses of education in seminaries and community training schools, and normal training of teachers for elementary schools, are especially desirable measures.

Third, that laymen be encouraged to take a larger share in Catholic education work, especially as teachers.

Fourth, that measures be taken to solve the problems of rural education.

Fifth, that in defining the Catholic attitude towards measures for State and Federal control, Catholics should give the minimum of complaint and of opposition to such movements. They should discriminate between things they can accept and those which they cannot accept—and then confine their opposition to the latter.

A seminary and a technical school for negroes is to be planned, as well as a national social service training school for laymen, the women's work to be systematized through the women's council.

Rural activities include plans to increase the number of Catholic farmers; the organization of social study clubs, and the selection of texts and programmes for their use; the encouragement of lecture courses in parishes and societies, and the encouragement of cooperative societies among farmers and consumers. Upon the National Catholic Welfare Council devolves the work of incorporating into our American life the vast number of Italians, Poles, Slovenes, Lithuanians, and other immigrant peoples. All these racial groups have their representatives in the several departments of the council. All foreign and domestic missions of the Church will be unified under the direction of the Catholic Board of Foreign Missions and unity of action in the management of Catholic hospitals will be governed through the Catholic Hospital Association. All Catholic men's societies will be affiliated with the men's council, the parochial unit to be the basis of the national organization. The inauguration of civic centres for young men, the development of the Big Brothers' movement for the care of the young and the establishment of international relations with Catholic societies of other countries are other items of this programme of activities and also the promotion of the beatification of Elizabeth Bayley Seton, founder of the Sisters of Charity in the United States.

On September 23d at Washington, 2 cardinals, 11 archbishops, 56 bishops, hundreds of priests,

and 10,000 of the laity were present at the laying of the corner-stone of the national shrine of the Immaculate Conception. It will be a Romanesque basilica, the dome 254 feet high, the length 420 feet; transept, 200 feet wide; nave, 54 feet; and front elevation, 124 feet. The interior will have 40 altars.

Important conventions of the year were the 17th annual meeting of the Catholic Educational Association in New York June 28th-July 1st, attended by a large body of educators from all sections of the United States. The problems of the parish schools, a constructive policy for higher education and standardization, were considered. At the public meeting on June 30th a brief by William D. Guthrie on "The Constitution and Catholic Education" was read. At the opening of the schools in September an estimated increase of 100,000 pupils was reported.

The Knights of Columbus held their 38th Supreme Convention in New York, August 2, 3, and 4, in which 300 delegates took part. On August 8th more than that number, led by Supreme Knight James A. Flaherty, sailed for France where they presented a bronze statue of Lafayette to France, and a jeweled baton to Marshal Foch. After this they went to Rome where the Pope received them in special audience on August 28th, during which he praised their work for charity, education, and patriotism, and expressed the hope that a branch of the order might be established in the Eternal City.

On September 17th the sixth biennial session of the National Charities Conference met at Washington with 1200 delegates attending. Every phase of Catholic social and charitable activity was represented. The technical and administrative problems of relief work, and social and economic questions were discussed, and conferences with a view of coördinating and unifying charitable work were held by the diocesan directors of 40 different dioceses. Catholic chaplains of penal institutions decided to organize a National Association of Catholic Chaplains for the development of their work and the enactment of uniform State laws relating to it.

The International Federation of Catholic Alumnae, representing Catholic women's schools of the country, met in Boston, October 8th-12th.

STATISTICS. The official Catholic Directory for 1920 gives the total United States Catholic population as 27,650,204 of which number 17,735,553 are in the United States proper. The priests number 21,019, of these, 5630 belonging to the regular orders. The churches total 16,181; the seminaries, 110, with 8944 students; the colleges and academies, 911; the free parish schools, 5852 with 1,701,213 pupils; the orphan asylums 296 with 45,687 inmates and the homes for the aged 121. There are 2 cardinals, 16 archbishops, and 96 bishops. There was an increase of 431 in the number of priests over the total of the previous year and of 1079 candidates for the priesthood, and 148 new parishes were established.

In the Dominion of Canada there is 1 cardinal, 11 archbishops, 29 bishops, 4500 priests, and 3,263,837 Catholics. A new diocese, Hearst, North Ontario, was created December 17th with Mgr. Halle as the first bishop.

The first Catholic daily newspaper in the United States printed in English, the *Daily American Tribune*, began publication in Dubuque, Iowa, July 1.

ROOSEVELT, FRANKLIN DELANO. Democratic candidate for vice-president in 1920. The last important office that he had held before his nomination was that of Assistant-Secretary of the Navy. He was born at Hyde Park, N. Y., Jan. 30, 1882; graduated at Harvard in 1904, and studied at the Columbia University Law School, 1904-7, being admitted to the New York bar in the latter part of 1907. He practiced in New York City from that time on. He was a member of the New York State Senate from 1910 to March 17, 1913, when he resigned to accept the position of Assistant-Secretary of the Navy. During the war he was in charge of the inspection of the United States naval forces in European waters, July-September, 1918, and of demobilization in Europe, January-February, 1919.

ROOSEVELT, SAMUEL MONTGOMERY. Portrait painter, died, August 19. He was born in New York City, in 1864, and studied there and in Paris. He painted the portraits of a number of prominent persons including Theodore Roosevelt, Hudson Maxim, the Earl of Kintore, etc., and was made chevalier of the Legion of Honor in France in 1914.

ROSS, CLINTON. Writer, died, March 26. He was born at Binghamton, N. Y., July 31, 1861; and graduated at Yale. He wrote a long list of novels and historical tales, including: *The Scarlet Coat*; *The Puppet*; *Two Soldiers and a Politician*; *The Break o' Day*; *Battle Tales*; *The Lady of the Blackfriars, or the Old Play* (1909); *A Tale of a Capitoline Venus* (1909); *Tontelle*; *The New Tale Book*; and a large number of serials and magazine and newspaper stories.

ROWING. The eight-oared crew of the United States Naval Academy won the world's rowing championship at the Olympic Games (q.v.) and also carried off the laurels in competitions with various college and amateur crews in the United States. Early in the season the oarsmen of Syracuse University defeated the Middies but later on the latter easily triumphed over their college rivals.

The intercollegiate regatta was revived in the United States in 1920 after a lapse of three years owing to the world war but instead of being held on the Hudson near Poughkeepsie as formerly over a four-mile course was contested on Lake Cayuga over a two-mile course. The 'varsity race was won by the crew of Syracuse University with Cornell second and Columbia third. The United States Naval Academy did not take part in the regatta. Cornell was victorious in both the junior varsity and freshmen events, Syracuse finishing second in each instance.

The annual championship regatta of the National Association of Amateur Oarsmen of America was held on Lake Quinsigamond, Worcester, Mass., the United States Naval Academy capturing the eight-oared event. The winners in other contests were: junior eight-oared shells, Duluth Boat Club; intermediate four-oared shells, Duluth Boat Club; senior international four-oared shells, Philadelphia Barge Club; quarter-mile dash, Jack Kelly, Vesper Boat Club, Philadelphia. Kelly also won the national singles title and with his cousin, Paul Costello, captured the doubles honors.

Harvard defeated Yale in their annual dual regatta held on the Thames, near New London. In foreign regattas Toronto University won the

eight-oared shells in the Royal Canadian Henley at St. Catharines, Canada, and the Leander Boat Club defeated Magdalen College, Oxford, in the English Henley.

Ernest Barry regained the world's professional sculling championship by defeating Alfred Felton, title holder, in a race held on the Parramatta River, New South Wales.

ROWLAND, JAMES. British member of Parliament, died March 1. He was born Oct. 1, 1851, and was educated in workingmen's colleges. He was at first a watch maker's apprentice, but devoted himself to politics and became prominent in the London Municipal Reform League. From 1886 to 1895, he was member of Parliament. He was active in the international arbitration movement and in promoting bills in Parliament for land reform and housing improvements.

ROZE, RAYMOND. English dramatic composer and conductor, died in London, January 4. He was born there in 1875, a son of the famous singer, Marie Rôze-Ponsin. Having graduated from the Brussels Conservatory as winner of the first prize, he became musical director to Sir Henry Irving at the Lyceum Theatre, and later to Sir Herbert Beerbohm-Tree at His Majesty's Theatre. In these positions he wrote a great deal of incidental music, especially for Shakespeare's plays. In 1913 he gave at Covent Garden a season of opera in English, during which he produced his own *Joan of Arc*. A second opera, *Arabesque*, was produced at the Coliseum in 1916.

RUBBER. With the unsettled economic and political conditions of such a year as 1920 it was inevitable that an industry so widely distributed as the production, distribution, and manufacturing of india rubber should reflect conditions both international and local. In the first half of the year in rubber as in other industry, the inflation that had developed since the armistice naturally was in evidence and a peak of high prices and demand was reached as will be apparent on reference to the statistical tables on the opposite page. Then came the deflation and descending prices until by the end of the year values were but 50 per cent of those prevailing six months earlier not only for crude rubber, but for many of the finished products. Concurrently there was a decline and liquidation in the securities representing the various companies in the industry and the financial condition of several became quite acute. Necessarily there was curtailment of production with unemployment or reduced wages at rubber centres. Notwithstanding the reduced production of the latter part of the year there was at the end a considerable surplus, for Europe was in no position to be an active customer, while there was a lack of confidence that the American demand would return immediately in full vigor. The estimated consumption of crude rubber in the United States in 1920 was less than 225,000 tons in place of some 300,000 tons which at the beginning of the year the more confident authorities expected might be absorbed. Furthermore, when a normal supply of crude rubber in the United States at the end of the year would be about 75,000 tons at the end of 1920 it ranged from 100,000 to 125,000. Furthermore, the prices had fallen to below the cost of production and for crude rubber (first crepe) the fall was from a high point of 55 cents to 16½ cents at the end of the year. Here it must be

* During 1919 there were actually received 231,510 tons, of which 5,478, not reported until 1920, are not included in figures published for either year.

remarked that the development of rubber plantations in the East had brought many changes in the industry for where \$1.50 once was an average price for Para rubber (reference to the 1910 YEAR BOOK will show a price of \$2.90 in New York in April, 1910), at the end of 1920, it was 18½ cents. Naturally such conditions aroused considerable concern in South America which, once the chief source of supply, formerly was able to control the world's crude rubber industry. Resentment here was but feebly disguised and the argument was advanced that the low prices were due to the world control of the markets by American trusts. But the condition was universal and there was a tendency to decrease production in the East. In fact, during the year a substantial restriction of the plantation rubber industry which long had been contemplated was determined on. The Council of the Rubber Growers Association of London recommended the curtailment of the estimated normal monthly output by 25 per cent. The planters were left free to either leave untouched one quarter of their tapping area or tap the trees in the entire tapping area only on every other day. Some 80 per cent of the proprietors of the 3,000,000 acres planted with rubber agreed to this plan, which was to be in force from Nov. 1, 1920, to Jan. 1, 1922, though the arrangement was subject to modification with changes in market, industrial, or other conditions affecting prices, production, or supply. This action was taken in view of the unstable and unsettled condition of the world's market for crude rubber which had suffered from a combination of all untoward economic symptoms prevailing in commerce and industry. In fact, where a boom had been anticipated after the war by some rubber authorities the industry was face to face with price recessions which reached a point perilously near actual costs of production such as 10d. a pound in London. It was realized, however, by the best minds in the rubber world that any artificial measures must be at best temporary and the eventual solution only would come through natural processes and industrial improvements.

In 1920 manufacturers in the United States consumed some 70 per cent of the world's rubber production of the world, but had a comparatively small interest in the plantations on which it was produced. It was estimated that American rubber manufacturers owned about 150,000 acres of rubber plantations in the East representing an original investment of between \$15,000,000 and \$16,000,000, which by 1920 had practically doubled in value, but represented only about 3 per cent of the world's total investment in rubber plantations. There was furthermore, a tendency that this American interest in the East would develop, especially with the growth of American foreign commerce and shipping. At any rate the distribution in 1920 of such American interests is of some interest.

The large American plantation holdings at this time were divided among four corporations. The United States Rubber Company with \$10,000,000 invested in Sumatra, had 43,000 acres bearing, 11,000 planted but not bearing, and 63,000 reserved, totaling 117,000 acres. This was the largest single rubber plantation in the world, nevertheless its production was far

inadequate for its 41 factories in the United States, 16 in Canada, and one in England. Next came the Goodyear Tire & Rubber Company with investments of about \$4,000,000 in 20,000 acres in Sumatra, of which 2000 were bearing, 9000 planted but not bearing, and 9000 cleared but not planted. The Manhattan Rubber Manufacturing Company had 2000 acres worth about \$500,000 in Java, 1200 of which were bearing, and 800 planted; while the Continental Rubber Company was the owner of 20,000 acres in Sumatra on which it had expended about \$1,000,000; 2000 acres being planted but not bearing, 2000 acres cleared but not planted, and 16,000 reserved.

One of the notable features of the year in the American rubber manufacturing industry was the over-production of pneumatic automobile tires which had been widely distributed in excess of the slackening demand. This led to the very necessary reduction of the stocks of dealers and manufacturers and the curtailment of production causing the shutting down in whole or in part of many plants and general demoralization in the trade, the rubber companies whose principal product was tires suffering, and in one notable case bankruptcy was only averted by the intervention of the creditors, banking, and other interests.

The condition of the crude rubber market in 1920 is reflected in the accompanying statistical table showing the lowest and highest prices by months for spot rubber at New York. The decline through the year is most apparent and it is worth recalling that in August, 1914, the finer grades sold above 120, while at the beginning of 1913 they ranged from 102 to 113 with uprun coarse rubber selling for from 76 to 84. The table of imports also tells its story and indicates the sources of the world's rubber and their relative importance under conditions as developed by 1920.

In rubber the export business was carried on with greater difficulty during the year on account of exchange conditions and the increasing value of the American dollar outside of the United States. However, improvement in such conditions was anticipated at the end of the year.

As regards its rubber manufacturing industry by 1920 Canada had not only become "self-supporting" but was developing an export trade. The total capital invested in the Canadian rubber industry in 1919 amounted to \$42,787,594. Of this sum \$33,005,888 was in Ontario, which is the centre of the industry and boasts of 18 plants producing miscellaneous rubber goods, and 5 turning out rubber boots and shoes. Quebec had 3 plants producing rubber goods and 5 in the rubber boot and shoe industry, supported by capital amounting to \$9,763,333. British Columbia's one rubber plant produces miscellaneous rubber goods, representing an investment of \$18,373.

Canada's rubber industry furnishes employment for 12,677 persons, with 9334 men and 3343 women workers. Rubber goods plants employ 6835, rubber boot and shoe factories, 5842. The wages paid during 1919 totaled \$11,547,817, of which \$7,004,028 was paid to rubber goods employees and \$4,543,789 to rubber boot and shoe makers.

The cost at the works of materials used during 1919 in the rubber goods factories is re-

turned as \$19,671,453, while the value at the works of rubber goods produced during the year is given as \$38,651,640; similar figures for the rubber boot and shoe factories give costs as \$7,862,961 and products valued at \$19,351,794.

The exports of Canadian rubber products increased in value from \$722,905 in the fiscal year 1914-15 to \$10,069,963 in 1919-1920, in which year tires to the value of \$7,391,777 were included, of which \$3,547,601 went to the United Kingdom.

Reference has been made to the serious condition of the rubber industry in South America. In Brazil at the end of 1920 there was in the Amazon region, one of the worst crises in the history of its rubber industry. Production of rubber had fallen off by 22,000 tons, but what was even more serious exports for the first 10 months of 1920 showed a shrinkage of 7013 tons, with both Europe and America decreasing their imports. The price of hard fine Pará dropped 40 to 50 per cent from January, 1920, to the end of the year and rubber was being shipped at a loss. Government aid was asked by the suffering states with the possible alternative of suspending payments.

The Amazon rubber interests gave the chief causes of this condition as eastern competition and American speculation working for lower prices. It was charged that a United States "rubber trust" was driving down the price of rubber, forcing the native planters out of the field and then purchasing the plantations at very low prices. The Brazilian rubber interests claimed that the opening of the World War in 1914 gave to America a virtual monopoly of the rubber industry.

Official statistics of the rubber industry in British Malaya derived from estates of 100 acres and over in extent, enable a comparison of the industry in Federated Malay States on December 31 in 1918 and 1919 to be made:

	1918	1919
Number of estates	1,126	1,221
Acres in possession	1,094,217	1,167,043
Acres planted	672,106	736,742
Acres producing	447,175	490,372
Newly planted	50,484	64,636

Adding the above figures to the statistics for the Straits Settlements, Johore, Kelantan, Kedah, and Trengganu, the totals were as follows:

	1918	1919
Number of estates	1,714	1,896
Acres in possession	1,978,000	2,091,535
Acres planted	1,124,243	1,236,806
Acres producing	691,435	751,986
Newly planted	78,423	108,438

In 1919, the rubber crop in the Federated Malay States amounting to 73,684 tons as against 62,517 tons in 1918, and the figures for the whole of British Malaya over a period of 10 years were as follows:

	Tons		Tons
1910	6,414	1915	51,885
1911	11,117	1916	67,677
1912	18,956	1917	82,319
1913	28,169	1918	92,279
1914	37,408	1919	106,757

The total export of plantation rubber from the Federated Malay States alone, amounted to 108,393 tons in 1919 as against 78,283 tons in 1918 and 79,831 tons in 1917. The discrepancy

between a rubber crop for the whole of British Malaya in 1919 of 106,757 tons and an export of 108,393 tons from the Federated Malay States alone possibly being due to the holding back of part of the previous year's crop for lack of shipping facilities. Upon estates of 100 acres and over in extent in the Federated Malay States there were 234,195 laborers employed.

Ceylon also showed an increased rubber area the plantation acreage in 1919 being given below:

	Estates over 15 acres	Small holdings	Total acres
Acres in rubber tapping, Sept. 1, 1919	253,930	13,032	266,962
Acres in rubber over 5 years of age but not in tapping, Sept. 1, 1919 ..	20,752	3,552	24,304
Acres in rubber over 1 year and under 5 years of age not in tapping, Sept. 1, 1919	61,416	20,875	82,291
Acres of 1-year-old rubber ready for planting	13,392	10,945	24,337
Acres of land cleared ready for planting	7,132	7,132
Totals	356,622	48,404	405,026

Of the areas of over 15 acres, belonging to planters' associations, the total acreage was 285,539 distributed over 21 planting districts of which the most important were: Galle, 23,858; Kalutara, 52,197 acres; Kandy, 24,885 acres; Kegalle, 18,966½ acres; Kelani Valley, 50,734½ acres; Matale, 39,086 acres; Sabaragamuwa 27,973 acres. The total acreage of estates not members of associations was 71,083, distributed over 11 districts. The Ratnapura district was credited with greatest plantation acreage, 19,017½, but Kalutara had the highest acreage in tapping, 7,039½, although its total was but 7,039½ acres.

RUDD, CHANNING. Financier, died November 9. Before his death he had been in charge of the Government Loan Organization of the Federal Reserve Bank of New York. He was born at Tiskilwa, Ill., in 1875, practiced law and for a time taught it at Columbia and New York Universities. He became associated with the Federal Reserve Bank in 1918.

BUFFO, TITTA. See MUSIC, OPERA.

RUHR BASIN. The Ruhr basin was the power plant of Germany's former industrial and military machine. The Peace Treaty stipulation that Germany must not construct fortifications within "50 kilometers to the east of the Rhine" loosened her absolute control over one of the richest coal fields in the shattered empire, over Ruhrort, which had the largest river harbor in Europe, over the factory cities along the Ruhr's course, and, above all, over Essen, city of the Krupp cast-steel and cannons. The confluence of the Ruhr and the Rhine was the geographic factor in making Ruhrort comparable in economic importance to Pittsburgh, though only one-twelfth its size. Between the Rhine and the Ruhr is Duisburg, a city of rolling mills, foundries, and factories. It is connected with the Ruhr by a canal. Essen owes its development to the Krupp works founded in 1812. In 1848 they had only 70 employees; but with the advent of railways and cast-steel guns they expanded rapidly. Mulheim is a railway centre, seven miles northwest of Essen, where convergence of rail and water routes brought an enormous traffic. Four miles east of Essen is another Ruhr

river port, Steele, a mining town with iron and steel works, also noted for its fireproof bricks. Farther up the Ruhr is Witten, important not only for steel, but also for beer, soap, and chemicals. Within the area of the disturbances in 1920, though it is on the Rhine, a scant five miles south of the Ruhr's mouth, is Düsseldorf. This is one of the most pretentious cities in western Germany. It was bombarded by the French in 1795, later was the capital of Berg when that State was a Napoleonic duchy, and passed to Prussia, with the rest of Berg, in 1815. The Ruhr basin coal fields not only were important to the German Empire because of their heavy production, but because they alone were accessible for water importation of ores. A canal connected Dortmund, a city of the Ruhr basin with the Ems River, thus affording an outlet directly to the North Sea at Emden. A by-product of this development of water transportation to care for the coal-mining and the attendant iron and steel industry, was the growth of textile manufactures. In cotton spinning the Ruhr basin held first place in Germany. Nearly a third of the spindles in the Empire were located here. The Ruhr was made navigable from the Rhine to Witten, some 43 miles, by means of locks. Even then low water frequently hampered navigation. See WAR OF THE NATIONS.

RUMANIA. A constitutional monarchy situated on the Black Sea; separated from Hungary by the Carpathian Mountains and the Transylvanian Alps; from Bulgaria by the Danube River; and from Russia by the Pruth River. Capital, Bucharest. Before the late war it comprised the former principalities of Moldavia and Wallachia, and the territory of the Dobrudja, but as result of the war Bessarabia was joined to it in March, 1918; Bukovina in November, 1918; and Transylvania in December, 1918. The area and population as estimated in the following paragraph are subject to some uncertainty as the precise limits had not been permanently determined at the close of the year, 1920.

AREA AND POPULATION. Before the war the area was given at 53,489 square miles and the population at 7,516,418, including the territory taken from Bulgaria by the treaty of Bucharest, Aug. 7, 1913. The additions resulting from the war brought the country to an estimated area of 122,282 square miles and an estimated population of 17,393,149. The distribution by divisions at the beginning of 1920 is shown in the following table from the *Statesman's Year Book* of 1920:

Country	Area in sq. miles	Population		Total
		Males	Females	
Old Roumania	53,489	3,989,606	3,914,498	* 7,904,104
Bessarabia	17,146	1,198,900	1,145,900	2,344,800
Bukovina	4,030	395,963	404,135	800,098
Transylvania	22,312	1,350,480	1,327,887	2,678,367
Crisana	8,038	659,836	657,145	1,316,981
Maramuresh	6,258	378,205	388,461	766,666
Banat	11,009	789,102	793,031	1,582,133
Total	122,282	8,762,092	8,631,057	17,393,149
* Estimate for 1915.				

The capital, Bucharest, had a population Jan. 6, 1917, of 308,987; and the other large towns with their population for 1914 are: Chisanau, 114,100; Cernauti, 87,128; Jassy, 76,120; Galatz, 73,512; Timisoara, 72,223; Braila, 65,911.

COMMUNICATIONS. Railway mileage in 1915

was 2313, all lines being operated by the State. The following information in regard to recent railway conditions was based on a report of the British Railway Commission to Rumania, published in 1920. The railway situation in Rumania after the signing of the armistice was exceedingly bad and there was much suffering throughout the country owing to lack of food and fuel. The limiting factors were lack of railway repair material and locomotives. Some relief was obtained by a loan from the British government of £500,000 (later reduced to £250,000) for the purchase of railway materials, and the promise of 100 locomotives from France. But in 1920 the railway situation did not materially improve. The efforts of Rumania to obtain loans for the reconstruction of the railways and the purchase of locomotives had little success.

The following report as to transport condition was made by an Austrian observer at the close of the year: The transportation difficulties that beset middle Europe were specially acute in Rumania. Reports that railway siding were filled with unused locomotives, were doubtless true, because the locomotives were unusable and Rumania had not the facilities to repair them. The need was estimated by some at 3500 locomotives and others at 7000, while there were but 240 in condition to use. In the Danube harbor of Giurgiu there were 500 car-loads of Austrian products which could not be moved to Bucharest for lack of sufficient rolling stock. Between Hungary and Rumania there was practically no freight traffic, and only an occasional freight train came through in transit from Austria, while, except for infrequent automobiles, passenger traffic was at a standstill. There was no communication by mail, telegraph, or telephone. Telegrams between the two countries had to be routed via Hamburg or Rotterdam if they were to reach their destination at all, and it was estimated that 70 per cent of them never arrived. This condition had obtained for a year and a half. When a train of freight cars crossed the border an equal number of cars had to cross in the other direction; and if a 10-car train met for exchange a train of 11 cars one car had to be detached and wait until another car could be delivered in return. Traffic with Rumania via the Danube, while theoretically unobstructed, was in practice beset with difficulties, as each frontier levied its own toll of fees. It was reported that fees extracted legally, high as they were, fell considerably below the illegal tolls.

The military department did excellent work

toward the reconstruction of the economic life of the country by means of its so-called army of construction which was employed mainly in repairing old roads and in building new ones. An elaborate system of automobile highways was projected. On them the government oper-

ated a general truck service. The work of repairing oil-pipe lines in the devastated regions was also carried on by the army.

PRODUCTION, ETC. The leading occupation is agriculture, about 80 per cent of the inhabitants being engaged in it. A little over 50 per cent of the cultivable land area was in holdings of under 247 acres. The chief crops are: Wheat, corn, barley, oats, and rye. The following information in regard to agricultural production was supplied by the Bureau of Foreign and Domestic Commerce, in 1920:

The area sown to cereals in Old Rumania, Bessarabia, Bukowina, and Transylvania in the autumn of 1919 was given in hectares [hectare=2.471 acres], as follows:

money than the Kingdom of Rumania had formerly. This was caused largely by hoarding on the part of farmers and others, and produced a money stringency which made credit difficult to secure and restricted industrial development and expansion.

FINANCE. No recent figures for finance were available. In 1916-17, the budget balanced at 645,719,300 lei. The public debt according to a British authority was £210,680,000. The fiduciary circulation in 1920 was placed at 10,000,000,000 lei and the government was planning measures which were expected to reduce it to 4,000,000,000. Much dissatisfaction was expressed by Rumanian writers over the agreement reached by the Allies at the conference of

<i>Cereals</i>	<i>Old Kingdom Hectares</i>	<i>Bessarabia Hectares</i>	<i>Bukowina Hectares</i>	<i>Transyl- vania Hectares</i>	<i>Total Hectares</i>
Wheat	697,181	338,694	8,347	598,221	1,642,893
Barley	14,015	2,950	65,851	82,816
Rye	49,509	108,803	15,608	23,798	197,508
Colza	12,507	406	1,120	14,033

The spring sowing of 1920 was given as follows:

Spa and the contrast was pointed out between the allowance to Rumania, Serbia, and Greece of

<i>Cereals</i>	<i>Old Kingdom Hectares</i>	<i>Bessarabia Hectares</i>	<i>Bukovina Hectares</i>	<i>Transyl- vania Hectares</i>	<i>Total Hectares</i>
Wheat	28,588	99,628	2,881	18,627	144,719
Barley	446,517	614,120	26,847	27,745	1,115,229
Rye	771	6,682	1,743	518	9,714
Coisa	13,546	8,598	17,144
Corn	825,818	584,552	49,583	182,985	1,592,938
Oats	419,782	182,065	29,118	59,812	690,727
Millet	19,559	1,050	20,609
Flax	6,528	2,197	8,720

Rumania's cereal crop for 1920 was estimated at 15,000,000 tons, 11,000,000 of which would be available for export: and its forest production at 5,500,000 tons, 2,000,000 of which would be available for export. Of the 750,000 square meters of oil fields, only 100,000 meters, or 13 per cent, were under exploitation. It was estimated that when all oil fields were put under exploitation, production would reach over 2,000,000 tons per annum.

From the report of an Austrian expert it appeared at the close of the year that Rumania had enough cattle and other live stock to provide for all domestic needs and an exportable surplus. The Transylvania section of Rumania was able to produce enough food to supply the entire country, leaving the rest free for export. Lumber was an important item of export, the capacity being 100,000 cars yearly (car-load, 10 tons). In 1912 Bukowina alone produced as much lumber as the entire country produced in 1920. Twelve thousand carloads of petroleum were taken out of Rumania by the Germans despite the damage done to oil wells by the British in their evacuation. In 1914 a well could be bored for 300,000 lei, whereas 5,000,000 lei are now required. Fifty per cent of oil refined was available for export. See PETROLEUM. Forest area is 6,539,920 acres of which 2,712,582 are owned by the State. See AGRICULTURE.

COMMERCE. No later figures for the foreign trade were available than those given in the preceding YEAR BOOKS. In 1920, the two greatest difficulties of trade with Rumania were difference in exchange rate and transportation. There seemed to be no inflation of Rumanian currency, possibly because Rumania possessed no note press, and the whole of Rumania had less

4 per cent of the Austrian indemnity, which as everybody knew could not be paid and the allowance to Rumania of only 1 per cent of the German indemnity. The agreement with the British government on the other hand was generally approved. This involved the postponement of payments on Rumania's war debt. The British government also consented to pay for the damages done to Rumanian oil wells during the war.

DEFENSE. Military service is compulsory between the ages of 21 and 46. The army of Rumania was reduced to 30,000 men by the treaty of Bucharest and during the war it was under the control of the Germans. After the armistice, a partial mobilization took place and after the entry of the Allies into Bucharest, about 400,000 Rumanian troops were reported as under arms. See NAVAL PROGRESS.

GOVERNMENT. In 1920 a Constituent Assembly elected by universal direct suffrage was engaged in unifying the constitutions of the former kingdom and the newly added parts. Executive power is in the king, Ferdinand I (born, Aug. 21, 1865) who acts through a responsible ministry; legislative power is in two houses, namely, the senate, consisting of 170 members of whom 82 were from the old kingdom, and the chamber of deputies, consisting of 347 members of whom 168 were from the old kingdom. The ministry in 1920 was constituted as follows: Premier, General Avarescu; Foreign Affairs, M. Take Jonesco; Interior, M. Argetoianu; War, General Rascano; Public Instruction, M. Negulesco; Fine Arts, M. Octairan Goga; Public Works, General Valiano; Finance, M. Titulesco; Agriculture, M. Cudalbu; Labor, M. Trancu Jasi; Justice, M. Cantacuzene; Industry and Commerce, M. Octairan Taslavanu; Reconstruction and Food Supply, M. Ataudiu;

Bukowina, Baron Starcia; Transylvania, M. Mosconyi; and Bessarabia, M. Nita.

HISTORY

MINISTERIAL CRISIS. Considerable opposition had developed against the government and in February the by-elections to the senate resulted in the success of its opponents. On March 15 the cabinet resigned and a new government was formed under General Averescu, who had been minister of the interior in the retiring cabinet. The new ministry was based on the Conservative and Liberal parties of the old kingdom. Its programme was founded on the idea of a Greater Rumania and embodied features looking to the centralization and economic reconstruction of the State. On March 27 parliament was dissolved and a new election ordered. The government granted a general amnesty, April 18. Dissatisfaction was caused in Transylvania by a reduction of the number of deputies, as this resulted in a loss of seats out of proportion to the population. The policy of centralization was carried out in the reorganization of the State into departments under prefects who were nominated by the central government. This involved the dissolution of the national councils of Bukowina, Transylvania, and Bessarabia.

LAND REFORM. In the autumn a committee of agrarian reform was at work on a plan for the better distribution of land among the peasants. The budget for the fiscal year 1920-21 appropriated 90,000,000 lei for that purpose. The new land law provided for the expropriation of all landed estates of more than 500 hectares held by individuals in the old kingdom of Rumania and of all such estates over 100 hectares in Bessarabia, Transylvania, and Bukowina. In the first place, the estates to be expropriated were those held in mortmain. The lands held by the Orthodox Church had already been largely distributed. The cost was to be paid to the extent of 65 per cent by the peasants and 35 per cent by the State and a period of 45 years was allowed for payment. There was much opposition to this measure on the part of some of the churches, but it was generally accepted because all the land taken was to be paid for on the basis of pre-war values.

CONDITIONS AT THE CLOSE OF THE YEAR. Early in December a bomb explosion in the Rumanian senate was reported, resulting in the death of two prelates, a general and several others. At the same time it was said that the prisons were full of political suspects and that martial law had been established. Economic conditions were reported to be serious and though Rumania had long been known as the granary of the Balkans it was said that she had not sufficient foodstuffs for her own need, owing especially to the falling off in production after the division of the land estates into small peasant holdings. In the outlying parts of the territory which had formerly belonged to Russia and Austria-Hungary, conditions were reported to be worse than they had been under the old régimes. It was announced at the end of the year that the king had called to the colors a large number of troops and had militarized the railways. There were reports at that time that divisions of the Bolshevist army were on the Dniester front and it was believed that hostilities between the Rumanians and the Bolshevists would soon break out. The im-

mediate cause was the question of Bessarabia, which was still claimed by the Russian government.

On August 22-23, the crown prince, Carol, was received with public honors in the City of New York during a visit to the United States.

RUMANIAN. See PHILOLOGY.

RURAL POPULATION. See AGRICULTURE.

RUSSELL, Sir EDWARD, (LORD RUSSELL OF LIVERPOOL). British journalist, died at Liverpool on February 20. He was born in 1834 and after serving in minor capacities as a newspaper man, became editor of the Liverpool *Daily Post* which office he held for 40 years. In 1885 he became a member of Parliament, but retired after two years service. He was knighted by Mr. Gladstone in 1893 and was created a baron in 1919. His editorship of the *Daily Post* was remarkably successful. He was intimate with many of the prominent statesmen of the time, including Mr. Gladstone, Mr. Chamberlain, and Lord Roseberry, with whom he corresponded and he was also well acquainted with the great personalities of the theatre. He wrote much on the drama and was one of the first critics to recognize the merits of Sir Henry Irving. He wrote besides a volume of reminiscences and many pamphlets on Shakespearian and other literary subjects, *An Editor's Sermons* (1901); *Arrested Fugitives* (1912); and *A Speculation on Hypothesis in Religion* (1915).

RUSSELL, Sir THOMAS WALLACE. British civil servant, died, May 2. He was born in Scotland, Feb. 28, 1841, and from 1864 to 1862 interested himself in temperance propaganda. In 1894 he was one of the chief promoters of the Land Acts' Committee, and was the founder of the new land movement in Ulster. He was member of Parliament from Ireland from 1886 to 1911, and from 1907 to 1916 he was Vice-President of the department of agriculture and technical instruction for Ireland. He wrote: *Ireland and the Empire: A Review* (1890-1900); and *The Irish Land Question Up-to-date*.

RUSSELL SAGE FOUNDATION. This foundation was organized in 1907 for the improvement of social and living conditions in the United States. The endowment, about \$15,000,000, was given by Mrs. Russell Sage in memory of her husband. The Foundation is primarily an educational institution. It does not attempt to relieve individual or family need or to duplicate the work of existing social agencies. It studies and interprets facts with regard to social conditions and methods of social work, makes this information available by publications, conferences, and other means of public education and seeks in various ways to stimulate community action for social betterment.

The departments with their directors are at present: Charity Organization, Mary E. Richmond, Child Helping, Hastings H. Hart; Education; Industrial Studies, Mary Van Kleeck; Publications, Frederick W. Jenkins; Remedial Loans, Statistics, Surveys and Exhibits, Shelby M. Harrison.

Following the digest of American Marriage Laws, published in 1919, the Charity Organization Department has begun an extensive study of the administration of laws, in selected states having sharply contrasted marriage laws. New and important material has already been collected and it is expected that when published the summary of facts will be of service to social

case work agencies, civic and legislative bodies, and others interested in the administration of marriage laws. Books in preparation include, *What is Social Case Work*, *Office Methods in Social Work*, and *The Social Case Work History*, by Ada Eliot Sheffield.

The Department has continued its work of teaching in the field of social case work. A four weeks Institute of Family Social Work for Students who wished to supplement practical experience in charity organization societies was held as well as a Conference of Case Work Supervisors from 12 cities. The Department conducted two exchanges made up of 40 charity organization societies which interchange their printed material and continued as agent for the Committee on Transportation of the National Conference of Social Work.

A comprehensive investigation of child welfare in the District of Columbia was made by C. Spencer Richardson, Associate Director of the Department of Child Helping. The organization, equipment, and administration of 28 institutions in the District was included as well as a study of legislation dealing with children. An investigation of child welfare work in Colorado was made by William H. Slingerland of the Department and published by a local committee. The book contains drafts of a Welfare and Supervision Bill for Children and a General Child Welfare Bill. The Department has continued its regular work of consultation with reference to organization, administration, and policies of institutions dealing with dependent, delinquent, and defective children and legislation in their behalf. The Department will soon undertake an intensive study of the organization and administration of institutions for juvenile delinquents with an analysis and comparative criticism of their work.

Two books were published by the Department of Education in 1920. *An Index Number for State School Systems*, by Leonard P. Ayres, offers a new educational measurement, worked out from official data, showing for each State the number of children attending school, the amount of training they secure, their progress, the amounts expended for buildings and supplies, the salaries paid teachers and other items. This index number which shows the general standing or efficiency of the school system was computed for each one of the 48 states at 10 year periods from 1890 to 1918. The book aroused considerable discussion and has served to greater interest in, and larger appropriations for education.

Trends of School Costs, by W. Randolph Burgess, is a reference book on school costs with data by which it is possible each year to compare the levels of teachers' salaries with the cost of living, and the wages of other workers, and to secure exact figures on tendencies in the cost of school buildings.

Scales by the Department of Education for measurement of spelling and writing ability have been followed by the Picture Supplement Scale to measure ability in silent reading.

In the Department of Statistics, which has worked in close cooperation with the Department of Education, an investigation of wage and price trends from 1820 to the present year has been conducted by Ralph G. Hurlin. A statistical study of the standard of living in this country during the past 50 years is in process. Other studies include salaries paid to college teachers

and expenditures by states for public health.

The chief work of the Department of Industrial Studies has been to carry forward a series of investigations which aims to present an accurate and impartial record of typical experiments in the United States in securing for workers a share in determining conditions of employment.

The Department of Recreation has worked in cooperation with the National Community Centre Association, the Recreation Committee of New York City, the Boy Scouts, Girl Scouts, Camp Fire Girls, National University Extension Association, and the New York Drama League to carry out its purpose which is that of aiding in constructive social organization of leisure time. Assistance in promoting better motion pictures, both for commercial purposes and for school, club, and army and navy service, has been continued.

Studies by the Department include State laws and city ordinances affecting public recreation, child welfare legislation in New York State and types of recreation administration in different cities. The Department has published *The Centre Gazette—1919-1920*, a pamphlet to acquaint superintendents of schools, school boards, and school principals with the developments in school centre activities and to aid in extending and standardizing the use of school buildings for community purposes other than regular school work. Other current publications are: *Sources of Information on Play and Recreation*, *Motion Pictures for Schools, Churches, Clubs, and Community Centres*; *Making Municipal Funds Go Further*, and *Contributions to Community Centre Progress*.

The Department of Remedial Loans has carried on its usual legislative work particularly in connection with the Uniform Small Loan Bill, which was considered, either for enactment or amendment, in Kentucky, Massachusetts, Georgia, Virginia, and New York. The Department is conducting an investigation of coöperative and non-coöperative organizations connected usually with industrial concerns to promote thrift or provide a means for securing provident loans.

The Department of Surveys and Exhibits has continued its work of studying and developing the social survey and exhibit as a factor in community improvement. It has conducted an advisory service, making plans for and assisting in local surveys and exhibits and has carried on studies and experiments in methods and technique. Recent publications are: *Traveling Publicity Campaigns*, by Mary S. Routzahn, a book describing various recent efforts to spread information on social questions through the media of railroad cars and trains, trolley cars, automobile and motor trucks. It gives accounts, with illustrations of 75 such tours, with a discussion of factors entering into the success of an educational tour; *Social Conditions in an American City*, a summary of the findings of the survey of Springfield, Ill., by Shelby M. Harrison; *The Health Show Comes to Town*, by E. G. Routzahn, the story of Dr. W. W. Peter's educational health campaign in China, and *Elements of a Social Publicity Programme* a paper by E. G. Routzahn before the National Conference of Social Work in New Orleans.

Studies in process or ready for publication include, "Public Employment," "Social Welfare and Educational Publicity," "Arts and Crafts

of the Homelands," by Allen Eaton; the *Social Survey Handbook*, and the "Survey Bibliography and Source Book."

Advisory work by the Department has been given in many states, in Canada, China, India, Japan, Cuba, Russia, Sweden, Turkey, Serbia, Uruguay, and Argentina.

The Foundation has in press a volume by the late John C. Campbell, formerly director of the Southern Highland Division, entitled *The Southern Highlander and His Homeland*. It represents the experience of one who spent 25 years in the service of the mountain people in the South.

A free public library containing about 20,000 books and 56,000 pamphlets on social problems, is maintained by the Foundation. Recent bibliographical bulletins published by the Library are: *Thrift and Savings, Industrial Relations, Industrial Hygiene, Family Budgets, Industrial Pensions, Southern Highlands and Books on Social Subjects*, published in 1919. There is also in press a volume on *Social Workers' Guide to the Serial Publications of Representative Social Agencies*, listing approximately 4000 institutions, arranged by subject and title. Librarian and Director of Publications, Frederick W. Jenkins.

The trustees of the Foundation are: Robert W. de Forest, President; Mrs. William B. Rice, Vice-President; Charles D. Norton, John H. Finley, Louisa Lee Schuyler, Mrs. Finley J. Shepard, Alfred T. White, and John M. Glenn, who is also General Director of the Foundation.

Headquarters are at 130 East 22nd St., New York City.

RUSSIA. A republic officially entitled the Russian Federative Republic, stretching over a vast area in eastern Europe and Northern Asia; its boundaries at the close of the year were still unsettled being in dispute with the various states that had separated from old Russia. These states, formerly comprised within the Russian Empire, had formed the following independent republics, some of which were still struggling for existence at the close of the year: Finland, Esthonia, Latvia, Lithuania, Poland, Georgia, Azernaijan, Armenia i.e., the Armenian Republic of Erivan, and Ukraine. (See the above titles, and see also below under *History*). Owing to the confused conditions and the difficulty of distinguishing between fact and propaganda, exact information as to Russian population, production and commerce, etc., in 1920 was not available and the description given below is a summary of pre-war data which will be found in detail in preceding **YEAR BOOKS**.

AREA AND POPULATION. The area of the old Empire after the treaty of Portsmouth was 8,417,118 square miles; and the population in 1915 was given at 182,182,600. Official figures given out by the Soviet government in 1919 indicated that the population under the control of the Soviets in that year numbered about 86,000,000. The figures of the Central Statistical Committee for 1915, omitting Poland and Finland, gave the area and population as follows:

	Area Squ. Mi.	Population
European Russia.....	1,867,737	131,796,800
Caucasus	181,173	13,229,100
Siberia	4,831,882	10,377,900
Central Asia	1,366,832	11,254,100

The same source gave the ethnical division of these regions, omitting Poland, as follows:

Aryans	92,209,909
Jews	3,803,011
Uralo-Altayans	17,656,108
Georgians	1,352,496
Other Caucasians	1,091,756
Chinese, Japanese, and Koreans.....	86,113
Hyperboreans	33,602
All others	4,773

Immigration to the United States from Russia reached its highest point in 1913, when it stood 291,040 but fell to 78,242 in 1916 and in succeeding years was as follows: 1917, 12,716; 1918, 4252; 1919, 1403; 1920, 2378. The total immigration from Russia to the United States from 1820 to the beginning of 1920, was 3,311,406. In 1915 Petrograd had a population of 2,318,645 and Moscow, 1,817,100. Reports after the revolution indicated a great decrease in the population of both, especially of Petrograd. In 1919 the population of Moscow was given at about 1,121,000.

RELIGION. After the Bolshevik revolution in 1917 the state church was disestablished, and its territory appropriated by the government, and freedom of religion was declared. The state church was the so-called orthodox or Græco-Russian faith, with an independent synod, but in relations with the four patriarchs of Jerusalem, Alexandria, Antioch, and Constantinople. The census of 1897 gave the adherents of the Orthodox church at 87,123,604.

EDUCATION. By decree of Dec. 28, 1917, the Soviet government secularized all educational institutions. Elementary education is ill provided for, for although the Soviet government established an extensive school system, education suffered from the lack of trained teachers, and from the accounts of observers in 1920, reported conditions were still chaotic. There are universities at Petrograd, Moscow, Kiev, Kharkov, Kazan, Odessa, Dorpat, Saratov, Tomsk, and in 1917 a new one was established at Perm. A woman's university was established at Petrograd in 1916; and later, universities were established at Voronesh and Yalta, and a school of technology at Ivanov-Vosnesjensk. In 1913 the figures indicated that out of every 100 persons of the age of nine, only 27 were able to read and write. Figures of 1919 gave the number of scholars exclusive of Finland as 8,038,109 or 49.9 per 1000 inhabitants.

PRODUCTION. The country is almost exclusively agricultural, but the chief cereal crops are grown successfully only in the southern sections and to some extent in Siberia. The chief products, have been grain, eggs, butter, timber, mineral oils, flax, and hemp. Figures indicating the decline of the cultivated area comprised within Soviet Russia were published as follows: Cereals (1915) 231,574,000 acres; (1918) 62,890,412 acres; potatoes (1917) 7,514,000 acres. In 1918 cereals harvested in millions of pounds were as follows: Rye, 640; wheat, 71; pulse, 64; buckwheat, 23; potatoes, 515; oats, 336; barley, 46. In 1915 the annual yield of tobacco in tons was given at 122,000. See **AGRICULTURE**. The forest area is enormous and the state owns 950,500,000 acres. There are resources of coal, iron, gold, asbestos and other minerals. It is estimated that 90 per cent of the world's platinum is produced in the Ural region. A

report by French specialists on the subject of the coal situation in Russia in 1920 presented the following points: Between 1916 and 1920 there was a falling off of 687,565,000 pounds or 77 per cent and the extraction in 1920 was about 10 per cent less than that of 1919. This involved also a very heavy falling off in the average individual production. The condition of the mines was not so bad as might have been supposed. The machinery seemed to be intact and although some pits had been flooded the Moscow government had succeeded in draining them. In short, the Soviet government while keeping the instruments of production, seemed unable to overcome the difficulties caused by shortage of labor and of technical skill. See INTERNATIONAL COÖPERATIVE ALLIANCE.

COMMERCE. In 1917 the trade of the United States with Russia totalled \$438,323,202. In the calendar year, 1920, the imports from the United States into Russia in Europe were valued at \$15,446,832, and the exports to the United States from Russia in Europe, \$13,280,886; and the exports from Russia in Asia to the United States \$10,655,196. The figures for the calendar year 1919 were as follows: Exports from Russia in Europe to the United States \$30,259,745; imports to Russia in Europe from the United States \$2,953,480; imports from the United States to Russia in Asia, \$52,176,440; exports from Russia in Asia to the United States \$10,655,196. The trade with Great Britain was as follows for 1918 and 1919 in thousands of pounds sterling:

	1918	1919
Imports from Russia into U. Kingdom.	6,711	16,678
Exports to Russia from U. Kingdom...	298	12,764

According to estimates of the National City Bank of New York City the exports from Russia to Great Britain in 1920 amounted to £34,000,000.

Figures for the total trade were not available for a later period than those given in the preceding YEAR BOOK, but for convenience, the following table may be repeated showing exports and imports from 1913 to 1916:

Year	Imports Roubles	Exports Roubles
1913.....	707,627,000	782,869,000
1914.....	565,466,000	492,386,000
1915.....	586,360,000	206,945,000
1916.....	550,000,000	201,000,000

A writer for an official organ of the government toward the close of the year criticized the policy pursued in regard to foreign trade especially for the lack of a well-conceived plan of operation. When the frontiers were at length partially opened to trade, he said, the foreign trade department of the government was wholly unprepared. He instanced as showing the lack of efficient provision for real needs, the importation of large quantities of children's toy shovels at a time when Russia was suffering for the lack of technical equipment, etc., and he concluding that under existing conditions and in view of the scarcity in all fields of industrial and personal consumption, it would be necessary even to export what Russia needed for its own consumption, merely in order to buy in exchange that which was needed more.

FINANCE. The budget estimate of 1919 was as follows: Revenue 48,000,000,000 rubles; expenditure 230,000,000,000 rubles. The cost of the war according to Russian estimates published at the beginning of 1920 was 50,599,275,699 rubles. French authorities made the following report in 1920 in regard to the Russian debt: At the time when the regular government at Moscow had disappeared the Russian debt exceeded 44,000,000,000 rubles or 117,000,000,000 francs of which 11,520,000,000 rubles (30,640,000,000 francs) was foreign debt and 4,175,000,000 was held by investors who had subscribed for loans before the war. Of the total, France had supplied about 4,300,000,000 of which 1,300,000,000 had been advanced by the state. The French credit in Russia in 1920 accordingly, amounted to about 13,540,000,000 francs, of which about 10,000,000,000 were loaned by private citizens. This situation explained in part why public opinion in France was so disturbed about Bolshevism in Russia.

There was no faith in the intention or the ability of the Soviet government to respect these obligations. In France, however, it was pointed out by certain writers that this was not the debt exclusively of the Soviet government but should be proportionately borne by the states that had formed part of Russia when the debt was incurred, and in certain quarters the French government was criticized for not having made this clear at the time when it recognized the states of Poland, Lithuania, Esthonia, and Latvia.

THE BALTIC PROVINCES. The so-called Baltic Provinces of Esthonia, Livonia and Courland are bounded on the west by the Baltic Sea, on the south by the governments of Kovno, and Vitebsk, on the east by the River Peipus and the governments of Petrograd and Pskov, and on the north by the Gulf of Finland; in 1920 they were all within the limit of the two republics of Esthonia and Latvia. (See articles under these heads). The following information in regard to both was derived from a special report under the United States Bureau of Foreign and Domestic Commerce, Dec. 30, 1920, which supplied from Russian sources diverse material heretofore not accessible in English.

ESTHONIA. In addition to the former Russian government in Esthonia and the northern part of Livonia, Esthonia claimed the islands of Moon Sound and certain districts in the Pskov and Petrograd government. The interests are largely agricultural though to a less extent than those of Latvia as the region is not so rich in soil or in forests and is not so well supplied with communications. In 1919 it was necessary to import grain and a normal crop was not expected in 1920. The principal crops with their product in metric tons in 1919 were: Barley, 104,000; oats, 113,500; potatoes, 550,000; rye, 127,000; wheat, 12,000. Flax, a monopoly of the government, had declined greatly since 1917. Live stock had also been reduced. The figures for 1920 were as follows: Cattle, 404,237; goats, 1,235,932; sheep, 421,103; pigs, 245,991; and horses, 164,601. In 1920 there was reported a dearth in every kind of vegetable with the exception of potatoes. Manufacturing establishments were suffering for lack of fuel and skilled workmen. The budget for 1920 was as follows: Ordinary expenses, 979,450,000 marks; total income 1,071,500,000 marks. Figures for extraordinary expenditures were unavailable.

The chief sources of revenue were the tax on matches, cigarettes, tobacco, and yeast; monopoly of spirits and alcohol; railroads and postal service. The military expenditures in 1919 were by far the heaviest, war expenditures amounting to over five-sevenths of the total. The country had been obliged to meet its obligations by constantly issuing paper money. Little aid for the war expenses was secured by means of loans. The deficit in 1919 was 1,500,000,000 marks which rendered the mark practically valueless and a further deficit of between 2,000,000,000 and 2,500,000,000 was indicated by the 1920 budget. Down to 1919, Estonia had received the following foreign loans: From Finland, 20,000,000 Finnish marks, against future delivery of flax, of which the greater portion had been delivered; England, £300,000 in seed and foodstuffs; United States, \$12,500,000 in foodstuffs and raw materials. Transport facilities as reported in 1920 fell far below the requirements of the country. The country is capable of exporting: Wood, flax, potatoes, alcohol, paper, and cloth. The imports needed include: Raw materials, agricultural machinery, fodder and fertilizers.

LATVIA. In addition to the government of Courland and the southern part of the government of Livonia, the Latvian republic claimed three districts of Vitebsk and regions in the governments of Grodno and Pskov and in East Prussia. The basis of economical life is agriculture and forestry, both of which have received the special attention of the government. The largest estates belong almost exclusively to the Baltic nobles, but the estates of southern Livonia were confiscated in the spring of 1919 and placed under the direction of economic committees. The same thing was done in Courland. Many landowners declared their willingness to sell such parts of their estates as could be taken care of by the purchasers during a period of six years. In the districts claimed by Latvia in Vitebsk, the average estates were mostly in the hands of small landowners.

Crops for the main part of the country, that is to say excluding the Vitebsk districts, in 1919, along with the area planted in hectares were as follows: Oats, 189,311; rye, 115,950; barley, 69,851; potatoes, 24,899; flax, 13,123; wheat, 12,525. The following table shows the value of exports and imports according to the countries during the last half of 1919:

Countries	Imports	Exports
	Lettish Roubles	Lettish Roubles
England	2,500,000	27,600,000
France	24,200,000	5,600,000
Netherlands	5,100,000	3,700,000
Belgium	2,800,000
Sweden	16,400,000	500,000
Denmark	13,300,000	400,000

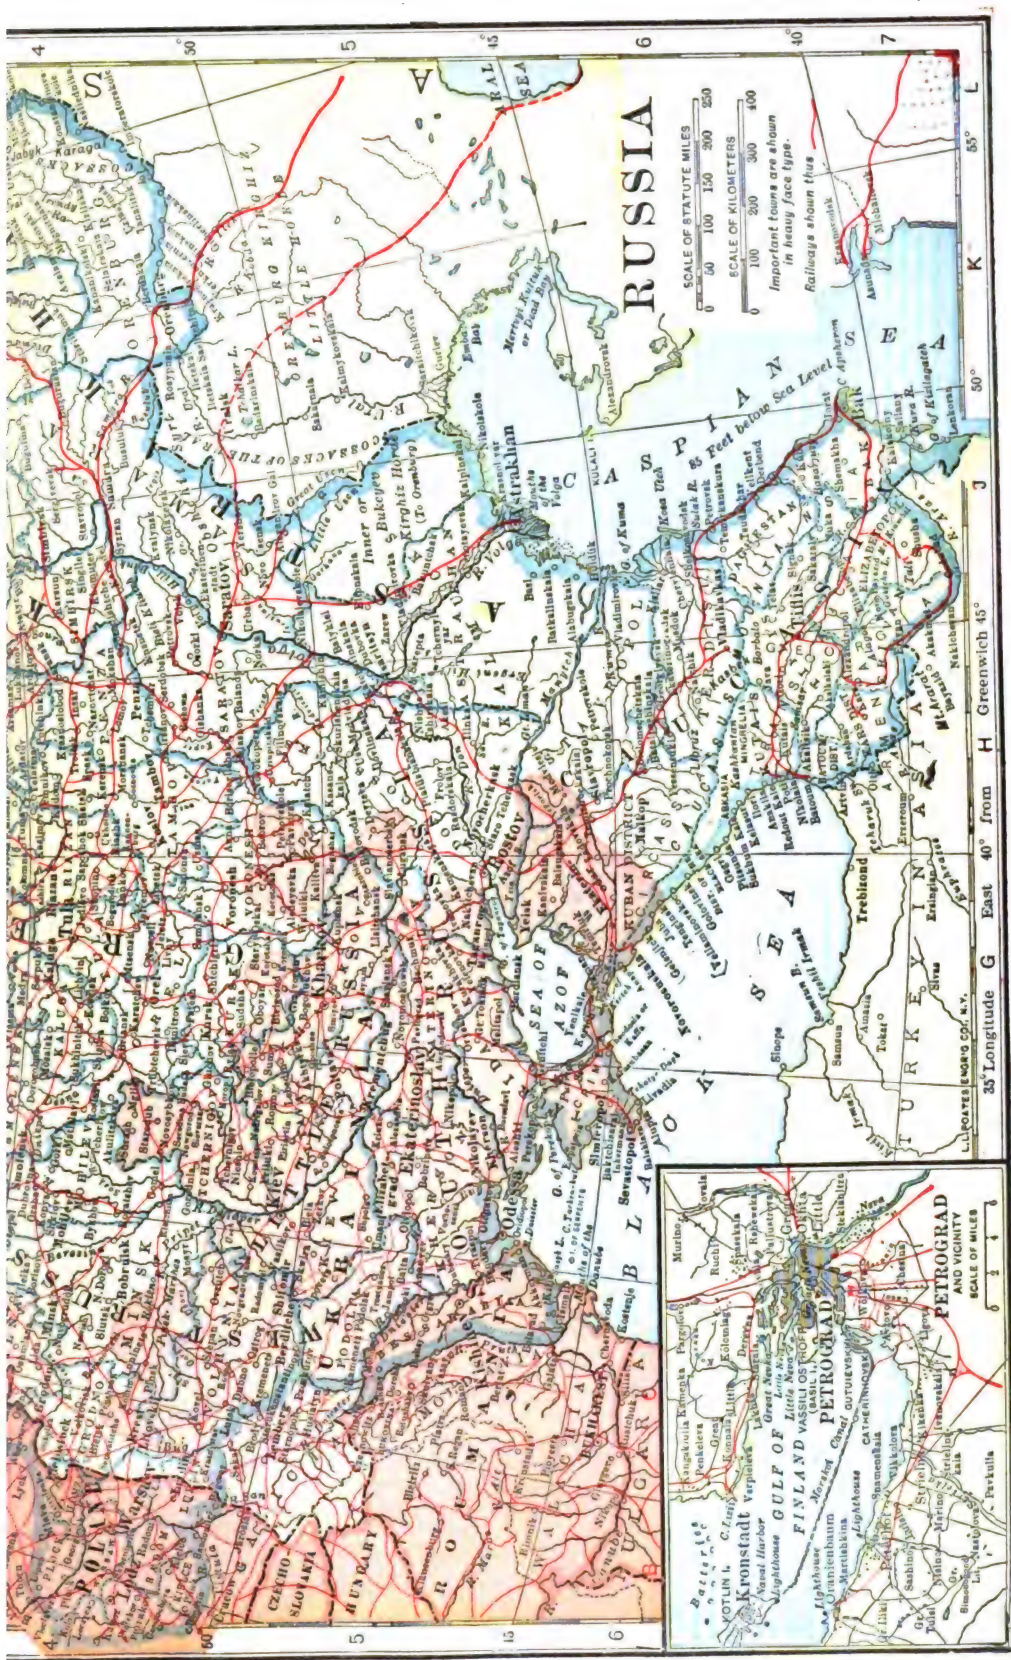

The following financial measures were proposed by the Finance Minister, in 1920: A direct income tax, the rates of which had not been determined; a tax on capital; readjusted taxes on stocks of merchandise, trade, and communication, since the railroads, posts, and telegraphs were yielding practically no revenue; increased inheritance taxes; and a revised system of indirect taxes. Government monopolies were proposed of wines and spirits, matches, and petroleum, and possibly also of tobacco, coffee,

tea, etc. These measures, it was hoped, would provide for the ordinary expenses of the government.

DEFENSE. The Soviet government by decree of Feb. 1, 1918 established the workers' and peasants' army of volunteers which was joined either voluntarily or under compulsion by officers of the old army and which steadily improved in organization and discipline in the course of the conflicts with internal and foreign enemies of the Bolsheviks. By January 31, 1920 when the Russian forces were in control of almost all European Russia and as far east as Lake Baikal in Siberia their field strength was estimated about 600,000 men with a reserve force including administrative services amounted to an additional 700,000. The forces were divided into 13 armies of which 5 were at that time on the eastern front, for the most part in Siberia; 5 on the southern front; and 3 on the northern and western fronts. Forces of about 60,000, chiefly composed of Austrian war prisoners, were distributed in the Near East, along the Prussian frontier, and in the neighborhood of Bokhara and Taskhurd. During the revolution the Baltic fleet fell into the hands of the Bolsheviks. A part of the Black Sea fleet offered resistance to the Bolshevik government on account of the dissatisfaction with the terms of the treaty of Brest-Litovsk and some smaller vessels and one battleship were lost. In June, 1918 the vessels returned to Sebastopol. The Baltic fleet was attacked in August, 1919 by officers of the British fleet and a number of smaller vessels and 2 battleships were destroyed. No figures showing the exact strength of the fleet were available and the details pertaining to the period before the revolution will be found in preceding YEAR BOOKS.

GOVERNMENT The Russian republic is a Federal, Socialist community government under the constitution published July 19, 1918, which was adopted by the fifth All-Russian Soviet Congress. The main features in the constitution are as follows: All central and local authority vested in Soviets of workers, soldiers, and peasant delegates; all private property abolished and become the common possession of the people; state ownership of mines, factories and all other means of production and transport; universal obligation to labor; freedom of conscience, opinion, the press, and meeting; compulsory and universal military service, with the reservation that the defense of the revolution by arms is incumbent only upon the laboring classes. In respect to powers whether executive or judicial the centre and source is the All-Russian Congress of Soviets, consisting of representatives from the town Soviets on the basis of one delegate for 25,000 electors and from provisional congresses of Soviets on the basis of one delegate for 125,000 inhabitants. This congress elects an All-Russian Central Executive Committee of not more than 200 members which serves as the supreme executive, legislative, and administrative body and which constitutes the so-called "Council of People's Commissioners," consisting of 18 members, for departments of foreign affairs, war, navy, interior, justice, labor, social relief, finance, etc. The three chief commissioners in 1919 and 1920 were: President of the Council, M. Lenin (Vladimir Ilitch Ulianov-Lenin); Military Affairs and Navy, M. Leo Trotsky; Foreign Affairs, M. Tchitcherin.

HISTORY

FAILURE OF ANTI-BOLSHEVIST CAMPAIGNS. The downfall of the Anti-Bolshevik leaders in Russia who figured in 1919, was indicated in the preceding YEAR BOOK, though it was not at that time complete. Early in the year the overthrow of Admiral Kolchak (q.v.), who had been defeated in the preceding year was completed and he was executed, February 7. The rout of Gen. Denikin, which began before the end of 1919, was completed early in 1920. By the beginning of the year, the Bolsheviks had captured the city of Ekaterinoslav, and were holding the Donetz coal basin. During the winter months, Denikin's forces were completely demoralized and in the spring, he fled to Constantinople, whence he embarked for England on a British warship, April 8. Semenov, the successor to Kolchak was unable to offer any effective resistance. General Yudenitch in the northwest, had completely failed before the close of 1919, and at the beginning of 1920 the northwestern government which was believed by the British interventionists to be a bulwark against Bolshevism, ceased to be of any importance. On the west there remained the Poles and in the south the forces of General Wrangel, both of which were ready to take the aggressive. In the spring the Polish forces entered the Ukraine and captured the city of Kiev against the advice which had been given to them by the British government. The Soviet forces quickly rallied and drove the Polish army back. For an account of the Soviet invasion of Poland, its failure, and the resulting Treaty, see WAR OF THE NATIONS; see also POLAND. By the first of April 20,000 Czechs had already sailed from Vladivostok. To the west of that city there still remained a considerable number of them and further to the west there were some 2000 Serbians and 2500 Rumanians. Poles to the number of about 2500 left Vladivostok early in April.

JAPAN AND SIBERIA. After the failure of Admiral Kolchak, Japan, declaring that she was defending her interests in the Far East and protecting Korea and her own country from Bolshevism, sent more troops into Siberia, who by January 8, had penetrated as far as Lake Baikal, where they were stationed. After the American forces withdrew, a Japanese contingent seized Vladivostok (April 5). Meanwhile, additional forces were landed on the Siberian coast in February and March. While taking this action, Japanese government officials declared that the troops in Siberia were merely for the defense of Korea and Manchuria, and that Japan had no design of holding the occupied territory, or any other motive than the preservation of peace and order. By midsummer, it was reported that Japan had a force of about 100,000 men in Eastern Siberia.

ALLEGED DECLINE OF BOLSHEVIST POWER. From about the middle of the year there were constantly recurring reports of the approaching fall of the Soviet government in Russia. Similar reports, to be sure, had appeared at short intervals in the anti-Bolshevik press from the very moment of the accession of the Bolsheviks to power and it was found that in almost every case these predictions of disaster were simply due to the natural desire that these disasters should occur. In 1920, however, the reports became more circumstantial and what was more important, rested on the authority of apparently

impartial witnesses. It appeared that a large number of the officials had fled into Germany; also that a considerable amount of wealth had been invested by prominent Bolsheviks in foreign countries. Moreover the appeals to the workingmen of other countries to come to the aid of Russia were becoming more emphatic and assuming a tone of supplication. There were reports of a mutiny of marines at Petrograd, of a revolt of the peasants, of demonstrations among the Red troops on behalf of an immediate peace at any price. These things were attributed not only to the defeat of the Red armies on the Polish front and to the advance of General Wrangel in the south, but to the failure of the Bolshevik social experiments and the bankruptcy of the revolution itself. A notable feature of the commentaries on Bolshevism during the year was the change of attitude on the part of well-known and thorough-going Socialists who repeatedly pointed out the failure of the Bolsheviks to realize true Socialist aims. The most generally cited of these criticisms owing to the great attainments and fine character of the critic was the exposé by Mr. Bertrand Russell which he published in the British press after a visit to Russia. (See the article SOCIALISM.) In October the Soviet situation was described in the Allied press as follows: Repulsed on all its frontiers; incapable of organizing new armies or equipping the troops that remained; powerless to impose its authority on the masses of workingmen and peasants who now realized that they had been deceived; powerless also to alleviate the sufferings of the people or to end the civil war or to enter into relations with other Powers; the Soviet government was facing the severest winter that it had ever endured.

THE RECOGNITION OF WRANGEL. The French government recognized the government of General Wrangel, August 11. This course was much applauded in the press and high hopes were expressed of the success of the new aspirant. Ever since the revolution of 1917 every Anti-Bolshevik leader in Russia was hailed by those among the Allies who believed in intervention as the savior of Russia and certain to succeed. Detailed account of successive victories which in each case turned out to be more of the nature of defeats were given in the leading newspapers of France, England, and the United States. When one of the leaders was overthrown and disappeared the same policy in respect to the next was followed in the Allied press until his disappearance. The successive disappearances of Anti-Bolshevik chiefs came therefore somewhat as a surprise to the public at large, until they learned the habit of the newspapers in this particular. In every case the new leader was said to have learned from the faults of his predecessors and it was prophesied that he would overcome the Bolsheviks. After this had gone on during nearly two years without change and always with the same result, that is to say, after welcoming with the greatest of enthusiasm each new leader predicting his inevitable success and witnessing his failure, the same thing began all over again in the case of General Wrangel, the anti-Bolshevik chief of South Russia. In regard to General Wrangel it was said that his leadership differed from that of all his predecessors and that this time at all events success was assured. The following extract illustrates the point of view of the French sup-

porters of an aggressive policy against the Bolsheviks, representing a vast body of French writing on the subject:

"When the Russian patriots were beginning finally to lose faith in an early deliverance from the horrors of anarchy noble France boldly issued a courageous recognition of the government of General Wrangel in South Russia. The happy consequences which will result inevitably from this gesture of noble France are numberless. Carrying the sacred tricolor, General Wrangel and his companions in arms conscious of the powerful support of the French nation and aware that western Europe at least understands their aims and their aspirations, will continue with redoubled energy their obstinate struggle against the tyrants of their tortured nation. The fall of Bolshevism is not far away. The Bolshevik forces have already met with terrible disasters. Their Red army which had been maintained only by a monstrous and tyrannical discipline and by terror is demoralized by the events which caused its flight from Poland and if it does not turn against the Commissaries of the People it will at least be unable to serve any longer for the support of Bolshevism. The Bolsheviks cannot exist without an army. The armies of Wrangel pursue their glorious course. His proclamation to the effect that the peasants would not be disturbed in the possession of the land is winning the support of the country. The recognition by France is encouraging the masses. These three powerful forces will soon deliver Russia and the entire world from the horrors of violence and anarchy."

OVERTHROW OF GENERAL WRANGEL. Early in October General Wrangel's forces attempted an advance against the Soviet troops and attacked the Kakhova bridgehead on the Dnieper river, but it was announced October 17th that they were not only repulsed but were retreating in great disorder. The general in command of the Kuban division was killed and there were heavy losses of men and munitions. At the same time it was reported that General Wrangel had signed a law creating local Zemstvos, which were to send delegates to a new Constituent Assembly.

Throughout October and the early part of November reports of reverses continued. It was learned that the French Government was firm in its determination not to send military assistance to him. On November 10, it was learned that Gen. Wrangel's forces were in full retreat toward their main defense line having abandoned their entire first line of defense before Perekop. At the same time it was reported that the Russian forces had captured two regiments of cavalry. It was announced on November 14 that the army of General Wrangel had been destroyed and many prisoners taken, and that a number of his generals had committed suicide. The battle occurred in the neighborhood of Perekop. Twenty divisions of the Reds were said to have been concentrated here against three divisions of the White army and in spite of the obstinate resistance of the latter it was cut to pieces. The Bolsheviks claimed to have taken 40,000 prisoners and admitted the loss of 30,000 men. It was reported in the press at the same time, that General Wrangel had left Russia on board a French battleship in Sebastopol.

The Soviet forces entered Sebastopol on November 13. The fate of these refugees who were said to number about 40,000, caused much anxiety to the relief officials, especially to the American relief workers upon whom the majority depended. Large numbers of them were received on board the Allied warships in the harbor, but many were left behind. According to the supporters of General Wrangel, there were five Red armies concentrated against him, numbering more than 100,000 men.

The disaster was attributed to the same causes that had ruined Kolchak, Denikin, and Yudenich, as had ruined Kolchak, Denikin, and Yudenich,

namely, corruption, incompetency, and jealousy among the officials, and reaction. When he occupied the Faurida province, he was overwhelmed by a vast number of supporters of the old regime and while the soldiers went unclothed and lacked munitions there were many signs of wealth among civilians in the rear. The attempt of the Czarists to make use of Wrangel damaged his cause. As a result of these attempts the rumor was circulated that the Grand Duke Michael would be chosen Czar. The immediate cause of his defeat, however, was the Riga armistice between the Poles and Russians which set free the Soviet troops in the Crimea.

The French press whose sanguine expectations in respect to General Wrangel, have been quoted above, commented on the disaster without much reference to what had been said before. They declared that the disaster was inevitable; that General Wrangel lacked munitions and supplies; that the allies of France had failed in their duty and ought to have come to his aid against the Red terror; that France alone had been disposed to aid him as she aided Pilsudski, but her resources did not admit of supplying the necessary means. If the indifference of her allies should result in another war in the spring, France, at least, would not be responsible. Such a renewal of the war against Poland was in the opinion of French writers who supported the policy of their government, highly probable. The Paris Temps published the following comments:

"If the Bolshevik regime does not fall this winter at Moscow, war will begin again at an early date and in view of this, it is the duty of the Polish people to prepare themselves deliberately for all the events of tomorrow, just as it is the duty of the Allies to give effective aid to Poland, who is the last rampart of central and western Europe against the monstrous Red wave of Russian anarchy."

BOLSHEVIST GOVERNMENT. The reports of events in Russia throughout the year were at the mercy of two opposing streams of propaganda and it was difficult to disentangle the facts. According to reports the policy of terrorism came to an end in January. On January 21st the death penalty was abolished. About that time it was reported that a certain measure of liberty of the press and of speech had been granted and that the government was doing all that was possible to maintain order; also that elaborate plans for popular education were being carried out, and a liberal programme of social legislation. Other changes announced were the recognition of complete equality before the law for men and women and the removal of obstacles to marriage, such as differences in religious faith, in the new marriage code. The code involved also provision that only civil marriages were legal and that divorces could be obtained on the desire of either one or both of the parties. The labor policy of the government encouraged all persons to join the trades unions which were under direct government control and had certain civic functions, exercised through a labor commissary, including the making of reports on sanitary conditions and the registering of persons out of work. All labor was compulsory and a system of rationing prevailed. The disbanded troops of the army were re-organized into industrial armies and measures were taken toward conscripting the labor of all able-bodied persons between the ages of 16 and 50 for males and 16 and 45 for females. Reports of conditions of distress continued throughout the year. A striking feature of the published descriptions

of the Soviet system in 1920 was the testimony from many persons sympathetic with Socialism and even with the most radical forms of it, all to the effect that the conditions under the Soviet government in Russia were intolerable; but while agreed in this, they differed in respect to the responsibility of the Soviet government for these conditions and in respect to the policy that the other Powers should pursue. Many agreed with the Bolsheviks themselves that the distress was rather the result of the complete collapse of Russia during the war than of Soviet misrule. The Bolsheviks attributed all evils to the Allied policy and especially to the blockade. The subject was one that involved international relations and appeared under different aspects according to the point of view of the ruling classes in the nation whose interests were involved. For further discussion see the article WAR OF THE NATIONS.

RELATIONS WITH THE POWERS. The year began with indications of a complete reversal of policy on the part of the Allies in respect to the blockade. At the Supreme Council in Paris after a long debate, it was decided on January 15, to lift the blockade immediately, with a view to permitting trade relations with the Russian coöperative societies, but without recognizing the central government. This policy proved of no avail, for the Moscow government refused to accept a resumption of trade with these individual co-operative societies and it was reported soon afterwards, that the Soviet government had assumed direct control of the co-operatives and that from February 1 they were under the direction of commissaries, acting for the Moscow government. Thus, the latter took the stand that trade relations if resumed, must be with the government. In France opinion began to incline toward the renewal of trade relations, but there was a strong feeling against any measure that implied recognition of the Soviet government. The prime minister, M. Millerand, repeated before the Chamber of Deputies, February 6, his previous opinion that trade with Russia did not involve peace with the Bolsheviks. The British prime minister, Lloyd George, made the same point in a speech in the House of Commons, February 10, saying that peace with the Soviet government was impossible until they gave some better proof of being fit to govern Russia in a civilized manner. He contended that the best way to restore the Russian people to sanity was to open trade with them. The Supreme Economic Council, February 24, repeated a decision previously reached, to encourage trade between Russia and other countries, but without recognizing the Russian government. Among the efforts on the part of Russia to secure peace with the other Powers, was a proposal announced February 26th to all the Powers including Japan that the Soviet government should pledge itself to a constituent assembly and that in return the policy of intervention should be given up, peace treaties signed, trade relations resumed and credits advanced. On the following day a note from the American State Department called this proposal merely a matter of propaganda differing in no way from preceding proposals. Efforts to secure peace with France encountered an obstacle in the fear of French creditors that the Bolsheviks would repudiate the debt of 26,000,000,000 francs owed to France by the old Russian gov-

ernment. During the remainder of the year the policy of the Soviet government limited its efforts for the most part to securing the resumption of trade relations, believing that political recognition would follow.

In March a Russian delegation was appointed under M. Gregory Krassin, Soviet minister of trade and commerce and M. Kamenef, to proceed to England, for the discussion of trade relations. The San Remo Conference authorized the Allied representatives to meet this delegation, and meetings were held at the end of May and early in June. On June 3, Lloyd George declared that there could be no resumption of trade until the Soviet government gave guarantees that it would cease attacking British interests, and he demanded further, the release of all British prisoners. Negotiations on these points were carried on in the summer months. Meanwhile, the Soviet government was trying to solve the question of trade by other means, and approaching other governments. A delegation was sent to Copenhagen in April, for example, and agreement for the resumption of trade was made with certain international associations. These were also under the direction of M. Krassin, who endeavored to come to an understanding with the so-called International Committee on the resumption of trade with Russia. In the United States business men formed the American Commercial Association to promote trade with Russia. At a meeting for this purpose in New York City, over 100 representatives of business firms were present.

At the beginning of October the situation of the Soviet government seemed precarious. Not only had it sustained an overwhelming defeat at the hands of Poland, but it had made little progress in its efforts to renew relations with foreign Powers. The governments of France and United States were openly hostile, both of them accusing the Moscow government of lying and deceit. In Great Britain, trade discussions had been carried on with the Russian representatives, Kamenef and Krassin, but upon the charge that the former was inciting a Bolshevik movement in England, he was compelled to leave the country. (See GREAT BRITAIN, *History*.) Discussions with Krassin were resumed after an interval but in the autumn the relations between the two governments were complicated by difficulties over the question of the British prisoners of war. The British government accused the Russians of violating the terms they had accepted in July in respect to prisoners and in respect to propaganda. On October 6, M. Krassin replied that Great Britain had not fulfilled her part of the conditions, but on the other hand had helped the enemies of the Soviets, as for example, in the support of Poland against Russia and the official reception accorded to General Wrangel on a flagship of the British Black Sea fleet and the opportunity allowed to him to purchase through his agents supplies in England and send them to southern Russia. Further notes followed on the subject and charges and counter-charges were made. The British government accused the Soviet government of a campaign of propaganda and conspiracy against the British power in Asia and declared that it would hold the Soviet government strictly to its pledge to cease propaganda against British interests. France also was at odds at this time with the Soviet government

over the question of war prisoners. On August 24 the French prime minister had telegraphed the Russian government that if on September 30 a single Frenchman was held in Russia the French government would order its fleet into southern Russian waters. The French charged the Soviet government with holding 900 French citizens against their will. The British government also protested against the employment of Bolshevik submarines in the Black Sea (October 2). In southern Russia and the Ukraine in the autumn, conditions were reported as highly adverse to the Bolshevik cause. During this period General Wrangel's movement was still at the stage when the Allied press was reporting its successes.

Down to November the question of renewing trade relations with Russia divided the policy of the Allies. In general Great Britain and Italy were in favor of it while France was strongly opposed and the United States officially opposed, although the movement in its favor was gathering strength throughout this country. On November 25, a change in the policy of France was indicated. The French prime minister informed the committee on foreign relations of the Chamber of Deputies, November 24, that he favored the suppression of the blockade. He also said that as the Soviet government was actually in operation it had been decided to permit French traders and manufacturers to engage in business with Russia. It was said at that time also that the government was planning to encourage trade with Russia. In the United States private enterprise had already begun to move in the matter and a Mr. W. D. Vanderlip was the object of much attention in the press as the representative of an extensive American company organized to invest capital in Russia. It was reported that extensive concessions involving a large area of Kamchatka had been made to it and that the work of exploitation was soon to begin on an enormous scale. There was much alarm on the subject in the press on the part of those who did not favor recognition in any form, and a good deal was made of a passage quoted from a speech of Lenin to the effect that this concession was in the interest of the Soviet government, because it was likely to exasperate further the ill-feeling between the Japanese and the American government.

At the close of the year Lloyd George and the Russian envoy agreed upon an arrangement for the resumption of trade relations between Russia and Great Britain. They included besides commercial stipulations a demand that the Soviet government should refrain from propaganda in British India and the Far East directed against the British government. The preamble was as follows:

"Whereas it is desirable in the interest both of Russia and of the United Kingdom that peaceful trade and commerce should be resumed forthwith between these countries, and whereas for this purpose it is necessary pending the conclusion of a formal treaty between the Governments of these countries by which their permanent economic and political relations shall be regulated, that a preliminary agreement should be arrived at between the Government of the United Kingdom and the Russian Soviet Government."

"The aforesaid parties have accordingly entered into the following agreement, without prejudice to the view which either of them may hold as to the legal status of the other, and subject always to the fulfillment of the conditions specified in the British note dated June 30, 1920, and accepted in the telegram from the Russian Soviet Government dated July 7, 1920, with regard to the mutual cessation of hostilities and propaganda di-

rected against the institutions or interests of the other party, and the repatriation of prisoners."

At the close of the year it was understood that the British government was willing to waive the payment of debts incurred by Russia to Great Britain during and before the war.

In Russia proposals were under discussion at the close of the year which indicated a spirit of compromise and an abandonment for the present of attempts to extend communism throughout the state. The peasants whose possession of the land had for a long time been tacitly accepted, were according to this program, to have the right to sell their products, subject to a tax in kind. The coöperative societies were to regain their right to function within the national boundaries. Foreign capital was to be invited to exploit the country's national resources. The moderate element appeared to be getting control of the Communist party, and to realize that the application of its principles was impracticable. Hope of a world revolution had apparently departed, and the policy of foreign propaganda toward that end seemed likely to be abandoned.

RUTGERS COLLEGE. A non-sectarian institution of the higher learning for men and women, at New Brunswick, N. J., founded in 1766. There were 677 men and 133 women enrolled for the regular fall session, and 530 students for the summer session. Including the short courses, extension courses, etc., the student body numbered 1978, excluding duplicates. There were 138 members in the faculty. The income for the year was \$483,000. There were 106,000 volumes in the library. President, W. H. S. Demarest, D.D., LL.D.

RYAN, Sir CHARLES LISTER. Former Comptroller and Auditor-General in the British government, died, November 20. He was born at Worcester, England, Sept. 30, 1831. At the age of 20 he became a clerk in the audit office and was one of the private secretaries of Disraeli and also Gladstone.

RYE. As pointed out by provisional estimates of the International Institute of Agriculture, Rome, the area devoted to rye in the principal rye growing countries of the world in 1920 was under the acreage of 1919, but the production was still above the average for the five years 1914-1918. The 1920 production of rye in Belgium, Bulgaria, Spain, Finland, France, Italy, Netherlands, Sweden, and Switzerland was given as 142,348,000 bushels, or 112.6 per cent of the 1919 crop and 111.8 per cent of the 5-year average 1914-1918. The yield of Prussia was placed at 153,866,000 bushels, or 81.8 per cent of the crop of 1919. The Canadian yield of 1920 was estimated at 12,240,000 bushels, or 2,069,000 above the yield of the preceding year.

The United States, as estimated by the Department of Agriculture, produced 69,318,000 bushels on 5,043,000 acres, or at the rate of 13.7 bushels per acre. The production of 1919 was 88,909,000 bushels on 7,103,000 acres, or at the rate of 12.5 bushels per acre, while the average data for the five years 1914-1918 showed a yield of 59,933,000 bushels on 3,918,000 acres, or at the rate of 15.3 bushels per acre. The average farm value of rye Dec. 1, 1920, was \$1.278 per bushel, making the total value of the crop \$85,609,000 as compared with \$1.345 per bushel and a total value of \$119,595,000 on Dec. 1, 1919. The principal rye producing States are: North Dakota, Michigan, Wisconsin, Minnesota, and

Nebraska, which produced more than half of the total crop of 1919. The area sown to rye in the United States in the fall of 1920 was given at 4,653,000 acres, or 88.6 per cent of the acreage sown the preceding fall.

The exports of rye from the United States in the shipping season 1918-19 amounted to 40,386,000 bushels as against the average of 1,054,000 bushels for the five years ending 1914. In Europe rye culture decreased during the war, while in the United States and Canada it increased in the effort to furnish greater supplies of breadstuffs to the nations allied against the central European powers. Since the close of the war, marked reductions in the rye acreage in these countries have taken place. The international trade in rye has decreased considerably as compared with pre-war years as the greater portion of the exports at that time were from Germany, Hungary, and Russia.

RYKACHEV, M. A. See METEOROLOGY.

SACCARDO, PIER ANDREA. Italian botanist, died, February 12. He was born in 1855. He was for a long time director of the Botanical Garden at Padua, Italy, and at the time of his death was professor emeritus of botany in the Royal University of Padua. He edited *Sylloge Fungorum*.

SACRAMENTO, CAL. See WATER WORKS.

SAFETY AT SEA. During the fiscal year 1919-1920 according to the annual report of the Supervising Inspector-General of the United States Steamboat-Inspection Service, 368,870,327 passengers were carried on steam vessels required to report to the service, of which number 42 were lost, so that there were carried in safety 8,782,626 passengers for each one that perished. The total number of lives lost, that is including both passengers and crew was 470. The total number of accidents resulting in loss of life during the year was 192, or a decrease of two from the previous year. The more notable disasters to American shipping resulting in an unusual loss of life during the fiscal year July 1, 1919, to June 30, 1920, as recorded by the United States Steamboat-Inspection Service were as follows:

Sept. 9, 1919, at 11 A.M., en route from Antilla, Cuba, to New York, N. Y., the steamer *Corydon* sank during a hurricane in the Bahamas Channel, resulting in the loss of 27 lives.

Oct. 28, 1919, about 4.20 A.M., the steamer *Muskegon* struck the south pier at the entrance to Muskegon Harbor, during a gale and heavy sea, resulting in the total loss of vessel and the loss of 23 lives.

Nov. 9, 1919, steamer *Polar Land* sank in latitude 44° 25' N., longitude 57° 50' W., with all on board. The vessel carried a crew of 51.

About Nov. 11, 1919, steamer *John Owen* foundered while en route from Duluth, Minn., to Midland, Ontario, loaded with 100,000 bushels of grain. The entire crew, consisting of 22 persons, was lost.

Nov. 22, 1919, steamer *Myron*, while bound from Munising to Bay City, Mich., with the barge *Miztec* in tow, both laden with lumber, foundered when about 6 miles west of Whitefish Point, Lake Superior. Sixteen lives were lost in this accident.

Dec. 18, 1919, steamer *J. A. Chanslor* struck the rocks near Cape Blanco, Oreg., and was wrecked with a loss of 38 lives, the vessel becoming a total loss. The *J. A. Chanslor* was voyaging from Portland, Oreg., to San Francisco,

Cal., when she struck the rocks, broke in two, and sank.

Jan. 26, 1920, steamer *Mielero*, from Mantanzas, Cuba, to Philadelphia, Pa., in approximately latitude 31° 45' N. and longitude 78° 41' W., at 7 A. M., broke in half and sank within a half hour, after ending going first, and forward end following within a few minutes. The master, the master's wife, two children, and 18 others, officers and crew, lost their lives.

Jan. 29, 1920, steamer *Fortune* sailed from Newport News, Va., for a southern port, and was lost off Jekyll Island with all hands. The crew consisted of 13 men and no trace of the vessel was found.

Feb. 6, 1920, steamer *Polias*, Searsport, Me., to Norfolk, Va., in ballast. Struck Old Cillely Ledge during a snowstorm. The third mate and 10 others of the crew left the ship against the master's orders and were lost. On February 7 the rest of the crew left the vessel in the ship's boats and were towed to the cutter *Acushnet*.

March 14, 1920, towing steamer *Georges Creek*, with three barges en route from Norfolk, Va., to Boston, Mass., encountered heavy weather in Block Island Sound, and two of the barges were lost and five lives were destroyed.

April 18, 1920, steamer *Baltic* received an SOS message to the effect that the hatches of steamer *William O'Brien* were opened by the severe storm and the vessel was sinking in latitude of 39° 50' N., longitude 65° 50' W. A search was made and the remains of deck houses, cushions, and other small articles were found. Vessel carried a crew of 40, and all were lost. The *William O'Brien* sailed from New York, N. Y., for Rotterdam, Holland, April 15, 1920, with a cargo of coal.

The concrete ship *Cape Fear*, built during the war by the United States Shipping Board at Wilmington, N. C., was sunk on the night of October 29, in Narragansett Bay in a head-on collision with the Savannah Line steamer *City of Atlanta*. The *Cape Fear* was bound south out of Providence in ballast and the *City of Atlanta* north for Providence with a cargo of pig iron.

The concrete ship remained above water only a few minutes, but 23 of the 34 men of the crew of the sunken vessel were rescued.

The *Cape Fear* was 282 feet long overall, 46 feet beam, 28 feet depth, having a full cargo displacement of 6175 tons, a deadweight of 3257 tons.

DISASTERS ON THE GREAT LAKES. During 1920 there were eight vessel losses and 29 lives lost, in shipping disasters on the Great Lakes, against 19 vessel losses and 80 lives lost the preceding year. The 29 fatalities were the result of a collision on the night of August 20, when the steamer *Superior City* sank in Lake Superior off Whitefish Point, after a collision in a fog with the steamer *Willis L. King*.

The *Superior City* sank so quickly after the collision it was impossible to launch boats, according to the stories of the four survivors. One of those lost was a woman, wife of the second engineer.

Other Great Lakes vessels lost in 1920 were:

The *Mary A. McGregor*, fire; the *J. H. Shrigley*, abandoned; the *Marion*, fire; the *Sarmon*, sprang leak; the *Mary Woolson*, waterlogged; the *Miztec*, abandoned; the *Francis J. Widlar*, driven on rocks. The *Widlar* was driven on the rocks near Whitefish Point during a storm that swept the upper lakes in November. The rescue

of the crew was made after a most thrilling effort by Capt. Arthur Forbes, of Ashtabula, Ohio, in command of the *Widlar*, who set out in a small boat with a few men for the channel to bring help. The party reached the channel after battling the waves for about 10 miles, and rescue ships went to the wreck and saved all members of the crew. The *Widlar* was abandoned by her owners to the underwriters.

ST. CHRISTOPHER. See **ST. KITTS AND NEVIS**.

ST. HELENA. An island of volcanic origin in the South Atlantic, 1200 miles from the western coast of Africa; belonging to Great Britain. Area, 47,000 square miles; population (1911), 3520; estimated civil population (Jan. 1, 1919), 3654. Capital, Jamestown.

ST. JOHN'S COLLEGE. An institution of the higher learning at Annapolis, Md., founded in 1696. For the regular fall session of 1920 there were 178 students enrolled. The members of the faculty numbered 17. The library contained 15,000 volumes. The endowment funds amounted to \$20,000 and the income for the year was \$57,306. The college has been rated among the 10 "distinguished" colleges of the country by the War Department. President, Thomas Fell, Ph.D., LL.D., D.C.L.

ST. KITTS AND NEVIS. An administrative division of the Leeward Islands (q.v.), governed along with the island of Anguilla under a British administrator with an executive and a legislative council. Area of St. Kitts, 65 square miles; pop. (1911) 28,283; Nevis, 50 square miles, with a pop. of 4075. Chief town of St. Kitts, Basseterre (pop., 8159); of Nevis, Charlestown (1912). Administrator at the beginning of 1919, Major J. A. Burdon.

ST. LOUIS, MO. See **CITY PLANNING; GARBAGE**.

ST. LOUIS UNIVERSITY. A Roman Catholic institution of the higher learning at St. Louis, Mo., founded in 1829. There were 470 students enrolled for the summer session, and 1801 for the regular fall term. The faculty numbered 218. A campaign for \$3,000,000 was conducted as an endowment fund. Many substantial gifts were received, and over \$800,000 had been subscribed. There were 85,000 volumes in the library. The Knights of Columbus of Missouri pledged \$250,000 to the endowment campaign, and the two next highest gifts were anonymous. Mr. Edward R. Stettinius of New York gave \$50,000. President, V. Rev. William F. Robison, S.J.

ST. LUCIA. One of the Windward Islands in the West Indies; a British colony. Area, 233 square miles; population (1911) 487,637; estimated (1919) 54,989. Capital, Castries, a coaling station and naval base. The white inhabitants are for the most part French Creoles whose religion is Roman Catholic. The chief products are: Sugar, cocoa, lime juice, honey, molasses, lime oil, bay oil, hides, logwood, and fuel. Administrator and colonial secretary in 1920, Lieutenant-Colonel W. B. Davidson-Houston.

ST. PAUL, MINN. See **CITY PLANNING**.

SAINT PIERRE AND MIQUELON. The principal islands of two groups off the south coast of Newfoundland, belonging to France. Area of the groups 93 square miles of which 83 were in the Miquelon group; total population, 4652 (4209 in the Saint Pierre group). Chief town, Saint Pierre.

SAINT THOMAS. See **SAO THOMÉ AND PRINCIPE**.

SAINT VINCENT. One of the Windward Islands in the West Indies; a colony of Great Britain. Area, about 150 miles; population in 1911, 41,877; estimated in 1920, 53,210. Capital, Kingstown, with a population of 4300. One-half of the Grenadines are included under its administration, the other half being under that of Grenada. Its chief exports are arrowroot, cotton, cocoa, live stock, fruit, and vegetables, and its fisheries are abundant. Administrator and colonial secretary in 1920, R. Popham Lobb.

SAKHALIN. An island off the east coast of Siberia separated from Japan by the narrow Strait of Soya; of which the part south of the 50th parallel of north latitude belongs to Japan and is called Karafuto and the part north of that line belongs to Russia and constitutes the province of Sakhalin. Japanese Sakhalin has an area of about 13,148 square miles, with a population in 1918 of 79,131. See **KARAFUTO**. The area of the Russian province is 14,668 square miles with a population estimated Jan. 1, 1915 at 34,000.

SALMON. See **ALASKA**.

SALT LAKE CITY, UTAH. See **GARBAGE**.

SALVADOR. A Central American republic on the Pacific Coast to the east of Guatemala. Capital, San Salvador.

AREA AND POPULATION. The area is estimated at 8170 square miles, but estimates vary, and the population was estimated, Jan. 1, 1919, at 1,298,621, of whom about two-thirds were mestizos and about one-sixth Indians. The population of the larger cities was estimated as follows: San Salvador, 65,667; Santa Ana, 59,713; San Miguel, 29,835. The capital, badly damaged by the earthquakes of 1917 and 1919, was recovering from the effects. In 1918 the births numbered 49,783, and the deaths, 33,884.

PRODUCTION. The following information in regard to production and commerce was supplied by the United States Bureau of Foreign and Domestic Commerce in 1920: The principal crop is coffee, grown on the plateaus and mountain sides. The lower sections of the country produce sugar and other tropical products, such as cacao, indigo, rubber, sisal, balsam, rice, corn, and medicinal plants. In the natural forests of the country are found dyewoods and such hardwoods as mahogany, rosewood, cedar, and walnut. Mangrove grows in swampy places and along river banks. Hardwoods grow in the uplands of the interior, but only in small areas, for most of the land has been cleared for agriculture, and the forest resources are steadily becoming more limited because of the density of the population. Large areas of balsam trees are found in part of the coast lands. The so-called Peruvian balsam which is one of the chief exports of Salvador is not, as its name implies, a native of Peru. This balsam is the hardened sap of the balsam trees. It is gathered by natives and sold to local dealers who heat it and pour it, a grayish red mass, into rectangular tins containing about 25 kilos each, in form for exportation. The balsam is known for its antiseptic qualities and is in demand as an ingredient in medical preparations. Salvador is rich in minerals, having deposits of gold, silver, copper, iron, lead, zinc, and antimony. The output of gold constitutes one of the principal ex-

ports. Petroleum deposits have been found, the discovery in most cases having been accidental, occurring when artesian wells were drilled.

According to the latest information available in 1920, about 215,000 acres were planted in coffee trees. Early estimates of the 1919-20 crop placed the harvest at 40,000 to 50,000 tons, a record crop. The districts of Santa Tecla and Sonsonate and the other provinces where the coffee trees were destroyed by the ashes from the volcano during the great earthquake of 1917 appeared to have derived fresh vigor from the ashes. Sugar is raised around Sonsonate and to some extent on the uplands. The 1919 sugar crop was an abundant one. Salvador is developing industrially and besides supplying many articles needed for domestic consumption it is beginning to export certain manufactured products to neighboring Latin American countries. The output of local mills embraces cotton and silk fabrics, shawls, scarfs and handkerchiefs, leather goods, such as harness, saddles, and shoes, fibre goods, including rope, hammocks, native woven straw hats, and baskets, simply made furniture and musical instruments, cigars and cigarettes, sugar, candy, rum, beer, and lumber. Electric power for industrial plants is obtained from the rivers of Salvador. Stock raising is an important industry, though the grazing land of the country is necessarily limited by the dense population. Ranchers have been giving more attention to improved breeds.

COMMERCE. The following tables show the values of imports and exports by countries in the four-year period, 1915 to 1918, inclusive.

Cotton goods have been the largest import and coffee has made up about four-fifths of the exports.

RAILWAYS. Railways open to traffic in 1918 had a length of 213 miles, all narrow gauge. During 1920 it was announced that the construction of a railway connecting central Guatemala with Salvador, which was postponed during the World War, would be undertaken again. This line will connect with the railway within which runs from Barrios, on the Atlantic, to San Jose, on the Pacific, and in this way would give Salvador direct rail communication with an Atlantic port. The new line was estimated to be 157 miles long and would cost between \$7,000,000 and \$8,000,000. Some three years would be required for its construction.

SHIPPING. In 1917 the vessels entered and cleared numbered 355 with a tonnage of 520,759. In that year 72 per cent of the foreign trade of Salvador in 1917 was carried in vessels flying the American flag, 255 of the 354 ships entering Salvadorean ports in that year having sailed from the United States; 20 ships were under the British flag; 18 were Norwegian; 13 Salvadorean; 5 Cuban; 5 Honduran and 1 Nicaraguan. The number of passengers entering was 1605 and the number leaving was 1766. Two-thirds of the passenger traffic was at the port of Acajutla.

FINANCE. In 1919 the total value of government revenues was 13,432,337 colones, and the expenditures were 13,704,263 colones. The budget for 1919-20, according to a British authority was: Revenues £1,670,056; expenditures, £1,692,692; the foreign debt according to a message of the President, was on Dec. 31, 1919, 12,292,576 colones, and the domestic debt, 12,203,240 colones.

The representatives of Salvador participating in the movement for the unity of the five Central American states attended the meeting at Antigua, Guatemala, November 1. The Salvador-

eans subsequently proposed that if all five republics were unable to enter at once, a union should be formed by those who wished it immediately. See GUATEMALA.

GOVERNMENT, ETC. Executive power is in a president elected for four years, and legislative power in a Congress of 42 deputies elected for one year by universal suffrage. President in 1920, Don Jorge Melendez.

SALZBURG. Before the disruption of the Austro-Hungarian Empire a crown-land of Austria; lying to the east and north of Tirol and bordered on the north by Germany. Area, 2763 square miles; pop. estimated in 1913, at 221,304. According to the census of 1910, the Austrian subjects numbered 208,562, nearly all German, and the Catholics formed 98.7 per cent of the pop. Capital, Salzburg, with a pop. estimated in 1910 at 37,300.

SALVATION ARMY. The Salvation Army is a religious body, existing in two phases, the evangelistic, which is the primary, and the social relief, which was made necessary by the evangelistic, and which operates to give permanency to many of its most important results. It was founded by the late Gen. William Booth, in London, in 1865, and was first known as The Christian Mission. Its present name was adopted in 1878. It derives its name from the fact that it works for "the salvation of mankind from all forms of moral, spiritual, and temporal distress." Its government is "military in form and its tactics militant and aggressive." It was incorporated in the State of New York in 1899.

During the year 1919, a change in method of financing resulted in greatly increased efficiency of the Army's machinery through the introduction of the Home Service Fund which the American public has generously supported. The Army continues to perform with the American Forces in Germany such welfare work as was conducted in 1918. Much of the war work adjacent to the permanent camps at home, which was originally considered as being but temporary, has so commended itself to the authorities as to require the placing of it upon a permanent basis. Child Welfare Work was carried forward in many institutions, the largest of which is the Lytton Springs Orphanage, and Industrial Farm in California, where the child population was nearly 300.

The latest available statistics (for the year ending Sept. 30, 1919) show that there were in the United States: 963 corps and outposts, 3042 officers and cadets, 152,450 indoor meetings held with a 5,949,454 attendance, 117,599 outdoor meetings with an 18,018,440 attendance, 32,738 converts, 63,968 junior meetings with an 1,869,994 attendance, 55 hotels where 1,101,700 beds were supplied and 371,334 meals supplied, 84 industrial homes where 1,498,887 meals and 518,142 beds were supplied, 11 posts and nurseries in the slums, 26 rescue homes and maternity hospitals, where 1,307,328 meals and 436,117 beds were supplied, 3 children's homes where 394,548 meals were supplied, and 201,760 Christmas dinners were supplied.

In its international characters the following figures are given for the year ending December, 1918:

Countries and colonies occupied	66
Languages in which salvation is preached	40
Corps and outposts	10,591
Social institutions	1,246
Day schools	722

Naval and military homes	24
Officers and cadets (including social)	17,476
Officers and cadets engaged in social work	3,124
Persons without rank employed wholly in S. A. work	6,238
Local officers (senior and junior)	68,676
Bandsmen (senior)	25,626
Bandsmen (junior)	5,768
Songsters	25,086
Corps cadets	16,901
Periodicals issued	76
Total copies per issue	1,210,194

Headquarters of the Army are at 120 West 14th Street, New York City.

SAMOA. A group of islands in the Pacific near latitude 14° south, of which the islands east of 171° east longitude have belonged to the United States since February 13, 1900, and the islands to the west of that line belonged to Germany till after the outbreak of the war in 1914, when they passed into the hands of New Zealand. The area of the latter group is variously estimated at from 990 to 1300 square miles with a pop. estimated in 1920 at about 35,000, the number having been reduced by loss of about 8,000 lives during the influenza epidemic of 1918 and 1919. According to the census of 1917, the Europeans numbered 1668 of whom 660 were British, 530 Germans, 236 Americans, and 42 Swedes. The area of the American group is also variously estimated at from 77 to about 100 square miles, with a pop. according to the United States Census, January, 1920, of 8,324. The chief island, Tutuila (area 55 square miles) is mountainous and well wooded and had a pop. in 1916 of 5,885. Its harbor at Pago-Pago on the southern coast is one of the best and safest in the South Seas and is an important naval station. Imports from the United States in 1920, exclusive of the precious metals, were \$275,095; exports to the United States in 1919, \$82,269.

SAMOS. One of the Anatolian Islands, formerly tributary to Turkey, but occupied by Greece during the late war and administered through a Greek prefect. Area about 181 square miles; pop. estimated in 1913 at 68,949. Capital, Vathy, with a pop. of about 8000.

SANDAY, WILLIAM. British theologian, died at Oxford, England, September 16. He was born in Nottingham, Aug. 1, 1843, graduated with honors at Oxford where he became a fellow; was ordained in 1867, and after a short period of parochial service became principal of Bishop Hatfield's Hall, Durham. In 1883 he was made professor of exegesis which chair he held till 1895 when he was elected to the Lady Margaret professorship. He made an elaborate study of the life of Christ and the theological problems involved in it. Among his theological writings may be mentioned *The Life of Christ in Recent Research* (1907); *Christologies, Ancient and Modern* (1910); *Personality in Christ and in Ourselves* (1911); and *The Primitive Church and Reunion* (1913). During the war he wrote *Deeper Causes of the War* (1914), and *The Meaning of the War for Germany and Great Britain* (1915).

SANDON, MATHIAS. See PAINTING AND SCULPTURE.

SANFORD, MARILLA. Educator, died, April 21. She was born at Old Saybrook, Conn., Dec. 19, 1836, and graduated at the Connecticut State Normal School in 1855. She had already taught school beginning in 1852. From 1871 to 1880 she was professor of history at Swarthmore College, Pa., and from 1880 to 1909, when she re-

tired, she was professor of rhetoric and elocution at the University of Minnesota.

SAN FRANCISCO, CAL. See CITY PLANNING; MUNICIPAL OWNERSHIP.

SANITATION. See GARBAGE, SEWERAGE AND WATER-WORKS.

SANTO DOMINGO. See DOMINICAN REPUBLIC.

SAO THOME AND PRINCIPE. Two islands belonging to Portugal, off the coast of French Equatorial Africa, in the Gulf of Guinea. Area, 363 square miles; pop. in 1914, 58,907, of whom 53,969 were in São Thomé. The whites numbered 1570. The chief products are cocoa, coffee, rubber and cinchona.

SARAWAK. A British protectorate comprising the northwestern part of the island of Borneo, with an area of about 42,000 square miles and a pop. estimated at about 600,000. Capital, Kuching, with a pop. of about 25,000. In 1919 the imports were \$20,265,281 and the exports \$23,957,953. The chief products are: Spices, sago, rubber, gold, and diamonds. Nuts, camphor, coal, antimony, rattan, etc., are also produced. The gold production in 1918, was valued at \$808,100. The output of coal in the same year was 42,972 tons. Petroleum is worked by an English company. The trade is chiefly with Singapore. The government was under the late Rajah, Sir James Brooke, who was succeeded May 17, 1917, by his son, Charles Vyner Brooke. British agent for Sarawak and British North Borneo, and High Commissioner for Brunei in 1920, Sir Lawrence N. Guillemard (governor of the Straits Settlements).

SASKATCHEWAN. One of the Prairie Provinces of Canada, having Alberta on the west, and Manitoba on the east, and extending from Montana and North Dakota, to the Northwest Territories. Capital, Regina. Estimated area, 251,700 square miles; population (1916), 647,835. Population of Regina (1916), 26,105. Lieutenant-governor in 1920, Sir Richard S. Lake; prime minister, W. M. Martin. See CANADA.

SAULT STE. MARIE CANALS. See CANALS.

SAURET, EMILE. French violinist, died in London, England, February 12. He was born in Cher in 1852 and studied at the Paris Conservatory and at Brussels. He taught in Berlin in 1880-81 and in 1890 was appointed professor of the violin at the London Royal Academy of Music. He was connected with the Ziegfeld Conservatory in Chicago from 1893 to 1906 and made frequent tours throughout the United States. He returned to London in 1908. Besides many musical pieces for the violin, he wrote a text-book for violinists.

SAVANNAH, GA. See GARBAGE.

SAVINGS BANKS. In June, 1920, there were 620 mutual savings banks in operation in the United States and 1087 stock savings banks. Of the mutual savings banks all but 24 were in the New England and Eastern States. Their total assets were \$5,619,017,000. Their business as measured by assets increased during the fiscal year, \$447,466,000 or about 9 per cent. Of stock savings banks the assets amounted to \$1,506,413,000, an increase of \$25,159,000 during the fiscal year. See table accompanying article STATE BANKS.

UNITED STATES POSTAL SAVINGS SYSTEM. Returns summarized in the report of the Comptroller of the Currency for the postal savings system in operation in the United States and its

colonial possessions showed total deposits on June 30, 1920, to the amount of \$139,208,954. The balance to the credit of depositors on June 30, 1919, was \$167,323,260 and the withdrawals during the year amounted to \$149,255,892, leaving a net balance to the credit of depositors on June 30, 1920, of \$167,276,322. The net increase in deposits during the year was \$2,518,832. The number of depositors on June 30, 1920, was 508,508, a decrease during the year of 57,001, and the amount due each depositor was \$309.29, an average gain of \$13.41. The aggregate assets of the system on June 30, 1920, were \$163,064,171.56 compared with \$173,353,650.59 on June 30, 1919.

SAVINGS INSTITUTIONS IN THE WORLD. The table on page 612 shows statistics of savings banks and postal savings systems in the principal countries of the world.

SAXONY. A term applied to the three following divisions of the former German empire: (1) The Kingdom (proclaimed a republic in November, 1918) of Saxony, which was the third largest constituent state of the empire; (2) the grand duchy of Saxony or Saxe-Weimar (also proclaimed a republic, and at the end of 1919 united with the new state of Thuringia, q.v.); (3) the province of Saxony in Prussia. Area of the former kingdom of Saxony, 5787 square miles; population (1910) 4,806,661; estimated (1914) 4,984,500. Area of the grand duchy, 1,394 square miles; population (1910) 417,149. Area of Prussian province, 9,756 square miles; population (1910) 3,089,275. In industry, the kingdom of Saxony is surpassed only by the leading industrial provinces of Prussia. The chief crops are: Wheat, rye, barley, oats, and potatoes. Prime minister in 1920, Herr Buck, elected April 27. See GERMANY.

SCABIES. See VETERINARY MEDICINE.

SCANDINAVIAN. See PHILOLOGY; SCANDINAVIAN LITERATURE.

SCANDINAVIAN LITERATURE. (Including works published Christmas, 1919, but not Christmas, 1920.) The literature of the three Scandinavian countries for the year was characterized by an increase in poetry and a general tendency towards idealism.

DANISH. DRAMA. In Einar Christiansen's *Thronfølger* (*The Crown Prince*) the hero symbolizes civilization in its degeneration. Emil Bønnelycke's *Den Troskyldige* (*The Credulous One*) portrays the conflict between the idealism of a poet and his prosaic surroundings. In *Dybet* (*The Abyss*) Carl Gandrup depicts a woman who makes life desolate for her three lovers as well as for herself. Helge Rode touches the Jewish race problem in *En Mand gik ned fra Jerusalem* (*A Man Went Down from Jerusalem*). Gudmundar Kamban's *Vi Mordere* (*We Murderers*), shows an intimate knowledge of human nature. Although the scene is laid in New York, the characters are European rather than American.

POETRY. A great deal of poetry was written, particularly lyrics, most of it, however, of inferior quality. L. C. Nielsen's *Sange ved Solnedgang* (*Songs at Sunset*), expresses an optimism arrived at through the conquest of despair, while the optimism found in Ludwig Holstein's *Æbletid* (*Apple Season*), impresses us as being natural with the author. Harold Bergstedt's *Bredere Vinger* (*Broader Wings*), contains some exceptionally good poetry, but on the whole it is not up to the author's earlier works.

SAVINGS BANKS, INCLUDING POSTAL SAVINGS BANKS: NUMBER OF DEPOSITORS, AMOUNT OF DEPOSITS, ETC., IN FOREIGN COUNTRIES (Compiled by the Bureau of Foreign and Domestic Commerce, Department of Commerce, from official reports of the respective countries.)

* The figures of population are for the nearest date to which the statistics of savings banks relate.
 * Excludes of 3,116 deposits of \$661,787 in savings banks in Porto Rico and 20,710 savings deposits of \$54,640,017 in ordinary banks.
 * The level in millions of \$100,000,000. The level in millions of dollars.
 * The level in millions of \$100,000,000. The level in millions of dollars.

In Niels Møller's *Egelunden* (*The Oak Grove*), we find poems from a period of more than 20 years, some indicative of deep thought, others written in easy and playful vein. Among them are several translations. The reflections in Edith Rode's *Digte* (*Poems*), seem to be of an autobiographical character. In *De evige Ting* (*The Eternal Things*), Otto Gelstedt shows a gain in firmness and style.

FICTION. Gunnar Gunnarson's *Salige er de Enfaldige* (*Blessed are the Simple*), is a powerful Icelandic story full of gloom and misery. Richard Gandrup's *Macpela's Hule* (*Macpela's Cave*), treats of the estrangement of a man and wife caused by outside influence. Thomas Olesen Løkken made his debut with *Bonden Niels Hald* (*Farmer Niels Hald*), which tells the story of a Jutlander who has noble ambitions for improving the conditions of himself and his fellow farmers. His motives are, however, misunderstood, he is indiscreet in his methods and ends in absolute ruin. *Syndefaldet* (*The Fall*), is a third story of the series *Ditte Menneskebarn*, by Martin Andersen-Nexø. In *Bruden* (*The Bride*), Oscar Thyregod shows how a woman leading a sad and sordid existence through her romantic imagination casts a glimmer of happiness over herself and her surroundings.

MISCELLANEOUS. Georg Brandes published his *Taler* (*Addresses*). Paul Tuxen gave us a translation of *Dhammapada*, a collection of proverbs from India. The notes are particularly helpful and scholarly.

NORWEGIAN. Poetry. Herman Wildenvey's *Alle slags vers* (*All Kinds of Poetry*), shows a certain merriment, but no very deep poetic feeling. In *Samlede digte* (*Collected Poems*), Olaf Bull published his poems from the last 10 years, all of them expressive of a strong Northern spirit. Nils Collett Vogt published a collection of selected poems.

FICTION. The problem treated by Johan Bojer in *Dyrendal*, is the effect on a woman of a childless marriage. Kristofer Uppdal's *Higeren* (*The Climber*), is highly lyric and subjective. The author succeeds in making us feel the personality of his character and the reality of the events that he relates. Olav Duun's *I blinda* (*Ye Blind Ones*), a sequel of last year's *Juvingingar*, pictures the breaking down of an old family with its traditions and ancestral worship. In *Guld-kappen* (*The Golden Cloak*), Barbra Ring tells the story of a woman who leaving her faithless husband engages in one task after another, always with success. The race referred to in the title of Kristian Elster's *Av skyggenes slegt* (*Of the Shadows' Race*), is the official class which is gradually being displaced by the farmers. The characterization is particularly good.

LITERATURE AND PHILOSOPHY. Anathon Aal wrote, *Filosofien i Norden* (*Philosophy in Scandinavia*). The method of treatment is somewhat original, but the part devoted to Swedish philosophy is rather unsatisfactory. Gunnar Heiberg's *Francke visitter* (*French Visits*), contains a number of articles full of wit and inspiration, mostly on Danish and Norwegian writers.

SWEDISH. DRAMA. The ominous atmosphere which pervades Carl R. af Uggle's *Den döda* (*The Dead One*), reminds us of Mæsterlink. The structure of the play is that of the ancient drama. *Lamporna* (*The Lamps*), by the same author is a dream play on the Faust-Margaret theme. It typifies the victory of the life of ideas over

the passive, sterile, and formal. August Brunius wrote three comedies.

POETRY. Ruben G. Berg's *September*, shows the influence of Goethe and Heidenstam. Hjalmar Lundgren in *Kiamé och medaljong* (*Cameo and Medallion*), returns to the spirit of Gustavus III. His poetry, however, gives the impression of artificiality and bookishness. In *Vindros* (*The Compass Card*), Sigfrid Siwertz shows a great facility in changing his verse to suit different subjects and to give expression to various moods. Albert Henning's *Meditationer* (*Meditations*), shows a leaning toward Romanticism. It expresses a longing away from the world of things and sensations to that of ideas and recalls Stagnelius. The chief characteristic of Erik Lindorm's *Domedagar* (*Judgment Days*), is its broad humanitarianism.

FICTION. In Dan Andersson's *David Ramms arv* (*The Inheritance of David Ramm*), we see the gradual development of insanity. The book gives the effect, however, of a number of lyric expressions of different characters rather than that of a continuous story. The lack of totality is also characteristic of Hjalmar Bergman's *Makurells i Wadköping* (*Makurell's in Wadköping*). The central point of the story is the discovery by Makurell that the son for whom he has been living is really not his son. In *Simonas kärlek* (*Simona's Love*), Ivan Bjarne treats the possibilities of the fallen woman as a wife. Ilm Wagner's *Den befriade kärleken* (*Love Liberated*), and Gertrud Almquist's *Det törstande folket* (*The Thirsting People*), both deal, though from different points of view, with the conflict between earthly love and religious conviction. Bertil Malmberg, whose work has hitherto been restricted to poetry, wrote *Fiskebyn* (*The Fishing Village*). Books inspired by the war are: Carl Bolander's *Hotell Europa*, which ends in despair of finding a solution for the ills of the world; Henry Mathis's *Livets lekar* (*Games of Life*), which seems to preach an unlimited optimism in spite of all evils, and Pär Lagerkvist's *Kaos* (*Chaos*), which, in addition to its stories contains poetry and a drama.

CRITICISM, ETC. Johan Vising wrote a book on Camões, the national poet of Portugal. In *Det röda zarriket* (*The Red Country of the Tzar*), Per Brusewitz gives his impressions from a journey through Russia.

SCHIERBRAND, WOLF VON. German-American writer, died in New York City, December 1. He was born at Dresden, Germany, in 1851, and came to the United States in 1872. Going into journalism, he was on the staff of papers in Chicago, St. Louis, and other cities, and from 1884 to 1891 he was correspondent of the Associated Press at Berlin. Among his works may be mentioned: *America, Asia, and the Pacific*; *Germany*; *The Welding of a World Power*; and *Australia, the Polyglot Empire*.

SCHIFF, JACOB HENRY. American financier, died in New York City September 25. He was among the most eminent financiers and philanthropists in this country. He was born in Frankfurt-on-the-Main, Jan. 10, 1847, of Jewish parentage and came to the United States in 1865, settling in New York. He was at first a bank clerk, then a junior member of a brokerage firm acquiring a considerable capital; and after his marriage in 1875 with the daughter of Solomon Loeb he went into the firm of Kuhn, Loeb and Company of which he became the head in 1885,

Mr. Loeb having retired. He was prominent in many of the great financial transactions of the time. His firm supported by foreign capital aided the late E. H. Harriman in financing the reorganization of the Union Pacific railroad in 1897, and in the extension of its control over the Southern Pacific and other railroads—operations involving, it is said, hundreds of millions of dollars. Though a backer of Mr. Harriman he was at the time a warm friend of the latter's adversary, the late James J. Hill. His firm served as backers for the Pennsylvania railroad and was said to have floated as much as \$100,000,000, of its securities at one time. The funds for the Pennsylvania Tunnel and the Pennsylvania Railroad Station were also raised by him; and it was through the firm's agency that \$50,000,000 of Pennsylvania bonds were raised on the Paris Bourse. Another great fund floated through his company was that for the Japanese government in the war against Russia amounting to \$200,000,000. He was a sympathizer with the Russian masses and a hater of the old régime on account of its oppression of the Jews, and during the great war regretted that the Japanese were fighting on the Russian side. In the latter part of his life his philanthropic activities absorbed most of his time. Among the corporations and institutions of welfare in which he was interested may be mentioned: The Central Trust Company; Western Union Telegraph Company; National City Bank of New York; Wells, Fargo and Company; Montefiore Home (of which he was president); Baron de Hirsch Fund (vice-president and trustee); New York Foundation (director); New York Chamber of Commerce (vice-president); Jewish Theological Seminary; Semitic Museum (Harvard); Nurses Settlement (New York); American Museum of Natural History; Metropolitan Museum of Art; American Geographical Society; American Fine Arts Society. He had been ill for the six months preceding his death. He was the father of Mortimer L. Schiff and the father-in-law of Felix Warburg.

By the terms of Mr. Schiff's will the sum of \$500,000 was bequeathed to the Federation for the Support of Jewish Philanthropic Societies in New York; \$300,000 to the Montefiore Home and Hospital in that city; \$100,000 to the Hebrew Union College at Cincinnati; and sums ranging from \$5000 to \$50,000 to a large number of other institutions. The remainder of his estate was left to his son and daughter to be divided between them equally.

SCHNEIDER, HORTENSE. French soprano, died in Paris, May 6. She was born in 1838. At the height of her career (1862-80) she was one of the most popular artists of the Théâtre des Variétés, creating the title-rôle in Offenbach's *La Belle Hélène* (1864).

SCHREINER, OLIVE. British author, died in December. When she was about 20 years old she published *The Story of an African Farm*, which gave her a reputation over the entire English-speaking world. She was born in Basutoland, South Africa, in 1862, the daughter of a Lutheran clergyman then serving as a missionary in South Africa. She married in 1894, Mr. S. C. Cronwright. Her other writings include: *Dreams* (1891); *Dream Life and Real Life*

(1893); *The Political Situation* (1895 in collaboration with her husband); *Trooper Peter Halket* (1897); *An English South African's View of the Situation* (1899); and *Work and Labor* (1911). The last named, which was also widely read, conveys her strong feminist views.

SCOTT, MRS. MAXWELL (MARY MONICA). British writer, died, March 15. She was born Oct. 2, 1852, and was the granddaughter of Sir Walter Scott. She wrote: *Abbotsford and Its Treasures* (1893); *The Making of Abbotsford, an Incident of Scottish History*; *Joan of Arc* (1905); *St. Francis de Sales and His Friends* (1913), etc.

SCOTTEN, SAMUEL CHATMAN. Capitalist, died, August 5. He was born at Burlington, Iowa, Oct. 31, 1851; educated in public schools and began work as clerk in a grocery store in 1861. After 1878 he was in the grain and commission business at Chicago and later became president of the Harris, Scotten Co. After 1907 he was a member of the firm of Scotten and Syndacker. He was a director of many important commercial enterprises.

SEARLE, ARTHUR. American college professor, died at Cambridge, Mass., October 23. At the time of his death he was professor emeritus of astronomy at Harvard. He was born in London Oct. 21, 1837, and came to the United States where he graduated at Harvard in 1856. In 1868 he was appointed assistant in the Harvard College observatory and in 1883-7 he was assistant professor of astronomy. He was appointed to the Phillips professorship in 1887 and retired in 1912 when he was made professor emeritus. At the time of his death, he surpassed in length of service all the other members of the faculty.

SENEGAL. A French colony in the government-general of French West Africa (q.v.), consisting of the four municipal communes of St. Louis, Dakar, Rufisque, and Gorée, and of territories directory administered by the government-general. Total area, about 74,012; population estimated in 1917, 1,444,621 of whom 5,015 were Europeans. Capital, St. Louis, (population, 1917, 23,326). Dakar is a fortified naval station and the seat of the government-general, with a population in 1918 of 25,468. The total foreign trade in 1919 was valued at \$77,266,367, as compared with \$98,622,476. The imports for 1919 were \$38,245,831; exports \$39,020,536. The leading imports in respect to value were coal, cotton goods, and cloth, and the leading exports were peanuts and gums. Great Britain held the leading place among the countries supplying imports. In respect to exports, France received nearly 91 per cent. The tonnage of shipping in 1919 was as follows: Entered, 2,277,988; cleared, 2,179,988. Local budget in 1919, 10,315,807 francs. The colony is represented by one deputy in the French parliament.

SENIOR, WILLIAM. British journalist, died at Croydon, early in October. He became a journalist in 1858 and contributed extensively to periodical literature. He was special correspondent of the *Daily News*, 1881-99. It was largely as a specialist in the sport of angling that he became known and his writings on that subject were widely read and gave him a special authority. He had charge for some years of the angling department of the *Field* and was editor-in-chief of that periodical from 1900 to 1909. Among his books may be mentioned: *By Stream and Sea* (1887); *Angling in Great Britain* (1883); *The Thames from Oxford to the Tower* (1889); *A Mixed Bag* (1895). Shortly before his death another volume on angling appeared under the title of: *Lines in Pleasant Places*.

SERBIA. A Balkan kingdom which in December, 1918, was proclaimed a part of the new unitary state of the Serbs, Croats and Slovenes. (See JUGO-SLAVIA.) It is bounded by Bulgaria on the east, Albania and Montenegro on the west, Greece on the south and is separated from Hungary by the Danube and the Save. Capital, Belgrade.

AREA AND POPULATION. The area is given at 33,891 square miles; population at 4,393,315. Belgrade, the capital, had 90,890 inhabitants, for further details, see preceding YEAR BOOKS.

PRODUCTION, ETC. The resources are chiefly agricultural and include: Wheat, corn, barley, oats, rye, and beet roots. The fruit production is important and fruit productions made up about 13 per cent of the total exports before the war. Tobacco also is produced, the output in 1919 being 15,000 tons.

GOVERNMENT. After the armistice Serbia took a leading part in the organization of the new state of Jugo-Slavia, of which the first ministry was formed Dec. 29, 1918. (See JUGO-SLAVIA.) As result of the Balkan war and of the late war, the economic condition of the country in 1920 was deplorable. Agriculture, transport, industry and commerce were reported as virtually destroyed. Many of the cities and towns had been reduced to ruins. The work of Serbian relief, however, was actively carried on during the year.

SEVERN RIVER BARRAGE, PROPOSED. See DAMS.

SEWAGE PURIFICATION. See SEWERAGE.

SEWANE. See SOUTH. UNIVERSITY OF THE.

SEWARD, WILLIAM HENRY. Soldier and banker, died April 26. He was born at Auburn, N. Y., June 18, 1839, the son of William H. Seward, Secretary of State and served in the Civil War, taking part in the battles of Monocacy, Petersburg, Cold Harbor, and others, and was promoted for gallantry in September, 1864, to the rank of brigadier-general in the department of Shenandoah. After the war he was head of the banking firm of William H. Seward and Company.

SEWERAGE AND SEWAGE PURIFICATION. New construction of both sewers and sewage-treatment works was checked by high prices, but towards the end of the year a number of cities voted a considerable total of bonds for sewer extensions. Studies of the *activated-sludge* process of sewage treatment were continued at *Milwaukee* and resumed at *Champaign, Ill.*—the latter by the State Water Survey and

the University of Illinois. Plans for a large activated-sludge plant for Milwaukee, together with a survey of the experiments on which they were based, were described in detail by T. C. Hatton, chief engineer Milwaukee Sewerage Commission in *Engineering News-Record*, May 20, 1920. Plans for an activated-sludge plant for *Reading, England*, were approved by the British Ministry of Health late in the year. The plant will have a capacity of 4,200,000 U. S. gallons and will be the largest plant of this type in England. A *direct-oxidation* or *electrolytic* sewage treatment plant (see 1919 YEAR BOOK) for *Phillipsburg, N. J.*, was completed and one for *Allentown, Pa.*, was reported as under construction.

SEYMOUR, HORATIO WINSLOW. Journalist, died in New York City December 17. For many years he had been an editorial writer on the *New York World*. He was born in Cayuga County, New York, in 1854; was educated in the schools of Wisconsin and became city editor of the *Milwaukee News*, in 1873. He was afterwards on the staffs of the *Chicago Times* and the *Chicago Herald*, and he edited and published the *Chicago Chronicle*, 1895-1907. After 1908 he was on the staff of the *New York World* until the time of his death, with an exception of an interval in 1911-12, when he edited the *Republic* of St. Louis.

SEYMOUR, MORRIS WOODRUFF. Lawyer, died at Litchfield, Conn., October 28th. He had been at one time chief justice of the supreme court of Connecticut. He was born at Litchfield Conn., October 6, 1842, graduated at Yale 1856 and practiced law in Bridgeport after 1857, specializing in corporation and patent law. Among the positions that he held may be mentioned that of judge of the city court at Bridgeport, member of the Connecticut State senate, and lecturer in the Yale Law School.

SHACKLETON, CHARLES. See PAINTING AND SCULPTURE.

SHANTUNG. One of the 18 provinces of China Proper. Area, 55,970 square miles; population, 25,810,000. Capital, Chinan. Kiao-Chow on its eastern coast was seized by Germany in 1897, but its port Tsing-Tau was captured by Japanese and British forces November, 1914, and administered by the Japanese. By the agreement of May 25, 1915, Japan obtained from China all mining and railway privileges previously enjoyed by Germany. Protests of China, with which there was much sympathy throughout the world, made the question of possession one of the most important problems before the Peace Conference. A discussion of it will be found in the preceding YEAR BOOKS in the article, *WAR OF THE NATIONS*. There was no change in the situation in 1920, but the issue became a subordinate part of the general dispute between Japan and China. See the article in the present volume on *WAR OF THE NATIONS*.

SHEEP. See LIVE STOCK.

SHERMAN, ANDREW MAGOUN. Clergyman, died at Morristown, N. J., December 28. He was born at Marshfield, Mass., May 5, 1854, and served as a volunteer in the Civil War. In 1869 he entered the Methodist Episcopal ministry and was pastor in Methodist churches in Connecticut and Massachusetts till 1877. In 1878, he was ordained to the Congregational ministry and held pastorates in New York, Massachusetts and New Jersey from 1889 to 1892. He was a

fertile writer, especially on American and local history, and his books include narratives of historical events and descriptions of localities in New Jersey; *Historic New England Towns Revisited* (1913); *The Perplexed Detective* (1913); *A Bold Confederate Scheme Frustrated* (1913); *The Story of Fort Mifflin* (1914); and *Recollections of a Half Century and More* (1915).

SHIPBUILDING. The total tonnage (gross tons of the 1759 merchant vessels launched in 1920 from the shipyards of the world, according to Lloyd's Register of Shipping, amounted to 5,861,000 gross tons, a decrease of almost 1,300,000 from the 1919 figure, but an increase of more than 400,000 over 1918. This decline of 1,300,000 gross tons in the world's total, from the 1919 figure, was due to the decrease in the American shipbuilding programme, launchings in the United States being 2,476,000 tons, or 1,600,000 tons less than in the previous year, while British production, 2,055,000 tons, showed a gain of more than 400,000 tons.

Other countries launched a total of 1,330,000 tons during 1920, or about 20,000 tons less than in 1919. Of the vessels launched in 1920, 32 were of 10,000 gross tons or more, while nearly a third of the aggregate of ships of all types, or 1,825,000 tons, were fitted with turbine engines.

There was, however, a distinct gain over pre-war building and in comparison with the pre-war figure the launchings for 1920 throughout the world showed an increase of about 75 per cent. This is largely accounted for by the fact that the American total was nine times that for 1913 and other countries, exclusive of Great Britain, showed an advance of about 20 per cent. On the other hand it was noteworthy that for the first time since the beginning of the war the United Kingdom in 1920 exceeded its 1913 figure, the gain being about 7 per cent. The yearly output of the United States and the United Kingdom in launchings since before the war is shown in the accompanying table, the figures being in gross tons:

	United States	United Kingdom
1913	276,000	1,932,000
1914	200,000	1,683,000
1915	177,000	650,000
1916	504,000	608,000
1917	997,000	1,162,000
1918	3,033,000	1,348,000
1919	4,075,000	1,620,000
1920	2,476,000	2,055,000

Lloyds pointed out that at the beginning of 1920 the United States and Great Britain had on hand practically the same amount of construction to be completed, and credited American yards with greater speed than those in Great Britain in that the United States exceeded England's total by 20 per cent.

In the latter part of the year there was a slight decline in shipbuilding. A statement prepared by Lloyd's Register of Shipping showed that the aggregate on Dec. 31, 1920, was about 5 per cent less than on October 1, of the same year. One of the most significant points was that 454,000 tons of motor ships were under way as discussed below.

The total building in the world on Dec. 31, 1920, was given as 7,179,000 gross tons, in comparison with 7,565,000 tons at the end of the third quarter of 1920. France and Holland were

practically the only countries to show a gain in the amount of construction.

For the first time since the war period, it is pointed out, British shipbuilding shows a decline over the previous quarter. The recession was only a small one, however, 3,709,000 gross tons being in hand at the end of December, compared with 3,731,000 tons at the end of last September. The decrease of 22,000 tons compared with one of 462,000 tons for American shipyards, the aggregate under way in the United States at the end of 1920 being 1,310,000 tons, compared with 1,772,000 tons three months previously.

At the end of 1920 as a result of the changed conditions 51.6 per cent of the world's shipbuilding was being done in Great Britain, compared with 38.1 per cent at the beginning of 1920. In the same period the United States' share of the total had decreased from 37.7 per cent to 18.2 per cent. Consequently, therefore, the United Kingdom was building more than all the rest of the world combined, a position held by the United States during the period of its intensified shipbuilding campaign. In the last quarter of 1920 Great Britain's share increased 2.3 per cent, bringing her across the 50 per cent mark, while the proportion held by the United States decreased 5.2 per cent.

The status of world shipbuilding at this time compared with a year previously is shown by the following table of gross tons of shipping under way at the two periods:

	Dec. 31, 1919	Dec. 31, 1920
United States	2,966,000	1,310,000
United Kingdom	2,994,000	3,709,000
Other countries	1,901,000	2,160,000
World total	7,861,000	7,179,000

Other countries than the United States and the United Kingdom have expanded their shipbuilding facilities materially in 1920. From Germany, accurate returns were not available, but the smaller maritime nations were constructing in excess of a quarter of a million tons more than in 1920. In the same period their proportion of the world's production advanced from 24.2 per cent to 30.2 per cent. At the beginning of 1920 they were building over a million tons less than the United States, while at the end of the year they were constructing 850,000 tons more than the United States. Great Britain, which was building about 1,100,000 tons more than these nations at the beginning of 1920 led on December 31, by about 1,600,000 tons.

In connection with the work in the United Kingdom at the end of the year there were indications that deliveries were at the point of exceeding the receipts of new orders. Whereas in the quarter ended Dec. 31, 1919, new steamers on which work was begun represented a total of 601,000 tons, launchings for that quarter represented only 451,000 tons. In the third quarter of 1920 new work aggregated 591,000 tons, while launchings were 478,000 tons. For the final quarter, however, the amount of new work begun totals only 503,000 tons, while launchings represented 576,000 tons. In three months, therefore, a lead of 113,000 tons held by work begun had been changed to one of 73,000 tons for launchings.

The fact that Great Britain was resuming its place as the world's shipbuilder was indicated by the statement that of the 3,709,000 tons un-

der construction in that country 1,257,000 tons, or more than a third, was for purchasers abroad.

The tonnage of vessels actually building under the supervision of Lloyd's Register and intended to be classed with that society which forms the bases of the foregoing paragraphs at the end of 1920 amounted to 4,800,409 tons, of which 2,920,656 tons were being built in the United Kingdom and 1,879,753 tons in other countries. The society was therefore, classing more than two-thirds of all the sea-going tonnage building in the world to-day of 100 gross tons and upward.

British tonnage launched was built for foreign owners, the amount being 846,403 tons, or over 41 per cent of the total. This proportion was considerably greater than that of pre-war times, the average figure for the five years 1909 to 1913 being just over 22 per cent. Another interesting feature of the figures is that although the tonnage launched in 1913 the previous record year, was lower than that in 1920, the amount added to the British merchant fleet in 1920 was 309,000 tons less than the addition during 1913. Of the tonnage launched in 1920, 286,644 tons

THE WORLD'S SHIPBUILDING

(From Lloyd's Register of Shipping)

TABLE SHOWING THE NUMBER AND TONNAGE OF MERCHANT VESSELS OF 100 TONS GROSS AND UPWARDS LAUNCHED IN THE VARIOUS COUNTRIES OF THE WORLD DURING THE YEARS 1900-1920
